Mr. Samuel Lubell's article, entitled "Butter Over Guns—A Peace Plan for the Free World," poses an enlightened approach toward solving our ever-present, most pressing problem—world peace.

The article follows:

BUTTER OVER GUNS—A PEACE PLAN FOR THE FREE WORLD

(By Samuel Lubell)

The peaceful nations of the world can seize the initiative—now—in the long struggle for peace by striking at all that is most vulnerable in the Soviet system.

That opportunity was put there by the Kremlin itself in the bitter struggle which brought the recent downfall of Premier Georgi Malenkov. In the course of that upheaval the soft underbelly of Soviet communism was flung over and exposed. Un-

wittingly, Russia's own ruler pointed where to strike the blow that could change the whole course of the cold war.

They showed the world the way to mobilize every measure short of war to halt aggression before it takes place.

How can that be done?

By taking these steps:

The United States should sponsor before the United Nations a bold new plan of economic and military disarmament which would: Limit the proportion of any nation's resources that could be devoted to "guns"—that is to war industries and all other direct and indirect military expenditures—as against "butter," meaning what goes to lifting levels of the people.

The debate touched off by this proposal should be used as a dramatic moral offensive to make clear to the world why high living standards are a built-in reassurance of peace, and any industrial nation which deliberately depresses the living of its people to build military power is a threat to peace.

If the Soviets accept the proposal, a basis for lasting peace might move into sight. Trade could flow freely, since products would be exchanged with Russia for mutual advantage.

But if the Soviets refuse to reverse their present guns-over-butter policy, the free nations should agree to treat her as a potential aggressor.

In support of that, every measure short of war should be invoked until the Soviets do reduce defense expenditures appreciably, and better the living conditions of the Russian people.

Among those short-of-war measures would be the full force of world opinion, the strengthening of other nations' defenses; also the breaking off of all economic relations—aid, credit or trade—which might strengthen a potential aggressor.

The basic idea of emphasizing living standards as a war deterrent was touched on by President Eisenhower in his speech before the American Society of Newspaper Editors in Washington in 1953. But there was no follow through. Now there is opportunity to act.

This entire program stems from the nature of modern warfare. As Hitler taught only too well, wars do not start when one country crosses another's frontier.

War begins when a would-be aggressor shifts his resources from peaceful to war-like processes, when tractor assembly lines are replaced by tank assemblies, when building materials are diverted from constructing homes to rearing munitions plants.

In short, war starts when a would-be aggressor makes the ominous choice of putting guns over butter.

Malenkov's ouster stripped away the last illusion that the Soviet Union has become anything more than a perpetual war economy.

Although our own defense budget has been cut for three successive years, Soviet arming has been raised at least to what it was when Russia was supplying Red China with equipment to fight in Korea.

The Soviet proposal announced a week ago to freeze defense budgets at present levels still would leave Russia mobilized for aggression, while preventing peaceful nations from strengthening their own defenses.

It seems to have been brought forward largely to delude the Russian people into thinking that the new sacrifices being imposed on them are made necessary by some threat from the West rather than by the Kremlin's aggressive commitments.

In ousting Malenkov the dominant faction in the Kremlin cracked down on efforts to increase civilian production so as to expand Russia's arms and war industry. In essence this was the same decision Hitler made when he boastfully chose "guns over butter."

The challenge is clear.

If war is to be prevented, Hitler taught, the time to act is when the bombs are being made rather than when they are falling.

The "butter over guns" disarmament proposal would furnish the basis for such action. By setting ceilings on the use of certain key resources, "butter over guns" disarmament would lock up enough of every country's production in peaceful purposes so no nation could mobilize its economy for a blitzkrieg without giving the world at least 3 years' warning.

No country's economic expansion would be curbed, since the proportion of resources allocated to guns, not the quantities, would be limited. The butter-guns ceilings also would vary with the special needs of individual countries—underdeveloped nations would not have the same ceilings as highly industrialized ones—and they could be reviewed periodically, say, every 5 years.

The net effect would be like drawing a new internal frontier inside each nation's economy—the butter-guns line—which, if crossed, would be an open confession that a government had passed from peaceful to aggressive intention.

If the men in the Kremlin really want peace, they should welcome such disarmament and cooperate to set up the system of inspection and control that would be required to enforce it.

If they do not, the peaceful nations still can draw this frontier against aggression by declaring they will use Russia's division of her resources as a yardstick for judging Soviet intentions.

Going further, the free nations could bring forward their own "butter over guns" standard of how Russia's resources should be divided to insure a minimum level of decent living for the Russian people.

Soviet propagandists, of course, would try to make the world believe that Russian living standards were rising. But the outside world would have little difficulty in judging the truth of the matter.

If Russia's resources actually were directed from war to peace, it would become readily apparent in the new homes that would be built, the new factories for consumer goods, the general abundance of things to buy.

In debating this "butter over guns" disarmament proposal we could call on the world to judge which of the two economic systems, ours or Russia's, makes for peace.

Last year, for example, the United States produced 5.5 million autos, 7.3 million television sets, and 9 million washing machines, refrigerators, and vacuum cleaners.

The steel used to manufacture these articles obviously could not be used for war.

In Russia, with roughly half of our steel supply, only 45,000 passenger autos were produced in 1954, only 365,000 TV sets, and hardly 600,000 washing machines, refrigerators, and vacuum cleaners. Most of the rest of Russia's steel went into expanding her military potential.

Shortly after he became premier, Malenkov revealed that more than two-thirds of Russia's industrial resources were being directed into heavy industry, and scarcely one-third to consumer goods.

Every possible means should be utilized to make known to the Russian people that satisfying their yearning for better living is our peace aim.

Within the Kremlin may be some men who will understand how other Soviet leaders are destroying any basis for peace by denying their own people a decent living.

Moscow has always sought to justify the harsh exactions inflicted on the Russian people as being necessary to strengthen Russia against outside attack. The "butter over guns" proposal would challenge this propaganda. The ceilings would be applicable to all major powers, including a revived Germany.

The peace offensive proposed here is not intended to settle every cold-war issue. It does not cover such problems as subversion, which could be considered another form of aggression. Nor would it take the place of efforts to control atomic and other weapons.

Essentially, it seeks to give new life to the possibility of curbing military aggression with measures short of war by gaining worldwide recognition for a simple principle:

That the intentions of even the most secretive dictators can be judged by how they divide the resources they command between war preparation and bettering living standards.

It may be argued that other countries will not go along with so forthright a program. Even if we knew that to be true, simply to proclaim this principle before the United Nations would be a considerable victory for the cause of peace.

WHAT ABOUT ENFORCEMENT?

(By Samuel Lubell)

Enforcing butter over guns disarmament would be no more—nor less—difficult than policing other systems of arms control.

The plan aims at padlocking enough of every nation's resources in peaceful production so no country can mobilize its economy for military aggression without warning the rest of the world. A variety of inspection controls could be employed to achieve that objective.

Every phase of economic activity need not be policed. We know enough of the interrelated processes of mobilizing for war to be able to select a relatively small number of economic choke points—which would show readily how a nation is dividing its resources between war and peaceful uses. In Russia, because nearly all her industries rely on railroad transportation, inspection would be easier.

Obviously it would be easier to make sure that tractor plants were not producing tanks than to check on the number of troops or weapons a country might be permitted.

In any case, these industrial and economic controls could be reinforced by and meshed with the usual controls on weapons and armed forces.

The big question mark, of course, is whether the Soviets would agree to the tamper-proof system of inspection and control which all disarmament plans require. This requirement cannot be compromised.

Where butter over guns differs from other disarmament plans is that if it breaks down, the violation comes early enough in the mobilization process to give every other nation time to rearm.

Also by drawing a guns-butter frontier inside every nation's economy it provides the free world with a moral basis for employing measures short of war to halt aggression while it is being prepared.

Willis W. Bradley: Naval Officer and Statesman

EXTENSION OF REMARKS

OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. THOMPSON of Texas. Mr. Speaker, the splendid eulogies on our late colleague, the Honorable Willis W. Bradley, of California, so far published portray not only a rich personality but also a career notable for its record of constructive achievements. Of his many impor-

tant contributions none are of more lasting value than those for the Panama Canal while he was a Member of Congress, 1947-49. These merit special emphasis.

At the time he was elected to the 80th Congress Captain Bradley had just completed a long and distinguished career as a line officer of the Navy with early specialization in ordnance engineering. In later years, he had important administrative assignments, served as Governor of Guam, held responsible positions afloat, and navigated in many parts of the world. This background of experience combined to qualify him eminently for leadership in the 80th Congress, in which he was assigned to the Committee on Merchant Marine and Fisheries. On that assignment he quickly became a recognized authority on interoceanic canal problems, for which he had been prepared by a lifetime of naval experience and years of study of the Isthmian problem.

When the question of the sea-level project for the Panama Canal was presented to the Congress in 1947, his definite views, vigorously expressed, served to prevent hasty action. Thus, the committees of the Congress were able to delve more deeply into that controversial proposal and its far-reaching implications.

On that committee one of his ablest colleagues was the late Representative Schuyler Otis Bland, of Virginia, who was then the senior minority member of the committee and its former chairman. He and Captain Bradley recognized each other's great abilities and formed an effective team, particularly as to canal matters.

When leaving the Congress in 1949, Captain Bradley passed on to Judge Bland and others the results of his canal studies. Thus, the 81st Congress, under the guidance of Judge Bland, who then resumed his chairmanship of the Committee on Merchant Marine and Fisheries, was able to carry on its work on the Panama Canal without discontinuity. As the member of that committee designated by Judge Bland to be chairman of a special subcommittee to investigate the operations of the Panama Canal, I was one of the principal recipients of Captain Bradley's teachings. We had many consultations.

The highlight of these was a presentation on the subject of the Panama Canal in the Navy Department, arranged at the suggestion of Captain Bradley by the Secretary of the Navy. By means of canal operational exhibits and terrain models, Captain Bradley explained the problems of ship transit and what is required for their solution. A distinguished engineer with Panama Canal experience, who was also present, described the principal engineering questions, which are fundamental in its consideration.

The lessons derived from those particular discussions were of immeasurable value to the subcommittee. They helped to clarify much of the fog of confusion that has featured so much canal debates, and helped to start the investigation along a path that overcame obstacles.

Captain Bradley made two notable addresses on the Isthmian question. The first, delivered on April 19, 1948, before the Cosmos Club, of Washington, is entitled "What of the Panama Canal?" CONGRESSIONAL RECORD, volume 94, part 10, April 21, 1948, page A2449. The second, made on February 24, 1949, before the Engineers Club of Washington, is entitled "The Whys of the Panama Canal," CONGRESSIONAL RECORD, volume 95, part 12, March 4, 1949, page A1303.

These two addresses are among the finest pronouncements on the canal question in the records of the Congress. As such, they are must reading for all who wish to go deeply into the canal subject, and are especially commended for study by the committees of the Congress.

Why George Washington Remained Unique

EXTENSION OF REMARKS OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a very interesting article entitled "Why George Washington Has Remained Unique," written by John Harris and appearing in the Boston Globe of February 20, 1955:

WHY GEORGE WASHINGTON HAS REMAINED UNIQUE

(By John Harris)

WASHINGTON, February 19.—For generations Americans have sighed as they make their annual preparations to honor the birth date of George Washington, that in his lifetime Washington had no Boswell.

We can only wish we knew more about Washington the man, majestic father of our country, for of all the stars in our armament of national heroes his is the brightest and yet the most remote.

How just a few intimate anecdotes, authentic and heart warming, would cut the distance that grows greater with the passage of the years:

Curiously, it is right here in the Nation's Capital, named after him, that we feel this lack the most keenly.

Lincoln, by contrast, is an ever lifelike memory, in the treasury of tales which he told or which were told about him.

It is surprising how little has come down to us about George Washington's association with the Capital, whose site he himself selected. We can picture him at Suter's Tavern in Georgetown arranging to buy the land; settling the dispute over Major L'Enfant, the city planner, or laying the cornerstone of the Capitol. There is little else. Indeed, at his death in 1799 just as the 19th century was about to dawn, the White House and Capitol were still incomplete.

AWE—LITTLE WARMTH

The Washington Monument, an obelisk greater in size than any raised in ancient Egypt or built elsewhere in the world, we do have.

It is an awesome memorial. Those who gaze upon it are impressed deeply with its dignity, austere simplicity, and, as well, with an inseparable sense of exalted aloofness and grandeur.

Some see this as a happy expression of the reserve that characterized Washington throughout his life. We all admire it; yet we cannot, in all reverence, be unconscious of a very human desire that the mere sight of the memorial, combined with a greater familiarity with the life of Washington than we can now possess, would touch more tender feelings.

Parson Weems did no service for the youngsters of the land when he told his improbable story about the cherry tree. Young bloods who avidly follow the Lone Ranger on TV and—at play—are equipped to shoot down Indians or cattle rustlers, are not likely to accept the goody two-shoes tale about young George and the hatchet.

Nor did another biographer, priggish Jared Sparks, do adults a service when he made his straitlaced revisions of Washington's own writings. A Hollywood director would say that Sparks, whose word picture of Washington was the inadequate model of Washington for decades, left the human side on the cutting-room floor.

YET, FIRST IN THE HEARTS

The anniversary at hand is, however, not so much a time for wishing as for reviewing, for reminding ourselves why it is that Washington, just as in the era when Col. Henry Lee first said it, "Is first in the hearts of his countrymen."

A succession of incidents in Washington's life comes quickly to mind.

Our young TV viewers would certainly thrill to the actions of the 23-year-old head of the Virginia militia as he fought beside the ill-fated General Braddock in the wilderness. Twice horses were shot from under young Colonel Washington and 4 times his coat was pierced by bullets. Washington, who expected and demanded a display of courage in others, displayed it fearlessly, almost recklessly, an earnest of the resoluteness that was to win freedom for a new nation.

There was this same resolution when young Washington journeyed to Boston to demand that Governor Shirley recognize a colonial commission as the equal of one granted by the British monarch.

HE RISKED ALL

No one can visit Mount Vernon without admiring the patriotism that impelled Washington to risk all his possessions and his head in the fight for liberty.

Here he lived the leisurely, aristocratic life of the Potomac gentry. He was owner of 55,000 acres and one of the biggest fortunes in the land.

He, a soldier, knew better than most colonials the might of the British imperium, but he never hesitated. In the depths of the struggle at Valley Forge his faith and fortitude remained constant.

When we scan history and count the conquering generals who put crowns on their heads, or observe the current world scene in which generals glide into the role of dictators, the patriotism of Washington shines in the supreme moment of military success. He rebuked and scorned officers who suggested he make himself a king. True idealist and man of democracy, Washington bade farewell to his army, laid aside his command, and headed back to Mount Vernon. He was, in the exulting phrase of Byron, "the Cincinnatus of the West."

When the States fell to wrangling and disaster loomed, disaster that would have offered a personally ambitious man another chance for a crown, Washington met with governors in the blue room of the now neglected Carlyle House in Alexandria, and initiated action that gave the Nation the Constitution. He accepted the Presidency only as a duty. And strictly from that same sense of obligation to his country did he accept a second term, in which he patiently endured a martyrdom of abuse.

HAVING A COUNTRY TO LOVE

It is at Mount Vernon and in nearby Alexandria, where Washington in 1798 joined in the first public celebration of his birthday at Gadsby's Tavern, still standing near the waterfront, we get the best appreciation of Washington the man. He loved the tidelands life of a planter.

He never left there, for war or the Presidency, without steadily missing it and yearning to return. He chose this as his burial place rather than the crypt prepared in the Capitol. His sincerely felt personal loss in long absences from Mount Vernon is a measure of his sacrifice. But in this devotion to duty, for which all Americans cherish him, Washington, too, had an abiding compensation, best expressed in words of James Russell Lowell, words Washington would have appreciated:

"There is something magnificent in having a country to love."

Eleven Useful Facts Concerning the World in Which We Live

EXTENSION OF REMARKS OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. BLATNIK. Mr. Speaker, the following summary by George Hardin of a speech given by Leonard S. Kenworthy at a conference of the Friends' Peace Committee in Philadelphia appeared in the February 17, 1955, edition of the Chisholm (Minn.) Free Press. I commend it to the thoughtful consideration of the Congress and citizens of our great country:

ELEVEN USEFUL FACTS CONCERNING THE WORLD IN WHICH WE LIVE

(EDITOR'S NOTE.—Reprinted herewith is a summary by George Hardin of a speech given by Leonard S. Kenworthy at a conference of the Friends' Peace Committee in Philadelphia.)

Because our world is so much bigger, or smaller, today, here are certain facts we need to remember in order to read newspapers, work on peace committees, rear children, work in schools, live in communities, and to live.

Most of the world lives in Asia. The sooner we recognize this, the better.

Most of the world is nonwhite. We must learn to live as a minority group.

Most of the world is abysmally, abjectly poor.

Most of the world is underdeveloped; it lacks tools and methods of production.

Most of the world is ill fed, ill housed, ill clothed, illiterate, and ill.

Most of the world is non-Christian. We must learn to think in terms of Hindus, Moslems, Communists, and others.

Most of the world is non-English speaking. We need new tools of communication.

Most of the world is either in revolution or has recently attained independence.

Most of the world differs from us. We must learn to associate differences with friendliness rather than hostility.

Most of the world is closely interdependent.

Most of the world is now working together in the United Nations; we must support it, and strengthen worldmindedness.

I Speak for Democracy

EXTENSION OF REMARKS

OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. KEARNEY. Mr. Speaker, in asking unanimous consent to extend my remarks in the Appendix of the Record, I want to call the attention of my colleagues to the fact that the young man who wrote the following essay entitled "I Speak for Democracy," is 1 of the 4 winners in a contest, sponsored by the National Association of Radio and Television Broadcasters, and participated in by over a million and one-half school children in the 48 States, the District of Columbia, Hawaii, Alaska, and Puerto Rico. It is with a great deal of pleasure and pride that I call attention to the fact that the young man, Avron Joseph Maletzky, is a senior in the Nott Terrace High School, Schenectady, N. Y., 16 years of age, and a resident of my district, the 32d District of New York. It is with a great deal of pride that I submit his essay:

I speak for democracy—a force that means life, liberty, and freedom for millions of human beings—a force that elevates the dignity of man toward the divine—but a force that defies definition.

Scores of interpretations do not embrace the meaning of democracy, and none of us know where to find the words to express our belief in it. Perhaps the fact that we have not yet achieved democracy is the key to the whole situation—for true democracy is a quality toward which one strives, rather than a concrete object which one encloses in a glass case. Then how is it possible to defend something that is as basic as the world we live in, but must be thought of as a goal never quite attained?

It was not until we faced the possibility of its loss that we began to visualize the meaning of this precious inheritance. It was not until we saw other democratic countries filled with people, not unlike ourselves, submerged and conquered, that we began to appreciate democracy as both a moral ideal and an historical institution.

The theme of democracy goes back much farther historically than the great documents of the American, French, and English Revolutions. The idea goes back to the Hebrews with their theories of divine justice; to the early Christians with their ideal of brotherhood; to the Romans with their stress on equality and justice. Those who feel that democracy is young, and thus is an unstable force, forget what a long history it has, and how deeply it is imbedded in the culture of nations.

Today, we are beginning to think of democracy not as a political institution, but as a moral ideal, and a way of living together. The early Christians had an appropriate saying—"We are all," as they put it, "members of one another." We must, if our democracy is to succeed, believe as they did. We must realize that no one can stand alone. True, society recognizes a person as an individual with his individual liberties and freedoms, but only if the person recognizes society as a brotherhood of individuals. To be part of a democracy, one must fight the natural tendency to demand equality and freedom for oneself, and not for others.

Of course, there are those who say that because it opposes, or conflicts with man's nat-

ural desire for personal gain, democracy will defeat itself. But democracy has its own peculiar strength. This strength lies in the fact that democracy tends to bring men together into agreement—it satisfies and reconciles all involved. Its strength thus lies in the justice, humanity, and loyalty which are evolved from this agreement between men.

To be sure, as long as democracy exists, there will always be a mild state of confusion and conflict. But what are these conflicts? Conflicts are the instruments of change and progress—they are the propelling force behind democracy.

For democracy there is always a future, and a bright one, too. Its potentialities have never been fully realized, and it would take a person gifted with a fertile imagination to think of all the many possibilities that democracy has in store for a nation of the 21st century.

As the well-known philosopher, Irwin Edman, has written: "It is by the fire of this dream (democracy), that the future is lighted, rather than by the flames of destruction that now, as often in the past, have violated—but never for very long—the faith in the human dignity of each man in a society of brotherhood and freedom."

Democracy is a powerful force. It represents a gigantic struggle toward some unattainable goal. But even if this struggle never succeeds entirely, out of it can come the courage and the faith that will maintain democracy as a dynamic force for eternity.

Business-Managed Ruin

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave granted, I wish to insert in the Record the following editorial from the Denver Post of December 9, 1954, entitled "Business-Managed Ruin":

BUSINESS-MANAGED RUIN

This country is spending \$35 billion to \$40 billion a year for defense. That's where most of the people's money is going. Figure out a way to cut defense spending, and you've got a way to cut taxes—really cut 'em.

Meanwhile, the politicians talk about economy. A balanced budget. President Eisenhower and his team have worked hard to reduce spending. They have not been entirely unsuccessful. But the costs of an Army, a Navy, and Air Force, and the fantastic gismos they use or will use, still levy a disheartening tithe on the taxpayer.

Looking ahead a few years, there's little relief, real relief, in sight. The best hope for sustaining the keep-home pay of the average guy, after taxes, is that there will be more taxpayers and more taxable wealth to carry the load. Nobody foresees a fire sale on arms or a deflation in their cost. Would that we could.

In view of the foregoing, is it good business to economize on Federal functions that add wealth—agricultural, industrial, taxable wealth—to the United States?

That's what Members of Congress are, in effect, doing when they wield their hatchets on western reclamation. They simply see no difference between operating expense and capital outlay. A business thus managed would be a runt, no less. They're saving pennies today that will cost dollars tomorrow,

while retarding the growth of a country that may, some day, need every ounce of its strength to survive.

That's good business? Hah! That's business-managed ruin.

Stimulation of Economic Growth in the Free World

EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, February 25, 1955

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement on import-export policy, made on February 8, 1955, by Mr. O. R. Strackbein, chairman of the Nationwide Committee of Industry, Agriculture, and Labor, before the Joint Committee on the Economic Report.

There being no objection, the statement was ordered to be printed in the Record, as follows:

The President in his special message to Congress on January 10, 1955, stated: "The Nation's enlightened self-interest and sense of responsibility as a leader among the free nations require a foreign economic program that will stimulate economic growth in the free world through enlarging opportunities for the fuller operation of the forces of free enterprise and competitive markets."

He added that "our own self-interest requires such a program because (1) economic strength among our allies is essential to our security; (2) economic growth in underdeveloped areas is necessary to lessen international instability growing out of the vulnerability of such areas to Communist penetration and subversion; and (3) an increasing volume of world production and trade will help assure our own economic growth and a rising standard of living among our own people."

Thereafter the message contained, among other things, specific legislative recommendations that had 5 days earlier made their appearance in H. R. 1 or the trade agreements extension bill of 1955 introduced by Mr. JERE COOPER, Democrat, of Tennessee, chairman of the House Committee on Ways and Means.

The statements above quoted are acceptable as generalities, but the extent to which the attainment of the stated goals or objectives rests upon the provisions of H. R. 1, it is based upon certain false assumptions and erroneous deductions from past achievements and failures. The message, to repeat a part of it, says:

"An increasing volume of world production and trade will help assure our own economic growth and a rising standard of living among our own people."

Of course, it would not necessarily do anything of the kind. Increasing world production and trade could just as easily take place at our expense and to our detriment.

The sublime or naive faith in foreign trade as the great cure-all for the world's economic ills or as a sure road to the peace of the world, reflected in the message, is a curse and an affliction. It has prevented a clear-headed assessment of the facts for too many years and has reached the ridiculous stage. It is like a spell or a hypnosis under which the victim merely repeats uncritically what the hypnotist says. Or, differently stated, it ranks as a nostrum with the no-

tion that if 1 spoonful of medicine is good, 2 spoonfuls are twice as good.

Trade is not and never was a good thing in and of itself. It can be evil and harmful, as the trade in opium. It may be thoroughly immoral as is prostitution. The slave trade was lucrative; but was it good? The trade in ivory created exchange and added to the income of the people who engaged in it; but was it in the national interest of the African tribes where it was carried on?

The halo must be torn from international trade before we can reason soberly about it. Am I then saying that the President is naive or that those who participated in shaping the part of the message relating to trade are naive or unthinking?

A whole people can be blind. A whole national leadership can be led along by a false idea until it explodes in their face. We do not have to strain our memories for examples.

One notion held not so many years ago was that Russia would quickly crumble under the Hitler onslaught. The fallacy of that judgment was amply demonstrated by events. Another notion was that the German people would throw up their arms and surrender once the war went against them. That also was a false estimate, very widely accepted. There are enough of such false notions and fads floating around in other fields, such as medicine, diet, child psychology, etc., to give us pause. Ordinarily, it is necessary only to wait a few years for the upset or for knowledge to catch up. In the field of trade we cling to a used-up idea because we do not seem to know how, when, or where to stop.

It is understandable why certain export interests wish to perpetuate the idea that increased trade, meaning, of course, increased exports, is an unmixed blessing. On the other hand, the support of this idea by economists and private organizations of voters who cut across the economic spectrum merely suggests a bankruptcy of ideas. This in turn may be the result of immersion in a constant flow of inspired comment that itself has taken on the dangerous aspect of unreflecting acceptance of what is fed to it.

After 20 years of tariff reductions, carried out in 29 bilateral agreements, followed by three multilateral agreements; after a reduction of 75 percent in the protection afforded by our tariff and after witnessing the great number of nontariff restrictions on trade imposed by other countries, it is about time that we turned away from this broken-down vehicle to carry us to the promised land. Many of these nontariff restrictions were justified and justifiable and were symptomatic of the economic disruption of war; but that does not change the fact of their existence or obliterate their cause.

We would do far better to study the great shifts that have taken place in the basic foundations of trade in the past 15 years; the distortions in the world economy caused by the great upheavals of World War II and the effects of the political and military realignments of the world. We should ponder the meaning of a policy that would subordinate the strongest economy in the world to the vicissitudes of a necessarily shifting diplomacy in an unsettled world.

We have in the past 10 years contributed heavily to the righting of the war-upset world. We have greatly liberalized our trade. We have greatly increased our imports. They are more than half again as high per capita in physical volume as in 1938-39.

Our diplomacy has been profoundly at fault in not saying these things to the world about our trade. On the contrary, our diplomats and various officials traveling about overseas have aided and abetted the idea that it was our stiff-necked policy about tariffs and trade that caused and sustained the dollar gap. They converted the protests of other countries thus incited into instru-

ments of political pressure on the home front in behalf of more tariff cuts. Only very recently has there been some evidence of a change.

We have actually reached the point in our tariff reductions where a halt is urgent. We have cut to the quick and in some instances well into the living nerves of many of our producers. However, no great reversal is involved; no general rise in tariff rates.

Our producers who are asked to absorb the foreign competition uncovered by 20 years of tariff-cutting are entitled to a remedy against errors of judgment committed in the wholesale approach to tariff cuts or against adverse changes in competitive conditions. There is no demand for undoing such good as may have come from the liberalized trade policy; only for a means of rooting out the evils. This remedy is not in hand. An escape clause that is more responsive to the needs of the case than the present one is called for.

All the minimizing of the losses caused or threatened by lower tariffs, so eagerly practiced by those interested in import profits or export markets or in upholding an intellectual position cannot overcome the very widespread and legitimate concern of the exposed industries and their workers. Final success in this campaign of belittlement would in any case succeed in depriving the very propagators of any real reason for advocating their own program.

In a nutshell, the trade-agreements program has run out of magic. Its constant elevation to the position of arbiter of world economic questions is not justified. As a measure that may be looked to for the attainment and maintenance of full domestic employment, the further general lowering of tariffs would bring us greater liabilities than assets. There is much more employment at stake, directly and indirectly, in the industries and agricultural pursuits that are vulnerable to import competition than exists in manufacturing or producing for export.

The fact that some of these producers are already highly protected by import quotas, such as wheat, wheat flour, and cotton, does not remove them from the list of exposed producers or from the list of beneficiaries of protection. That these groups themselves heavily support freer trade for others is only a measure of the high degree of consistency of which man is capable.

As for investment in foreign countries as a means of developing and strengthening them, the idea has merit; but again it is not foreign investment as such that is important. The kind of investment and the conditions under which it is made are more important. Investment in economically unsound projects will not only not accomplish what is sought, but will go sour. The same may be said of investment where expropriation, nationalization, or refusal to allow profit transfers may sooner or later confront the investors.

Inasmuch as tax incentives would tend to overcome the prudence and caution that should be exercised in such investments, their long-term value may be questioned. Also as inducements to industry to seek low-wage areas for location of new plants, tax incentives on foreign investments might do more harm than good. If our capital cannot find foreign outlets that are sound enough or free enough from state control or confiscation to make them attractive without special tax incentives, it certainly is not clear that the granting of such incentives would remove their obstacles to investment; but they might cause the taking of unjustifiable risk.

From present trends of world population it does not appear that our point 4 and similar elements of assistance will accomplish much more than to demonstrate the continuing validity of the Malthusian theory of population.

Justice in a New State

EXTENSION OF REMARKS OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

JUSTICE IN A NEW STATE

(By the Honorable Shneur Zalman Cheshin, deputy president of the Supreme Court of Israel)

(EDITOR'S NOTE.—This paper is an adaptation of lectures delivered by Judge Cheshin before the association, the American-Israel Society and the Foreign Law Association.)

Four cases involving points of constitutional law of the greatest importance have recently come before the Supreme Court of Israel. The facts of the first case were briefly as follows:

According to our press law, the Minister of the Interior is authorized to suspend publication of a newspaper which publishes material likely to undermine the security of the state or endanger the peace of the inhabitants, but he must specify in his order the term of suspension.

Not so very long ago two newspapers, one Arabic and one Hebrew, severely criticized the foreign policy of our Government. The Minister of the Interior used his authority to suspend the publication of these two newspapers for a number of weeks.

They then applied to the supreme court sitting as a high court of justice for an order nisi in the nature of a writ of mandamus directing the Minister of the Interior to appear before the court and show cause why he should not cancel his order of suspension. Thus arose the issue of the freedom of the press involving, as it does, human rights and civil liberties.

Case No. 2 involved an Israeli Arab who was apprehended by a military commander and kept in prison. His whereabouts were not made known either to his family or to the civil authorities. Attorneys tried in vain to see him, to locate him, and to get information from him as to the reason of his apprehension. All their attempts were unsuccessful. His family therefore applied to the Supreme Court of Israel sitting as a high court of justice for a writ of habeas corpus—an order directing the jailers to appear in court and to show cause why they kept him without warrant of arrest and without bringing him to trial, and why he should not be released forthwith.

Case No. 3 also involves an Israeli Arab who, at the age of 62, although he was already married and the father of five children, fell in love with a girl of 20 and wanted to marry her. He appeared before the Kadi, who is the religious dignitary, or priest, of the Moslems, and asked him to perform the wedding ceremony, offering proof that he had purchased the girl from her father and paid a high price, and was, therefore, entitled to marry her. He also pointed out that Moslem religious law provides that a man may marry more than one wife.

The Kadi, however, refused to perform the ceremony, saying that the days have passed when a man may marry as many wives as he wishes. Israel, he explained, now has a law providing equal rights for man and woman and, in view of the fact that a woman may not have more than one husband, it follows that a man should have only one wife. And so the Kadi refused to perform the ceremony.

The elderly suitor then appealed to the supreme court of Israel sitting as a high court of justice. He complained that his right to freedom of worship was being infringed and he asked for an order directing the Kadi to perform the ceremony.

Case No. 4 had to do with a teacher who was discharged from his job, because of his political inclinations, by the director of education on the command of the minister of defense. It had transpired that before the establishment of the State of Israel this teacher had been the leading spirit in one of the underground movements and that he had not abandoned his revolutionary tenets and inclinations.

He, too, resorted to the supreme court sitting as a high court of justice, asking for an order directing the director of education to cancel his dismissal and to reinstate him in his position.

THE STRUCTURE OF GOVERNMENT

Before revealing what the decisions of the court were in these four cases, I think it worthwhile to explain, at least sketchily, the structure of the Government of Israel, including that of the judicial system, so as to make clear why these cases were brought to the supreme court sitting as a high court of justice.

As nearly everyone knows, Israel is a part of an area long known as Palestine. Up to the end of World War I, Palestine itself was part of the Turkish Empire and consequently lived under Turkish law. Then, for a period of 30 years, the British, under a mandate from the League of Nations to administer the area and to establish in it a Jewish national home, carried on the governmental functions.

On the 14th of May, 1948, when Israel was established as a State in accordance with a resolution adopted by the General Assembly of the United Nations some 6 months before, Israelis faced a very interesting and vital practical problem, a problem such as the Americans faced soon after they declared the independence of the Colonies from Great Britain, namely, what law should be administered in the new State? Should it be entirely new law? Should it continue to be the law administered in Palestine theretofore, a law mainly based on English law and jurisprudence?

The mandatory regime, during its 30 years of existence, did indeed do a remarkable job in the field of legislation whatever may have been the record in other aspects of governmental action. It must be admitted that a large body of law was enacted which not only was appropriate to the development of a progressive community in Palestine but was, in large part, adapted to its needs at the time. Should this body of law be thrown overboard or should it be kept intact and acted upon?

We have adopted the very same solution that the ancestors of Americans of today adopted after they severed political, economic and, to a degree, intellectual ties with the mother country.

Immediately upon the establishment of the State of Israel, there was created a Council of State of 37 members and from these 13 were selected to form a provisional government. They enacted the first fundamental law of the new nation only a few days after the signing of the declaration of independence. To understand the spirit of this very important act, it will help to refer to a few sentences of that declaration, part of the articles of faith of the founders of the State of Israel and its inhabitants.

The proclamation of independence says that "the State of Israel . . . will be based on freedom, justice, and peace as envisaged by the prophets of Israel; it will ensure complete equality of social and political rights to all its inhabitants, irrespective of religion,

race or sex; it will guarantee freedom of religion, conscience, language, education, and culture; it will safeguard the holy places of all religions; and it will be faithful to the principles of the Charter of the United Nations."

These were the articles of faith of the founders of the State of Israel. It was contemplated to have them implemented in a constitution, in a basic law of the land or in subsidiary legislation. Yet the full flowering of these precepts could not occur in a moment. Israel has been engaged, during the past 6 years, in a struggle for survival, and a struggle to make a home for hundreds of thousands of Jewish immigrants who have come from all parts of the world—the remnants of the Nazi victims who are living witnesses to the denial of every human right in so many countries.

SOURCES OF THE LAW

A few days after the establishment of the State of Israel and the proclamation of our independence, a law, called the law and administration ordinance, was enacted. This law prescribes how the government shall be carried on. It says, most importantly, that the law of Palestine, as it existed on the eve of the termination of the mandate—the 14th of May, 1948—shall remain the law of Israel, insofar as there is nothing therein repugnant to the said ordinance or to the other laws which may be enacted by the Provisional Council of State, and subject to such modifications as may result from the establishment of the state.

Now, what was this law that we inherited at the outset? It had a number of sources and these are worth examining, for they help to give us an understanding of many of the problems which members of the bench and bar, litigants and legislators, have encountered and still meet.

There are, of course, the remnants of the Turkish law that was administered in Palestine, including what is now Israel, before the British occupation. This law is far from modern or suited to a progressive and intellectual community. Yet parts of it were and still are in force in Israel.

Much of the Turkish law was based on Moslem religious rules. These do not recognize locomotives, steam trolleys, or electrically driven vehicles but they do have a good deal to say about donkeys, camels, cows, and horses. The entire law of torts, moreover, is concerned with damage done by these animals. A few examples are illuminating:

"If dirt and mud are scattered about by the hoofs of an animal and another person's clothes are splashed therewith; or if such animal kicks with his hind legs or swishes his tail and inflicts injury thereby, there is no need to make good the loss. But a person riding an animal is responsible for collision or for blows inflicted by the front feet or by the head."

(Of course this point of view is nothing to joke about or laugh at. This was the law of a community of yesterday. It was appropriate for its time. It is no longer appropriate for the State of Israel or for any other modern society. I cite it to illustrate the problems with which our first legislators were faced in the new state. The intricate problems of the collisions of cars were unknown in such rules because the prophet Mohammed didn't know about automobiles; they had not yet been invented in his day.)

"If any person drags the clothes of another person and tears them, he must make good the loss and pay the full value thereof. If a person, however, takes hold of the clothes of another, and the owner of such clothes draws them away and, by so doing tears them, such person is liable to make good only one-half the value of the garment. Similarly, if any person sits upon the skirt of an-

other, and the owner, unaware thereof, gets up, and tears his clothes, such person must make good one-half the value of the clothes."

This is the notion of sharing the loss. "The owner of a pearl worth 50 piastres drops it and it is swallowed by a hen worth 5 piastres. The owner of the pearl may take the hen upon the payment of 5 piastres."

Let us see 1 or 2 examples of the law providing for neighborly relations.

"If a person climbs up the fruit trees in his garden, and thereby overlooks the women's quarters of his neighbor, such a person must give information every time he intends to climb such trees in order that the women may cover themselves. Should he fail to give such information, the court may forthwith prohibit him from climbing such tree. . . ."

(This stems, of course, from the Moslem requirement that women must cover their faces. A violation of the above rule is considered to amount to injury. The old Turkish law even went so far as to require a householder to build a wall before a newly constructed window, overlooking a place where women of an adjoining neighbor foregather with uncovered faces.)

The regard for women can also be seen from the following provision in the law of evidence: "In civil cases evidence is only valid when given by 2 males, or by 1 male and 2 females."

(Here is reflected the social status of women under the old Turkish rule in provisions that have now become obsolete under the women's equal rights law of 1951.)

It would be possible to cite many other examples of the rules of law that arose out of social conditions of another age. Those I have mentioned, however, serve to show something of the provisions of the Turkish law with which we have had to deal.

The law and administration ordinance, mentioned earlier, provided as a source of law also the many important enactments, dealing with all areas of human endeavor, that were made by the British during their 30 years of administration as the mandatory power.

A third source of law is the provision enacted at the time by the mandatory government that any gap which may be found in the laws taken over from the Turkish administration shall be filled by the common law of England and the principles of equity. This is important to keep in mind, for much of the common law is still applied in Israel in spite of the fact that we have severed all ties with Great Britain.

The courts in Israel function, of course, against the background of the other organs of government, as well as against that of the sources of law. Our Knesseth, or Parliament, is composed of a single chamber of 120 members elected according to a system of proportional representation. The presiding officer, or the speaker, is elected by the members from among their number. Bills are handled by committees and are enacted only after three readings with ample opportunity for argument, debate, and amendment.

The President of Israel also is elected by secret ballot of the members of the Knesseth. In his selection there are no limitations as to sex or religion. He may be a man or woman, a Moslem, a Christian, or a Jew. The duties and the powers of the President of the state, however, are restricted; he charges one of the members of the Knesseth to form a government, appoints foreign representatives, receives foreign diplomats, and accepts the reports of the Prime Minister as occasion demands.

The Prime Minister is the focal point of governmental structure as he is in Great Britain. He presides over meetings of the cabinet, acts as the Government's chief

spokesman, and, in effect, is the chief executive officer of the state.

Certainly one of the most distinctive aspects of the governmental structure of Israel is its judicial system because of the novel method that has been adopted for the selection of judges from the lowest bench to the highest. This method has been devised to remove the pressures of politics from their selection and yet to obtain the benefit of the best-qualified opinion.

Under the Israel plan judges are appointed by the President of the State on the recommendation of a 9-member appointments committee made up of 3 judges of the supreme court (including its president), the Minister of Justice, and another member of the Cabinet, 2 members of the Knesseth who are chosen by the full membership, and 2 members of the bar, designated by the council of the Israel Bar Association to serve on the committee for a period of 3 years. The President of the State must honor the recommendation of this committee. All judges are appointed for life or until reaching the pensionable age of 70, when they must retire. They can be removed from office only for misbehavior after a hearing by a specially constituted committee.

As might be expected, the magistrates' courts have the most limited jurisdiction, both in civil and criminal cases. They number about 20 in all and are established in nearly every town and village of importance so as to be accessible to the people.

Appeals from the magistrates' courts go to the district courts, the second level of our judicial system. There are 3 district courts, 1 in Jerusalem, 1 in Tel Aviv, and 1 in Haifa. The one in Haifa goes on circuit to Safad and Nazareth in Galilee; the one in Jerusalem to Beersheba.

On the highest level, of course, is the supreme court. It holds its sessions in Jerusalem, the capital of Israel. The supreme court has 9 judges who sit in groups of at least 3. It hears appeals, both civil and criminal, from judgments of the district courts in the exercise of appellate jurisdiction. The supreme court also has original jurisdiction, and as a high court of justice hears applications that come from various quarters, often from the minority groups in Israel or from individuals who feel that their civil liberties or rights have been infringed by the Government or one of its departments. The supreme court as a high court of justice sits in cases involving habeas corpus, mandamus, quo warrant, and certiorari—the four prerogative writs.

When the Supreme Court of Israel sits as a high court of justice it does so to safeguard the interests and rights of the individual. That is why, in one of the cases mentioned earlier, a writ of habeas corpus was required, and, in another, a writ of mandamus. The court had to consider in those cases whether the civil liberties of the individuals concerned had been infringed.

THE SUPREME COURT DECIDES

We have now come, by a rather circuitous route but perhaps a useful one, to an appropriate point to examine the opinions laid down by the Supreme Court in our 4 cases.

In the first case, that of the newspaper publisher, who came alleging infringement of the freedom of the press, the Court said: "The principle of free expression is a principle closely connected with the process of a democratic government. Under an autocratic regime the ruler is regarded as a superman and as one who knows best what is good and what is bad for his subjects. It is, therefore, prohibited to criticize in public the political actions of such ruler. In a democratic country, on the other hand, the rulers are only the representatives of the people who elected them. Every individual may, therefore, criticize the political actions of the elected representatives at any time,

whether with a view to having them amend their action or in order to cause their immediate resignation and their replacement at election time."

The gist of this is clear, but here the Court also relied upon 3 authorities, 1 British and 2 American.

The British authority, Scrutton, J., in a famous opinion of his said that, "You really believe in freedom of speech, if you are willing to allow it to men whose opinions seem to you wrong or even dangerous." Otherwise there is no freedom of the press and no freedom of speech.

In a very famous case *Schenk v. The United States*, Justice Holmes said:

"When a nation is at war many things that might be said in time of peace are such a hindrance to its effort that their utterance will not be endured so long as men fight, and no court could regard them as protected by any constitutional right."

Meaning thereby that in time of peace everyone may criticize the Government even though his criticism may be severe and harsh.

The following are the words of Justice Brandeis, also from a very famous case, the case of *Whitney v. People of the State of California*:

"Those who won our independence believe that * * * freedom to think as you will and to speak as you think are means indispensable to the discovery and spread of political truth; that without free speech and assembly discussion would be futile * * *. Only an emergency can justify repression (of free expression). Such must be the rule if authority is to be reconciled to freedom."

These were the words that Justice Brandeis used, and these were the very words upon which the Supreme Court of Israel based its decision, not because it was bound by this authority but because of its persuasive argument.

After analyzing the two articles that were published in the two newspapers in the Hebrew and Arab press, the court came to the conclusion that even though they may be subversive, they did not tend to undermine the security of the country and did not endanger the peace of the public. Therefore, the court ordered the Minister of Interior to cancel his order of suspension and to allow these newspapers to resume their publication.

Mind you, the State of Israel is still in a state of emergency at the present time. There are border incidents every day and every night. Some claim that technically we are still in a state of war, and the Supreme Court of Israel dares at such a time to say that, in spite of all of that, human rights must be protected and the civil liberties cannot be infringed even in time of emergency.

In the second case, that of the Arab who was detained without trial, without the chance of being able to see an advocate, I should now like to say that we did not have enough time to enshrine all of the articles of faith of our proclamation of independence into positive law. Our statutes have not been revised entirely and, therefore, we still have remnants of the British Emergency Regulations. These emergency regulations say, in a notable section, known as section 111, that the Military Commander may detain any person without trial if he thinks that his activities are dangerous and detrimental to the State. However, the very same regulation provides that there shall be a committee appointed by the Minister of Defense to which such a detainee may bring his objections. This committee sits in a quasi-judicial capacity. It has no great powers but, nevertheless, it at least gives the detainee somebody to resort to.

The Supreme Court, after hearing both sides of the story, found that this man had been detained without trial and without

warrant of arrest and that no committee had been set up before he was detained, but only after the event. Thus a very important question arose as to the legality of the order of detention because at the time it was made, the detainee had no remedy. This is what the court had to say:

"In time of war authorities may deem it expedient in certain cases not to announce the reason for detention or the place of detention. However, in the absence of an explanation shedding light on the subject, one cannot avoid the impression that there are officials who do not yet grasp the idea that the attorney who defends the interests of his client is also rendering a valuable service to the State by helping to preserve the most fundamental rights of the subject; and it is the duty of the authorities to give him all possible help, and not to hinder him or thwart his efforts by repeatedly telling him, 'Go and come back.'"

That was as to the question why no advocates were permitted to see the man under detention. As to the merits of the case, the court said:

"Regulation 111 makes provisions which must be accepted so long as the state of emergency requires them and which ordinarily would have been declared unreasonable because they are incompatible with the ordinary rights of the individual. * * * Some slight relief was afforded to a subject who has been so detained by imposing upon the authorities the duty to establish, for the purpose of that regulation, a committee the functions of which shall be to consider any objection that a detainee might find it necessary to raise and to make its recommendations to the Military Commander. * * * It is entirely immaterial that this right of the detainee is so slender. On the contrary, if as against the immense power vested in the Military Commander, the detainee is granted so small a protection, it must be assumed that the intention of the legislature was that at least this right should be closely and carefully guarded. * * * This right is vested in the detainee from the very minute an order of detention was made against him and when a Military Commander makes use of this extraordinary power he is in duty bound to notify the detainee at once that he is being detained by virtue of regulation 111 in order to enable him to exercise forthwith his right to appeal to the committee. But in order that he may do so there must be a committee in existence at the time of his detention. It follows, therefore, that the Military Commander may exercise his power to make the order only if and when there is a committee in existence, and since the order in this case was made before the committee was established, the court holds that the very exercise of the powers under the regulations was illegal."

Consequently an immediate order was issued for the release of the detainee. The court further observed that the authorities are amenable to the law just as is an individual.

From the two decisions examined so far, it might be supposed that the Supreme Court, sitting as a high court of justice, always renders decisions against the Government, but that would be leaping at conclusions indeed.

When the elderly and married Arab suitor appealed to the Supreme Court sitting as a high court of justice, he contended that his right of freedom to worship had been infringed by the refusal of the Kadi to perform the marriage ceremony.

The Supreme Court looked into the matter and found a case that had been adjudicated in the United States and which appeared almost analogous to this one. This case, *Reynolds v. The United States*, involved a Mormon who was convicted of multiple marriage when Utah was a Territory under an act of Congress of 1862, prohibiting plurality marriages in the Territories of the

United States. He appealed to the United States Supreme Court on the contention that the said act of Congress was unconstitutional and that he was being deprived of his rights under the first amendment which guarantees freedom of worship. Furthermore, he argued that, according to the Mormon faith, it was mandatory upon him to marry more than one wife. The United States Supreme Court did not accept his contention.

In the case of the elderly suitor we decided that had the Moslem religion actually commanded a man to marry more than one wife, then any act by the State of Israel preventing him from doing so would have been an infringement of his constitutional or religious rights. All the Moslem religion says, however, is, "we permit you, we will not interfere." That is only permissive and not mandatory. A law that runs counter merely to permission does not infringe the rights of the individual. Therefore, we threw the case out of court.

Finally, in the case of the teacher who was discharged because of his political inclinations and tendencies, on the recommendation of the Minister of Defense to the Director of Education, this is what the Supreme Court said:

"Without in any way disparaging the honor and dignity of the Minister of Defense, and no one in this country treats lightly the heavy burden and the great responsibilities that are cast upon him, matters of education do no come within his jurisdiction. For these purposes a Director of Education has been appointed, and, although he may consult with other officials and departments as to the course to be pursued by him, he may not act as an instrument in the hands of others in matters falling within the purview of his office. Whenever the authorities act in a manner affecting the rights of the individual it is incumbent upon them to show that the law authorizes them so to do.

"No evidence has been adduced that applicant advocates the use of force or revolutionary force. The instruction or order issued by the Minister of Defense to the Director of Education not to engage the applicant as a teacher was illegal, and, therefore, of no effect."

The Director of Education, the Court added, did have the authority to dismiss the teacher but he acted, in this case, not upon his own judgment but upon the recommendation and command of some other officer. In other words his judgment was arbitrary, for he did not have the proper state of mind in which to exercise his own best judgment. The Supreme Court therefore ordered the cancellation of the order of the discharge.

THE LAW STRENGTHENS CIVIL RIGHTS

I have tried to explain that the evolution of the law in Israel has tended toward the strengthening of civil rights for all, even under the most adverse, precarious, and serious circumstances resulting from a state of war.

This is the trend and we hope it will continue. For the law of Israel is not a dead letter; it is a living law. It does not stand still. The supremacy of the law, the rule of law, is by no means a novel doctrine in the United States of America. Even children in the home know of it. Unfortunately, it is not generally so in our part of the world.

I have tried to explain the workings of the various organs of state, more particularly the judiciary. In our neighboring states the judiciary is a servant of some other organ of the state. The judiciary is in the hands of a cabinet and the cabinet is in the hands of an army.

In the State of Israel it is the other way around. The army is controlled by the government and the government complies with the law as interpreted when necessary by the supreme court sitting as a high court of justice. These are fundamentals of a free democracy.

Israel is a bastion of democracy in the Middle East. There is no reason why it should ever cease to be so. We hope that with the help of the free democracies of the world we shall be able to implement all the articles of faith that were laid down in our declaration of independence.

Lithuanian Independence Day

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks, I wish to include a resolution pertaining to Lithuanian Independent Day, which was adopted at a gathering of Wyoming Valley, Pa., Lithuanians held Sunday, February 13, 1955:

Unanimously adopted, after due deliberation, by the Lithuanian Americans of Wyoming Valley, gathered for the commemoration of the 37th anniversary of the Declaration of Independence by the people of Lithuania.

Whereas for almost 15 years, Lithuania, one of the Baltic nations, has borne the yoke of slavery as a result of the brutal and unprovoked aggression by the Soviet Union;

Whereas a campaign of physically exterminating the Lithuanian entity has been conducted by the Kremlin masters on a scale unheard of heretofore;

Whereas no nation, great or small, can today feel protected from the claim of international communism supported, as it is, by all the destructive weapons that modern civilization has devised for mankind;

Whereas because of the global and totalistic nature of the Kremlin's peaceful coexistence line is designed primarily to gain time in order to divide and destroy free-world alliances and pave the way for world conquest: Therefore be it

Resolved, That this gathering of American citizens of Lithuanian descent of Wyoming Valley pledge their wholehearted support of this great country's efforts to achieve lasting peace and justice in the world, and urge the Federal Government of the United States to respond to the demands of this crucial time by initiating a positive and dynamic political program against the international Communist conspiracy; be it further

Resolved, That in the opinion of the Lithuanian Americans of this valley, the following steps should be undertaken as a part of such a program and with respect to the enslaved nations:

1. That in advancement of the program for world peace and freedom a special stress be laid upon the necessity to hasten liberation of the captive peoples, and that all acts or omissions which tend to confirm their enslavement be rejected.

2. That the resistance movements of the enslaved nations be encouraged and supported through the funds already authorized by Congress for such purposes.

3. That a new committee to investigate the facts and techniques of Communist aggression be appointed by the 84th Congress, in order to continue and complete the work splendidly done, during the last Congress, by the Select Committee on Communist Aggression headed by former Representative Charles Kersten.

4. That the United States Government sponsor a resolution in the United Nations based upon findings and conclusions of said

investigation, denouncing the Soviet Union as an aggressor against all the nations now enslaved by communism.

5. Be it finally resolved that this gathering voice its deepest gratitude to the Federal Government and the Congress of the United States for their sympathy with and unchanging favorable attitude toward the eventual restoration of independence of Lithuania.

THOMAS E. MACK, Esq.,
Committee Chairman.
GENEVIEVE B. NATTUS,
Committee Secretary.

Our New Federal Interstate Highway System

EXTENSION OF REMARKS

OF

HON. OTTO KRUEGER

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. KRUEGER. Mr. Speaker, under leave to extend my remarks, I wish to insert the text of the following two resolutions passed by North Dakota's 34th Legislative Assembly; one—House Resolution 9, the other Senate Resolution 6, both relating to a vital problem before us—that of extending an adequate interstate highway system over the Nation; and requesting that Highway No. 2 crossing our State be designated an integral part of the national system of defense highways, and that it be placed on the national system of interstate highways:

House Resolution 9

Resolution to the Honorable Dwight D. Eisenhower, President of the United States; to the Congress of the United States; to the Honorable Sinclair Weeks, Secretary of the Department of Commerce; to the Honorable Charles E. Wilson, Secretary of Defense; to the Honorable C. D. Curtiss, Chief of Administration for the Bureau of Public Roads; to the Honorable Milton R. Young and the Honorable William Langer, United States Senators from the State of North Dakota; to the Honorable Otto Krueger and the Honorable Usher L. Burdick, Congressmen from the State of North Dakota; requesting a reallocation and increased strategic mileage in the Federal Aid Highway Act of 1944 to add United States Highway Two to the National Interstate Highway System

Whereas the Federal Aid Highway Act of 1944, which act amended the Federal Road Act approved July 11, 1916, as amended and supplemented, provided that "There shall be designated in the Continental United States a national system of interstate highways not exceeding 40,000 miles in extent, so located as to connect by routes as direct as practicable the principal metropolitan areas, cities and industrial centers, to serve the national defense and to connect at suitable border points with routes of continental importance in the Dominion of Canada and the Republic of Mexico"; and

Whereas the act further provided that "the routes of the national system of interstate highways shall be selected by joint action of the highway departments of the several States and the adjoining States," and in another provision required approval by the Federal Works Administrator; and

Whereas Phillip B. Fleming, major general, United States Army, Administrator of

the Federal Works Agencies, caused to be entered a certificate of approval of the national system of interstate highways, dated the second day of August, 1947, which adopted a national system of interstate highways, selected by the joint action of the State highway departments of each State and adjoining States; and

Whereas the national system of interstate highways selected, modified and revised, as aforesaid, is comprised of routes totaling approximately 37,800 miles in extent; and

Whereas there is a balance of 2,200 miles within the 40,000-mile limit provided for in the Federal Aid Act of 1944 which can be placed on the interstate system; and

Whereas United States Highway No. 2 is the shortest route through arterial highway link between Sault Ste. Marie, Mich., and Seattle, Wash., and runs parallel to the northern border of the United States and intercepts all highway communications with Canada in the State of North Dakota as well as the several other boundary States; and

Whereas said United States Highway No. 2 plays an ever-increasing integral and necessary role in the tremendous development of the country's natural resources, namely, oil, coal, gas, iron ore, nuclear, and other minerals, as well as the vast timber industry, and in the vast development of power being generated by the dams constructed and being constructed in the northwest, and in the expanding industrial development potential in the several States and in Canada, notably in the Provinces of Manitoba and Alberta, all of which demands a revision and an increase in our vital defense needs; and

Whereas the said United States Highway No. 2, which can without any difficulty be linked from east coast to west coast through the States of New York, Vermont, New Hampshire, and Maine, and connected with Canada's Highway No. 9, from New York to Montreal, and Highway No. 17, from Montreal to Sault Ste. Marie, which are of importance in the Dominion of Canada, is the only connection between our air-defense bases, the number of which and the personnel involved are known only to Congress, and Department of Defense officials, along the entire northern defense perimeter of the continental United States; and

Whereas under the hourly maximum traffic classifications, the interstate designation of the United States Highway No. 2, to be determined by the Bureau of Public Roads, can be the classification of interstate rural, under the specification for the interstate system set out by the Bureau, this could call for a 2-lane highway with a 100-foot right-of-way; and

Whereas the total mileage involved in this petition is approximately 2,178 miles in length and connects at points in 7 States, from the city of Sault Ste. Marie, Mich., to the city of Everett, Wash.; and

Whereas while this is a petition from the State of North Dakota, it is contemplated the joining by the several other States with similar petitions, action having already been started in the States of Montana, Idaho, and Washington, this is especially true in view of the gigantic growth and expansion of the areas served by, contiguous to, and adjacent to United States Highway No. 2 because such areas, at their accelerated progress, resulting from a shift of population and industry to the Northwestern States and increasing industrial expansion in all areas, demand a revision of the transportation needs; and

Whereas, this request that the designation of the United States Highway No. 2 be placed on the National System of Interstate Highways is made without prejudice to existing interstate highways in the State of North Dakota and in the other States served by the United States Highway No. 2; Now, therefore, be it

Resolved by the House of Representatives of the State of North Dakota, That the

House of Representatives of the State of North Dakota does hereby, most earnestly and respectfully, request that the Congress of the United States recognize the strategic importance of United States Highway No. 2, and through the proper Federal agencies, take immediate action to have United States Highway No. 2 designated an integral part of the national system of defense highways, and that it be placed on the national system of interstate highways; be it further

Resolved, That copies of this resolution be transmitted by the Honorable Norman Brunnsdale, governor of the State of North Dakota; and by the Honorable Ben Meier, secretary of state of North Dakota; to the Honorable Dwight D. Wilson, Secretary of Defense; to the Honorable C. D. Curtiss, chief of administration for the Bureau of Public Roads; to the Honorable Milton R. Young and the Honorable William Langer, United States Senators from North Dakota; to the Honorable Otto Krueger and the Honorable Usher L. Burdick, Congressmen from North Dakota.

*K. A. FITCH,
Speaker of the House,
KENNETH L. MORGAN,
Chief Clerk of the House.*

Senate Resolution 6

Senate resolution to the Honorable Dwight D. Eisenhower, President of the United States; to the Congress of the United States; to the Honorable Sinclair Weeks, Secretary of the Department of Commerce; to the Honorable Charles E. Wilson, Secretary of Defense; to the Honorable C. D. Curtiss, Chief of Administration for the Bureau of Public Roads; to the Honorable Milton R. Young and the Honorable William Langer, United States Senators from the State of North Dakota; to the Honorable Otto Krueger and the Honorable Usher L. Burdick, Congressman from the State of North Dakota; requesting a reallocation and increased strategic mileage in the Federal Aid Highway Act of 1944 to add United States Highway No. 2 to the National Interstate Highway System

Whereas the Federal Aid Highway Act of 1944, which act amended the Federal Road Act, approved July 11, 1916, as amended and supplemented, provided that "there shall be designated in the continental United States a national system of interstate highways not exceeding 40,000 miles in extent, so located as to connect by routes as direct as practicable the principal metropolitan areas, cities, and industrial centers, to serve the national defense and to connect at suitable border points with routes of continental importance in the Dominion of Canada and the Republic of Mexico"; and

Whereas the act further provided that "the routes of the national system of interstate highways shall be selected by joint action of the highway departments of the several States and the adjoining States," and in another provision required approval by the Federal Works Administrator; and

Whereas Phillip B. Fleming, major general, United States Army, Administrator of the Federal Works agencies, caused to be entered a certificate of approval of the national system of interstate highways, dated August 2, 1947, which adopted a national system of interstate highways, selected by the joint action of the State highway departments of each State and adjoining States; and

Whereas the national system of interstate highways selected, modified and revised, as aforesaid, is comprised of routes totaling approximately 37,800 miles in extent; and

Whereas there is a balance of 2,200 miles within the 40,000-mile limit provided for in the Federal Aid Act of 1944 which can be placed on the interstate system; and

Whereas United States Highway No. 2 is the shortest route through arterial highway link between Sault Ste. Marie, Mich., and Seattle, Wash., and runs parallel to the northern border of the United States and intercepts all highway communications with Canada in the State of North Dakota as well as the several other boundary States; and

Whereas said United States Highway No. 2 plays an ever increasing integral and necessary role in the tremendous development of the country's natural resources, namely, oil, coal, gas, iron ore, nuclear, and other minerals, as well as the vast timber industry, and in the vast development of power being generated by the dams constructed and being constructed in the Northwest, and in the expanding industrial development potential in the several States and in Canada, notably in the Provinces of Manitoba and Alberta, all of which demands a revision and an increase in our vital defense needs; and

Whereas the said United States Highway No. 2, which can without any difficulty be linked from east coast to west coast through the States of New York, Vermont, New Hampshire, and Maine, and connected with Canada's Highway No. 9 from New York to Montreal and Highway No. 17 from Montreal to Sault Ste. Marie, which are of importance in the Dominion of Canada, is the only connection between our air-defense bases, the number of which and the personnel involved are known only to Congress, and Department of Defense officials, along with the entire northern-defense perimeter of the continental United States; and

Whereas under the hourly maximum traffic classifications, the interstate designation of the United States Highway No. 2 to be determined by the Bureau of Public Roads, can be the classification of interstate rural, under the specification for the interstate system set out by the Bureau, this could call for a two-lane highway with 100-foot right-of-way; and

Whereas the total mileage involved in this petition is approximately 2,178 miles in length and connects at points in 7 States from the city of Sault Ste. Marie, Mich., to the city of Everett, Wash.; and

Whereas, while this is a petition from the State of North Dakota, it is contemplated the joining by the several other States with similar petitions, action having already been started in the States of Montana, Idaho, and Washington, this is especially true in view of the gigantic growth and expansion of the areas served by, contiguous to and adjacent to United States Highway No. 2 because such areas, at their accelerated progress, resulting from a shift of population and industry to the Northwestern States, and increasing industrial expansion in all areas, demand a revision of the transportation needs; and

Whereas this request that the designation of the United States Highway No. 2 be placed on the National System of Interstate Highways is made without prejudice to existing interstate highways in the State of North Dakota and in the other States served by the United States Highway No. 2; Now, therefore, be it

Resolved by the Senate of the State of North Dakota, That the senate does hereby, most earnestly and respectfully, request that the Congress of the United States recognize the strategic importance of United States Highway No. 2, and through the proper Federal agencies take immediate action to have United States Highway No. 2 designated an integral part of the national system of defense highways, and that it be placed on the National System of Interstate Highways; be it further

Resolved, That copies of this resolution be transmitted by the Honorable Norman Brunns-

dale, Governor of the State of North Dakota, and by the Honorable Ben Meter, Secretary of State of North Dakota, to the Honorable Dwight D. Eisenhower, President of the United States; to the Congress of the United States; to the Honorable Sinclair Weeks, Secretary of Defense; to the Honorable C. D. Curtis, Chief of Administration for the Bureau of Public Roads; to the Honorable Milton R. Young and the Honorable William Langer, United States Senators from North Dakota; and to the Honorable Otto Krueger and the Honorable Usher L. Burdick, Congressmen from North Dakota.

C. P. DAHL,
President of the Senate.
EDWARD LENO,
Secretary of the Senate.

Address by Hon. Herbert Brownell, Jr.,
Attorney General of the United States,
Before the Republican State Convention,
Detroit, Mich., February 19, 1955

EXTENSION OF REMARKS OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. FORD. Mr. Speaker, under leave to extend my remarks I include an address delivered by the Honorable Herbert Brownell, Jr., Attorney General of the United States, before the Republican State Convention held at Detroit, Michigan, on Saturday, February 19, 1955:

It's always a pleasure for me to get away from Washington for a few hours, to meet and talk with fellow Republicans. It's an opportunity to keep a true perspective on American's problems and America's dreams.

We had a lot of both 2 years ago when the members of the Republican administration moved to Washington. Thank goodness, I can report that many of the worst problems have been conquered and that many of America's dreams are closer to reality. Our Nation has gone a long way under the inspiring leadership of Dwight D. Eisenhower. He has proven to political friend and foe alike that he is truly a great man, a great President.

Michigan has a wonderful squad working on President Eisenhower's team. You have given our President men of outstanding ability and integrity. Charley Wilson is doing a great job at Defense, and so is Governor Brucker. Joe Dodge put a lot of good old Michigan commonsense into the budget. Art Summerfield is putting the Post Office on a realistic, businesslike base. Senator PORTER has displayed the foresight so vital to sound legislation and decent legislative conduct.

Every one of them—and a lot of other Michigan people—are devoting long, long hours of unselfish work for the administration and for the Nation. I know you are as proud of them as those of us who are privileged to work with them.

I'm just as proud of the fine performance of Fred Kaess here in Detroit and Wendell Miles in western Michigan. They are two of the best of the Justice Department's group of outstanding United States Attorneys.

Your personal interest in government and world affairs is heightened, too, as work progresses on the St. Lawrence seaway. Here is a project which was just a fond

dream since George Washington first envisioned it. And the seaway, as you know, has been advocated by every President since McKinley. Yet, when Dwight Eisenhower presented the facts and the needs fully—and then went to bat for it—a Republican Congress passed the legislation to make that dream a reality. The seaway will bring deep-draft oceangoing vessels to the Lakes, letting your industry compete equitably for foreign trade. It will mean new factories, new jobs, and new prosperity for Michigan and for the entire Nation. History shows that any major advance in transportation benefits the entire Nation's economy—not just that of the immediate area served.

And let's talk realistically about prosperity for just a moment.

It was a big issue up here last fall. You still were making the transition from a wartime boom, based on blood and bullets, to a peacetime economy, based on the needs of our growing population and our rising standard of living. Also, campaign time was change-over time in the auto industry and a lot of people were temporarily out of work.

There was a lot of political talk of gloom and doom in the past 2 years. Yet, today, no one challenges the fact that your Republican administration has guided the Nation successfully from a wartime to a peacetime economy without the great depression so many predicted. No one challenges the fact that your Republican administration has helped bring our Nation instead its two most prosperous years in history in terms of wages, in terms of jobs, and in terms of earnings. We're well on our way right now to a third fine year.

This all was done without mirrors and without controls on the economy—on the prices a businessman could ask or the wages a worker could seek. Even more important, both can now plan realistically on the buying power of the dollar they will earn later this month, or next summer, or next winter, because inflation has been halted. The retired couple no longer find 10 or 20 dollars being taken out of each hard won hundred dollars every year by unchecked inflation. Neither do the parents trying to save money to give their children an education, nor the young couple saving for a decent home of their own, nor the farmer saving for new machinery or new stock.

All this is to the benefit of all Americans. So is the sense of security and faith that came from the end of that inflation, the end of the fighting in Korea, the end of loose security in Government, the end of corruption in Washington. It is such matters of the common good I wish to discuss primarily today because President Eisenhower's entire aim is to be a President for all Americans.

We all recall proudly that Republican Abraham Lincoln declared repeatedly he was for that "which will give the greatest good to the greatest number." Republican Dwight Eisenhower said in his recent state of the Union message, "Let the general good be our yardstick on every great issue."

The philosophy of Lincoln has returned to Washington.

President Eisenhower summed it up well for us when he said:

"This administration is committed to a program of progressive moderation."

He said that program must be "liberal in its human concerns, conservative in its economic proposals, constructively dynamic and optimistic in its appraisal of the future."

Progressive moderation is nothing new to the Nation or to the Republican Party. In a speech generally credited with uniting factions within the party just 2 years after its founding, Lincoln asked his fellow Republicans to "appeal to the moderation" of the people. He declared that "we will grow strong by calmness and moderation."

I think you will agree that all forward-looking Americans can support a program of

progressive moderation, especially when we consider what President Eisenhower said in applying it to the individuals and what the administration seeks to do for those individuals. It was this, and I quote:

"We seek increase in their opportunity to enjoy good health, good schools, good homes; we seek a lessening in their fear of personal disaster and in the impact of hardships beyond their control. In this endeavor, we reject Federal domination over State and community, for we seek to strengthen—not weaken—the historic self-reliance of our people."

What does all this mean in specific terms? Well, I think we should first review quickly the first 2 years of the Republican administration and the steps to carry out this program of making this a better Nation for all to live in and to enjoy.

Most necessary, of course, in pursuit of this goal is a strong, growing economy. By keeping it vigorous and free, we create more and more opportunities and an ever-widening share in prosperity for our people.

What has your administration already done to help? Several things. For instance, I've discussed how controls were removed from wages, prices, and materials. Then, through reducing Federal spending, an unprecedented tax cut was possible, and Americans as individuals were the beneficiaries. The tax cuts also encouraged increased spending, which in turn brought about greater production and more job opportunities. Couple these moves with the flexible monetary and debt management policies of the administration and this is the result: a halt to inflation and stabilization of the value of the dollar.

Meantime, the administration created an atmosphere conducive to good labor-management relations. An unprecedented low of work stoppages due to strikes was reached. Man-days of idleness due to strikes in 1954 were the fewest in any year since the end of World War II. This resulted from the administration's belief that Government has no place at the bargaining table—that labor and management can settle their problems over that table without the Government sitting with either side.

And there's another helping hand which is being extended to the unionman, as part of a drive against the evil elements of organized crime. Extortion and bribery by labor racketeers had become a flourishing and lucrative business. This not only impeded commerce and industry. More important, it reflected unfairly on the millions of honest workingmen who were caught up as pawns of these labor racketeers.

A special section on Organized Crime and Racketeering was created in the Department of Justice last year. With the cooperation and assistance of the FBI, this section has been vigorously investigating labor racketeering. At present, it is initiating about 50 investigations every month. The effort is paying off.

During 1954, 65 of these racketeers were indicted in 37 cases and there were 28 convictions. So far this year, there have been nine more convictions or pleas of guilty. Contrast that, if you will, with a complete absence of any convictions under the anti-racketeering laws in 1951, 1952, and 1953.

Among those convicted was a racketeer who sought to extort more than \$1 million from contractors for a powerplant for the Atomic Energy Commission. His actions cost the Government millions of dollars because of delays in construction. An Illinois man was sentenced to 4 years for extortion in a 700-mile pipeline project needed to serve the Chicago and Indiana area. A man tabbed the Duke of Indiana for the power he wielded for his own selfish gains pleaded guilty to attempting extortion in connection with road construction. And a longshoreman's leader in New York was convicted recently for taking gratuities from a trucking concern.

with which he supposedly was dealing on behalf of his union. Ample warning has been served that the Government will not stand idly by while the unionman and the businessman are being victimized by the ruthless and greedy use of power by labor racketeers.

That is a matter of the common good. So are the tax reductions which have totaled more than \$7 billion a year. More than half goes directly to the individual taxpayer, the consumer. And indirectly they benefit from the rest. It now looks, barring unusual developments, that a further tax cut will be possible next year.

Let's look at what was done in the social security field. Carrying out the 1952 pledge, Republicans improved many of the ills of the program. They added 10 million Americans to the eligibility rolls. They increased benefits for more than 6 million now entitled to and drawing benefits. On the unemployment compensation side of the picture, the President recommended to the States increased weekly benefits, while coverage was extended to an additional 4 million persons, including Federal employees who previously were not entitled to protection.

Here in Michigan a major industry is production of automotive vehicles. You will benefit from the record Federal-aid highway program allotting \$875 million a year to the States. And while making it easier for our people generally who use the roads, it also will increase the market for vehicles. Hence your State will have both direct and indirect benefits.

One of the most important things in life is health. Over the years hospital facilities particularly have failed to keep up with the demand. We now have a 3-year hospital construction program embracing grants totaling \$182 million.

What about homes? Well, the administration and Congress worked out a housing program permitting longer mortgages, thereby stimulating home ownership. It also speeded up slum clearance and encouraged remodeling, modernization, and repair of homes.

What about the future? President Eisenhower said that the wise course for Government in 1955 is to direct its program principally toward fostering long-term economic growth rather than toward imparting an immediate upward thrust to economic activity.

What did he suggest to Congress? Simply stated, he suggested a program which you and I naturally support and which, I know, all people of Michigan want. Here are the major recommendations:

1. Extension of personal security against the hazards of unemployment.
2. Strengthened minimum wage legislation.
3. Protection of savings in credit unions.
4. Increased Presidential discretionary authority to vary the terms of insured mortgage loans in the interest of economic stability.
5. Authorization of a great 10-year program to modernize the interstate highway system—this on top of what already has been done.
6. Meeting the nationwide need for school construction.
7. Creation of a coordinator of public-works planning and a revolving fund for advances to States and municipalities for public-works planning.

All of these proposals, plus the others now pending or to be sent to Congress, will create a favorable atmosphere for economic activity. They will encourage private initiative. The Federal Government would be in a position to help State and local governments in providing needed public facilities. They would provide greater opportunities for the less fortunate of our population and help all to cope with the hazards of unemployment, illness, old age.

In the field of health, the Nation is failing to exert proper efforts to reduce the impact of disease. This administration, under leadership of President Eisenhower, is urging steps which will alleviate the situation.

Establishment of a Federal health reinsurance service to encourage private health-insurance organizations in offering broadened benefits to those insured and to provide coverage to more people has been recommended.

I noted enthusiastically as I entered this hall the youthfulness of all of you. The youngest of you, I know, are beginning to understand, as oldsters do already, the economic strain on a family that comes in time of illness or injury.

Now, any one of us could become what the medical profession is now calling the medically indigent. They are referring to that time when any one of us could be faced with medical bills which we just could not afford to pay. Group hospitalization programs and the prepaid surgical plans available in some communities have done some good in meeting this problem. This is true also in the case of aid toward medical, therapeutic, hospital and similar bills by such organizations as the Tuberculosis Association, the Infantile Paralysis Fund, Heart Fund, and others. But more is needed.

The reinsurance proposal of the President would furnish a system for broad sharing among health-insurance organizations of the risks of experimentation. It would be the incentive for improvement in existing insurance plans, and encourage better protection, particularly against expensive illnesses. And it would mean extension of these private voluntary health-insurance plans to millions of additional people. It contemplates a reasonable capital fund, using it as necessary to reinsure programs which would meet the needs which I have outlined.

We also hope Congress will authorize separate Federal matching of State and local expenditures for the medical care needed by public-assistance recipients. As proposed by the President, it would provide better care for the aged, the permanently and totally disabled, the blind, and children deprived of parental care.

Also recommended to Congress is a program to further stimulate construction of more health facilities, such as hospitals, clinics, and technical establishments. As proposed by the President, the Secretary of Health, Education, and Welfare would be authorized by Congress to insure, for a small premium, mortgage loans made by private lending institutions for the construction of such facilities. This program, I am sure, would go a long way to help the many communities which today lack some, if not all, of these things needed for the protection of the health of our people.

Another part of the health program is designed to end the shortage of nurses. Recommended are a 5-year program of grants to State agencies for training practical nurses; and an expansion of Public Health Service operations to establish traineeships for graduate nurses in specialties such as administration, teaching, and research. In addition, Mr. Eisenhower has proposed revision of the present public health grant programs to include authority for training in all public health specialties, including mental health.

These are well-formulated plans. These, plus other elements of the health program proposed by your administration, represent a real attack against problems standing in the way of a stronger and healthier United States.

One other program the President has proposed means something to all of us. It is the proposal for Federal cooperation with the States to give our children as quickly as possible the classrooms they must have. As you know, there is a deficit of 300,000 class-

rooms, and with mounting enrollments at least 50,000 new classrooms must be completed each year just to care for this new crop of youngsters. What is happening is that the present construction rate is barely keeping up to the mounting enrollment, so the deficit of 300,000 classrooms is being cut only slightly.

Viewing this as an emergency and for purposes of meeting it on that basis only pending results of nationwide conferences, the administration has proposed to widen accepted channels of financing, without interfering with the responsibilities of State and local school systems.

Congress has been asked to authorize the Federal Government to purchase school bonds issued by local communities which are handicapped in selling bonds at reasonable interest rates. This would be possible if Congress authorizes appropriation of \$750 million for use in the next 3 years. It is also proposed that the Federal Government be authorized to participate with the States in establishing and maintaining for State school-building agencies an initial reserve fund. Thus, we would help those communities which are unable to build schools because of restrictive debt limits and which now depend on State agencies. With such a program, \$6 billion worth of building would be possible in the next 3 years.

Other elements of the proposed program would provide for grants to school districts with proved need, and lack of local income; and grants to States for administrative costs of State programs.

These are some of the things now planned to make this a better America, by protecting our most precious asset—our people.

What do this year and next will continue to merit the support of the great majority of our citizens.

They already have seen a Republican Party devoted to serving needs of all people.

It will continue to serve the people well.

Under the inspiring and courageous leadership of President Eisenhower, we cannot fail.

Revenue Act of 1955

SPEECH
OF

HON. WALTER ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 4259) to provide a 1-year extension of the existing corporate normal-tax rate and of certain existing excise-tax rates, and to provide a \$20 credit against the individual income tax for each personal exemption.

Mr. ROGERS of Texas. Mr. Chairman, I did not really intend to get into this debate, because I did not think there was going to be a fight on it. But, when there is a fight going on, I do like to get into it. The reason I did not think there would be a fight is because I thought that this bill was doing what the President of the United States asked this Congress to do on this floor in his state of the Union message. If you will recall, he told us at that time that they anticipated cutting taxes in 1956. Now, that is exactly what this bill does. And, what has been done by this Congress is very simple. We have taken the suggestion of the President, and we are putting it into law so that he will not have

an opportunity to be talked out of what he wants to do for the American people. When he said that he wanted to cut taxes in 1956 he was doing 1 or 2 things: he was either playing politics or he was sincere. I prefer to think that he was sincere. I prefer to think that any President of the United States is sincere in what he does.

Now what happens? Immediately after this bill was prepared and brought to the floor—really before that—the newspapers were filled with all kinds of castigating remarks—including some of those by the President—saying that it was fiscal irresponsibility. Well, who suggested it in the first place? He is the man who suggested it. And do you know why it was necessary for Congress to act? If it had not been for some past experiences, this bill probably would not even be on the floor. But you know what happened when the opportunity presented itself to carry out some campaign promises concerning 100 percent of parity that was promised to the American farmer in Minnesota, and several other places. The American people remembered that. They also remembered this, that there was some small print in there that said "At the market place." Of course, the farmers have not found that market place yet. The market place that they have had to go to has very low prices.

But the point that I am making is simply this, that what they wanted to do was to pinpoint this because they did not want to turn up here in 1956 and be told when they thought this was the year they were getting a tax reduction that what the President meant all the time was to give another tax reduction to the coupon clippers who got it last year.

The little people in this country want some relief. They want it on the books so that somebody can understand it. And when you talk to me about fiscal irresponsibility I want to say this: that if it is fiscal irresponsibility to give some tax relief to the overburdened little people of this country, this country could use a lot of it. The truth is it is not fiscal irresponsibility, but on the contrary absolute fiscal and intellectual responsibility.

Mr. ARENDS. Mr. Chairman, will the gentleman yield?

Mr. ROGERS of Texas. I yield.

Mr. NICHOLSON. Mr. Chairman, will the gentleman yield?

Mr. ROGERS of Texas. I yield.

Mr. NICHOLSON. Does not the coupon clipper get \$20 under this bill?

Mr. ROGERS of Texas. He gets \$20 under this bill, he certainly does. And we do not begrudge it to him one minute. I think it is fine that he gets it. What we want to do is to be fair with everybody but we do not want the little people to believe that we are going to do something for them and then later on have them learn that we are doing it only for a few and that we are saying, "Well, you just did not understand what we meant when we said taxes would be reduced. We were talking about the big boys not you little fellows."

If there has been any irresponsibility concerning this measure, it has not been fiscal, it has been vocal if not mental. When anybody says—and I do not care what office he holds or where he is from—when anybody says to me that I am fiscally irresponsible because I want to help a man to buy some shoes for his children's feet and some bread for their stomachs, I do not think he is being honest with himself or anyone else.

I shall never subscribe to the policy that substantial tax relief for a privileged few is "statesmanship" while meager tax relief for the many is fiscal responsibility.

The Glorification of Youth

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. DORN of South Carolina. Mr. Speaker, in 1938 at the age of 22, the people of Greenwood County, S. C., kindly elected me to the State house of representatives at the head of the ticket in a field of 10 highly regarded aspirants. It was no easy decision for me to decide to enter that race. Many people told me that I was too young and should wait until I was more mature. While burdened with indecision, I read an article by Dr. T. F. Callaway, pastor of the First Baptist Church, Thomasville, Ga., entitled "The Glorification of Youth." This article appeared in the April issue of the Baptist Training Union magazine in 1938. After reading Dr. Callaway's article, I no longer had any doubt about the place of youth in our American political life.

I am happy to report that Dr. Callaway is still living a very useful life in Thomasville, Ga., and is still encouraging the youth of that fine city. I commend to this House and to youth everywhere in America this splendid article written in 1938 by the beloved Dr. Callaway.

THE GLORIFICATION OF YOUTH

(By T. F. Callaway, pastor, First Baptist Church, Thomasville, Ga.)

"Let no man despise thy youth." (1 Timothy 4: 12.)

In the glorification of youth there is a threefold secret.

First, there must be a clear realization that youth can be glorified. No inferiority complex need possess the souls of the young today because they are afflicted with that malady we all wish we had and could keep. Youth. This has ever been a young man's world, and never more than today. The pages of history have been largely written by young fingers. In every realm of life we find that youth has ever made a mighty impact.

Alexander the Great battled his way to world supremacy and died at the age of 33. Napoleon was a second lieutenant at 16, commander of the French Army in Italy at 25, dictator of France at 30, and the Emperor of France at 35. George Washington wrote his One Hundred and Ten Maxims of Be-

havior at 13, he was a surveyor in the wilds of Virginia at 18, and adjutant general in the British Army, with rank of major, at 19.

The halls of music and art are replete with pictures of men who early refused to allow the world to despise them because of their youth. Liszt began picking out tunes on the piano when he was 3. Mozart showed signs of genius when he was 4. Handel and Rubinstein were considered prodigies at 8. Mendelssohn was attracting wide attention at 10. Beethoven began composing his symphonies at 11. Michelangelo and Raphael began sketching while playing around their mothers' knees. Benjamin West was painting pictures at 6.

In the realms of science and invention Robert Fulton was a veteran of 14 summers when he first designed the steamboat. George Stephenson had arrived at the commanding age of 15 when the very first blueprint of a locomotive was drawn by him. Eli Whitney invented the cotton gin in Georgia while in his early twenties. Cyrus McCormick was 22 when he gave his reaper to the farmers of America. Elias Howe was 26 when he proved himself good enough to give the sewing machine to the housewives of the Nation. Thomas A. Edison conceived the electric light while a news butcher on a passenger train.

Embryo statesmen of our country might well be inspired by men like Wilberforce, who began his monumental work on slavery at 16 and was a member of Parliament at 21; or by men like William E. Gladstone, who was a member of the House of Commons at 23 and Lord Treasurer of the empire at 26. Alexander Hamilton was Washington's most trusted adviser at 20 and a member of the Continental Congress at 25, yet he never weighed over 110 pounds. When Thomas Jefferson wrote the Declaration of Independence he was too young to have been elected President of the United States. John Quincy Adams was secretary to the Russian Legation at 14 and United States Minister to Holland at 27. In recent years many men in the Southland under 40 have been elected governors of great States. Among these are Moody of Texas, Byrd of Virginia, Johnson of South Carolina, and Russell and Rivers of Georgia.

In the business world today we see men who were born since the turn of the century serving as presidents and executive officers of gigantic banks, commercial corporations, and industrial concerns. A few years ago a graduate of the Georgia School of Technology was elected when 32 years of age to the presidency of the Otis Elevator Co., at a reputed salary of \$150,000 a year.

In the realm of education we behold such things as Benjamin Franklin opening a publishing house at Philadelphia at the age of 14 and founding the public library of Philadelphia at the age of 26. Daniel Webster was the outstanding scholar at Dartmouth at 15 and at 18 was the Fourth of July orator at Andover. That son of the South, Robert Maynard Hutchins, when barely 30 became the boy president of the University of Chicago.

In the area of religion we likewise see many who refused to let the world despise them because they were guilty of the crime of being young. For there we behold John Wesley preaching at the age of 11. John Calvin was pastor at 17. Jeremy Taylor was preaching at the famous St. Paul's Cathedral in London at 18. Charles Haddon Spurgeon was pastor of the great London Tabernacle at 20. Francis E. Clark founded the Christian Endeavor movement when barely 20. When 22 years of age George Williams started the first YMCA. The Lord Jesus Christ had completely finished the Father's work on earth and gone to the cross as the Redeemer of the world at the youthful age of 33.

Truly, then, the first step in the life of him who would glorify his youth is the realization that it can become a thing glorified rather than despised in the eyes of the world.

The second secret in the glorification of youth is the firm determination that one's youth shall not be despised by the children of men. To realize the possibilities of youth is a mocking specter unless there is a corresponding purpose to translate those possibilities into realities. Success in life is not incidental, it is not accidental; it is the result of a will to win. Young people go to the top in life in direct ratio to the power of their purpose to succeed. The difference between the success and failure of youth is the difference between the power of a purpose and the lack of a purpose.

A few years ago I sat on my front porch one unusually balmy Christmas Day. Across the street were twin boys, about 8 years of age, dressed in Indian suits which old Santa had brought them the night before. Along with the Indian suits came bows and arrows and they were engaged in shooting the arrows as high as they could. I noticed that one of the little fellows shot his arrow high in the air, while the arrow of the other boy went little higher than his head. The second little fellow was handicapped by a bow which had been broken and was tied together by a cotton string. One arrow went high because the bow was strong; the other did not because the bow was weak.

It was impossible not to moralize a little over the picture. The arrows going into the air represent the degree of success that two boys, maybe in the same home, achieve in life. The bows represent the power of purpose in life. One boy will go high toward the goal of success because the power of purpose is strong, while his brother will never rise above the average plane because the purpose in his life is broken or weak.

Theodore Roosevelt was right in his moral geometry when he said that the circumference of a man's influence in life is determined by the radius of his purpose in life. The longer and stronger the radius of purpose, the wider the scope of one's influence in life. Truly the secret of success is the power of purpose.

Every school child recalls the story of Napoleon, who told his field marshal that the French army must be carried into Italy. "You cannot do it; the Alps are between you and Italy," replied the field marshal. "There will be no Alps before the army of Napoleon," rejoined the great commander. And verily there were no Alps before the army of Napoleon, for through sheer power of an indomitable will Napoleon's army of 300,000 men, horses, and cannon was carried over the Alps into Italy.

We southern people love Horace Greeley. Although a northern man, he was a true friend of the South. It was he who signed the bond of Jefferson Davis, the President of the Confederacy, when it was a very unpopular thing in the North to do. We delight in a story that comes from his college days. When Horace Greeley entered Princeton University he pasted on the door of his dormitory room the letter "V." The boys wanted to know what that letter "V" stood for. Greeley told them to wait 4 years, and they would find out. Four years later young Greeley stood up during commencement exercises to deliver an address before an audience that taxed to capacity the largest building on the campus. He began by saying: "When I came to Princeton 4 years ago I placed upon the door of my room in the dormitory the letter 'V.' I told the boys who inquired as to its meaning that I would tell them in 4 years. The 4 years have now rolled around, and I wish to let everyone interested know that that letter 'V' stood for 'valedictory.' My mind was firmly made the day I entered college to graduate as valedictorian." And he did. It was no pull or

bootlicking that caused Horace Greeley to graduate at the head of his class. It was purpose.

Who, as a youth, has not thrilled over the story of Daniel Webster? When he announced that he was going to practice law his friends tried to dissuade him, telling him that the legal profession was already overcrowded. With a twinkle in his eye he said, "There is always room at the top." And to the top he went. With the possible exception of John Marshall this country has never known a greater constitutional lawyer than was Daniel Webster. He succeeded on purpose.

It is this same power of purpose that has proved the secret of spiritual success in the lives that have glorified God and blessed humanity. We see a young Hebrew in a den of lions. A heathen king has passed a law that the king, himself, is the one to whom all prayers should be addressed and that any one daring to pray to any other should be cast into the den of lions. Daniel, although an exile in a foreign land, pays no attention to that law of the king, but goes to the open window where every one could see him and three times a day gets upon his knees and with his face towards Jerusalem prays to the God of Israel. Before he would compromise his convictions or sacrifice his sense of loyalty to his God, he goes to the den of lions. Why? Because when a mere boy, doubtless in his middle teens, he sat down in the palace of the king and deliberately made up his mind to stand true at all times and in all places, as revealed in those words that flash and flame: "Daniel purposed in his heart that he would not defile himself." How we of today need to sing and pray and live over and over again the hymn of our youth:

"Dare to be a Daniel, dare to stand alone;
Dare to have a purpose firm, dare to make it known."

We look at Paul. We see him rising like a mountain above the average plane of humanity. We make bold to say to him, "Brother Paul, you have blessed this world as no other man who has ever lived in it outside of the Lord Jesus. Your words and works have influenced more lives than any mere man who ever lived. Will you please give us the secret of it all?"

With all modesty we can hear Paul as he replies: "If my life has been a blessing to the world; if I have been true to my Lord; if my example has counted for his glory, you can catch the spirit of my purpose in life in my words in Phil. 3:14: 'This one thing I do, forgetting those things which are behind, and reaching forth unto those things which are before, I press towards the mark for the prize of the high calling of God in Christ Jesus'." Paul was the product of his own purpose. There is nothing mysterious about spiritual success. We are as holy, as influential and as useful as we will to be. God can ever be counted on to empower the purpose to glorify Him and bless the world. Christian lives are so powerless today because they are so purposeless. Purpose in every realm is the secret of success.

Then, there is the third secret in the glorification of youth. There must be a preparation adequate for the success to be achieved in life. Realization and determination can only become actual through a preparation that is sufficient.

There should be preparation of body. The body is the vehicle of the mind. Many are the tragedies of men whose brilliant intellects have been handicapped by broken bodies. Alexander H. Stephens, the vice president of the Confederacy, had a mind that scintillated like a diamond. His body was thin, sickly, and emaciated. He and Abraham Lincoln were close personal friends. One day Lincoln heard Stephens in the halls of the United States Senate as this gifted

orator from Georgia sat in his rolling chair and charmed and awayed the throng that listened. As the crowd quietly left the room Lincoln was heard to say, "If I had the mind of Alexander Stephens in the body of Abraham Lincoln I could move the world." No price is too great to keep the body clean and strong. Especially should the Christian remember that his body is the temple of the Holy Spirit. Let the body be a fit temple for the habitation of the Lord.

There must be a preparation of mind. This preparation of mind must be commensurate with the ambitions in life. A young carpenter is said to have been taking much time and unusual pains in finishing the judgment bench in the supreme court room of a middle western State. The foreman of the job reproved him for the time he was taking. The young man replied that he was building that bench against the day when he would sit behind it as the chief justice of the supreme court. Little did the foreman realize that this young man then was saving his money for college and dreaming dreams of a successful legal career and that the day would come when that young man would sit as chief justice behind that very bench. That young man could have remained a good carpenter without more preparation but he never could have achieved the heights of the legal profession without it. We remember the young lawyer in The Honorable Peter Stirling, which is said to be the biography of Grover Cleveland, who used ever hour of the many clientless days in careful study and was ready when the chance came to have part in a successful lawsuit which not only carried him to legal success but to the Presidency of the United States. As perhaps never before we are in a day when the man who goes is the man who knows.

There must be preparation of heart. Knowledge is power but it is power for evil unless directed by character that is good. An educated mind minus a cultivated heart equals a moral menace. The Federal prisons of our land are filled with men whose bodies are strong and whose intellects are keen from modern education and contacts, but whose minds have never been guided by the moral power of Christian character.

Some 2 years ago Robert E. Speer delivered a series of addresses in Atlanta. How he inspired those of us who heard him. Although then 70 years of age, he stood erect, his body strong. His eyes were keen, his mind was fresh and strong, his faith was simple and the force of his character was impelling. We could easily understand how he is regarded as one of the outstanding Christian statesmen of the world today. We thought of the price he had paid. At Princeton he made a national reputation as an athlete, especially in football. He stood in the forefront in his classes. He accepted Christ as his Saviour and Lord. He dreamed a career of Christian conquest. He dedicated his life to Christ and his service. The world rises today to call him blessed. He refused to let the world despise him in his young days. He achieved the glorification of youth.

Strictly Political

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. FORD. Mr. Speaker, under leave to extend my remarks, I wish to include herein an editorial entitled "Strictly

Political." which appeared in the Grand Rapids Press of February 21, 1955:

The announced plan of House Democrats to cut the Federal income tax by \$20 per person is an out-and-out political move. For one thing, they know it is almost certain that if such a measure should get through the House—and that is extremely doubtful—it would founder in the Senate, where Senator HARRY BYRD leads a strong Democratic bloc opposed to tax cuts this year.

However, sponsors of the idea probably figure that they can't lose by proposing a tax reduction of this kind. Even if the measure should go down to defeat, they would be able in next year's congressional campaigns to say that they had fought for tax cuts. And that always goes well with voters.

It just happens that this particular tax slash would affect everyone who pays the personal income tax. From a politician's standpoint, that's the best kind of tax reduction. And this one has an especially glittering appeal for the politician for the reason that it reportedly would remove from the tax rolls and estimated 4 million families. That's 4 million heads of families. With their spouses they represent roughly 8 million voters—enough to swing a national election.

Aside from the purely political angle, this tax-cut plan is to be condemned for still another reason. It flies in the face of the sound principle that the tax base ought to be as wide as possible. Everyone has a stake in the Government. Therefore, everyone ought to pay a little something toward its upkeep. Not everyone does at present, it is true. But that is no reason for taking a step backward, toward narrowing still more the tax foundation on which the Government rests. That principle now is accepted widely enough in Congress to guarantee that there will be no tax-forgiving scheme of this flagrant type this year—a year in which the Treasury stands, without tax cuts, to run behind again.

Nickels for Our Indians

EXTENSION OF REMARKS OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. DIGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Columnist Robert C. Ruark which appeared in a recent issue of the Detroit Free Press. The article focuses attention upon a matter which is a blight upon the American scene and which every decent thinking citizen should desire to eradicate:

I have noticed recently big, double-columned ads for an organization called Arrow, Inc., which is collecting funds to aid the American Indians. The headline of the ads says: "Being Sorry for Ira Hayes Is Not Enough."

Hayes was 1 of the 6 men who composed that classic photo of the American flag being raised on Iwo Jima. He was a full-blooded Pima Indian. He was found dead at 32 on the reservation, dead of exposure. Like so many other people, he had not been able to handle the bottle very well.

Hayes had tried to make it off the reservation, but had returned in despair. "I want to be out on my own," he said, "but out in Arizona the white man looks down on the Indian, and I don't stand a chance anywhere off the reservation."

Many Indians, largely of mixed blood, have been able to make it off the reservation, and are proud today of their Indian admixture. But there are about a half million fullbloods in the country today, mostly on reserves, and they have had a pretty dirty shake.

It is not particularly news that they are ravaged by disease, or that they have not been extensively educated, or that their annual income is tiny. These facts have been hammered at a long time.

My point is that this column should not have been written at all, because Arrow, Inc., for the relief of the benighted redskin should not be necessary.

We have been pushing the noble Indian around now ever since we came over and appropriated his country.

We are mightily concerned all over the globe today mixing in other peoples' business and scattering money like chaff to the four winds.

We advise the rest of the world how to live, and we send aid all over the globe to the poor in resource, and we finance the construction of nightclubs in Rome.

But we still have done very little—the last time I was in Indian country—to change the blanket Indian gradually from a stone age aboriginal to a fit victim for the modern world.

The changing of any aboriginal from old ways to new is difficult, needing much time and gradual elimination of the old ways while substituting transitional aid and arriving eventually at the aim.

That sort of progress has been very swift for the American Negro in this country, but it has needed many, many years to effect, and is only partially complete.

But practically nothing has been done about our own aboriginals. The least we can do today, it seems to me, is to pause briefly in our vast international spending, divert a few funds from global do-good, and start improving the lot of the people who owned the real estate first.

AMA Statement on Health Message

EXTENSION OF REMARKS OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. PRIEST. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include herewith a press release issued by the American Medical Association with reference to the President's health message:

CHICAGO.—The American Medical Association commended President Eisenhower today for his January 31 health message to Congress and pledged continued support to improve the health of the Nation by strengthening medical efforts at the State and local levels.

Through its board of trustees, the AMA congratulated Mr. Eisenhower on his statement that health proposals to the 84th Congress "recognize the primacy of local and State responsibility" and would "encourage private efforts with private funds."

In support of many of Mr. Eisenhower's specific proposals the AMA noted that most areas touched upon in his message are those in which the medical profession as a whole has been concentrating much of its activity. It applauded the administration's recognition and support of what Mr. Eisenhower called important progress in bettering health and reducing the threat of leading diseases.

Specifically, the AMA said it supports or agrees in principle with these recommendations by Mr. Eisenhower:

1. An intensified attack on mental illness, which has been termed "the Nation's No. 1 health problem" by the AMA Council on Mental Health. The AMA, through this council which was established in 1952, and the American Psychiatric Association, are jointly sponsoring a national survey and report on all aspects of mental health and illness. This project, cosponsored by 16 national organizations, expects to evolve some fundamental departure from traditional concepts of dealing with mental illness which will lead to a far more effective attack on the problem than has thus far been realized.

2. Proposals aimed at relieving the shortage of nurses. The AMA has for years not only worked closely with the American Nurses Association, the League for Nursing, and the Committee on Careers in Nursing on this problem, but on several occasions has urged that Federal funds be made available to help support a nurse recruitment program.

3. Continued efforts in restoring to useful lives most persons who become disabled and who can be rehabilitated and returned to employment. The AMA agrees that reaching the President's goal will be a heartwarming achievement.

4. Permitting greater flexibility in the use by States of Federal grants-in-aid for public health services. The AMA has supported this theory in previous legislatures and agrees with the President's aim of unifying the grant-in-aid structure. Dr. George F. Lull, secretary-general manager of the AMA, has stated the organization considers it "eminently desirable for local health officials to have greater responsibility and discretion for solving public health problems" and approves of "sound proposals to meet these objectives."

5. Establishing traineeships in public health and strengthening the Public Health Service Commissioned Corps by improving its status and survivor benefits. The AMA is in agreement with actions designed to better the service.

6. Stepping up research on air and water pollution. The AMA has supported Federal research grants for this work and also recognizes the need for intensification of study.

The association said it is not prepared to comment on Mr. Eisenhower's proposals to improve arrangements for health service to public assistance recipients, until it can study the legislation recommended. The AMA has long supported and worked for better care for those unable to pay for it, and considers worth while the fundamental purpose of proposals intended to better this care.

The AMA also said it has no opinion yet on Mr. Eisenhower's new recommendation for mortgage loans to provide construction of health facilities but will study the legislation introduced.

The AMA has been "in complete accord" with the stated purpose of legislation designed to promote voluntary health insurance and commends Mr. Eisenhower for his beliefs and efforts in encouraging its expansion. The medical profession has been reassured to find that the official position of the Government is one of trust and confidence in the ability of private initiative to solve existing problems in the field of medical care. However, the AMA still believes that the proposed reinsurance system will not achieve the desired results.

"The AMA's interest has been and remains that of working for the best health for all the Nation," Dr. Lull said, adding: "In practically every instance of recognized deficiency, the AMA has been the first to undertake a positive, constructive program of action, and continues to be determined in its efforts and its cooperation with those working toward the same goals."

Brotherhood Week

EXTENSION OF REMARKS OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. DIGGS. Mr. Speaker, we are all aware, I am sure, of the fact that we are now in the midst of an annual observance of Brotherhood Week. America has a great number of observances during the year commemorating occasions, personages, and ideals—all of which have a special significance in their link to certain basic principles inherent in our democratic form of government and our concepts concerning man and his human rights. In these many observances, I think it well that we be reminded that Brotherhood Week, in the essential meaning of the observance and without regard to point of time in which the celebration was established, is the basic premise from which all of these observances stem. Brotherhood Week embodies the very roots of our religious faith and the very roots of the faith upon which our Nation was founded.

Whatever our religious creed, we who are Christians hold the common faith that the one Father made of one blood all the races of the world; that fundamentally all men are brothers. Whatever our political party affiliations, we who are American philosophically—in truth—hold the common faith that all men are created equal and are endowed by their Creator with certain inalienable rights, among which are life, liberty, and the pursuit of happiness. Brotherhood Week is not then an observance pointing up the human rights of any particular people; rather it is an observance meant to keep in the fore of all men's mind that our basic religious and democratic tenets are the protection to your human rights, to my human rights, and to the human rights of all the peoples of the world who hold our common faith.

Human rights was the underlying issue behind extension of the universal military program, which involves the sons of all races, colors, creeds; human rights was the issue behind the Formosa resolution, involving protection of rights of our Nation and of brother nations. The right to life and the pursuit of happiness, through promotion of general welfare—as set forth in the opening of our Constitution—is the issue behind our concern in the economic well-being of our Federal workers and our Nation's workers in general.

"Your faith shall be known by your works"—if as an individual, regardless of race, creed, or national origin, we truly believe that we hold inalienable rights to life, liberty, and the pursuit of happiness; if as an individual, we truly believe that through one God in whom we live and move and have our being, we, having a spark of His divine nature, have dignity and stature before all men, it must follow that all men have such equal

rights and stature and to uphold and promote our individual human rights, we must uphold and promote the human rights of all men.

Brotherhood week is not a time to be viewed with lightness. It is a time for rededication to democratic principles and, above all, a time of rededication to the principles of our Christian faith. I call it to your attention, urging its practice, not for a week, but for each day of daily life, knowing that in its principles is the hope and salvation of this world in which we live.

Neuromuscular Research

EXTENSION OF REMARKS OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. PRIEST. Mr. Speaker, Federal legislation is not the solution to all the problems uncovered by the comprehensive health inquiry made by the House Interstate and Foreign Commerce Committee during 1953 and 1954. As in the past, most of the responsibility must be assumed by private individuals and institutions. As chairman of the committee, I call attention to a particular need in the field of research that was developed partly by the recent hearings. In order to avoid any partisan approach to this critical human situation, the Honorable CHARLES A. WOLVERTON, chairman of the committee during the 1953-54 hearings, joins me in inviting comment and constructive suggestions. Our joint comment follows:

In the health inquiry directed by the House Interstate and Foreign Commerce Committee during 1953 and 1954, it was found that about 20 million persons are affected by neurological and sensory disorders for most of which medical science has discovered neither causes nor means of specific treatment, and that the deaths from these diseases are exceeded only by the number of persons dying from cancer and heart disease.

It was even more startling to learn that public and Federal Government expenditures from 1951 to 1952 for research and treatment for each victim of a neurological or sensory disorder averaged only 3 cents, while \$29 was spent for each victim of cancer and \$1.75 for each victim of heart disease.

Because the spending of this 3-cent-per-victim money is shared by the Government and by many individual national organizations concerned with multiple sclerosis, muscular dystrophy, cerebral palsy, the crippled, epilepsy, and neurology, it is apparent that very little can be allotted to fundamental research, without which progress toward finding causes and cures will proceed at a snail's pace.

This need for basic research is of special concern to the families of victims of certain neuromuscular disorders that baffle medical science and that have not been the specific concern of a national organization supported by public funds. This neglected group includes amyotrophic lateral sclerosis (the disease which ended Lou Gehrig's life when he seemed at the peak of physical health), progressive muscular atrophy, and

peroneal muscular atrophy. In 1950, 1,006 Americans died from these diseases, compared to 1904 for poliomyelitis. One tragic aspect of the situation is that a man who contracts the disease from which Gehrig died cannot expect to live more than 3 years. Doctors are helpless; they do not even like to talk about this visitation of death to about 667 Americans each year.

Basic research in nerve fibers and muscle tissues offers the means of determining the causes of neuro-muscular disease and developing methods for treatment and prevention. Such research has been initiated in a small way by public and private groups. The National Institutes of Health, for instance, is carrying on a study of amyotrophic lateral sclerosis in Guam in an effort to find a clue as to why there are from 50 to 100 times as many deaths there per 1,000 of population as in the United States. Scientists such as Nobel Prize Winner A. Szent-Györgi, of the Institute for Muscle Research, are concentrating on basic research. The Neuro-Muscular Research Foundation has just been formed to promote basic research which will be directed toward amyotrophic lateral sclerosis and other neglected diseases as well as the neuro-muscular disorders which have received greater public attention. We commend an intensification of such activities and greater coordination of public and private efforts in this field.

On the probable cost of such a research program, we quote Dr. Cornelius Traeger, speaking for the National Committee on Research in Neurological Disorders at the House inquiry: "If we could get, not 3 cents per patient, but \$2 a patient, I think that we could do a job that the Atomic Energy Commission did, or what preceded the Atomic Energy Commission did, in nuclear fission, and in about the same time."

J. PERCY PRIEST,
Chairman, House Committee on Interstate and Foreign Commerce.
CHARLES A. WOLVERTON,
Chairman during 1952-54.

The Medway Plan

EXTENSION OF REMARKS OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. PATTERSON. Mr. Speaker, a great humanitarian and American by the name of William Montgomery Bennett has submitted to me for my perusal a foundation plan known as the Medway Plan Foundation.

The aim and purpose of the foundation is for the relief of the needy and mobilizes individual American citizens to adopt aged, sick, and permanently disabled refugees abroad. It is also carrying abroad an understanding of what our free way of life means to body and spirit of every human being.

I wholeheartedly recommend the Medway Plan Foundation to our American public and seek their support for such a worthy cause.

THE MEDWAY PLAN

"Giving money to good causes—churches, hospitals, universities, Boy Scouts, refugees, the blind, the crippled, the starving—is a commonplace of American life, a glorious commonplace that astonishes people, the world over, but a commonplace. We accept it as a matter of course.

Giving yourself is something else.

The Medway Plan Foundation didn't invent the idea. It goes back a good many centuries, back to the Good Samaritan and, back of him, probably thousands of years, to some cave man or cave woman bending over some stricken stranger. What Medway has done is to give the idea focus, emphasis, and potentiality on a world scale.

Is there a person in need in a little Austrian or Korean village that you never heard of, in need of money or food or medicine or clothes, or, perhaps, only of human fellowship to mitigate the sense of utter aloneness in a hostile world? Medway sends you his or her authenticated name and address and you do the rest. You find the money (among your neighbors or in your own bank account); you find the food at the chain store, the medicine at the pharmacy (perhaps both as gifts); you find the clothes in your attic or a friend's; you write the unknown, show an interest in his troubles, make him your friend, give him hope and a reason for living: you do just this at first, perhaps, only to get your next letter; after a while, perhaps, to pass on to others the saving touch of the concerned heart. What you have given in time, money, energy, has all, every bit of it, gone to your unknown correspondent. There has been no leakage, no waste; or overhead of rent, salaries, heat, light, and janitor service that drains off up to 60 percent of each dollar you send even to the most respected and thoroughly worthy charity organizations.

There are no salaries in Medway, no offices, no secretaries, stenographers, and office boys; no overhead at all. Medway's headquarters, books, and files are established in a single room in a New England house, where Medway's president, William Montgomery Bennett, at 76, is his own secretary, himself typing the letter asking you to take on this unfortunate or that. The stationary, stamps, telephone, and telegraph, freight charges and gifts of funds for special activities abroad? Bennett himself and some of his associates take care of those things. Every cent of every dollar you give (and you spend it yourself in your own town, as I have indicated) goes to the person who so desperately needs it.

What you get in return is something away beyond the momentary sense of an obligation met, when you send a check to a charity. You get an appreciation of the potentialities of human caring in the solution of the world's problems. You learn how you, in a little American community, the other end of nowhere, can, and indeed, have become one with the forces rehabilitating the victims of a tragic time; and you acquire a friend.

That, in a nutshell, is Medway. The human touch. The spark, jumping across thousands of miles of ocean, plains and forest, lighting a light in a dark room, starting a dynamo, long inert; waking blinded eyes to new visions and tortured hearts to new hopes. Not charity but compassion. Not an organization playing Lady Bountiful; but a person being human.

The idea works out wherever it is applied. Sometimes a whole town in America takes on a town in Europe or Asia, but, within the town, it is still the individual, giving service and fellowship, rather than the \$5 bill or \$10 check. The Medway idea has worked and is working in the hard-core cases that the International Refugee Organization, disbanding, dumped in Medway's capacious lap. It has worked and is working to get the story of freedom and democracy to men and women in Iron Curtain countries; not by leaflet from the sky (though that is a fine idea, too), but person to person, through the underground.

Person to person. Always person to person. Nonsectarian, nonprofit, nonpolitical, backed by leading figures in the church, the

professions, banking, industry and government, officially thanked and bemedaled by Presidents and Prime Ministers, Medway works with all the great organizations in the field of relief and rehabilitation, the Medical and Surgical Relief Committee, Operation Town Affiliations, and the International Rescue Committee; with the Friends' Service Committee, the Church World Service, the International Friendship League, the National Catholic Welfare Conference and many other agencies. The major problem of all these organizations is people—people displaced, people starving, people in trouble of any sort. These organizations see them in the mass and are appalled. Where in the world is the money coming from, the personnel, the leadership? Medway isn't appalled. Medway knows that for every person in need, in Europe or Asia, there is a person in America, ready to help. Medway's problem is to find that person.

It is the genius of Medway, which means the genius of its sparkplug and president, Mr. Bennett, that it generally finds him or her and, having found him, puts him in touch with the person in need. It takes time. There is no national directory of Good Samaritans. But Bennett is building one. Perhaps, my name and address should be in it, could it be? And, perhaps, gentle reader, yours?

HERMANN HAGEDORN.

Gains of Technology and Displacement of Workers

EXTENSION OF REMARKS OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, February 25, 1955

Mr. DOUGLAS. Mr. President, to remind us of the unbelievable speed of present-day industrial advances and of the serious questions that the growing displacement of workers raises for the American people and of their government, I ask unanimous consent to have printed in the Appendix of the Record a thought-provoking article entitled "Automation Is Here" from the March issue of the Democratic Digest. We cannot afford to forget basic human values in our self-congratulation over the gains of technology.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Automation Is Here—A New Chapter in the Story of Mankind and Machines

Nobody in the administration is talking about automation, whether they call it by its bright new name, or whether they call it pushbutton production, the robot revolution, or the age of electronic machines.

Secretary of Labor Mitchell isn't talking about it.

Secretary of Commerce Weeks isn't talking about it.

President Eisenhower isn't talking about it. (A check of the President's speech and statement index kept by the White House staff does not even show a listing for the word.)

There is so little Government interest in automation that the Government Printing Office does not have a single pamphlet about it among the thousands of documents it sells on every subject from dishwashing to atomic energy.

But whether Washington has heard of automation or not, many plant workers have, and they are concerned. Walter Reuther, the president of the United Auto Workers, is also concerned. He says that because of pushbutton production, 200,000 auto workers may soon be able to do the work of the present 1 million. His apprehension on this score is shared by many other union leaders who see automation making strides in their industries. Even a few responsible employers admit privately they are disturbed by the immediate outlook.

For automation is changing America—and fast. Yet it has developed so recently that even the word "automation" is in few dictionaries. It is unfamiliar to many opinion makers; it is a mystery to the man in the street—unless it has cost him his job. Yet it is causing basic changes all around us.

Just what is automation?

At its highest stage of development it is the completely automatic factory where machines untouched by human hands can turn out a product untouched by human hands.

The Wall Street Journal has defined automation as "doing a job by machines with a minimum of human assistance. It usually implies also the use of electronic controls to automatically schedule and guide the production process."

This then is the beginning of an era when machines, not men, run other machines. It is the second industrial revolution. The first one replaced man's muscle with machines. This revolution is replacing his judgment with machines.

Specifically, we are entering an age when a machine can dig a hole, measure it, decide the hole is wrong, and correct its own mistake.

This is completely different from the garden variety of increased productivity which America has customarily enjoyed. Since 1930, for example, output per man-hour has increased more than an average 2 percent a year. This has come about as a machine took over a job a man was doing or helped him do it faster—a conveyor belt or a fork-lift truck moved merchandise a man used to push or carry; a pneumatic drill replaced a pick. Over the last 25 years such changes have resulted in an enormous growth in conventional productivity through wartime, peacetime, depression and prosperity.

From where we stand today this is all to the good. We have long since lost track of the telephone operator who went out when the dial system came in. Indeed, thanks to the expanding telephone industry, there are actually more telephone operators now than there were when the change-over to the dial system began over 30 years ago.

Through the years, we have lost track of other people who were displaced by machines. Most of them have been absorbed by the expanding economy and share now in the 50 percent more purchasing power enjoyed by the average American, along with 15 percent shorter working hours. But this does not mean there were not cases of bitter hardship when the conversions took place.

Today we are entering a new era that dwarfs the past rate of increased productivity. In the long run, again, we will be bound to enjoy shorter hours and higher living standards, but prospects for short-run displacement are disturbing. At a Chevrolet plant where these new machines carburize camshafts, productivity has gone up not a mere 2 percent in 1 year but 3,300 percent almost overnight. For where 250 camshafts used to be carburized in 34 man-hours they are now done in a single man-hour.

Equally astonishing strides have been made in the manufacture of radios, light bulbs, airplanes, television sets, and chemicals, in coal mines, bakeries, and tanneries, in the

handling of paperwork by utility companies, insurance companies, and railroads.

Here are some developments in industry by industry.

Radios: In 1 Chicago plant, 2 men assemble 1,000 radios a day. Before automation, 200 workers were employed.

Light bulbs: One electrical-equipment company now turns out 80,000 light bulbs an hour with 230 employees. Automation magazine has estimated that this output by old-fashioned methods would require 75,000 workers.

Utility and insurance companies: Officials have told the Wall Street Journal that electronic brains now available will replace from 170 to 200 clerks each.

Airplanes: Convair now has 2 men with automatic riveters doing a job on wing panels that previously required 18 to 20 workers. At Solar Aircraft Co.'s Des Moines plant, machining time has been reduced 25 to 50 percent by automatic innovations. Boeing Aircraft, Seattle, with automation, can now bend tubes, which formerly were made in separate halves and then laboriously welded together. An official places savings at \$14,000 on each airplane.

Television: Admiral Corp., with equipment it calls Robot I, can now assemble half a TV receiver chassis in a matter of seconds. Machines now on the designing board would be able to insert tube sockets and tubes. (Admiral announced it has lowered its price, and employed more women to complete the assembly of the sets.)

Coal mining: At the United States Steel's Karen mine, 14 machines are taking care of all coal output. They run with a crew of 3 or 4, produce 15 tons per shift for each man in the mine. The national production average with conventional methods is 6 to 7 tons.

Chemicals: Du Pont has used MIT's big electronic brain to solve a chemical industry production problem. One man working 40 hours a week would have taken 20 years to do the arithmetic the "brain" did in 30 hours. Du Pont figures savings at \$450,000 as the brain eliminated need for large-scale high-cost test equipment.

Bakeries: Baker Process Co. is working on an automatic machine which would make bread untouched by human hands, will do an hour and half's work in 2 minutes.

Tanneries: Eagle Ottawa Leather Co. in Grand Haven, Mich., has bought a machine that will process leather in a few minutes instead of the weeks or months of conventional methods. Three or four men will do the work of 12 to 15. Pickled hides are put into a 25-foot long machine at one end and usually come out as leather in 4 minutes or less, already dyed, if desired.

The benefits from these changes promise to be enormous eventually. Indeed, we can look forward to a day of astonishing living standards achieved by nominal working hours. But the penalty in the short run threatens to be mass displacement, as man gives way to the machine.

What are these robots that can do the work of a man's mind? Basically they are electronic brains that run on the principle of feedback or self-regulation. Once they are set, or taped they can regulate a producing machine. The familiar household thermostat gives some idea of how they work. Once it is set to a certain temperature, it measures the temperature in the surrounding room and regulates a furnace so that the desired degree of heat can be achieved.

Automation machinery works on this same principle. But since it regulates far more complicated machines, the regulator itself is infinitely more complex. A typical machine may be from 70 to 100 feet long, with several rows of automobile-sized motors, joined together by a maze of wires, tubes, and pipes, while a couple of panels resembling switch-

boards are placed off on the side. The machine must be taped with the specifications of the product, a relatively unskilled job. Then electronic gadgets do all the work ordinarily done by the machine operator, controlling speeds and feeds, and even inspecting parts being machined.

Such a machine sounds too expensive for any but giant corporations, but this is not so. Walter P. Hill, Inc., Detroit machine-tool builder, has recently introduced a machine to assemble evaporating coils for air-conditioning equipment that sells for \$7,000 to \$11,000. Since 1 man with the machine can do the work of 12 men without the machine, labor savings may well pay for the new equipment in a few months.

This raises the question as to what products lend themselves to automation.

Machine-tool manufacturers are enthusiastic about the potentialities generally. "There isn't a product made which can't be automated," says C. F. Hautau, of Hautau Engineering Co., a leader in this field. "As long as a small manufacturer has a substantial volume in any one item, that item probably can be produced much cheaper through automation."

Richard L. Meier, of the University of Chicago, has classified the prospects for automation industry by industry. Advanced designs indicate that these industries will be fully automatic in the foreseeable future: Chemicals, liquid fuels, cement and brick, fermentation products, synthetic fertilizer, paper products, soap, and telecommunications.

A second group of industries will become largely automatic, but will still need some manual skills. Meier lists these as fiber and textile, glass and ceramics, iron and steel, machine tools, mining, and processed foods.

Today there seems little chance of dispensing with traditional skilled operators in transport, forestry and wood products, the garment trades, or in shipbuilding.

How long has it taken to make this astonishing progress, and how fast is this revolution advancing?

The basic research and developments came about during the war as part of the atomic and guided missiles programs. Today's machines are the peacetime result of this work. The first suggestion that these wartime regulators could be applied to industry seems to have come from a Massachusetts Institute of Technology mathematician and former child prodigy, Norbert Wiener. In 1948, he published his book, *Cybernetics*, which has led to the astonishing developments we see around us today.

Progress is so rapid that by now the manufacture of machine tools is a \$3 billion industry. Another indication of the fast changeover comes from the Federal Reserve Board. In November 1953, their index figure for the output of mining and manufacturing industries was 129. One year later in November 1954, the index figure was still 129. Production, then, was at a constant rate.

Yet employment in mining and manufacturing had declined by almost 1 million workers. In other words, productivity per man-hour rose so sharply in 1 year that the same output was achieved with 989,000 fewer workers. This has implications which are hard to ignore.

Yet at this stage automation is so new that it is hard to know what should be done. What seems to be most needed is some sort of fact finding study which can appraise possible courses of action and come up with answers to such questions as:

Should we extend the time limit on unemployment compensation?

What are the possibilities for retraining workers?

How can we be sure to educate enough technicians to take care of the machines that run machines?

How can push-button production be translated into higher living standards for all of us?

We do not have forever to answer these questions. As the 19th century orator, Wendell Phillips, once said, "revolutions never go backwards."

Progress in 1954

EXTENSION OF REMARKS

OF

HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. LAIRD. Mr. Speaker, the American Dairy Association made real progress in selling dairy products last year. This progress was made possible through the cooperative effort of the dairy farmer and the dairy industry in establishing the year-around set-aside. This year-around set-aside has added real muscles to the framework of merchandising, advertising, research, and planning that ADA has been building over the years.

The American Dairy Association is entering 1955 far better equipped to initiate and support real dairy promotion which will have significant effects upon the sale of milk products for years to come.

I am indeed proud and pleased to be able to present to the Congress the report of the American Dairy Association for 1954. This report is a splendid report on the activities of the American Dairy Association in 1954. After reading over this report, I am sure that you will all agree that it is too bad indeed that this great work of the American Dairy Association was not started on the same scale that it was carried out in 1954 several years ago.

The report is as follows:

PROGRESS IN 1954—A YEAR-END REPORT ON THE DAIRY INDUSTRY

The following report on the dairy industry in 1954 is presented in an effort to bring you up to date on important changes. The report relies upon United States Department of Agriculture estimates on production and consumption of dairy products. These figures are, of course, subject to correction at later dates.

An attempt has been made in the report to tell you how the dairy industry has moved forward to meet the problem of bringing production of milk and consumption of milk into balance.

THE DAIRY INDUSTRY MOVES AHEAD

The dairy industry is in the news—active, dynamic, progressive. Farmer, processor, and distributor alike—working together—are making economic progress. There is new emphasis on the importance of sales, the building of markets, aggressive merchandising, and a positive outlook, looking forward to growing service to the American people by this large, dynamic industry. This year-end report on the dairy industry gives background facts and a look toward the future of this key American industry.

MILK CONSUMPTION AND PRODUCTION HAVE INCREASED IN 1954

In the past 12 months dairy farmers set a new record for milk production. The

United States Department of Agriculture (USDA) estimates total milk production in 1954 about 124 billion pounds, 2.8 billion pounds more than was produced in 1953. However, the Department also estimates that consumption of milk, and the products made from milk, increased in 1954 more than the additional supply of milk.

Additional population each year requires approximately $1\frac{1}{2}$ billion pounds more milk. Based on current production and per capita consumption, this population factor alone would bring production and consumption of milk into balance in the year 1956.

The dairy industry, however, is not waiting for population to overtake production. The industry sold, according to USDA estimates, 9 pounds more milk, in the form of fluid milk or other dairy products, on an average, to each of the Nation's more than 162 million people in 1954, thus moving another $1\frac{1}{2}$ billion pounds of milk into consumption.

PRICE SUPPORT OPERATIONS ARE STILL AN IMPORTANT FACTOR

The Department of Agriculture estimates that consumption of milk, in all forms, in 1954, totaled 118.5 billion pounds, leaving approximately 5.5 billion pounds of 1954 milk production which will be accounted for in Government purchases of butter, cheese, and nonfat dry milk solids.

The USDA reported that Commodity Credit Corporation dairy purchases for April-September 1954 decreased more than 13 percent from purchases during the same period in 1953. For over 6 weeks in September and October 1954 there were no Government purchases of butter, and there were much lower purchases of all dairy products during the final months of 1954 as compared with 1953.

It should also be kept in mind that the dollar investment of the Commodity Credit Corporation in dairy products has declined since April 1, 1954, not only because of smaller purchases but also because of lower support prices. The purchase price was set, as of April 1, 1954, to attempt to assure dairy farmers 75 percent of parity for their milk. Prior to this time the support level had been at 90 percent of parity.

GOVERNMENT DAIRY STOCKS ARE MOVING INTO CONSUMPTION

Government holdings of butter, cheese, and nonfat dry milk solids, at the end of 1954, will represent a larger carryover than at the end of 1953. The stocks now on hand have been accumulated over a 22-month period.

It is significant, however, that in September 1954, the dairy trade repurchased dairy products from the Government stocks. In September the Commodity Credit Corporation sold more butter back to distributors than was purchased for price-support activities.

Disposal programs have also been developed and are now moving dairy products into consumption. In November, while making almost no purchases of butter, the Government made contracts for disposal of some 200 million pounds of its supply. USDA officials have predicted that in 1955 they will dispose of more butter than they purchase under the price-support program.

By 1956 the dairy experts in the Department estimate the Government may be out of the dairy storage business. Unfavorable weather conditions in the next 2 years, which could cut production, could bring about this change much sooner.

GOVERNMENT STOCKS ARE USED TO CARRY OUT OTHER GOVERNMENT PROGRAMS

Government-owned butter, cheese and dried milk are moving into consumption through various channels. The butter is not being destroyed, as was the case with some price support operations in other commodities in past years.

The butter is being distributed through the school lunch program, an increase in armed services use, through sales of butter at world prices to other nations, through conversion of butter into butter oil for reconstituting whole milk in several Asiatic countries which are short of milk, through donations to welfare agencies such as CARE. In most of these cases Commodity Credit Corporation stocks are being used to carry out other programs approved by the Congress, including the school lunch and foreign aid programs.

THERE ARE CHANGES IN MILK CONSUMPTION

The United States Department of Agriculture estimates that consumption of dairy products, on a milk equivalent basis, in 1954 increased 9 pounds over 1953, to reach a total of 697 pounds. This compares with a 1935-39 average of 791 pounds.

There have been changes in consumption patterns. In the 1935-39 period, per capita consumption of fluid milk was 264 pounds. This increased to a maximum of 335 pounds in the wartime year of 1945 when consumers spent a larger share of their income for non-rationed items such as milk. In 1954 the estimate is that fluid milk consumption was 299 pounds. Fluid milk and fluid cream consumption together in 1954 totaled 352 pounds, according to the USDA estimate, this being a 2-pound increase over 1953.

BUTTER CONSUMPTION UP FOR YEAR

Official estimates are that butter consumption for the year 1954 will be up four-tenths of a pound per capita for a level of 9 pounds per capita. This is a significant gain. A 1-pound increase in per capita consumption of butter would use the equivalent of $3\frac{1}{4}$ billion pounds of milk annually.

Less milk goes into butter now than in the abnormal, wartime years. In 1954 consumers used a total of 697 pounds of milk per capita, down 94 pounds from the 1935-39 average. A large portion of this drop has been because of smaller butter consumption.

Comparing more normal peace-time years, and leaving out the war-time years when food was one of the few consumer items available to the public, the per capita consumption of dairy products, with the exception of butter and evaporated milk, has shown a steady increase. Dairy foods have been among the groups of which have gained in consumption because of a general trend towards foods high in protein, vitamins, and essential minerals and away from the starchy, high calorie foods.

PEOPLE EAT MORE CHEESE AND ICE CREAM

Cheese and ice cream consumption, measured on a milk equivalent basis, have shown fairly steady increases in per capita consumption. In the 1935-39 period cheese consumption was equal to 55 pounds of milk equivalent, and this had increased to a record of 76 pounds of milk in 1954. Milk used for ice cream had moved from 25 pounds in 1935-39 to 46 pounds in 1954. Although the USDA estimated a slight decline in milk used for ice cream in 1954, as compared with 1953, there were increases in the low-fat iced milks, sherbets, and other dairy desserts which more than made up for the lower use of milk for ice cream itself.

Fluid cream on a milk equivalent basis, showed a 1 pound increase in 1954 over 1953, but the 1954 total of 53 pounds of milk was a drop from 66 pounds of milk in 1935-39. Evaporated and condensed milk usage has dropped from the peak wartime years, but in 1954 the 36 pounds of milk per person used in these products was the same as in 1935-39.

DAIRY FARMERS HAVE PROPOSED NEW PRICE SUPPORT PROGRAMS

Dairy farmers, through their various organizations, have indicated their willingness to work with the Department of Agriculture and the Congress to develop programs that

will eliminate the need for the Government to purchase and store those dairy products which are not immediately consumed.

The Secretary of Agriculture, under congressional mandate, must report to Congress in January 1955 on various dairy plans and make recommendations for a new dairy price support program if the Secretary feels a better plan has been suggested.

A self-help proposal, originally approved by the National Milk Producers Federation over a year ago, with proposals for modification offered by other groups, is certain to receive considerable attention in the next session of Congress. This plan would assess a stabilization fee against milk producers, or use a base-surplus type of payment for milk, with dairy farmers themselves assuming the full cost of disposing of that milk which is not used in domestic channels.

Unless weather conditions should bring about a serious drought in the next year or two, it would appear that the major factor affecting the stabilization of production and consumption of milk will be the success of the Commodity Credit Corporation in drastically reducing present Government stocks of dairy products. These large supplies on hand have the same effect on dairy marketing as an oversupply in any other industry. Any self-help proposal for dairying would depend upon Government policy in disposing of current Government holdings.

THE IMPORT-EXPORT QUESTION IS UP AGAIN

Because of the excess supply situation existing in the dairy industry in the past several years, the Congress has authorized limitations on imports of various dairy products. This program will be reviewed in 1955.

It appears doubtful that, under present conditions, there will be any important changes in current import restrictions. Exports of dairy products are not likely to show any major increases, except under special Government aid programs. Prices of dairy products in the United States remain substantially above those of the world market, and other dairy-producing countries are attempting to market dairy foods through exports.

The competition from lower priced dairy products, produced under different economic conditions in other countries, is not a problem unique to the dairy industry. Other American industries are finding themselves underbid in domestic and foreign markets by foreign manufacturers. United States manufacturers are, in fact, subsidized, or protected, in such competition within this country through the laws which require that foreign bids on Government-financed projects must be lower, by a congressionally set limit, than American bids before they may be accepted.

THE OUTLOOK FOR 1955 IS FOR MORE PROGRESS IN THE DAIRY INDUSTRY

If present USDA estimates for 1955 are fairly accurate, there will be little change in milk production rates in the next 12 months. At the present rate of consumption, the Department of Agriculture forecasts that the Nation will consume at least 120 billion pounds of milk in the next year, allowing for the anticipated increase in population. This, then, would leave production about 4 billion pounds higher than consumption, the equivalent of slightly over 1 pound of butter per person for a year, or about one-half pint of milk per person per week.

There are reasons to believe that per capita consumption of milk and milk products will show further increases in 1955.

The Agricultural Act of 1954 provides \$50 million per year to expand milk consumption in schools. This amount of money, which has been allocated and is now being used in most of the 48 States, could mean the purchase and use of about 1,200,000,000 pounds of milk in addition to the amount already being used in the schools. The program is

educational, in that it aids schools in developing more nutritious lunch programs for pupils.

There is another rapidly developing trend in milk distribution and sales which is helping to increase consumption of milk. The automatic vending of milk in factories, transportation centers, office buildings, schools, and other places where there are sufficiently large numbers of people concentrated is helping to expand per capita sales of fluid milk.

Vending machine sales are usually additional sales of milk because the machines are installed in places where milk often-times has not been available in the past. The USDA reported, in November 1954 that surveys made in the vending field indicated a 25-percent increase in the number of machines vending milk in 1954.

The activities of the dairy industry in greater sales promotion for milk have produced results in 1954 and certainly should play an increasingly important role in dairy sales in 1955.

PRODUCING MILK IS LONG-TERM BUSINESS

It has sometimes been difficult for people not fully acquainted with the dairy industry to understand why dairy farmers have not been able to bring their production of milk into balance with current consumption demands.

First, it should be realized that the dairy industry is actually a collection of many separate industries, unlike the automobile industry for example, which is a matter of four major producers who maintain, through their own dealer systems a close check on sales of their cars. In dairying there are approximately 2 million individual dairy farmer-businessmen producing the raw material milk for sale. There are more than 25,000 firms which bottle or manufacture the milk. There are no producers or manufacturers who alone can exert enough influence on the industry to affect production of dairy products.

It requires 3 years for the dairy farmer to bring a cow into milk production. The dairy farmer, like any other patriotic citizen, has always responded to the calls from his country to increase production during wartime periods. He has been able to add to his herd in order to produce more milk, but he has not been able to cut production by the flip of a switch.

MILK PRODUCTION INCREASE BEGAN IN 1952

The current increase in milk production began in late 1952. In the fall of that year many economists were urging dairy farmers to increase their production of milk to meet what those economists felt were going to be larger demands for milk. Economists were also urging farmers who were producing crops then in surplus to go into dairying which in 1952 was providing a fairly stable income for farmers.

Good weather in the winter of 1952 and throughout most of 1953 in the heavy milk producing areas enabled dairy farmers to increase the production of milk at a rate never before attained. Dairy farmers put into practice the better breeding, better feeding, and better herd management programs advocated through the years. Their cows produced more milk.

There were other changes going on during this period. More milk was being produced in the eastern and southern market areas. In the meantime the Midwestern dairy States were also increasing their production.

Because each individual dairy farmer operates his own business enterprise, and because most dairy farms are comparatively small enterprises, operated by the farm owner and his family, income must be maintained at a level which produces a profit for that individual farm. Thus, historically, the dairy farmer has increased production

of milk when prices paid for milk declined in order to earn approximately the same gross income. Milk production has not responded to price changes in the same way that some other products do. Each dairy farmer is his own production manager and responds according to his own income calculations.

THE INFLUENCE OF SUBSTITUTE PRODUCTS ON THE DAIRY MARKET

The dairy situation has been further complicated in the postwar years by sales of substitute products, those products which use the skim-milk portion of milk in combination with cheaper vegetable fats substituted for butterfat. The butterfat displaced by other fats has been manufactured into butter because churning butter is the traditional way to store butterfat.

THE DAIRY INDUSTRY IS BUSY SELLING MORE DAIRY FOODS

For many years the emphasis in agriculture has been on efficient production, and American farmers have become very efficient. In April 1954 the United States Census Bureau estimated that only 13 1/4 percent of the Nation's total people live on farms, as compared with 35 percent in 1910 and 75 percent or more not too many decades before the turn of the century. Today each American farmer produces enough food for 17 other people.

American farmers have been willing to take greater risks than almost any other businessmen. They have invested in land, buildings, livestock, and machinery to produce more and better food. They have each spring purchased fertilizer and seed, plowed and planted, cultivated and hoped that the weather would cooperate to produce crops. They have been successful, and today the United States, unlike most of the rest of the world, faces the problem of handling too much food instead of not enough food. Political and diplomatic situations, not any desire on the part of the farmers, are responsible for the inability to move excess American food to other areas of the world where food is needed.

FARMERS LOOK TO THEIR MARKETS

The American farmer has become the most efficient producer of food and fiber in the world. Even though some small groups of farmers, with specialized crops, learned the value of carrying on their own sales programs in past years, it has been only in the more recent postwar years that farmers, in general, have directed their attention to building markets for their products.

In 1954, the dairy farmers of America gave more attention to market building than ever before. In their local communities, dairy farmers have worked with civic groups, food retailers, dairy processors, and others to call to the attention of consumers the values of dairy foods. They have organized local dairy days and dairy promotion groups. They have set up dairy bars at fairs and other large gatherings of people to introduce their products to the public. They have helped to spread the use of milk vending machines. It is not uncommon these days to attend meetings of dairy farmers and find them discussing the intricacies of advertising and merchandising, public relations, and market research.

DAIRY FARMERS HAVE EXPANDED THEIR NATIONAL SALES PROGRAM

Perhaps the best indication of the new interest which dairy farmers are showing in selling milk and milk products is their rapid expansion of their own national sales promotion activities through the American Dairy Association. In 1954, approximately 1 1/2 million dairy farmers in 44 States invested over \$4 million in a national program of research, public relations, advertising, and merchandising. They have set up a budget

of \$5 million for 1955 to intensify further their sales campaign.

Secretary of Agriculture Benson issued a challenge to the dairy industry at the 1953 annual meeting of the American Dairy Association to sell more milk and milk products to the American public. Even before he had spoken, dairy farmers in several States had voted to increase their investment in the association from a 2-month program to a year-around program at the rate of 2 cents for each 100 pounds of milk they produced. This year-around plan was adopted as a national policy at the meeting addressed by the Secretary.

By January 1, 1954, most of the major dairy producing States, and many of the States where dairying is not a major enterprise, had either started on the new year-around investment program or had made definite plans to start sometime during the year.

Because dairy farmers themselves wanted a bigger sales promotion program and because they provided the funds for this program, they now have a voice that is being heard in an estimated 45 million homes every week, a voice telling consumers a strong sales story about dairy foods.

RESEARCH PAVES THE WAY

The dairy farmers have adopted and are using the same selling methods employed by other successful business enterprises. One of their first steps in their expanded sales program was to employ the services of an outstanding market research organization (Alfred Politz Research, Inc., of New York City).

Through the American Dairy Association, dairy farmers had been carrying out a research program to learn more facts about their products, nutrition facts, and processing facts. They continue to sponsor these studies in colleges and universities throughout the country, but they have added market research to learn consumer attitudes toward dairy products and toward the dairy industry itself.

These consumer studies have produced information which makes it possible to develop more effective advertising and merchandising programs and to direct public-relations efforts in the most productive channels. Sales messages are directed toward capitalizing on favorable attitudes toward dairy foods or toward correcting misconceptions which have developed.

NEW PRODUCTS AND PROCESSES SALES

During 1954 there were two major developments in one branch of the dairy industry. Instantly dissolving nonfat dry milk was placed on the market for the first time. A new bread-baking process, known as the stable ferment process, was introduced to the baking industry by the American Dry Milk Institute.

The stable ferment process for baking bread holds promise for reducing baking costs and increasing the use of nonfat dry milk in bread. Bakers who adopt the process will be able to reduce space and equipment requirements and eliminate the need for all-night baking crews.

Other developments in products and processing techniques are on the way. Efforts are being made to produce a powdered whole milk which will not require refrigeration. A completely new type of cheese has been developed at the University of Wisconsin and is now being manufactured (Dairiworld). The dairy industry is making progress, from the farm to consumers' tables, through research.

DAIRY FARMERS ARE IMPORTANT FOOD ADVERTISERS

In 1954 dairy farmers have become important in the total food sales promotion field. Through the American Dairy Association dairymen are sponsoring national radio and television shows. Their advertisements appear regularly in leading magazines and

newspapers. They have developed a fluid milk sales program that, market research shows, is leading adults into the healthy habit of drinking at least three glasses of milk every day.

In 1955 the dairy farmers will launch a million dollar campaign to convince housewives that "even more than your guests, your family deserves butter." The dairymen are capitalizing on the prestige which butter still maintains among homemakers. They will be telling a powerful sales story on the use of butter in cooking and baking.

The dairy farmers, through the American Dairy Association, have developed a comprehensive sales program for milk, butter, cheese, ice cream, evaporated milk, cottage cheese, and nonfat dry milk. The sales plans are based on the market research. They include not only the biggest dairy advertising program ever conducted on a nonbrand basis, but also very complete merchandising ideas which are made available to brand distributors for use at the point of sale.

In 1954 milk dealers throughout the Nation were using the American Dairy Association's milk sales campaign. Local dealer advertising was in many cases tuned-in to supplement the association's national campaign. The dealers used bottle collars and a host of other merchandising tools to carry the story of milk drinking benefits into more homes. Where this milk sales story was used intensively by brand dealers, increased milk sales were easy to measure. Adult attitudes toward milk drinking showed important changes.

WHY DAIRY FARMERS ARE PROMOTING SALES

It is not customary for producers of raw materials to be spending the money they receive for those raw materials to promote sales of the finished products. Dairy farmers have not let customary practices stop them from going into dairy sales promotion full-scale.

Dairy farmers, fundamentally, are in dairy food sales promotion because they are interested in increasing consumption of milk rather than to cut production. They are not taking over all promotion for dairy products but instead have developed an overall campaign for everyone in the industry.

Brand distributors in the dairy industry are local or regional, except for several companies which do have national distribution of one or two of the major dairy products. Through the years there have been few national campaigns covering all of the dairy foods.

Dairy farmers have stepped in and filled a big void for the dairy industry. They have developed comprehensive sales programs for each of the dairy products. Brand distributors are kept informed about these sales campaigns in advance. Today even the smallest brand dealer can take advantage of a well-planned national promotion for milk or butter or cheese or any other dairy food. New packaging and merchandising ideas are available to the smallest processor as well as to the largest. Brand distributors are using the American Dairy Association campaigns to sell more dairy foods to present customers.

DAIRY FARMERS ARE PROVIDING SALES LEADERSHIP

Through the leadership which dairy farmers are giving to the dairy industry in sales promotion, it is now possible for the entire industry to have effective national sales programs. In 1954 processors and distributors of dairy products accepted and joined with the American Dairy Association program more than they have in the past, and 1955 will see more brand dairy products being sold through the sales appeals developed by the dairy farmers.

The year 1954 saw some improvement in per capita sales of various dairy foods. Prices on some of these products were at lower

levels than in 1953. There is no accurate way to measure the relative effects of lower prices and sales promotion efforts on sales. It does seem logical to assume, however, that higher per capita butter sales in 1954 were the result of increased sales promotion as much or more than lower prices, since butter, even at the lower prices, was still more than twice the price of substitute products.

NUTRITIONISTS SUPPORT THE DAIRY FARMERS

Dairy farmers are convinced that their sales promotion, now that it is in high gear, can do a great deal to move more dairy foods into consumption. Nutritionists are strong supporters of the dairy farmer in that they are urging greater consumption of high-protein dairy foods. Some nutritionists have stated that the current population of the United States should be consuming 145 billion pounds of milk annually to reach a minimum level of good diet.

The dairy farmers are selling their products for both health reasons and for good eating. The dairy foods family includes America's favorite dessert, ice cream. Milk is consumed by almost 50 percent of all adults at least once each day. Cheese is found in over 90 percent of the homes as a staple food. Studies show that dairy foods provide approximately 30 percent of the average person's nutritional requirements at a cost of only 15 cents out of each food dollar. On a nutritional basis, dairy foods are rated as among the top buys in the food market.

It would take only a small increase in per capita milk consumption, about one-half pint of milk per person per week, to move all current production into consumption. The dairy farmers are intent upon selling that additional amount of milk so that they can turn their attention to increasing production to meet growing population needs instead of worrying about storing dairy foods in warehouses.

DAIRY FARMERS TELL THEIR STORY TO THE PUBLIC

Dairy farmers are in the public-relations business because they have not been happy about the unfavorable attitude toward them on the part of some segments of the public. The amount of money which the Government has invested in dairy products since the beginning of price-support activities in 1933 has been relatively minor in comparison with other branches of agriculture and with non-agricultural industries.

The dairy farmer would much prefer to sell his products directly to consumers, and through his sales-promotion program he is making an effort to do that. In the meantime it is not easy for him to cut production by turning a switch. The products which the Government has bought have gone into consumption and are going into consumption through various channels; they have not been wasted or destroyed. The dairy farmer, unlike other segments of the economy, has taken a drastic cut in his income. The Government price-support operations do not guarantee a high income for the dairy farmer but rather serve to keep the dairy farmer from becoming insolvent.

The dairy farmer's market research bears out the studies made by various public-opinion analysts. The public is not especially well acquainted with Government price-support programs. Those people who are familiar with such programs are not particularly upset about these operations. A majority of the people who indicated, in the Politz studies, that they were acquainted with price supports also indicated that they thought such programs were a good idea.

Price-support operations, which keep the dairy industry from going into a depression period which might eventually result in shortages of milk, are, dairy farmers feel, as justifiable as Government subsidies for shipbuilding in order to keep American shipyards from going out of business. Food, as

well as ships, is essential to the Nation's defense.

Dairy farmers are working every day to increase their efficiency of production in order to cut their costs. They are investing in new equipment which helps to improve even more the sanitary standards under which milk is produced. They are engaged in a sales program to help move their products into consumption.

The dairy industry has made substantial progress in 1954, perhaps more progress than in any previous year. The industry is moving into 1955 with confidence that the new year will end with the industry closer to the goal of expansion rather than contraction.

Thirty-seventh Anniversary of the Declaration of Independence by the People of Lithuania

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks I wish to include the following resolution:

LAWRENCE, MASS., February 20, 1955.

Resolution unanimously voted by the Lithuanian Americans of the city of Lawrence, at the observance of the 37th anniversary of the declaration of independence by the people of Lithuania, held under the auspices of the Lithuanian Citizens Club and the Lithuanian American Council, Inc., at the Lyra Hall on the 20th day of February 1955:

"Whereas the intolerable conditions which now prevail in Eastern and Central Europe, including Lithuania and her two neighbors of Latvia and Estonia, should be of gravest concern to Western democracies, and first of all to the United States, as no peace and stability in the world is possible without participation of that area which comprises a force of over 100 million people separated from the rest of the world by the Iron Curtain;

"Whereas the United States Government sponsor a resolution in the United Nations based upon findings and conclusions of said investigation, denouncing the Soviet Union as an aggressor against all the nations now enslaved by communism; also that the genocide convention which represents the most powerful legal means to save the Soviet-slaved peoples from total destruction be immediately ratified by the United States Senate so that the Communist crimes perpetrated against humanity may be fully recorded and officially noted for prosecution:

"Resolved, That this gathering voice its deepest gratitude to the Federal Government and Congress of the United States for their sympathy with and unchanging favorable attitude toward the eventual restoration of independence of Lithuania."

JOHN URBONAS,

President Lithuanian Citizens Club.

JOHN A. STUNDZA,

President,

Lithuanian American Council, Inc.

JULIUS PIESLOK,

Vice President,

Lithuanian American Council.

MATTHEW STONIE,

Secretary, Lithuanian American Council.

ANNA T. JEVNESKY,

Treasurer, Lithuanian American Council.

Intellectual Freedom, Oppenheimer, and National Security—Part II

EXTENSION OF REMARKS

OF

HON. HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. VELDE. Mr. Speaker, yesterday, under unanimous consent, I inserted in the CONGRESSIONAL RECORD the first part of an article entitled "Intellectual Freedom, Oppenheimer, and National Security" written by my good friend, Mr. Glenn A. McLain, a professor at Eastern Kentucky State College who is serving as director of the university's center of international relations.

The second part of the article follows:

Within a short time after the release of the findings of the Gray Board, the official hearings titled "Transcript of Hearings Before Personnel Security Board in the Matter of J. Robert Oppenheimer" were released to the general public. There was something less than a rush on the part of the American people to read this rather formidable and closely printed document. However, the makers of public opinion in America owed it to their reading and listening public to read this remarkable record in its entirety. But almost as one, our newspaper reporters and newscasters ignored the documentary story except for the parts where the Board admitted any doubts as to whether Oppenheimer was guilty of actually submitting security information to Soviet agents. As in the case of the findings, the scientific brotherhood rushed into print with bulletins, and brochures claiming Oppenheimer was "humiliated because he failed to conform." It was this same kind of "conformity" that developed the idea in Klaus Fuchs' mind to give our atomic secrets to Russia in the cause of world peace. Oppenheimer probably would do none of these things, but what are average citizens, who run our Government and operate our democracy, to think of these "nonconformist" activities? If we had a platonic republic in America under the rule of philosopher kings, such activity would be acceptable. But not in a democracy.

Newspaper comment concerning the decision of the Atomic Energy Commission was something less than enlightening for American readers. The Alsop brothers led the parade of outright misinformed or deliberately partisan writers who complained that "the facts did not support either the Gray report or the AEC report." The Alsop brothers were given the original letter exchange between Oppenheimer and the AEC and tried to build up public opinion in favor of Oppenheimer before any official material was released. After the AEC report, the silence of the Alsop brothers was deafening. Apparently, these columnists who are capable in some fields of foreign policy but obtuse in matters of liberty and those concerning most congressional investigations had finally read some of the AEC report. Otherwise, their usual scathing journalistic comments would have been in order.

Various magazines and journals of opinion such as the New Republic commented that the whole unsavory incident should be blamed on the FBI. This is the usual type of hackneyed argument one might expect from these magazines which have a long history of following the unpopular causes in American life. We need all sorts of opinion

on such matters whatever the ideological stripe of the writers. However, it would be more in the interests of scientific analysis if the facts were considered first before opinions are delivered with editorial bombast. This is the same type of ill-considered opinion that is often offered by such writers as Alan Barth who considers the FBI as a police state organization and all congressional committees as a threat to intellectual freedom in America.

With a very few exceptions, the only newspaper in America which seemed to consider the case on its actual evidence was the Christian Science Monitor. The Monitor, the New York Times, and a handful of other papers which consider the actual news as reportable and not some editor's opinion based on preconceived ideas, said that "the hard language of the documents in the case . . . was conditioned by the political and emotional climate in the United States, which likewise is hard." Roland Sawyer, one of the best Monitor correspondents, pointed out that "it is difficult to compel men who live almost entirely in the free and uninhibited world of the intellect to work with other men who must live entirely in the disciplined, almost semiauthoritarian world of the military." Both the Oppenheimer ivory tower and the tight security-conscious steel tower of the Pentagon official are necessary in this Orwellian world of ours. However, like the Ashram of Ghandi, Oppenheimer's ivory tower is in this world when he attempts to make decisions which influence political matters of importance. It is his right and the right of every citizen, scientist, or bootblack to give his considered opinion on political matters. But in exercising these rights both Oppenheimer and the bootblack must be bound by the conventions of national security. If Oppenheimer or any other individual is above and beyond the regular security standards perhaps our laws should be changed. Until the nature of our ideological struggle with international communism changes, this does not seem possible.

The opinion of the scientists in America was almost 100 percent against the first 2 to 1 decision of the Gray board and the 4 to 1 decision of the AEC Board against Oppenheimer. The Alsop brothers diligently reported that the scientists regarded "these charges as fundamentally irrelevant to a security proceeding." They further reported that a hornet's nest of scientific unrest had been stirred up by this decision and that petition signers at Los Alamos and other plants would be likely to lose their enthusiasm when contracts came up for renewal. This is fantastic nonsense. It is the same type of hysterical, fear-ridden thinking that characterizes the Wendell Furies and Corliss Lamonts who decry any attempt to search out the meaning of the Communist danger.

No one has to lose their liberty under the careful scientific analysis of such committees as the Gray or the AEC Boards. If such opinions are true, perhaps a little required reading in the actual history of the Communist movement in the world and as an organized conspiracy in America since 1921 are in order. Such studies are available free from the United States Superintendent of Documents in Washington. Perhaps this type of mental activity would be anti-intellectual. Perhaps we need some more hardheaded realism to temper our intellectual climate in America today. Most of the so-called "scientific hornets" do not feel that they lose their intellectual stingers by being required to stop associating with Communists. Or so the informed opinion of such scientists as Vannevar Bush and a host of others maintain. Let us believe the true savants in this matter and not those who

would let us rob our Nation of its national security.

The issues at stake in the Oppenheimer case go far beyond the two rulings made by the Gray and the AEC Boards. Briefly stated, the issues are the validity of the security system of the United States, the right of individuals to be nonconformists under our existing laws, and the role of technical advisers in policy decisions. The shadow of fear and the uncertainty of the cold-war struggle loom over the atomic horizon which can bring plenty into a needy world or doom it to a hydrogen-blasted planet.

Let us explain these issues in the light of the findings, the hearings, and the actual facts. The formation and determination of public opinion depends upon a reasoned analysis of the facts and not emotionally charged ideas. The issue is not one between practical men of affairs and the scientists or professors. Rather the issue is one that cuts across all psychological, professional, and ideological boundaries. That is, it should if citizens of this Republic actually believe in the democracy we profess. How valid is a security system which penalizes the genius who was greatly responsible for the development of the A-bomb? Does the decision of the AEC Board set an unrealistic security standard? These are fundamental questions, and they deserve clearcut, unequivocal answers. No American seriously would wish to kill the goose that laid the golden egg of atomic and hydrogen power. This has not been done in the Oppenheimer case. His contract as a special consultant was merely not renewed when it expired on June 30, 1954. He is free to work on any scientific problem which might be in accord with his professional inclination. He has been told firmly by the AEC Board that "the record shows Dr. Oppenheimer has consistently placed himself outside the rules which govern others. He has falsified wherein he was charged with grave responsibilities in the national interest. In his associations he has repeatedly exhibited a willful disregard of the normal and proper obligations of security."

It would seem that this statement by the AEC members is self-explanatory. One can well imagine the political hue and cry that would ensue if Oppenheimer would be judged clear, securitywise, after such judgment had been developed from voluminous evidence and personal testimony of the involved person himself.

The right of the individual in our society to be a nonconformist is one of basic importance. Those who think otherwise misunderstand both the nature of our democratic system and the long historical tradition of Anglo-Saxon jurisprudence. Liberty for individuals does not mean license to transgress against the laws of our society which protect all citizens. Like a 20th century Hamlet, the position of Oppenheimer is one of infinite tragedy for the nonconformist who lives in an intellectual world of his own choosing. Our colleges and universities are staffed with such individuals who, like remnants of a golden age in America, are honored because of their humility and inherent greatness but who somehow are not capable of understanding this Machiavellian world of 1954, which is rushing toward Orwell's 1984. We need the anachronistic in political life. If they work for the Government, they should confine their activities to theory and not the application of theory in public affairs. Their intellectual skill is needed and need not be confined, as the free mind knows no bounds or it will atrophy. Practical decisions concerning the nature of the enemy are sometimes disregarded by this type of individual. Oppenheimer is obviously of this type, and as his work is a combined effort in scientific

fields and public affairs, he is not constitutionally or morally able to fulfill this dual function. There is no threat to the liberty of any scientist or any public figure because of this considered decision on the part of the AEC.

The final question to be considered is the role of the scientist in our national defense effort. The scientists are asking: "Does the Oppenheimer decision mean that the loyal scientist called upon to advise his Government does so at his own peril?" This is a vital question. If errors in judgment are to be punished by banishment like the Athenians were centuries ago, national security needs have created a Frankenstein monster. The AEC decision does not suggest any such movement. The carefully considered, well reasoned, and judicious analysis of the Gray and the AEC Board carry with them no overtones of such fear and danger. There is such a climate of opinion in American life today, but it has nothing to do with the Oppenheimer case. As Americans, let us consider each issue of national security on its own merits. If any citizen will take the trouble to actually study the excerpts from the findings or the the hearings as published in our national newspapers, in the U. S. News & World Report, Time magazine, or in full in the CONGRESSIONAL RECORD, or the special reports, the decision would have to be in favor of the two Boards. Oppenheimer has made great contributions to America. His value as a scientist has been impaired by his lofty personal view of what the security needs of America were in 1954. If he and other Americans who fought fascism with such vigor and patriotism in the thirties and early forties apply that same vibrant energy to the understanding of the true nature of communism, their positions will be unimpaired under our security system. Such has not been the case. The decision could, therefore, hardly have been otherwise.

All Americans pride themselves on their acceptance of the law to regulate affairs and responsibilities of citizens. Our national security laws are clearly identified as being in conformity with the needs of our Nation in 1954. There is a difference in loyalty to abstractions in contrast to that same loyalty to human beings. Communism recognizes no abstractions. The law is no respecter of persons. Whether the individual be the President of the United States or an atomic genius, the issue is clear. The national interest is the duty of the individual. This is not chauvinism, super patriotism, or hysterical nationalism—it is solid respectable Americanism based upon the hard realities of our modern world.

(NOTE.—Since this paper was written in late summer 1954 some of the reporters and writers who are criticized here have written further articles concerning the Oppenheimer case. These same writers formed their opinions before reading the complete findings and the hearings so my evaluation concerning their inadequate reporting still stands. For a consideration of the views of those who disagree with the findings of the AEC in the Oppenheimer case see: We Accuse, Harpers, October, 1954 and The Oppenheimer Case, Atlantic Monthly, October, 1954. For the texts of the report and the findings see U. S. News & World Report, Gray Board Findings, June 11, 1954; excerpts from important testimony in the case, June 25, 1954, and AEC final decision in the Oppenheimer case, July 9, 1954. A debate between Roger Robb, AEC council and the Alsop brothers appears in the December 24, 1954 U. S. News & World Report.)

Address of Hon. Leroy Johnson, of California, Delivered to the New York Chapter, Atlantic Union Committee, February 18, 1955

**EXTENSION OF REMARKS
OF**

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Friday, February 25, 1955

Mr. JOHNSON of California. Mr. Speaker, a group of us in both branches of the Congress have introduced concurrent resolutions asking the President to invite the other democracies who sponsored and signed the North Atlantic Treaty to meet in a convention to explore and report to what extent their peoples might further unite within the framework of the United Nations, and agree to form a Federal Union for our mutual protection. Last Saturday night I had the honor of making a speech on this proposal to the New York Chapter of the North Atlantic Union Committee.

Under leave to extend my remarks I am including that speech, which follows:

Ladies and gentlemen, I warmly appreciate the courtesy of your kind reception. Especially I am grateful for the high honor paid me by your invitation to address your chapter of the Atlantic Union Committee.

I rather imagine that any ideas I bring you on the North Atlantic Federal Union proposal will be neither novel nor startling. But what is lacking in originality I hope will be made up at least in part by my genuine, abiding interest and also by my true sincerity in respect to this challenging, vital proposition so important to every civilized person on earth.

Last week was a possible turning point in the long history of this movement.

In the United States Congress a group of Senators and a group of Representatives, including myself, introduced highly important resolutions. They contain this key provision:

"The President is requested to invite the other democracies which sponsored the North Atlantic Treaty to name delegates, including members of their principal political parties, to meet in a convention with similarly appointed delegates from the United States and from such other democracies as the convention may invite, to explore and report to what extent their peoples might further unite within the framework of the United Nations, and agree to form, federally or otherwise, a defense, economic and political union."

I am profoundly convinced that the formation of a Federal union with free nations of Europe for defense purposes would open vast possibilities for advancing and stabilizing the world peace for which all of us hope so prayerfully today. If the proposition is sound, repetition of its supporting arguments may be useful, even though I suspect that most of you are more conversant with them than am I.

This fundamental approach to mankind's most critical problem—that of building a solid foundation for unity and peace in this divided world—first came into my consciousness through a lecture delivered by

Clarence Strett in the 1930's in Stockton, Calif. I was deeply stirred by the concept. Today its appeal to me is as fresh and as powerful as it was two decades ago.

Little did I think as I listened to Clarence Strett that I would soon be witness to a global conflict far more destructive than the gigantic struggle in which I participated in 1917 and 1918. Nor had I the faintest premonition that I would become a member of the House of Representatives, or that for seven Congresses I would serve on a Congressional committee charged with drafting laws pertaining to the security of our Nation. In both the Senate and House of Representatives these laws are handled by the Committee on Armed Services. Senator KEFAUVER and I are members of these committees.

For the past several days, the House committee has had before it the top military experts of America. They have described with candor and in detail the dangerous situation confronting our country. They have set forth the steps we must take for our protection in this nuclear age. I shall quote a few of their statements made in public hearings. From them you may gain a clear appreciation of the deadly menace confronting us and of the character and scope of our defense needs.

Let us hear first from Adm. Arthur Radford, chairman of the Joint Chiefs of Staff. He says:

"In my opinion a personnel strength of 2,850,000 men is the size of forces we must maintain for as long as the Communist threat hangs over our head. This may be 10 years or it may be 50."

Next, let's listen to the Secretary of Defense, Charles E. Wilson. He says:

"The security of the United States and the security of our allies are in reality one and the same. This concept of collective security is reflected in our military arrangements around the world."

"In the development of our military programs now and in the future we must reckon with the Communist capabilities as well as with their possible intentions. Because their military power has continued to grow and now includes the ability to produce and deliver nuclear weapons, the United States for the first time in its history has reason to be deeply concerned over the serious effects which a sudden attack could conceivably inflict upon us."

"As a Nation we reject the concept of preventive war. However, a sudden nuclear attack aimed at our population, industrial and military centers, could be a threat to our survival as a Nation. Therefore, our primary objective must be to maintain the capability, first to deter an enemy from such an attack; and second, to blunt any such attack if it comes. Both purposes require a combination of effective retaliatory power and a continental defense system of steadily increasing effectiveness."

"The forces envisaged in the long-range program of the Department of Defense constitutes by far the largest Military Establishment that this country has ever undertaken to maintain for an indefinite period of time."

"The maintenance of these forces and their qualitative improvement will require expenditures over an indefinite period of years of many billions of dollars."

Since the A-bombs were dropped in Japan, a decade ago, there has been a rapidly rising crescendo of frightfulness in the construction and development of weapons.

From a low-flying plane, about a year after atomic bombs had fallen on Hiroshima and Nagasaki, I looked at the ruins of these two

cities. The sight of the carnage wrought by those two small bombs actually made me ill for several days. It was an incredibly ghastly, horrible, shocking sight. I kept saying to myself, "Has humanity gone stark, raving mad; is man so stupid, so inherently evil, so savage and untamed, that in the end he will destroy himself?"

And yet, today we face a situation far more staggering in its implications.

Today, we know, though we can scarcely comprehend the awesome fact, that the hydrogen bomb can wreck 1,000 times the damage inflicted upon Japan. Other weapons are still more hideous. Noted scientists have written that a few properly placed cobalt bombs could exterminate most of the human race. Weapons of such boundless destructive power may soon be in the hands of our own and hostile military forces.

In the face of such momentous developments, it is indeed understandable that during the past 10 years apprehension that these new weapons might be used against us has steadily heightened among our people. There is, in truth, no escaping this grim fact: We live in an age in which cruelly ambitious, unprincipled, atheistic men could destroy the civilized world—not only its people but also its institutions, its public and private works, its most hallowed traditions, its very will to survive. This dread capability rests both with the Communists and the free world.

As I look back over these 10 years, I can see that more and more, year by year, our country and its allies are relying on the power to destroy an enemy in an effort to find protection against sudden attack. We are, perforce, chained to a military treadmill; feverishly we labor, lavishly we expend our resources, in our effort to increase the deadly power of our military force. Our antagonists are ensnared in the same fantastic spiral; day and night they are striving to surpass us in building stronger, ever stronger, weapons of destruction.

And yet, here is the pathetic paradox:

Every person, in America and abroad, with whom I have seriously discussed this problem, longs ardently for peace. On every continent in the past decade I have talked of this terrible dilemma with public officials, businessmen, teachers, the poor and the rich. All give voice to the same deep yearning: "We want peace," they say with almost pathetic earnestness. "We do not want war." Yet, the pages of history are filled with the message that a race in arms ultimately explodes into war.

The Secretary of Defense says we may have to fight for our survival; the Chairman of the Joint Chiefs of Staff says our tense situation may last from 10 to 50 years. The Secretary of Defense further advises us that our costly weapons rapidly become obsolete due to technological advances. Thus we are in an economic vise; we are also in a military position which will remain eternally precarious.

I must, of course, make this clear; I have have strongly supported all of our efforts to strengthen our Armed Forces. I have voted to draft our young men. I have voted to have American youth trained so they may be skillful warriors, able and read to defend not only their country but also themselves on the field of battle. I have supported our Nation's efforts to buttress our friends throughout the world. These steps and others I, as a Congressman, feel we must take to protect our country and to neutralize the terrible, imminent threat to our survival.

All of these things we reluctantly do for one reason alone: Ungodly men are at large in this world, implacably bent upon communism and enslavement of all humanity. At any time they may strike with atomic or hydrogen bombs, hoping to destroy our industrial system or, in one massive blow, wound us so mortally that domination of our country would surely follow.

Our ready military power, our national resolution, our patient firmness, the certainty of our devastating counterblow will, we pray, deter them from war.

But, in all candor, it is somewhat less than inspiring to contemplate nerve-racking tension and deadly threat year after year, for decades to come, even though war may never be our lot.

I repeat that we cannot minimize the imperative necessity for a strong military posture. Our strength is our insurance against annihilation in today's world. But it is comparable to a fire-insurance policy: Comforting, of course, to have, but no guaranty that there will be no fire. We must stay alert to the danger of our situation; we must keep the threat in the forefront of our minds as we look hopefully and enthusiastically upon the promise held out to mankind by a North Atlantic Union Federation.

With these caveats behind us, let us now explore our route toward peace which provides an alternative to military force. It requires no coercion, no intimidation, no exploitation. In my deepest belief, this peaceful method of building strength against communism and aggression holds the key to the present world dilemma; it contains the seed from which can grow enduring world peace.

With my colleagues in the Congress, I am eager to explore the possibility of Americans joining with other peoples who have representative government, combining their ingenuity, their skill in government, their belief in a peaceful society, their boundless resource and strength, that ultimately, by the sheer majesty of their aggregate power, we shall neutralize and finally eliminate the threat that looms today over much of the world.

The federation we visualize would make common rules and establish legal machinery to compel the obedience of all member nations thereto. Those failing to comply could be brought to do so through judicial decree, backed by the combined force of the federated nations.

The obvious parallel is right at hand. We Americans have grown up with it.

In our country we have 48 States, each sovereign, yet each joined permanently in common cause for the common good. Controversies among our States are settled in the Supreme Court of the United States whose decrees are binding upon and respected by the losing parties.

Forgive me for particularizing in a somewhat personal way, but this example may help make the point clear.

Right now a controversy is awaiting resolution between my State of California and the State of Arizona. The issue involves interpretation of a contract governing the allocation of certain waters of the Colorado River. The differences between the States have been bitter, acrimonious, and explosive, for water is critically needed in both States. It is easy to envision that two sovereign nations would resort to war to settle such a dispute; matters of far less importance and complexity have turned nations to the sword in the past. But here, in our Federal system, we avoid the ultimate test of power, reposing the issue, for the common good, in a disinterested, objective branch of the Government.

Many persons anxiously search for parallels to this process in the processes of the United Nations. Some persuade themselves that this great body has the power to enforce its own decisions and those of its related agencies. But this is wishful thinking; it is dangerous thinking which could lead us to tragic ends.

The United Nations, true enough, can issue decrees; it can enunciate principles; it can find a nation guilty of subversion or aggression; it can recommend remedies for injus-

tices committed by one member nation upon another. But it lacks the power to compel its members to obey its suggestions; it founders upon the rock of enforcement of its will.

This fatal weakness finally shattered the League of Nations; it tore the heart out of the Kellogg-Briand Pact which bound nine nations not to wage war on one another until every peaceful remedy had been exhausted. The insufficiency of both efforts is still painfully clear in our memory. We shall never forget that Japan struck us at Pearl Harbor at the very time their Foreign Minister was talking with our Secretary of State.

So it is that nations, in contrast to our States, in striving to adjust their differences, still tend to resort to that ancient and brutal institution—military force, which, applied today, amounts to mass murder and, conceivably, the obliteration of both sides.

In such a contest, victory is the goal. And what is its reward? The flower of our manhood decimated by slaughter; multitudes disabled for life; cities pulverized; a system of society sundered at its roots. Many among us today have seen three wars come and go, each more brutal than the one before. And yet, our experience is clear: military victory does not bring permanent peace.

I am convinced that man's inhumanity to man, that the endless, futile cruelty and bloodshed of modern warfare, can be avoided through a federal union of free nations. The federal system has proved both its efficiency and its stability in our own country and in the Swiss Republic. I remind you that in the latter nation four languages are in use; nevertheless, regardless of divergent, even antagonistic, national strains, the Swiss experience with federalism has been outstandingly successful.

I most earnestly hope, therefore, that our Nation will take the first halting step forward in the direction of which I speak. Let us move now toward creating the climate and the opportunity to build an alternative to Armageddon. Let us move toward joining with our friends throughout the world in exploration of a federal union which would bind the parties for mutual protection—and, if that should prove successful, moving toward an integration of a larger scope.

Now, of course, we have the jeremiads, the gloom-mongers, the it-can't-be-done type of people. In all ages, as in our own time, such people point with fear and trembling, obsessed with the problems, never inspired by the opportunities. These are the barnacles on the ship of mankind.

You know their doleful strain. It adds up, essentially, simply to, "It just can't be done."

Our own past shouts the denial to those who fearfully hold back.

Boldly our forefathers resolved a chaotic situation which resulted from the inability of the Articles of Confederation to bind the Colonies closely together.

After the Colonies had fought and won the Revolutionary War, they shattered into independent, even antagonistic, sovereign units. Economies of the several States disintegrated; traffic was impaired; the common defense was undermined; navigation and trade was fettered and harrassed to the point almost of extinction. Something had to be done. The common good dictated subordination of the primitive fetish, sovereignty which held the Colonies almost at swords' points.

The Articles of Confederation became the first rallying point—the first attempt at common government. This failed utterly to unite the Colonies into a strong cohesive nation, with an effective central government. For a time, unity seemed impossible. You know what then occurred.

On February 21, 1787, the Continental Congress decided to hold a convention in May of that year at Philadelphia. Its purpose

was sharp and clear: to revise the Articles of Confederation. Delegates were chosen. Through the bitter debate that ensued only the majestic personality of the beloved George Washington and the benign influence of wise, philosophic Benjamin Franklin saved the deliberations from ruin. And then, as you know, ultimately, rather than amending the Articles of Confederation, they wrote a new Constitution and laid an enduring foundation for a new nation.

And in this Constitution, precisely for the reasons which plague us today in this trembling world, they turned to a Federal system. They built a national government with the vitality and power to carry forward the common good; they retained, nevertheless, State and local responsibilities, reserving to the States and to the people all powers not specifically granted to the National Government.

And in the preamble, they used language which is the key to much of the problem of which we speak today: "We the people of the United States," is the way they began this immortal document. Not "We the States"—but "We the people" do ordain and establish the Constitution for the United States of America.

Thus government was brought through the governmental maze to the citizen; thus sovereignty was brought home to the individual; thus government was made of the people, for the people, and by the people. And therein is a powerful lesson for those of us who today aspire to a better order of things in this world. There, my friends, is the key to world peace.

And so you see that I am indeed a devotee of this concept—because, mainly, I so deeply revere our own system and the strength and the glory it has brought to our people. I cannot conceive of any supportable reason why a similar effort would, in our own time, fail to bring just as many rich dividends to ourselves and to our children.

Across the seas are nations in mortal fear of the Soviet Union. They live in daily dread that their life, their property, their liberty, and all that they love in life may be destroyed by the Communist advance. They know all too well of the agony and, even, the despair of their neighbors today behind the Iron Curtain. I cannot but believe that they would slowly, perhaps, but surely, inevitably, seize upon a federation such as I have discussed with all the ardor of a drowning man reaching for a helping hand.

I happen to believe that a juncture of the free nations of the North Atlantic, with still others who might wish to join, would be so potent an aggregation that the Soviet threat of aggression would dissipate and frustrate and consume itself futilely, finally dying out altogether. Freedom is a mighty force. I mention only that 95 percent of inventions in the world in the last 2 centuries have been made by persons living in nations with representative government and protected personal freedoms. Freedom is the seedbed of initiative and ingenuity.

The nations of which I speak also have a genius for government based upon the will of the people. In most of them, substantially the rights accorded an American citizen are accorded to their citizens. They have, moreover, the industrial skill, the industrial plant, the agricultural knowledge, and the richest resources, added to ours, of this world. Such an amalgam would soon have a massive impact upon the ambitions of the Soviet Union. That nation would, in my judgment, recognize swiftly that only defeat would be the outgrowth of their continued assault on the free world. And this above all else is true: dictators cannot stand defeat. I am convinced that the rock upon which international communism will surely founder is federation of all or part of the states in the North Atlantic area.

Just as our own country has developed under the Federal system of Government, so would this group of nations, these millions of people, develop in strength, in capacity, in genius, in a unified democratic forum. They would be assured of victory in this divided world; they would be assured of a better world.

My friends, how deeply I wish that we were blessed by having 10,000 Owen J. Roberts to speak to a hundred thousand groups of our people. His penetrating mind, his profound experience and knowledge in judicial and governmental affairs, his wise insight into the perils of our time, would bring light into the darkest places of opposition to federation. Would that we also could stimulate the sale of Union Now, bringing its vital, gripping message to millions more of our people, so that this cause could reach out and truly grasp the minds and hearts and the imagination of His Majesty, Mr. Average American. Surely this is one light that we must ever strive to keep from under a bushel.

There are so many more things I wish I could mention. I remember with pride our gift of freedom to the Philippines in 1946. For 48 years we governed these wonderful people. But instead of resorting to tyranny and oppression, we spent a good part of those years helping these people prepare themselves for self-government and independence. Truly this is one of the brightest stars in our firmament. In many ways, I believe that my vote for Philippine independence was one of the most significant votes I have cast in my 13 years in the Congress. Two years ago, for example, I found on a trip into the Asian region that almost all nations along the Indian Ocean were aspiring to achieve the same recognition, the same self-respecting position in the family of nations, that our Nation had accorded to the Philippines.

Such is the power and the glory and the opportunity of America. Such is the promise our people, our faith, our system, holds out to the suffering and the oppressed who people much of the globe.

And such is the America which, I hope and pray, will boldly rise to today's challenge and lead God's people from the wilderness of militarism and terror into the shining light of hope and opportunity and dependable, just peace. Federation, my friends—what better article could America hope to merchandise among mankind today. It is an imperishable, proud part of our own experience. Let us help others reap its rewards.

And, in the process, we shall help ourselves and assure our children and their children a decent chance to lead fruitful, happy lives.

Thank you very much for your courteous attention.

Commission for the Study of the Civil Defense Problems

EXTENSION OF REMARKS

OF

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. FRIEDEL. Mr. Speaker, under leave to extend my remarks, I am inserting a letter I have written to the President in which I respectfully urge that prompt action be taken to establish a commission for a study of the civil-defense problems which have been brought

about by the advent of nuclear weapons. The letter follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., February 25, 1955.
The President,
The White House,
Washington, D. C.

MY DEAR MR. PRESIDENT: Much has been said in the press this week concerning the possible establishment of a commission for a prompt study of the civil-defense problems brought about by the advent of nuclear weapons. In the light of the recent information released by various Federal agencies regarding the lethal affect of these nuclear weapons, I respectfully urge that immediate steps be taken to bring such a commission into reality.

Nearly 2 years ago, on July 22, 1953, I expressed my views on the civil-defense problem in a letter addressed to Mr. Shirley Ewing, director of the Maryland State Civil Defense Agency, a copy of which is enclosed. This letter, in which I expressed my belief that we have an obligation to make available to our citizens all information (within security limits) which will alert them to the peril created by these nuclear weapons, appeared in the CONGRESSIONAL RECORD of July 24, 1953. At that time I urged that more effective civilian defense precautions be prepared and tested.

I do not believe that Members of Congress have been kept as well informed as security would permit concerning the horror flowing from the use of nuclear weapons, and certainly the average citizen has been kept even less informed.

As a result of the series of explosions now taking place in Nevada, I have been receiving quite a bit of mail from my constituents in which many of them express, for the first time, their great interest and alarm.

I believe that recent disclosures of information with regard to the hazards from fallout and other affects of nuclear explosions should be encouraged, and even expanded, within the limits of national security. I also believe that the Federal Government ought to make realistic appropriations for use at the Federal level and for grants to State and local governments on a matching basis, in order to bring our civil-defense preparations and activities to a level where, if and when needed, the citizenry will be protected.

I heartily endorse your recommendation to appoint a commission to study the problems of civilian defense. I again urge that this action be taken immediately.

Respectfully,

SAMUEL N. FRIEDEL.

Ambassador Brosio, New Envoy From Italy, Distinguished Lawyer, Statesman, and Diplomat

EXTENSION OF REMARKS OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, it gives me great pleasure to insert herewith an article which appeared in the February, 1955 issue of the America-Italy Newsletter:

NEW ENVOY FROM ITALY, A DISTINGUISHED LAWYER, STATESMAN, AND DIPLOMAT

His Excellency Manlio Brosio arrives at a juncture in world affairs as delicate as that

which existed when his distinguished predecessor Alberto Tarchiani came, in the midst of the last war, to represent his country in Washington.

To this difficult assignment Ambassador Brosio brings the rich experience of 5 years in Moscow and 3 in London as chief of mission. In both capitals he was respected for his perseverance, his graciousness, and his political wisdom. His fluency in Russian and English enabled him to obtain a remarkable insight into the problems of the western democracies; his scholarly dedication to learning is combined with a coolness of approach which was a subject of comment even in England.

Manlio Brosio's qualities of mind and conduct are inherent. Born in Turin in 1897, he was nurtured in the Piedmontese tradition of enlightened leadership which gave guidance to the Risorgimento and united Italy. Young Brosio's interest in the great problems of the day was stimulated by close relations with such noble figures of 20th century Italy as Benedetto Croce, the philosopher, and Luigi Einaudi, the eminent economist who is now President of the Republic of Italy.

Barely 20, Manlio Brosio was decorated in World War I for his conduct as an officer in the Alpine Corps. Following the close of hostilities, he took his degree in law and began practicing in Turin. His open participation in politics as a member of the Liberal Party and as a regular contributor to the most important Liberal magazine ceased with the advent of fascism, but his interest and his contacts with opposition groups continued.

During World War II and after the Armistice, he remained in northern Italy under German occupation; he was a member of the underground National Liberation Committee (1943-45) and general secretary of the Liberal Party (1944-45). He held ministerial posts in several postwar cabinets from 1945 through 1946, the last time under Signor Alcide de Gasperi as Minister of Defense. In January 1947, when the relations between Italy and the U. S. S. R. were extremely sensitive, Minister Brosio was selected as the first Ambassador to Moscow of the Italian Republic. He has remained in the diplomatic service ever since.

Despite the heavy demands of his position, the new Ambassador to Washington finds time to read widely and write on political and legal matters for leading Italian periodicals. Little wonder, then, that Manlio Brosio's record has been described as "the ideal one for the Washington Embassy."

The American-Italy Society will welcome the new Italian envoy, His Excellency Manlio Brosio, at a dinner to be given in honor of him and his wife on February 15 in New York at the Hotel Plaza. On this occasion the Ambassador will deliver his first major address in the United States.

Ellsworth Bunker, president of the AIS and former Ambassador to Italy, will introduce the members and guests of the society to the new Ambassador.

Ambassador Brosio arrived in the United States the last day of January, accompanied by his wife, Clotilde Brosio, and his sister, Signorina Emma Brosio.

portance of our greatest national resource, the youth of our country. But lipservice is not enough. American youth needs among other things schooling that is commensurate with our power, our wealth, and our importance in the world at large.

Miss Doris Fleeson, one of the ablest of Washington's correspondents, has written a column in comment on President Eisenhower's school-aid program that reveals its many and painful inadequacies.

Under leave to extend my remarks, I include herewith Miss Fleeson's article, *The Worthy Poor*:

THE WORTHY POOR
(By Doris Fleeson)

WASHINGTON. — President Eisenhower's school aid program does not represent a serious attempt to deal with the national emergency in education.

It is little more than a letter of condolence to the localities and school authorities which are struggling against an enormous and growing shortage of classrooms.

The President's Commissioner of Education, Samuel Brownell, has placed the current need at 370,000 classrooms. Federal cost estimates indicate that the job, well done, would cost more than \$12 billion.

The President has suggested only \$200 million in direct aid over three years which is about \$65 million a year. Even if all went well and exactly as planned, it would build only a few thousand of the missing classrooms.

School authorities are equally skeptical about the proposed plans to help school districts and States. Twenty States are said to have constitutional debt limits which will prevent any new borrowing. In both Maine and Wisconsin, the courts have declared school construction authorities unconstitutional.

The school experts say also that it would be at least a year before any results would show from the Eisenhower plan. Meanwhile, school enrollment is going up at a rate of more than 1 million a year. This year it is 30,800,000—an increase of 22 percent since 1950.

The President's philosophical approach provokes as much gloom in school circles as his practical suggestions. As they see it, he has dealt with what they regard as the gravest internal crisis in this democracy in the spirit of a lady bountiful who restricts her gifts to the worthy poor.

The reference is to the President's restriction of outright grants to communities too poor to build their own schools. There will be no States and few communities willing to take the pauper's oath on this or any other proposition. Actually many of the wealthiest States which spend proportionately the largest share of their revenues on education are among the most hard pressed.

The idea that some portions of this country should publicly admit to their poverty and throw themselves on the mercy of richer States or the Federal Government seems to have appeal in many quarters. It emerges regularly at the annual governors' conferences and just as regularly the overwhelming majority of the governors turn the cold shoulder.

This quarrel is basic. The original architects of the welfare state—much of which the President has accepted, at least in the theory—believe in prompt and ample Federal action to meet national emergencies like that confronting the schools. From their point of view the President's approach in the new message looks back—way back.

Perhaps one trouble with the present special school problem is that Washington draws to it for the most part the successful, the well-to-do and the more mature citizens. Their children are not victims of the present

cruel classroom shortage and as a French philosopher said, one bears with equanimity the misfortunes of others.

Warning on Geology of Huge Upper Colorado River Dam—Rainbow Bridge Periled

**EXTENSION OF REMARKS
OF**

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. HOSMER. Mr. Speaker, on January 31, under title of "Plans for Huge Upper Colorado Dam Uncertain, Says Secretary McKay," I revealed in this Record the contents of a letter written November 30, 1954, by Secretary of the Interior Douglas McKay to David R. Brower, executive secretary of the Sierra Club. The letter concerned the geology of the site of the proposed \$21 million gigantic power dam at Glen Canyon, Ariz.

I explained that this dam would be the key structure depended upon to raise power revenues to pay for a substantial portion of the cost of the multi-billion-dollar upper Colorado River project, H. R. 270, now before Congress. I quote a portion of Secretary McKay's letter with respect to this geology as follows:

The poorly cemented and relatively weak condition of the materials in comparison with the foundations common to most high dams has given the engineers who prepared the preliminary designs of the dam some concern as to the competency of the foundation to support any structure higher than 700 feet.

As a direct result of those remarks, I have just received a communication from Joseph Jensen, chairman of the board of directors of the Metropolitan Water District of Southern California, who is himself a trained geologist, born and educated in Utah, and personally familiar with the location. This communication points out that not only is the site on which the dam is proposed questionable, but that the area behind it, which is supposed to provide a reservoir, may be little more than a sieve. In short the whole project might turn out to be as useless as a waterpail without a bottom.

Mr. Jensen informs me that the rock in Glen Canyon are essentially sandstone. They have been drained of all underground water to the level of the Colorado River.

As a result they are dry. They do not contain underground water which would prevent the migration of stored water from the reservoir. It follows that when the reservoir is being filled, the water will seep out into these parched sandstones for miles. The seepage will be limited only by the dip of the sandstone formation and the effect of the pressure of the head of water which accumulates behind the dam.

No one can tell how long it would take to fill the porous sandstones nor how many millions of acre-feet of water might be thus consumed before any wa-

The Worthy Poor

**EXTENSION OF REMARKS
OF**

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. KLEIN. Mr. Speaker, everyone pays lip service to the paramount im-

ter could again flow down the river. The reservoir might never be filled, nor usable for major power development. The country might be stuck with the most enormous white elephant in history.

Any dam that is built in the canyon would extend only a short distance into the canyon walls. Therefore, the water migrating out into the sandstone from the reservoir will create an underground body of water vastly more extensive than the reservoir itself, which is calculated to store 26 million acre-feet of water, twice the average annual flow of the Colorado River at Glen Canyon. It is apparent that eventually, as these sandstones become filled with the vast volume of water, it will migrate around the ends of the dam and thus render it wholly or at least partially ineffective for power purposes.

Although Secretary McKay's letter promised more intensive studies will be made of the foundation conditions after congressional authorization of the project, suppose this more intensive study discloses that no power dam should be built? How then will Congress explain to itself the appropriation of large sums of money for uneconomic projects for which there will be no pay-out from Glen Canyon power?

Further, although the Secretary was quoted in my prior remarks as stating that "appropriate changes will be made in the designs"—of the dam—"prior to construction" if further geological studies warrant, no modifications in the dam or its height can cure the fact that a reservoir built entirely on porous sandstone rock will not hold water.

Certainly this Congress will be well advised not to authorize or appropriate any expenditure on the Upper Colorado project until the safety and certainty of building a dam in Glen Canyon has been fully determined.

The best way of having this determined is to have a committee of three of the best experts in the United States on dam construction, two of whom would be men who have successfully built concrete dams, and the third should be a geologist of national standing and reputation familiar with the texture and character of rocks.

This is precisely what was done before the dam site for Hoover Dam was chosen. Only after three of the best engineers in the country approved the dam site, was that construction authorized.

This committee of experts also should determine whether or not any steps proposed to protect Rainbow Bridge National Monument from waters of the proposed Glen Canyon Reservoir by a barrier dam would provide adequate protection.

There is more than a suspicion that this barrier dam also would be built on nothing other than porous sandstone. Just as the water would seep around the Glen Canyon Dam, so would it seep around the ends of the barrier dam. If the elevation of water in the reservoir is as high as that of Rainbow Bridge, then the water would encroach to the bridge itself. All of these natural bridges owe their lives to the dry climate

of the area. Moisture and water in any quantity would be fatal to their future life.

The Man Is Raising Sensible Cain

EXTENSION OF REMARKS
OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. KLEIN. Mr. Speaker, the need for security controls is generally recognized. What is perhaps not as widely known and accepted is the need for rigid safeguards and for procedures that will provide the American people with its fullest security, at the same time that there is an unflagging effort to preserve those fundamentals of our free democratic tradition which makes our security worthwhile.

Benjamin R. Epstein, the national director of the Antidefamation League, has written a comment on this subject that I urge my fellow Congressmen to read. Under leave to extend my remarks, I include his comments:

THE MAN IS RAISING SENSIBLE CAIN

(By Benjamin R. Epstein)

Wolf Ladejinsky, through no particular effort of his own, has brought to a boiling point the mounting unhappiness of the country with the Government security program. It has, for instance, made Harry M. Cain unhappy—Harry Cain, former United States Senator from the State of Washington, who is mildly described as a conservative.

Mr. Cain is now a member of the Subversive Activities Control Board, a quasi-judicial governmental agency concerned with Communist activities and groups. In the 2 years since his defeat for reelection, he has had time to sit back and ponder the ways of men and government.

He had been set to thinking by the case of Lt. Milo Radulovich. ("It's time that we begin to worry when a young American, age 26, expresses surprise that he was dealt with justly by his Government.")

He was disturbed by the fate of an Air Force sergeant, Victor Harvis. ("Victor Harvis, at the age of 12, had been taken by his father, now dead, to some Communist Party meeting. . . . He was declared to be a security risk . . . and faced dismissal from the Air Force. In this country, the crimes of the father are not to be visited on the child.")

The Ladejinsky case made him boil over in a speech in Spokane. It is significant that the fate of "little men" in Government projected into the headlines of the Nation's press unsettled him.

Because Mr. Cain's words on this subject are projected from the far right corner of the political map, they have particular interest. The liberal would find them indistinguishable from some of the things he has said himself. To Cain, the country has been unnecessarily destroying individuals in the search for national security, and our security officials are not always well-trained for their jobs, failing to understand the difference between disloyalty and unconformity. On a frightened note, Cain said that the security program can snuff out the light of learning while making cowards and mental robots out of free men and women.

Sharpest criticism he reserved for that clause in the President's security Executive order which sets up the standard that a

man's employment by Government has to be clearly consistent with the interests of national security. This, Mr. Cain finds, "constitutes a burden which can hardly be borne by anyone. It almost makes the employee affirmatively prove that the national interest requires the retention or continuation of his services."

And he asks, "Who among us could do that?"

The term "clearly consistent," he finds, can be read to mean pure hearsay or malicious gossip or unsupported allegations as creating doubts which would make a man unemployable. To his knowledge, it has been so read.

It has been so read by enough American citizens to create the present uneasiness with the operation of security procedures. The part played by determined mischief-makers and those who do not hesitate to give vent to prejudice has long disturbed the Anti-Defamation League, beyond its concern as all Americans have for an effective and fair security system.

In the Ladejinsky case, the note of malicious mischief entered when a Department of Agriculture official released the now notorious Vitt letter with its smear against Jews of Russian origin as revolutionaries. In the Abraham Chasanow case, malicious gossip, paraded as evidence, almost deprived the Navy of a valued employee and Mr. Chasanow of justice. In the Fort Monmouth case, it has not been possible to prove beyond a doubt the widespread belief that anti-Semitism was a factor in the suspensions of scientists there, but it became quite clear that the established criteria for security evaluation are so without safeguards that malicious rumor and the most careless hearsay became the basis for suspensions and loss of security clearances.

We can no longer afford the luxury of giving encouragement to malice or sanction to gossip. To paraphrase an old cliché, the time is long past when Americans, on this issue, can safely "come to the aid of their party." In the security program, party politics are played at the Nation's peril. It is indeed time "to come to the aid" of the country with a thorough study at the proper levels of the entire security program, so that we cease sapping our national strength by misguided decisions that drive some of our best governmental servants out of the Nation's service and frighten others from entering it.

Resolution of the Greenfield-Montague Zionist District

EXTENSION OF REMARKS
OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. HASELTON. Mr. Speaker, I am inserting a copy of a resolution adopted by the Greenfield-Montague Zionist District, Greenfield, Mass., as requested by the officers of that organization:

RESOLUTION PASSED BY THE GREENFIELD-MONTAGUE ZIONIST DISTRICT, FEBRUARY 15, 1955

Whereas the Egyptian Government in its attempt to strengthen its unsettled internal position as well as to gain stature abroad, has so recently resorted to the hasty execution of some of its Jewish citizens after a shockingly unfair trial by Egypt's Supreme Military Court;

Whereas the 11th-hour pleas for clemency by the American, French, and other governments fell upon deaf Egyptian ears;

Whereas by their haste in carrying out these inhuman executions in spite of the intervention of the American Government, the government of Premier Nasser has again demonstrated its contempt for American public opinion; and

Whereas, by the continuation of abuses, calculated to harm the state of Israel ever since its establishment, in spite of repeated gestures of conciliation and good will by the Israeli Government: Be it hereby

Resolved, That, the Greenfield-Montague Zionist District in meeting assembled this day goes on record as condemning the Egyptian Government in this their latest shedding of innocent Jewish blood; and be it further

Resolved, That the Greenfield-Montague Zionist District commends the Government of the United States for its effort in attempting to save the lives of the two Jews in Egypt; efforts which were so unsuccessful as to highlight the contempt of Egypt for American public opinion and democratic concepts.

Von Tresckow Claims Atomic Energy Commission Rejected Proposal of His Group Which Would Save Government \$125 Million to \$250 Million in Power Costs Over Dixon-Yates Proposal

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the Record I include herewith an address before the Massachusetts Municipal Electric Association in Boston, Mass., February 24, by Walter Von Tresckow, head of a group which offered to supply power to the Atomic Energy Commission at greatly reduced cost than Dixon-Yates. Despite the more favorable proposal from the Von Tresckow group, the AEC entered into negotiations with Dixon-Yates and rejected the Von Tresckow offer without serious consideration.

Testimony before the Senate Antimonopoly Committee, 83d Congress, showed that every obstacle within and without the Government was placed in the way of the Von Tresckow group and it was finally brushed off unceremoniously.

The Von Tresckow group claim their proposal would save the taxpayers millions of dollars and they charge that under the Dixon-Yates contract the Government will be paying from \$125 million to \$250 million more for power over the period of the contract than would be the case if AEC had accepted the Von Tresckow proposal.

Mr. Von Tresckow's address follows:

Is the Dixon-Yates Contract Also Creeping Socialism?

(Address before the Massachusetts Municipal Electric Association in Boston, Mass., February 24, 1955, by Walter von Tresckow)

The Dixon-Yates story begins in 1953 with a request by the TVA for 600,000 kilowatts

of additional capacity. This capacity was to be built in western Tennessee. The TVA stated that it required this added capacity in order to be able to meet the demand of the AEC at Paducah in 1957.

Congress, even in Democratic administrations, has not been too favorable in late years toward the further expansion of TVA generating facilities by the construction of steam plants.

With the advent of the Republican and businessman's administration, TVA adherents realized that the task of getting money from Congress for the rapidly expanding needs for power of the TVA area, through the construction of additional steam plants, would be even more difficult.

For some time, nearly everyone concerned had realized that a new pattern or philosophy would have to be worked out for a Federal power operation that had begun as a byproduct of a flood control project but had grown to be the largest power system in the world.

The TVA request for appropriations for 600,000 kilowatts of additional capacity was turned down by the Republican Congress in April 1954, even though it was tied to the needs of the AEC.

Finally, in July 1954, President Eisenhower ordered the AEC to sign a contract with Dixon-Yates to meet the needs of the TVA in the Memphis area.

The final contract, however, was not for what the TVA had asked for—600,000 kilowatts of additional capacity—but for 600,000 kilowatts of firm power. This had not been requested, nor was it needed. TVA had ample facilities in its own system to firm up the added 600,000 kilowatts of capacity.

A heavy price was paid for this unneeded and unwanted firm power under the Dixon-Yates contract. In addition to all operating expenses, including taxes, the AEC pays for the installation of 650,000 kilowatts, but only gets the power from 600,000 kilowatts. Further, Dixon-Yates has the right to sell all the power not needed by TVA to their wholly owned subsidiaries. The rate at which Dixon-Yates is permitted to sell this power is at the incremental rate of 1.863 mills per kilowatt-hour.

In the contract, the fiction has been maintained that Dixon-Yates supplies the AEC 600,000 kilowatts at a 98-percent load factor, whereas the facts are that Dixon-Yates will supply the TVA needs in the Memphis area at about a 60-percent load factor. TVA will continue, as it is now doing, to supply the AEC at Paducah—225 miles away—the power it needs at a 98-percent load factor. This difference in the load factor between the two locations gives Dixon-Yates the difference between 650,000 kilowatts at a 98-percent load factor, and 600,000 kilowatts at a 60-percent load factor. It gives Dixon-Yates 2.4 billion kilowatt-hours annually, which they can dispose of to their wholly owned subsidiaries at 1.863 mills per kilowatt-hour.

At the present time, the power production costs of these Dixon-Yates subsidiaries are between 5 and 6 mills per kilowatt-hour. Within 5 to 10 years these production costs will rise to between 7 and 8 mills per kilowatt-hour because of rising fuel costs.

It is safe to say for the minimum term of the Dixon-Yates contract—25 years—the difference between the incremental cost of 1.863 mills per kilowatt-hour, and what it would cost Dixon-Yates to produce this power without Government subsidy, will be about 5 mills per kilowatt-hour.

If Dixon-Yates used all of the 2.4 billion kilowatt-hours available, it would mean a profit of \$12 million per year, or \$300 million for the minimum contract period of 25 years.

Now we do not believe it is wrong for Dixon-Yates or anyone else to make a profit. We believe in profits. However—it is decidedly wrong for Dixon-Yates to state publicly

time and again that their profits are limited to \$495,000 per year; when, as a matter of fact, they can make \$12 million per year. Even under the worst circumstances they could not help but make \$5 million more per year than they publicly state.

It is doubly wrong for the Atomic Energy Commission and the Bureau of the Budget to lend credence to these claims. These agencies of the Government either are not familiar with the facts, and therefore are unfit to make power contracts for the Government; or they are familiar with the facts, in which case much more serious questions arise.

Now to our own proposal. The group I head offered to supply the 600,000 of needed capacity; to produce water at a cost of about 25 percent less than Dixon-Yates; to limit all profits to \$133,000 per year; and at the end of 30 years, turn the facilities over to TVA, debt free, for \$1.

Our offer would save the Government the \$100 million that would be needed in the budget for TVA to build the facilities. Our offer would save the Government \$125 to \$250 million in power costs over the Dixon-Yates proposal. The Government would own a plant it had paid for, and would be able to make the profits from the sale of excess power.

Our group made its first attempt to get a hearing from the AEC in April 1954. It took more than a month to finally get a hearing and we had only the one. In August the first very sketchy cost comparisons between the TVA, Dixon-Yates, and our proposals were published. It was on this analysis that the President of the United States based his directive to the AEC to enter into a contract with Dixon-Yates. As soon as possible thereafter, we advised the Joint Congressional Committee on Atomic Energy that the cost comparisons contained 6 major errors, resulting in 98 wrong figures. All of the errors were in favor of Dixon-Yates. For several months we received no reply to our communication to the committee. Finally, in November we were told that we would get a hearing before the Joint Congressional Committee on Atomic Energy. Just as it became our turn to testify, the hearings were conveniently suspended.

The detail figures of the Dixon-Yates contract (how they arrived at power costs), which would permit an accurate comparison between their proposal and ours, were not released until after the contract had been signed.

The records of the Atomic Energy Commission and Bureau of the Budget, released in August 1954 by direction of the President, showed that the idea of making a firm power contract for 600,000 kilowatts—instead of supplying 600,000 kilowatts of additional capacity—originated only in April 1954. This is when we had made our proposal. No one had even mentioned it before. The main idea behind this change was to limit the bidding to Dixon-Yates.

The Senate Antimonopoly Committee came to the following conclusions in its report on the matter: "The testimony before this committee shows that every obstacle within and without the Government was placed in the way of the Von Tresckow group and it was finally brushed off unceremoniously."

In other words, every obstacle inside and outside the Government was placed in the way of saving the taxpayers between \$125 and \$250 millions; and in the way of pointing out that Dixon-Yates, under their contract, would be charging the Government \$125 to \$250 millions more for power than we would, in addition to their making a profit of \$125 to \$250 millions over and above the \$495,000 a year, which they did disclose.

From the record and the statements of President Eisenhower, the obvious conclusion can be drawn that the Republican administration believes no further Federal Gov-

ernment funds should be invested for the expansion of TVA power generating facilities. Probably this has grown to be the viewpoint of the majority of the country. The Dixon-Yates contract is the Republican administration's answer to the problem of meeting the expanding power needs of the TVA area.

In order to get the Dixon-Yates contract accepted over the violent objections of the people in the TVA area, and the Democratic Party, President Eisenhower adopted the propaganda of the private utilities for his own viewpoint. He called TVA creeping socialism because cheap power in that area is produced at the expense of all of the taxpayers of the Nation. If this is a true statement, then the Dixon-Yates contract is also creeping socialism, because under this contract, power is being purchased at a \$250 million higher cost than we offered to produce it, and this increased cost is also at the expense of all the taxpayers of the Nation. According to President Eisenhower, it is creeping socialism if the taxpayers of the country subsidize the TVA area, but it is not creeping socialism if the taxpayers of the country subsidize Dixon-Yates to the tune of \$250 million.

In their narrow zeal for their own answer to meet the expanding power needs of the TVA area, the administration has completely lost sight of a basic consideration which affects the Nation as a whole. They have put every obstacle in the way of preventing the competitive free-enterprise system from functioning to provide the consumer with the cheapest possible power.

We do not believe it is good policy on the part of the Government to prevent the effective functioning of the competitive free-enterprise system for the benefit of the consumer. Our country has grown to its present stature and standard of living because of the free and effective functioning of the competitive free-enterprise system. This system produces lower costs to the ultimate consumer; the Eisenhower policy produces higher costs to the ultimate consumer.

In the heat generated by the Dixon-Yates contract, involving one 650,000 kilowatt generating station, an important fact has been neglected altogether. In 1954 the TVA sold a total of 30 billion kilowatt-hours. Of this total only 12 billion kilowatt-hours (or 40 percent) were sold to the 148 municipalities and cooperatives which supply all power to the residences, farms, industrial and commercial establishments in the area. The other 18 billion kilowatt-hours are used by the United States Government and 24 very large industrial establishments.

This municipal and cooperative load is growing at the rate of 500,000 kilowatts per year. Beginning in 1958 new steam generating facilities of 500,000 kilowatts per year will have to be provided.

If the majority of the people in the country feel that no more Federal Government money should be used to supply these power plants, then it is much more logical to ask these communities to build these required facilities for the TVA or themselves, than to force a Dixon-Yates type of contract down their throats.

This kind of a solution would seem to be the best and most reasonable one and more likely to meet the approval of the majority of Americans. Unfortunately this reasonable kind of solution has not been proposed to the administration by the 148 distributors.

In the face of stubborn opposition on part of the administration to further spending of Government money for added steam plants, the TVA adherents have been just as stubborn in their insistence on continuation of past policies. Only the city of Memphis has stated that it will build its own plant, if the Dixon-Yates plant is to be built. In

our study of this situation we found that these plants can be financed and built and produce power at the same cost as Government financed TVA plants.

Under our proposal to the AEC and TVA we prove that we, as private enterprise, can produce power as cheaply as the TVA. In view of this fact, we have expanded our original proposal, which was to build 600,000 kilowatts for the AEC, to include supplying all the generating facilities required by the growth of the 148 municipalities and co-operatives now supplied by TVA. Our aim in these proposals has been to do away with the necessity of further Federal appropriations, and at the same time, retain for the consumer the advantage of the low cost power resulting from the operation of a large integrated power system. The cost of power will not be increased over present TVA rates.

Our proposals are based on the principles we developed right here in New England—in the contracts between the city of Burlington, Vt., and the Green Mountain Power Corp. The philosophy underlying those contracts is that power costs to the consumer can be substantially lowered by cooperation between private and public enterprise, and secondly, that this kind of cooperation produces higher profits for the private utility company.

The net result of those pioneering contracts has been that the city of Burlington is retaining the same rate for its power needs that it has enjoyed since 1919; and the stock of the Green Mountain Power Corp. rose from \$12 per share in 1952 to \$35 per share in 1955. We do not mean to imply that this rise in the value of Green Mountain stock is altogether due to the Burlington contracts, but it is fair to say that those agreements were a substantial factor in the rise.

These startling results are truly a New England achievement in which all of us have a right to take pride. I would like to pay rightful tribute to Mayor Moran and the officials of the city of Burlington, Mr. Hill, chairman of the board of Green Mountain Power Corp., and its other officers and directors; and the New England Electric System (largest private utility company in New England), for the contribution it made toward these results.

Perhaps the best illustration of how sincere were the efforts of all concerned is to tell you that when an apparently insurmountable legal roadblock threatened to defeat the whole project, it was Mr. Robert Davison, counsel for Green Mountain Power Corp., who provided the solution which permitted a completion of the contracts.

I would like to point to the Burlington-Green Mountain contracts as an example of opportunity for all of you, as well as the private utility companies in New England, to lower power costs in New England, and in that way help to improve the competitive position of New England with the rest of the country.

As to the TVA area, which is surrounded in the West and South by Dixon-Yates subsidiaries, how much more could be accomplished, not only for the benefit of the ultimate consumer, but also for the Dixon-Yates companies, if Dixon-Yates offered to sit down with these 148 TVA distributors and say, "Let's solve our problems together; we'll help you."

We have enough faith in private enterprise and Dixon-Yates to believe that they will see the advantage of this type of cooperation for the benefit of the ultimate consumer and their own companies. The war that they, and the private utility industry as a whole are waging now to destroy the TVA concept, is ultimately bound to be a losing one.

The same amount of money and effort used in a determined effort to lower power

costs on a countrywide basis, rather than raise them in the TVA area, would substantially benefit every American and raise his standard of living.

In our plans and proposals there always has been, and always will be room for cooperating with Dixon-Yates, because we feel that they will ultimately come to the conclusion that it will serve the best interests of their companies and their customers. It would make them statesmen in the realm of free enterprise.

The Springfield Daily News Celebrates 75th Anniversary

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks, I would like to call to the attention of my colleagues, and have printed in the RECORD, the news story relating to the 75th anniversary of the Springfield Daily News' first publication on February 24, 1880. This story tells of the numerous and well-deserved tributes that have been paid to this outstanding Democratic newspaper, and includes the congratulatory resolution of the Massachusetts House of Representatives.

Also, Mr. Speaker, may I call to your attention the editorial entitled "Our Diamond Jubilee."

THE DAILY NEWS, 75 TODAY, RECEIVES MANY MESSAGES, HONORED BY LEGISLATURE—"No. 1, 75TH YEAR," GOES ON MASTHEAD AS THE PENNY NEWS OF 1880 CELEBRATES DIAMOND ANNIVERSARY IN WESTERN MASSACHUSETTS

Today is the 75th anniversary of the founding of the Springfield Daily News.

Readers may note that today's anniversary date involves a change in the volume number under the masthead at the top of page 1. The Daily News ended its 74th year with yesterday's edition, and changes the volume number today to "75th Year, No. 1."

The first edition of this newspaper was published February 24, 1880, as the triweekly Penny News. It became the Daily News on May 13, 1880, and by sticking to its pledge as the people's paper, quickly assumed its present position as the largest newspaper in western Massachusetts.

The story of the rise of the Daily News from a struggling infant nurtured by the Bellamy family to a 94,572-circulation newspaper perpetuated by the late Sherman H. Bowles was told Saturday in a special diamond-anniversary supplement.

Copies of this 16-page, tabloid issue are available at the Daily News office for anyone who may desire to keep a souvenir record in picture and story of the paper's first 75 years.

MANY MESSAGES

Since publication of the anniversary edition, the Daily News has received scores of congratulatory messages and salutes.

The Massachusetts House of Representatives adopted a special resolution. Wire services sent anniversary stories about the Daily News to all parts of the country.

Readers, from the average citizen to high-ranking governmental and industrial officials, sent "happy birthday" messages in the form of letters to the editor.

Many of these letters have already been published in the Mail Box column on the editorial page and others are being printed today. An anniversary editorial and a special Pepper Box column also appear in today's Daily News.

Next Wednesday, the Daily News will be saluted by the Springfield Chamber of Commerce Breakfast Club at its monthly breakfast at 8 a. m. in Hotel Highland.

HOUSE RESOLUTION

The State house of representatives' resolution congratulating the Daily News was offered by Representative John F. Thompson, Democrat, Ludlow, and Representative Raymond H. Beach, Republican, Wilbraham.

The text of the resolution:

"Whereas on February 24, 1955, the Springfield Daily News, published in Springfield, will celebrate its 75th anniversary as one of the outstanding newspapers in the Commonwealth; and

"Whereas the Springfield Daily News, first named the Penny News, was the first successful penny newspaper published in New England and prospered as the people's paper to become the largest in western Massachusetts; and

"Whereas through the years the Springfield Daily News has contributed much to the newspaper industry by presenting the news to the public with an informal touch and has maintained the highest traditions of journalism and ideals of a free press; and

"Whereas recognition must be given to all of those, past and present, who have contributed to the success of an outstanding newspaper proudly published in the Commonwealth—the Springfield Daily News: Therefore be it

"Resolved, That the house of representatives expresses its congratulations to the Springfield Daily News upon its 75th anniversary and to its publishers and editors and to all who have contributed to its accomplishments and extend its best wishes for continued service and success; and be it further

"Resolved, That copies of these resolutions be forwarded by the State secretary to the Springfield Daily News."

OUR DIAMOND JUBILEE

It was 75 years ago today that Edward and Charles J. Bellamy produced the first edition of the Penny News which soon became the Daily News.

The editorial room was a painter's shop over the Bellamy law offices on Main Street, and a plank atop 2 barrels was the editor's desk. However, 2,000 persons paid their pennies for that first issue, and started the ever-growing family of readers. Soon, the Daily News became the largest newspaper in western Massachusetts, a distinction it still holds.

Since that day in 1880, the Daily News has counted many assets. We are indebted to the 2 publishers, to the 4 men who have served the newspapers as editors, and to the hundreds of men and women who have filled important reportorial, mechanical, and business positions.

We are grateful also to the ingenious technicians who developed the wireless, the typewriter, the high-speed press, the Linotype, wirephotography, photo facsimile, and the many other machines and processes which permit us to produce a better newspaper.

However, the greatest asset of any newspaper is its readers. In that regard, the Daily News has been richly blessed. Our huge family of readers includes stanch partisans and frequent critics, and it has sustained the Daily News through years of financial difficulties, keen competition, and newsprint shortages.

In Springfield, almost everyone reads the Daily News, and thousands of persons in

other western Massachusetts cities which have their own hometown dailies nevertheless buy the Daily News each day.

On our diamond jubilee, we gratefully acknowledge the well wishes of many friends, and we express our thanks to our many thousands of readers in the western Massachusetts and Connecticut communities which we earnestly seek to serve.

Analysis: World Trade, H. R. 1

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. HARVEY. Mr. Speaker, the problem to be discussed herein is simply whether H. R. 1 should be accepted as a sound measure in the national interest or rejected as an unsatisfactory solution to world-trade problems in light of its effect upon the United States economy.

For practical consideration the problem is divided into three basic elements: First, economic: What effect will the United States tariff policy have upon the economies of the free world nations? Second, world political: What effect will the United States tariff policy have upon the political and military unity of the free world nations? Third, domestic: What effect will United States tariff policy have upon the domestic economy and particularly upon industries affected by lower tariffs and international competition.

ECONOMIC

In terms of a long-run solution to the trade and payments problems of the world, the basic difficulty seems to be that of a continuing necessity for nations to adjust the allocation of their resources. This readjustment is necessary in order to keep pace with the constant increase in world production and reshuffling of world trade among the free nations. Three separate factors seem to be affecting the long-run distribution of national resources:

(a) The increasing integration of industries within each nation so as to gain the advantages of manufacturing their own basic raw material. Most important in underdeveloped areas although significant in Europe.

(b) The strong drive of all the free nations for strength and the highest degree of independence possible.

(c) The trading nations of the world have had a great tendency to develop into trading blocs with each bloc having somewhat divergent and competing interests and limited self-sufficiency. Sterling bloc, European Payments Union, dollar area.

Assuming the above facts to be sound and accurate we present the question of what effect the United States tariff policy will have upon the problems confronting nations with regard to trade and payments. The facts indicate that the current problems have had little connection with the United States tariff policy and therefore any change in this

policy will have a negligible effect upon the important problems of international trade and payments. The facts from which this view was formed are as follows:

(a) Import tariffs are only one factor to be considered in judging whether or not the American consumer will buy foreign goods.

(b) The factors of taste, technology, and new inventions, distance and shipping costs, competing price reductions by domestic producers as a result of import threat have been largely omitted in considering the issue.

(c) In actual fact most evidence points to the fact that in the event that United States tariffs were completely removed there would be little change in the trade throughout the world. Mr. Howard S. Piquet, Senior Economic Specialist in the Legislative Reference Service of the Library of Congress, in his book Trade Aid and Tariffs, expressed a well-founded opinion that in the absence of any tariffs, imports into the United States would rise no more than \$2.6 billion annually.

We are left with the conclusion that most of the foreign claims that a lowering of United States tariffs would remedy all the free world's economic and balance of payments difficulty simply are not true and that arguments in favor of freer trade based upon this concept of the international economic effects of such trade increases forthcoming through tariff reductions have been greatly overstated. A much more sound theory explaining the international trade and payments difficulties of the free world can be based on the three factors affecting the long-run distribution of national resources named in this discussion.

WORLD POLICY

The long-range United States foreign policy centers around one basic objective—a strong domestic economy in a peaceful community of nations. In order to fully realize this objective it is assumed that the United States must have strong, economically secure allies. This Nation has taken the dominant role in postwar politics and in the establishment of sound prosperous economies among the free nations. The free nations of the world now look to America as a leader and attach greater importance to United States action than is justified by fact. This exaggerated sensitivity is confirmed by almost every foreign reaction to United States policy. Thus, through the assumption of leadership in international affairs and through the natural internal economic strength of this country, the United States has become the leading actor on the free-world stage.

Coordinating the above statements and consideration of H. R. 1, we present the question of what effect United States tariff policy will have upon the political and military unity of the free world.

It is immediately apparent that the failure to accept the President's tariff proposal, H. R. 1, will cause violent objection among the free nations of the world, particularly the European trading nations who form the bulwark of our Western European defense perimeter.

In short, it is obvious that this kind of objection is economically completely unjustified, but it is nevertheless a political reality. It must be analyzed as a reality.

The basic question then becomes a very broad one involving United States strategic policy. Should this Nation disregard the opinions of other free world nations because we know that the opinions had little basis in fact? The answer to this is no. Because of the fact that most of our allies are keenly interested in United States tariff policy and regard it as a primary index as to whether or not we intend to practice on the economic front what we preach on the political front, we must attach considerable importance to this phase of the trade problem. We must weigh the political realities alongside economic fact in setting forth the trade policy of the United States.

DOMESTIC

The effect of lower tariffs upon the domestic economy of the United States has formed the battleline for both the proponents and opponents of H. R. 1. Basically, this factor in isolation from other considerations is an insufficient foundation for a final conclusion. However, because of the tremendous publicity given this phase of the problem many misconceptions have been formed and many opinions drawn upon this factor alone. Those proponents of H. R. 1 who believe that low tariffs will act as a veritable panacea to the domestic economy must ultimately face the same disillusionment as those friendly nations who have in the past made the United States tariff policy the whipping boy for all their economic problems. The various pressure groups who by necessity or by choice have selected their belief and are now trying to utilize every conceivable rationale in favor of their original opinion do not come to grips with the basic question of the effect of United States tariff policy upon the prosperity of the domestic economy.

In general it is recognized that some economic gains accrue to a nation from such tariff reductions. This tends to reduce the price to consumers of the products imported in greater quantity and to increase the financial ability of foreign nations to buy United States produce. However, to put the tariff question in proper perspective, it should be made clear that the proposed changes set forth in H. R. 1 will have an insignificant beneficial effect upon the overall national economy.

In recent years exports have averaged approximately \$15 billion and imports \$11 billion per year which amounts to roughly 4.5 and 3.3 percent of the gross national product during the same years. Approximately \$6 billion of the annual import figure enters the country free from duty. This means that a reduction in United States tariffs would affect only the goods presently being imported into this country at an annual rate of \$5 billion or less than 2 percent of the gross national product. Reliable estimates of the probable increase in imports in the absence of any duties place the range at \$1.2 billion to \$2.6 billion. Judging from this estimate, the maximum effect of

H. R. 1 upon the economy as a whole would be less than 1 percent of the gross national product.

The bare fact is that certain domestic industries have a long history of operation under tariff protection while other industries foresee a good possibility of expanding their sales and profits if tariffs are reduced. Just how much either group would be damaged or helped by the passage of H. R. 1 is impossible to determine since both sides constantly overstate their position. Nevertheless, herein lie the two sides of the argument.

Objective tests show that the industries which would be most affected by increased competition from foreign producers are the textile groups—wool and cotton manufacturers as well as textile fibers—and the machine and vehicle group—bicycles, autos, lawn mowers, sewing machines, and many types of other machinery. There would be a substantial rise in imports in the areas of animal fats and oils, vegetable products, and chemicals.

Is it in the national interest to continue tariff protection in industries where such protection now exists in order to prevent dislocation of production? This question must be answered on a case-by-case basis and not by a general policy as set forth in H. R. 1. Congressional action on this bill will merely set the trend for future changes.

There is no doubt that some controls are essential to prevent other nations from pushing the burden of worldwide economic adjustments onto the United States as world productivity capacity increases and changing factors force a reshuffling of resources throughout the world.

CONCLUSION

The tariff question boils down to this: We must weigh the effects of H. R. 1 upon, first, the free world economies; second, the political and military unity of the free nations; and, third, the domestic economy and protected industries.

Absolutely nothing the United States might do in the way of lowering tariffs can solve or even substantially aid the economic problems of the free world. The first step to be taken in solving national and international economic problems is a realistic insight into the actual difficulty by the countries involved. There can be no successful solutions to the problems so long as nations refuse to do this. It must be stressed that the role of this country should not be one of nurturing all the misconceptions which exist among the allied nations who continue to use United States tariff policy as a "scapegoat" for their own unsolved economic problems. We cannot make our laws and justify them on the basis of unsound opinions voiced by friendly nations.

The same basic principle of economic reality must be followed in coping with the strong foreign objections forthcoming from a United States policy to maintain tariffs at their present level. Legislation such as H. R. 1 must be based upon and justified by full considerations of domestic interests.

The full impact of further tariff reductions upon several of our domestic industries has not been stressed here. However, it is generally known that the textile, bicycle, lawnmower, and many other industries will be further depressed by a continuation of tariff reductions. Should we cease to protect these industries because of the good accruing to the consumer and the economy as a whole? The answer to this would be "Yes" if such general economic benefits were a probable result of a lower tariff policy. This is simply not the case. In fact, H. R. 1 will have the effect of helping one small group of producers at the expense of another small group of producers for the general benefit of no one, except the latter group.

Looking once more to the realities of the allover problem, it seems that a low-tariff policy has become the popular symbol of an economic cure-all. People and nations have attached themselves to this symbol in the hope of something better for themselves. The mysterious economic curing power attributed to a lower United States tariff policy is pure mythology. Sooner or later all nations must solve their economic problems through their own efforts and by facing up to the real problems. The time for this action is now and United States tariff policy is not the real problem.

The rational balance in the allocation of traded resources between nations cannot be expected to happen automatically. There must be tariffs and standby measures for the protection of all countries from dislocations in their internal economies. United States tariffs are now the eighth lowest in the world and the facts simply do not justify further reduction.

An Unworthy Political Trick

EXTENSION OF REMARKS OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. BEAMER. Mr. Speaker, under unanimous consent, I include an editorial from the Indianapolis News of February 23, 1955:

AN UNWORTHY POLITICAL TRICK

The \$20-for-everybody tax cut which some Democrats are trying to push through the National House of Representatives is nothing but a piece of political chicanery designed to put President Eisenhower on the spot.

This newspaper said last month, when the tax-cut idea was first broached, that until the continuing Federal deficit has been halted, the budget balanced, and the way opened to reduce the enormous national debt, any overall slash in tax revenues would involve risk to the Nation's economic stability and military security. That sums up the President's position, which we support completely.

The measure approved by the House Ways and Means Committee is particularly reprehensible because it combines irresponsible and untimely individual tax cuts with the

Eisenhower-backed plan to extend corporate income taxes at their present high rates.

It is a take-it-all-or-leave-it political plot. It ought to be recognized and repudiated as such by the House as a whole. Responsible Democrats in the Senate, including HARRY F. BYRD and WALTER GEORGE, chairman and ranking member of the Finance Committee, have condemned the move as unwise and unfortunate. Their counsel should prevail in the Senate even should the House be so reckless as to push the \$20-handout trick to passage.

All economic indications point to the possibility of a balanced budget and some measure of tax relief, both for individuals and business, unless there is a downturn by mid-1956. However, the Government deficit for the 1956 fiscal year, which begins July 1, will total about \$2,400,000,000. It is utterly unrealistic, therefore, to schedule general tax cuts now, especially any which might begin in January of next year. The situation a year hence can provide the only safe basis for deciding.

President Eisenhower is keenly aware that the public is entitled to tax relief just as soon as that becomes feasible. But he is also keenly aware that no loss of revenue should be risked while the Government is running in the red and while military demands are so great.

We believe the people will understand his position. If certain Democrats in Congress are so foolish as to think otherwise, their whole plot may boomerang in votes against them in the 1956 election.

United States Surplus Wheat Gift to Russia Sheer Folly

EXTENSION OF REMARKS OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. FEIGHAN. Mr. Speaker, there has been considerable discussion about the critical food shortage in the Soviet Union, and some speculation as to the effect this shortage might have upon the stability of the Russian autocrats sitting in the Kremlin. On the other hand, it has been suggested that since we have a wonderful bounty of foodstuffs accumulated as a surplus over a period of several years, that we should turn over a goodly part of this surplus to the Communist masters for distribution by them throughout their empire. The argument is advanced that this would be a great humanitarian act and that we would win many friends and stimulate better understanding between the Communist world and our free society.

Another point of view has been advanced that since one of the principal reasons for the critical food shortage within the U. S. S. R. has been the resistance of the farmers and their refusal to cooperate in the collectivist farming schemes of the Russians, there seems little doubt but that the farmers in the Soviet Union who despise the Russian Communists, have set out to create a crisis by creating a critical food shortage. It is reasoned, therefore, that we, a free people, should not upset the hard-earned gains of the farmers in the U. S. S. R.

who are engaged in a death struggle with the Russian tyrants.

On Wednesday, February 23, there appeared in the Cleveland News, an editorial entitled "United States Surplus Wheat Gift to Russia Sheer Folly." This editorial, in my considered judgment, is the most practical analysis I have yet seen on the question as to whether we should give or trade any of our surplus wheat to the Russian tyrants. It expresses a most refreshing point of view and I commended it to the reading of every Member of the House:

The United States Information Agency, which operates the Voice of America network, reports Russia's massive drive to step up farm output has failed so badly that the Soviet population has less grain per person than in 1926.

After more than a quarter of a century of collective farming under communism, says the USIA, the Russian people are still critically short of foodstuffs, and livestock production is 3 million less today than before the Bolshevik revolution of 1917.

Malenkov walked the Kremlin plank because he failed to improve Russia's agricultural output.

This brings us to the current suggestion of some Members of Congress to President Eisenhower that the United States make a gift of some 350,000 bushels of our surplus wheat to Russia as a "humanitarian act" which would improve relations between the Soviet and this country.

There is no question that there is a serious Russian food shortage, but not so grave but what Russia sold thousands of bushels of its wheat to Iran earlier this month.

The United States has a big wheat surplus, probably enough to supply this country's needs for 2 years. But to make a gift of 350,000 bushels of our surplus wheat to Russia seems to us a dubious proposition. If the Kremlin rulers would tell the Soviet population where the wheat came from, that it was a gift and why such a gift was necessary, then the proposal might possibly be in order.

Such knowledge, however, would never be given the Russian people by the Kremlin dictators. It would spoil their whole international act.

When the Marshall plan was inaugurated after the last war, Russia was responsible for those "Yankees go home" placards that appeared all over Western Europe, if you recall.

It would not pay now for the Kremlin to admit to their victims of terror within Russia that America is a humanitarian nation of people who have no quarrel with the Russian people.

Under the circumstances, it would be sheer folly and fantastic for us to turn over any surplus United States wheat to the Soviet bosses.

Once the gift was made, they'd laugh in our faces.

The Case for Mohawk

EXTENSION OF REMARKS OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. TABER. Mr. Speaker, pursuant to the consent granted me today, I submit for the RECORD an editorial from the Rochester Democrat and Chronicle:

THE CASE FOR MOHAWK

In the absence of more clarification it seems to us Mohawk Airlines has a point in protesting the Civil Aeronautics Board's refusal to grant it a hearing on its petition for a permanent license.

Mohawk, whose feeder lines serve Rochester and other eastern cities, meets all 15 requirements used by the CAB to measure operating performance. It believes it has made "reasonable progress toward ultimate self-sufficiency in relation to the public convenience and necessity" set by the CAB as a standard for a permanent license. It cannot be sure since the CAB has never precisely defined the standard, according to Mohawk spokesmen. But the airline's progress toward increasing traffic and decreasing subsidies has averaged 27 percent or more a year, they point out, and the company in August through September showed a net profit exclusive of mail pay subsidies.

One CAB member is quoted as opposing a permanent license because it might take away from feeder lines the incentive of expanding. That may well be. But should a going company such as Mohawk progress reports indicate it to be, pay this price? A permanent license for this and other stable, going airlines would help attract more investment money, improve their equipment and maintain high quality service.

Mr. Speaker, it is apparent that the substantial lines should have a permanent franchise.

A Critical Study of the New Proposals for Federal Aid to Schools—Editorial by the Most Reverend John F. O'Hara, C. S. C., Archbishop of Philadelphia

EXTENSION OF REMARKS OF

HON. WILLIAM T. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. GRANAHAN. Mr. Speaker, an editorial published in the Catholic Standard and Times of February 11, 1955, written by the archbishop of the diocese of Philadelphia, contains an interesting and informative discussion on some of the problems involved in meeting today's school needs. The editorial is entitled "A Critical Study of the New Proposals for Federal Aid to Schools," and was written by the Most Reverend John F. O'Hara, C. S. C.

As the archbishop points out in this editorial:

The Members of Congress, in the honest desire to serve the best interests of our Nation, should do all in their power to insure that prudence will prevail in the distribution of any aid granted by the Federal Government to assist local communities in their problems of education.

I was struck, Mr. Speaker, by the study and research which went into the preparation of this editorial and I commend it to all Members of Congress through these pages of the CONGRESSIONAL RECORD as a means of bringing an informed and most interesting viewpoint to the attention of the Congress.

Archbishop O'Hara, in effect, urges the most careful study of all the facts and

the tremendous amount of available background information before any legislative action is taken on the matter of emergency Federal aid for school construction. The full text of the editorial is as follows:

Current proposals for an emergency program of Federal aid for school construction must have very careful study before any legislative action is taken.

Considerable material for such study is contained in two Government documents printed in 1954 for the use of the House Committee on Education and Labor. The first of these is Federal Aid to School Construction, a report prepared in the Legislative Reference Service of the Library of Congress by Charles A. Quattlebaum; the other, Hearings Before the Special Subcommittee of the Committee on Education and Labor—House of Representatives.

The first thing that must be understood by the legislators is that the long-range problem of schoolroom shortage is, up to the present moment, largely one of obsolescence of buildings and mobility of population. The impact of increased births would hardly be noticed at the present moment were it not for the other two factors. The enrollment in public schools in the United States in October 1953 is reported by the Bureau of the Census (series P-20, No. 52, January 22, 1954) at 26,845,000. The enrollment in October 1934 (U. S. Office of Education) was 26,434,000. An increase of 400,000 in 20 years is not a notable increase (1.4 percent) in a total picture of more than 26 million pupils. The short-range view regards the increase of 3 million pupils since 1945.

The testimony of one witness on the mobility of the population in his State is illustrative of the general trend. This witness reported: "We are no different from any number of rural States in that we have a shifting population from farm to urban and suburban. We actually have some school buildings in our State that are in fairly good condition, that are no longer required because of their location and we cannot use them; yet in our urban centers we find we are underhoused, overcrowded, and we are at a loss to meet the situation." (Hearings, p. 225.)

Mobility looms large in the picture. The 1950 census showed that between March 1949 and March 1950, 18.7 percent of our population had moved from one house to another. A census report (series P-20, No. 49) showed that between April 1952 and April 1953, 20.1 percent of our population moved. Between April 1951 and April 1952, 19.8 percent of our population moved. From April 1950 to April 1951, 21 percent of our population moved.

Any congressional study of the present problems should include census data on the back-to-the-farm movement of the depression days of 20 years ago. Some of the local problems of overcrowded schools solved themselves 20 years ago when industrial workers who were unable to find employment in urban centers returned to the farms which they had abandoned in the 1920's.

Since mobility of the population is such a strong factor in the creation of school shortages, there would seem to be need for far more study than has been given at the present time to the question of whether a local population is transient or permanent. The construction of elaborate school facilities in what may be a ghost town 10 years from now would later be stigmatized as poor planning. The most skillful analysis is required to determine whether temporary or permanent buildings are advisable in a given situation.

In this connection a wise observation is offered in the general report of the Joint State Government Commission of the Commonwealth of Pennsylvania in January of this year. Reporting on the distribution of funds

raised by the State Public School Building Authority, the Commission notes that on the basis of 1954 prices, construction cost per pupil for the authority-financed elementary buildings ranged from \$474 to \$2,166. . . . construction cost per pupil for secondary buildings constructed by Authorities ranged from \$750 to \$4,300. The report notes further that the most frequently occurring value is about \$1,000 per pupil for elementary schools and \$1,550 per pupil for secondary schools.

Since one proposal offered is based, in the main, on a nationwide expansion of the plan already in effect in Pennsylvania, the practical observations of this Commission should carry weight. The Commission recommends that in its future calculations it plan for construction costs of \$1,100 per pupil for new elementary schools and \$1,700 per pupil for new secondary schools.

Variations in construction cost per pupil just as great as those noted in Pennsylvania are to be found in the hearings mentioned above. Two other types of variation are reported in the hearings. Costs per square foot vary from \$5 to \$17 in estimates offered by various State school officers. Similarly costs per classroom vary from \$8,500 to \$45,000.

The hearings have also disclosed a great variation in the tax procedures of the respective States in the matter of raising funds for school construction. On pages 224 and 225 of the hearings the variation reported is rather striking—the State of Alabama is said to have a statutory prescription that the real estate assessment should be 60 percent of its reasonable market value, while in Arkansas the assessed valuation is supposed to be 20 percent of the real or fair value of the property. In the latter case it is further reported that there has been a considerable increase in the assessment ratio over the last several years.

The hearings reveal quite generally a hope that Federal aid will stimulate local activity where it has been lagging. A witness for one State school department, who stated that under present legislative restrictions only \$16 million could be borrowed in the State for school construction, said he felt that a Federal grant of \$150 million on a matching basis would stimulate the local and State authorities to remove whatever restrictions now exist so that the Federal grant could be accepted on a 50-50 basis.

An extreme example of the "pump-priming" concept is provided in the hearings (pages 129 and following). The witness cited one county with a bonding capacity of nearly \$5 million and with estimated needs of replacement and modernization of \$7 million. The voters of this county were reported to have rejected on five occasions proposals to issue bonds for needed school improvements. The witness expressed his conviction that an offer of the Federal Government to finance one-half the cost of improvements would induce the voters to approve a bond issue for the other half. The comment of one Congressman was: "You are giving me the best argument for no aid to construction I have heard yet. You are saying: 'We are going to sit back until we get some money from the Federal Government and are not going to raise a finger to help ourselves.'"

Another instance of loose thinking is offered by a State official who stated that in response to a telegram from the committee he had prepared a wire for the Governor of the State which reported the cost of needed classrooms as \$82 million. In his testimony he amended the telegram to add the "necessary facilities that go with the classrooms, such as library, study hall, recreation rooms, etc." and gave as his revised estimate a total of \$732,314,790.

President Eisenhower in his recent message to Congress has expressed a wholesome desire to safeguard "a fundamental element

of the American school system—local direction by Boards of Education immediately responsible to the parents of children and other citizens of the community." While we approve this objective, we must observe that the extension of Federal aid without scrutiny as to its ultimate destination can give rise to a situation worse than the one for which a remedy is sought.

Careful analysis of the hearings is definitely in order before any further appropriation is voted for assistance to local communities in solving the school problems. Those who make the analysis should keep before them a recent observation of Dr. John M. Lumley, Deputy Superintendent of the State Department of Public Instruction in Pennsylvania. Commenting on the growth of the movement for consolidated school districts and jointures in rural areas, he said: "School jointures are a monstrosity because they are complicated by conflicting authority that impedes the administration of school affairs. We got ourselves into the jointures because we thought they were the answer to our school problems, but now we know that they are not and we are seeking a way to get out."

Any factual study of Federal participation in school construction should have access to all available material on previous action by the Federal Government in this field. The report, "Federal Aid to School Construction" by Charles A. Quattlebaum, shows that between July 1933 and June 30, 1942, the Public Works Administration made allotments for 6,687 elementary and secondary school projects, while the Works Progress Administration took part in the construction of 5,900 new school buildings and the modernization, enlargement or improvement of 33,000 other school buildings. In the WPA operation the expenditure was over \$979,000,000, and in the WPA operation the estimated cost was \$466,700,000, of which the Federal Government provided about 71 percent. This study needs to be brought up to date by factual information on the present condition and the present use of those buildings. If any of them are now abandoned, if any of them fell apart or deteriorated more rapidly than schools constructed under complete local responsibility, the facts should be laid before Congress.

An important element in the appraisal of the entire picture is the number of pupils per teacher. In 1934 the ratio was 31 pupils to 1 teacher for the entire United States. In 1950 the ratio was 24.4. (These figures are furnished by the United States Office of Education.) Study of the recommendations made by witnesses as reported in the hearings reveals that in their appraisal of needs the State school officers generally estimate 30 pupils to a classroom. In 1950 only one State, Mississippi, had this ratio for an average, while 24 States showed an average below the 24.4 pupils per teacher reported for the entire country. It is obvious that an increase of 20 percent in the average teacher load would take care of a great many students without increased construction. The mobility of the population, of course, stands in the way of using, or using to capacity, existing schools in depopulated districts, but a critical survey of actual conditions may reveal the possibility of savings in construction.

The estimates of building costs reported in the hearings have in general disregarded the element of the interest cost on bonds. A pertinent paragraph on this is offered in the general report of the Joint State Government Commission of the Commonwealth of Pennsylvania, page 2:

"Reimbursable project construction cost is necessarily smaller than the amount on which the Commonwealth subsidy is paid, which is the total of approved construction costs plus interest costs. For example, assuming that money is worth 3 percent and that all projects are amortized over a period

of 30 years, the total amount on which the Commonwealth would reimburse over time would be 1.53 times the project construction cost."

Revealed by the hearings is a general estimate of \$10 billion as the cost of needed school construction. This observation of the Pennsylvania joint commission indicates that if the cost of bonds is taken into consideration, the estimate should be revised to \$15,300,000,000.

A final observation. Much has been made of the reduction in the number of 1-room schools in the United States. This may or may not be a good thing. Certainly the local community should continue to determine its own needs. Those who love the 1-room school can point with pride to the young Governor of Pennsylvania, elected at the age of 37, who is a product of a 1-room school in York County. Certainly his preparation was adequate for his secondary education in York Collegiate Institute, his college education at Gettysburg, and his graduate work at the University of Pennsylvania.

The Members of Congress, in the honest desire to serve the best interests of our Nation, should do all in their power to insure that prudence will prevail in the distribution of any aid granted by the Federal Government to assist local communities in their problems of education.

Mohawk's Air Status

EXTENSION OF REMARKS

OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. TABER. Mr. Speaker, pursuant to the consent granted me today, I submit for the RECORD an editorial from the *Utica (N. Y.) Observer-Dispatch* of February 14, 1955:

MOHAWK'S AIR STATUS

The increasing number of central New Yorkers who fly Mohawk to get to New York and other eastern cities, will be surprised that the airline is still fighting for its permanent license.

Of course, Mohawk has to live up to all the safety and operational requirements of the Civil Aeronautics Board but it, along with dozens of other smaller lines, is considered merely trying its wings, so to speak, by CAB.

Mohawk has appealed the CAB ruling that it cannot have a permanent license at this time. The argument in the Board is reported to involve fear if feeder lines have permanent status they will lose their incentive for expanding.

The catch is that as long as Mohawk and other feeders lack permanent certificates from CAB they will not so easily attract investment needed to expand as fast as they and their public might wish.

Mohawk is an operating, functioning airline living up to all standards of CAB. Its progress toward more traffic and less subsidy has averaged 27 percent or more a year, its officers say. Also, in August through September last year the line showed a net profit exclusive of the mail pay of the Government.

Central New York would like to see this record recognized by a permanent license from CAB. It could mean even better aeronautic facilities for our service and convenience.

Mr. Speaker, it is apparent that the substantial lines should have a permanent franchise.

New England's Business Future Appears Bright

EXTENSION OF REMARKS

OF

HON. LAURENCE CURTIS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1955

Mr. CURTIS of Massachusetts. Mr. Speaker, frequently the pages of the CONGRESSIONAL RECORD have contained important information on problems of the economy of New England.

However, it would be unjust to the spirit of New England's industry to present none of its brighter aspects to the Nation. Therefore, under leave to extend my remarks in the RECORD, I include an article from the *Boston Post of Sunday*, February 13, 1955:

NEW ENGLAND'S BUSINESS FUTURE APPEARS BRIGHT

A growing population, expanding incomes, and increasing productivity provide foundations on which New Englanders may base sound expectations for the region's continued progress and development.

These conclusions are reached in the report of the Federal Reserve bank for 1954, which has just been released. The bank states that New England is a "dynamic demonstration that a mature industrial civilization can contain the seeds of rebirth and revitalization."

Highlights of the report show:

More than 2 million people have been added to New England's population since 1920.

A growth of 780,000 in total employment in the same period, including a 70 percent expansion in number of service industry workers.

The average level of manufacturing employment in New England in 1953 was about the same as the 1920 level, the bank said. "Yet during these years, individual incomes of an expanding population increased by one-half, even after the adjustment for changes in price levels."

"Obviously, a fundamental change in the character of New England's manufacturing activity took place during that period to enable the same number of workers to support more people at higher income levels."

"This change, the most striking development in the region's manufacturing history, has been the shift in labor force to higher-paying, more productive industries—to industries in which New England's manufacturers hold a better position in relation to their competitors in other areas."

METALWORKING ACTIVE

The transition in New England's manufacturing activities has been marked by the significant increase in the relative importance of metalworking activities—up from 30 percent of the total manufacturing employment in 1919 to 41 percent of the total in 1954.

And between 1947 and 1953, 63 percent of all new manufacturing jobs added to the region's economy were in just 2 product categories—electrical machinery and transportation equipment.

New England is also making improved use of its most important resource—manpower. New England labor force is being steadily "up-graded." Output from an hour of labor in the durable goods industries now exceeds output from a comparable hour in the non-durables by 10 percent.

There is encouraging evidence, too, the bank continued, that New England is improving its competitive position in the na-

tional manufacturing economy. In those industries where New England is growing the fastest, the net product per man-hour is also advancing the most rapidly.

The rise in individual incomes in New England, in dollars of constant buying power, has consistently exceeded the United States average. In terms of 1954 dollars, per capita income in New England has grown by one-half since 1929, reflecting the expanded output from each man-hour of labor.

"It is the combination of a concentrated area and a large manufacturing population, with both high incomes and high savings, that makes the area so rich a market for both consumer and industrial products," the bank comments.

Particularly helpful are community industrial foundation programs, State development credit corporations, and venture capital organizations.

GROWING POPULATION

"One may expect the New Englander to continue indefinitely the adaptability he has demonstrated for three centuries," the bank said. "As new economic problems arise—and problems are inherent in change—he is certain to find new devices and processes for solving them."

As to the future, the bank thinks the next decade will add another million to the region's population.

"This growing population will demand still further expansion of public and private facilities, and will provide new markets for many of the region's producers."

"In this fact lie both the need and the opportunity for a continuing expansion of economic activity. Another million people by 1965 will necessitate New England's finding 400,000 new jobs, and of almost every imaginable variety."

The Man With Ultimate Responsibility

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mrs. FRANCES P. BOLTON. Mr. Speaker, there is hardly an American today who is not aware of the many problems that beset our Nation and our world. Whether our principal job is in factory, farm, or office, or whether it is as a homemaker, all Americans sense the difficulties of maintaining healthy communities, a strong Nation, and a peaceful world. But our individual share of the responsibility is limited—even for those of us who take a more direct role in governmental affairs—and there is a certain solace in knowing that many others share the ultimate responsibility with us.

But there is one man in this country who cannot avoid ultimate responsibility. One man who carries upon his shoulders the massive task of leadership—for all Americans and for many free nations in the world. He is the President of the United States.

Recently, when new hydrogen bomb statistics were released to the public, it moved the *Cleveland Press* to ponder upon the dreadful responsibility of President Eisenhower. I call it to the attention of the Members because of its thoughtful consideration of a man who

deserves our fullest admiration and trust:

IKK'S DREADFUL RESPONSIBILITY

Nothing in recent years has underlined so clearly the dreadful responsibilities of the Presidency as this week's official news of the vast killing power of the hydrogen bomb.

Nothing has given us more cause for dependence on the President, or more cause for prayers that the President may make his decisions wisely.

The Atomic Energy Commission's explanation of how the "fallout" from an H-bomb can contaminate an area of 7,000 square miles is, of course, one of the big news stories of our time.

But it is much more than that. It reduces from a nebulous generality to reality the danger that civilization as we know it can doom itself in a hydrogen war.

The President has known this for a year. He knows much more; about even greater bombs, about guided missiles with atomic warheads, about bacteriological warfare. He knows much more than the public knows, much more than the public may know for a long time, if ever.

It is on this kind of information, some of which must be highly secret for obvious reasons, that the President bases the awful decision it is his duty to make. On such inside information, President Eisenhower has made the decisions which led to our Formosa policy, our attitude toward the shift of power in Moscow, his proposal to reduce Army manpower.

How can citizens judge such decisions of the President, with his superior information?

They can't.

They only can have faith that the information is sound, that the President is using his very best judgment.

On questions of foreign policy and military action, the President cannot balance his judgment against the views of many others, or against public opinion generally. He must "go it alone," for the most part.

Despite this, we are a Nation in which a well-informed people is the greatest bulwark of peace.

The decisions of the President are, in the ultimate sense, the decisions of the people.

But it is only when the people promptly understand the urgency of the facts behind these decisions that they also can share in the responsibility for them.

The Late Pete Jarman

EXTENSION OF REMARKS OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. McCORMACK. Mr. Speaker, the Honorable Pete Jarman, an illustrious Member of this body from 1937 until 1949, and my esteemed friend and valued colleague, died on February 17 at the age of 62.

Pete Jarman represented the Sixth District of Alabama with courage, charm, and political know-how. He has been called a Congressman's Congressman. We can point with pride to his confident support of our foreign policy and the ability he had to draw others to him.

He was born in Greensboro, Ala. After graduating from the University of Alabama he tutored under his father in the

probate office of Sumpter County. When World War I came he attended the first officers' candidate school at Fort McPherson, Ga., and went overseas as a first lieutenant. He returned February 2, 1919, having been wounded in France.

In 1931 Mr. Jarman became secretary of state for Alabama. Four years later he was named assistant State controller. Elected to the United States House of Representatives in 1937, he served until 1949.

President Truman named Pete Jarman as Ambassador to Australia in 1949. He left that post in 1953 and retired.

His interest and membership in worthwhile organizations reads like a cross section of American life. He was commander of the Department of Alabama, American Legion, in 1927-28. In 1947 he was elected president of the Jefferson Island Club, which drew its membership from members of the Democratic Party, and dedicated itself to the political principles of Thomas Jefferson.

Pete Jarman regarded his constituents as "the finest, the best, the kindest people of the world." He was one of them. He shared with distinction the responsibilities of our House Foreign Affairs Committee. His duties he regarded as a sacred trust.

I believe the finest tribute I can accord our deceased colleague is to repeat his own words, given in this Chamber during his years of service:

Congress is composed of men of common interests with the plain people as well as the mighty. . . . I have served all the counties of my district with regard for the advice and counsel of the citizens of them all, never having been controlled by any group. You also know I never will be . . . To serve my country, my district, my State, my Nation to the best of my ability has ever been my keen desire.

I rejoice that I was privileged to serve with Pete Jarman and welcome this opportunity to express my great admiration for him. I am certain you join with me in acknowledging a deep sense of personal loss in his passing.

The family life of our late friend and Mrs. Jarman was beautiful, an inspiration for all to follow. They were always together, always sweethearts.

I extend to Mrs. Jarman my deep sympathy in her great loss and sorrow.

"I Wuz Robbed," Cried the Elephant

EXTENSION OF REMARKS OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. KELLEY of Pennsylvania. Mr. Speaker, from New York there comes a plea for the underpaid workers of this country—that they should be relieved of at least a small amount of their taxes.

This is an appeal in behalf of those people, and I am sure the editors of the New York Post are close enough to these people in the low-income bracket to testify to their needs.

I am pleased, therefore, to extend my remarks in the Record to include the following editorial appearing in the New York Post of Wednesday, February 23:

"I Wuz Robbed," Cried the Elephant

About a month ago a Times headline said: "Eisenhower Sets 1956 for Tax Cut." The headline was based on a clear declaration in the President's Economic Report that next year will be the year for a "general, though modest" tax cut for everybody.

It was thereupon noted in a few places that 1956 happens to be the year of a great national election, but nobody got very indignant about the coincidence.

Now come the House Democrats with a proposal for a \$20-a-person income-tax cut starting next January 1. The cries of Republican protest are deafening. In nearly all the gazettes it is charged that the Democrats are guilty of irresponsible fiscal misconduct bordering on subversion.

The charge is badly stated. What the Democrats are guilty of is attempted robbery: they are trying to steal a campaign issue in broad daylight. If, in the process, they seek to insure that tax relief is not loaded in favor of the wealthy (as it was in the 1954 Republican tax bill), the theft must be deemed even more outrageous by the Republican press agents.

The offense of the Democrats is not that they are playing politics, but that they have beaten the Republicans to the playing field. Relax, folks; that noise in the distance is a wounded elephant groan, not to be confused with the death-rattle of the Republic.

One Nation Under God

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. OSTERTAG. Mr. Speaker, a well-deserved tribute has just been paid by the Freedoms Foundation of Valley Forge to Millard C. Browne, editorial writer of the Buffalo Evening News. The foundation has given one of its coveted awards to Mr. Browne for his thoughtful and moving editorial of June 16, 1954, concerning the addition of the words "under God" to our Pledge of Allegiance.

Mr. Browne, in his editorial, notes that the addition of these words was spurred by the rise of atheistic Communism, but adds this thoughtful and incisive comment:

Our gravest danger as a Nation lies not in the possibility that significant numbers of Americans ever will fall for the evil doctrine of communism, but in the fact that too many Americans serve freedom with their lips and not with their hearts. The strong and active faith that motivated the founding of this republic and united its people behind a dream of liberty and justice for all God's creatures, has paled into a discussion of rights and duties that too often takes place in a vacuum, so far as it concerns any recognition of the authority whence those rights and duties derive.

Under leave to extend my remarks, Mr. Speaker, I include the full text of Mr. Browne's editorial:

ONE NATION UNDER GOD

"I pledge allegiance to the flag of the United States of America and to the Republic for which it stands, one Nation under God, indivisible, with liberty and justice for all." (By act of Congress, June 14, 1954.)

Something new has been added to the symbolism of our nationhood—something as new as this year's Flag Day, yet as old as the Declaration of Independence.

The Pledge of Allegiance, memorized and recited by two whole generations of Americans, will have to be relearned with two vital words added. The very fact that they are new and unfamiliar will underscore them in the reciting and give a richer meaning to the whole.

The change is a simple one, saying no more than has been implicit all along; after "one Nation" is added the phrase "under God." Yet the addition to these two words speaks volumes about our national history and, for that matter, about the whole conception of "liberty and justice" on which America is founded.

Some traditionalists may wonder why it was necessary to tinker with the pledge—why, if it was good enough for grandpa, it couldn't be left as is for us. But traditionalists with a deeper understanding of America—its past and present—will not need to ask. They will know why these words—assumed, and thus omitted when the pledge was written—are needed now to complete an affirmation intended to encompass the vital things for which our flag stands.

The pledge we recite is not a dead tribute to the past, but a living testament of present day Americanism. The Founding Fathers could not have written it all, for the very accent on "one nation indivisible" is a reminder not of the Revolution but of the Civil War. The Declaration of Independence speaks not of an "indivisible" nation but of united colonies which "are, and of right ought to be free and independent States."

The other parts of the pledge would sound much more familiar to the founders of the Republic—especially its reference to "liberty and justice for all." That phrase goes to the core of their faith. Their very justification for our kind of government was rooted explicitly in the premise of a Divine Power which, guiding the affairs of men, held each one equal in His sight, and thus gave an inalienable dignity and status to every human personality.

Throughout our history, the basic testimonials to our national creed have been filled with recognition of the ultimate authority of a Divine Creator. The Declaration of Independence rests its case for national independence on "the laws of nature and of nature's god"—and it rests its case for the rights of men on the assertion that "they are endowed by their Creator with certain unalienable rights." It closes with an assertion of "firm reliance on the protection of Divine Providence."

Lincoln, in his immortal restatement of the American creed at Gettysburg many years later, voiced that same dependence, in words identical to those now added to the Pledge of Allegiance: " * * * that this Nation, under God, shall have a new birth of freedom."

The Pledge of Allegiance, without explicit reference to God, came later. But its very author was a man of God, the Reverend Francis Bellamy, of Rome, N. Y. What he could not have anticipated in 1892 is that a nation which then accepted divine authority as a self-evident truth would soon fall into an era of skepticism, cynicism, and materialism—an era, moreover, in which our entire American creed would be pitted in mortal ideological combat against two godless tyrannies each dedicated to an inconceivable evil view of human beings not as creatures of God but as pawns of the state and its power-crazed rulers.

Even as we wage this struggle today, we see the American creed—the "last best hope of earth"—weakened rather than strengthened by the failure of so many of our own people to grasp and thrill to its revolutionary meaning. Just when the spirit of the American Revolution most needs rekindling to defeat the challenge of a tyrannous counter-revolution, that spirit falters for want of faith.

Our gravest danger as a nation lies not in the possibility that significant numbers of Americans ever will fall for the evil doctrines of communism, but in the fact that too many Americans serve freedom with their lips and not with their hearts. The strong and active faith that motivated the founding of this Republic and united its people behind a dream of liberty and justice for all God's creatures has faded into a discussion of rights and duties that too often takes place in a vacuum so far as it concerns any recognition of the Authority whence those rights and duties derive.

If our schoolchildren and their elders stumble a bit as they learn the new version of the pledge of allegiance, maybe they will also think. If they think enough about that phrase "one Nation under God," they will know how vital it is to the whole American creed. If they ponder on that, the spirit of freedom may yet regain the dynamic force to make it the most revolutionary idea of our time, as it was in 1776.

Postal and Federal Pay Increase Legislation

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. MULTER. Mr. Speaker, I would like to direct the attention of our colleagues to my statement in support of the Federal and postal pay adjustment bills presently being considered by the House Post Office and Civil Service Committee:

Mr. Chairman and members of the committee, I am very appreciative of this opportunity to present my views in support of a pay increase for Federal and postal workers. My mail and personal contacts with those in a position to know indicate to me that now, more than ever, Congress owes the employees of the Government a fair and living wage.

You are all familiar with the steady rise in the cost of living and the difficulty the average wage earner has in making ends meet. I will not quote the numerous figures that conclusively prove this fact, since I am sure that your committee is already familiar with them.

The last time Federal and postal workers received a pay adjustment was July 1951. It was, in my opinion, inadequate in amount even when granted. The continuing rise in the cost of living has made the condition of Government workers more serious, and makes the need for another pay adjustment obvious.

I have been urging increases of pay for Federal employees of all grades and classes from the lowest to the highest ever since I came to Congress. Regardless of whether or not a campaign was approaching, I have done my best to gain the passage of bills that would close the gap between the cost of living and the inadequate salaries of Federal employees. Increased morale and con-

sequently increased efficiency, in addition to the right of all workers to a fair wage, far outweigh any misplaced demands for Government economy in this field.

In fact, a salary adjustment for Federal and postal employees is one sure method to economize in Government. Such an adjustment generates esprit de corps and higher morale in the jobs affected and would thus improve the quality of the service rendered. It makes for longer tenure and smaller turnover, thus saving millions of dollars for training new personnel.

I urge support for appropriate legislation increasing the pay of Federal and postal employees.

Thank you for this opportunity to express my views.

A Modest Proposal on Taxes

EXTENSION OF REMARKS OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. KELLEY of Pennsylvania. Mr. Speaker, there are some newspapers in this country that are actually on the side of the low-income people. The editorial below is from one of the papers that is close to these people. It is from Labor's Daily which is published in West Virginia.

Living in touch with these people, the editors know their financial condition.

The situation in West Virginia applies to many areas in Pennsylvania, where the coal industry has been injured.

With permission to extend my remarks, I am therefore including this editorial which appeared in Labor's Daily on Wednesday, February 23:

A MODEST PROPOSAL ON TAXES (By Willard Shelton)

The party line of Mr. Eisenhower's supporters, expressed most emphatically by Treasury Secretary Humphrey, is that it would be unwise, inexpedient, and unjustified for Democrats to push a proposal to cut everyone's Federal income taxes, beginning next January 1, by \$20 a year for himself and for each dependent. This department disagrees, and the modest proposal may be advanced that it is time for Humphrey to yield somewhat and show a little statesmanship.

The Humphrey argument is that the Treasury simply can't afford to lose the revenue involved in the \$20 tax cut. He suggests, further, that we can't foresee economic conditions, and that maybe the next year we shall be in such inflationary conditions that a tax cut would not be justified.

The newspapers supporting the Humphrey viewpoint say the Democrats are simply playing politics.

Well, to some extent they are. What were the Republicans doing in 1952 when they promised to balance the budget with lower taxes?

What is Mr. Eisenhower doing now in holding forth the pledge that maybe next year, which is an election year, he will feel able to recommend tax cuts?

What did the Republican 80th Congress do in passing a tax-cut bill and insisting that the income-tax form show taxpayers specifically what they had saved as a result of the new law?

There are certain issues on which the people have a right to demand that legislators rise above their own political interests.

Revenue for the Government in a time of necessary heavy expenditures is one of these issues.

There is, however, a perfectly respectable professional economic viewpoint that considers relatively small Federal deficits, in our present situation, to be no threat to stability. It is the belief of some professional economists that the Humphrey emphasis on balancing the books right now is completely unrealistic.

Give the economy space to breathe, they say, and the increase of purchasing power and the rise in productivity will balance the books without a substantial cut in expenditures. The tax yields will be so much greater at lower rate that the books will be balanced automatically.

Humphrey's complaints that a tax cut for low-wage families may not be sound clashes logically with his refusal to tolerate a tax cut last year when the economy was definitely slipping and an increase of consuming power would have helped.

The only tax relief we got last year was special favoritism for corporation stockholders, plus a huge volume of technical changes in the revenue laws that had the practical effect of relieving business of substantial tax liabilities.

Let Humphrey advocate a repealer of the tax favoritism to stockholders, let him suggest a plugging up of loopholes that subsidize certain groups, and he would be on sounder ground in complaining that the Treasury can't afford to lose any more money.

There are good grounds for believing that a cut in personal income taxes, of greatest proportional help to low-wage and middle-income families, is appropriate economically and desirable as a matter of equity. All the equities, previously, have been the equities of the already rich.

Marie A. Connery

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which is a most praiseworthy eulogy that appeared in the Lynn Telegram-News, of Lynn, Mass., concerning Mrs. Marie A. Connery, wife of our late Congressman William P. Connery.

Mrs. Connery will be remembered by our colleagues who served in the Congress in the years 1923-37, as one who devoted much of her time and efforts assisting her husband in his duties on Capitol Hill. She was a kindly person, a sincere and conscientious and faithful wife, a loving mother and one who by her modest and gentle approach to people won countless friends both for herself and her respected and admired husband—Billery Connery. May both of them be blessed with eternal happiness for valuable services and charitable endeavors well done:

MARIE A. CONNERY

The death of Mrs. Marie Antoinette (Manseau) Connery this past week brought to the mind the many years she spent in the limelight as one of Lynn's most gracious and compelling personalities.

As the wife of the late Congressman William P. Connery, Jr., Mrs. Connery was a familiar figure at multiple social functions as she sought to try and make as many appearances as possible with her famous helpmeet. She made appearances because she knew the people of Lynn by the warmth and cordiality of their reception of her were sincerely interested in seeing and greeting her.

Mrs. Connery was a tremendous asset to her nationally renowned husband. She was not only wife and best friend but a careful and competent adviser. He leaned on her heavily and made no secret of the fact.

In those post World War I and depression days of the early 30's, the Connery household was a warm and happy one. Pictures taken in the household often depicted the happy couple with their only daughter, Marie Therese, seated between them at the piano. All had a flare for music and their friends could be assured of a song by way of greeting once they arrived.

The Connery family was to suffer a crushing and devastating blow in June of 1937 as the beloved Congressman was cut down suddenly by death. With the entire North Shore stunned by grief, no person could accurately compound the measure of the grief that was the wife's and daughter's.

In the years that ensued, Mrs. Connery did what every responsible American wife would do. She went to work to bring up her small daughter and give her the education and background she felt was so necessary. Then some years later she herself was stricken and confined to her bed.

During the long years of her suffering, Mrs. Connery was saintly and uncomplaining. And she had the love and devotion of a beautiful young lady, her daughter, Marie Therese, to assuage and comfort her. When she died and was reunited with her husband this week it could be truly said that God was good in that he at last had released her from her worldly yoke and made her life happy and beautiful again.

Today the people of Lynn salute the daughter of Billy and Marie Connery and offer her their sympathies in her own individual hour of sorrow upon the loss of her mother. She can be sure that by her constant ministering and devotion to her mother she measured up to the fullest traditions of an unforgettable family. What more can be said?

Permanent License Earned

EXTENSION OF REMARKS

OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. TABER. Mr. Speaker, pursuant to the consent granted me today, I submit for the RECORD an editorial from the Ithaca Journal of February 2, 1955:

PERMANENT LICENSE EARNED

Mohawk Airlines has asked the Civil Aeronautics Board for a hearing on its petition for a permanent license.

Legislation is also being sponsored in the House by Representative JOHN BELL WILLIAMS, Democrat, of Mississippi, to bring about permanent certification of all established airlines. This legislation will affect 14 air carriers, including Mohawk, serving some 260 communities out of a total of 440 now provided with airline service.

CAB officials have indicated that Mohawk's request for a hearing will not be granted

because the question of permanent operating authority for feeder airlines is pending in Congress.

The Board has set up 15 requirements to measure operating performance. Mohawk, operating under a 7-year certificate which has 3½ years to run, meets each one of these requirements.

The Board also has a standard under which it will grant a permanent license. This standard is reasonable progress toward ultimate self-sufficiency in relation to the public convenience and necessity.

Mohawk's president, Robert E. Peach, argues that the CAB has never defined this standard. He points out that Mohawk's progress in increasing traffic and decreasing subsidies has averaged more than 27 percent a year and asserts the airline showed a net profit in August through September, 1954, without regard to mail pay subsidy. In Mohawk's view, these facts constitute "reasonable progress toward ultimate self-sufficiency."

Josh Lee, CAB member, opposes permanent certification on the ground it would take away the incentive the feeder lines now have to drum up traffic, replacing this incentive with a Government guaranty of continued existence. Granting permanent licenses, he says, would reverse the trend of feeder lines away from Government subsidies.

The temporary operating rule was understandable in the early days, but the smaller airlines have now been carrying passengers and payloads, most of them, for several years.

Permanent operating certificates will enable these airlines to attract more investment money and to improve their equipment and services. This means the communities they serve will be given better air transport.

Certainly Mohawk is a permanent fixture in New York State. It, and the other feeder airlines, have earned a permanent rating.

Mr. Speaker, it is apparent that the substantial lines should have a permanent franchise.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodte is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Abraham Lincoln Address by C. A. Bottolfsen

EXTENSION OF REMARKS OF HON. HERMAN WELKER

OF IDAHO

IN THE SENATE OF THE UNITED STATES
Friday, February 25, 1955

Mr. WELKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered by former Gov. C. A. Bottolfsen, of Idaho, entitled "Lincoln: The Man Who Belongs to Everyone."

As Senators will remember, Governor Bottolfsen served the Senate during the past 2 years as Deputy Sergeant at Arms, and made many friends in the Senate. I commend a reading of Governor Bottolfsen's address to every Member of the Senate.

There being no objection, the address was ordered to be printed in the Record, as follows:

LINCOLN: THE MAN WHO BELONGS TO EVERYONE

(By C. A. Bottolfsen)

I should like to preface by remarks about Lincoln, by quoting an editorial which appeared in the Miami Herald on February 12, 1953, and which has been selected by The Lincoln Foundation advisory group as the most timely editorial published in American newspapers for that date:

"This is Abraham Lincoln's birthday. It is one of the most significant anniversaries not only in the history of the United States but of human kind.

"One-hundred-forty-four years ago today, destiny was at work in the one-door, one-window, dirt-floor Kentucky log cabin that housed the birth of the immortal Abe.

"Out of these primitive surroundings came the gaunt-faced, raw-boned man whose genius was safely to guide the country through the tempest of internal strife, forever to eradicate human bondage from the land in recognition and acceptance of the worth and dignity of all men.

"The story of Lincoln has been told often and at length. Its interest does not lessen through the years.

"In fact, in the last year there had been a great outpouring of scholarly studies of this immortal.

"He is the humanitarian symbol to free-men everywhere. He is the embodiment of the principle that a democracy can think and that there is a right-mindedness in the common people out of whom is woven the fabric of America.

"Lincoln came to the head of this Government at a time of great stress.

"He was the stabilizing influence in a period of national flux which threatened the permanence of this 'new Nation' conceived in liberty, and dedicated to the proposition that all men are created equal."

"It is no present-day purpose to assess Lincoln's greatness against the causes that led to the War Between the States.

"The American people are not internally embroiled today. We do, however, face a menacing world turbulence. It has put us to the test, as a people, against an ideology of totalitarianism that would destroy us.

"Lincolns are not commonplace of any time or people. They are the great and rare lights in a man's quest for human decency in democracy.

"Lincoln was raised up not just for his time but as an enduring inspiration for all of us to live and work for the heritage of our fathers—the right to govern ourselves.

"His homely virtues, his courage, his abiding faith in the right, and his determination to follow it—if adhered to by our Government heads and practiced by all of us in our daily living—are the basic and essential guarantees that 'government of, by, and for the people shall not perish from the earth.'"

While the editorial I have just quoted is indeed a sermon in itself, it would be impossible to sketch even hastily the outlines of the life of Lincoln without omitting volumes of important events that bear constant repetition and grow closer to us with each telling.

Today Lincoln stands firmly enshrined as the American who, above all others, best represents the American faith. So it seems appropriate that in this history-making period of 1955, we should seek some lesson, some new guiding force to point the pathway to clearer, saner thinking. Surely, the life of Lincoln gives us a pattern of nobility of purpose and simplicity of faith that has no equal in the history of American public life.

Someone said of Lincoln: "When he speaks it seems as if the people were listening to their own thinking aloud." Albert J. Beveridge, a resident of the Hoosier State, where Lincoln lived for 13 years, commented: "In a sense, Lincoln may be said to have been the child of a people. All that was best in this great middlestream of that mighty American folk movement was combined in his person, character, and intellect."

From President Wilson came this analysis of the brotherhood of man: "Mr. Lincoln we describe as 'a man of the people,' and he was a man of the people essentially . . . who had his roots deep in the experience and consciousness of the ordinary mass of his fellowmen. . . . A man of the people is a man who has felt that unspoken, that intense, that almost terrifying struggle whose object is . . . simply to live and be free."

President Eisenhower made this appraisal of his greatness: "The true values of America he understood as enduring, and they hold us together. And so he was patient. He was forbearing. He was understanding. And he lives today in our hearts as one of the greatest that the English-speaking race has produced, as a great leader. Yet never did he fall into the false habit of striking a Napoleonic attitude at any time and under any provocation."

He was the shepherd of his people at a time when our Nation was torn asunder. An unseen power must have had a very deep interest in Mr. Lincoln and this Nation, for it seems inconceivable that any one could have faced the multitude of personal dangers which he faced long before an assassin's bullet claimed his life, without protection from Him who rules the universe.

Lincoln enjoyed politics. It was the one activity throughout his entire somber life,

in which he found genuine pleasure and enthusiastic enjoyment.

Lincoln was a man of great commonsense. His simple election statement proved that beyond a doubt. His homely simplicity, his quiet, penetrating humor, his feeling of equality with ordinary people and his unswerving faith in their integrity, bulwarked firmly his political future.

Lincoln stood in awe of the Constitution of the United States of America. He believed that the Constitution was sufficiently all-embracing to demand his complete adherence to it, as a pledge in support of which he was willing, even glad if need be, to lay down his life. Nor was his reverence merely a blind loyalty to an historic document. It was well said of him in an address by the late Congressman Chipperfield, of Illinois: "The things for which he stood and which he attempted to do were in the name of the Constitution, and to this instrument, as he construed it, he was wholly devoted. The reckless and hairbrained experiment in government possessed no attraction for him, nor was he inclined to adopt a plan merely because it was new and untried, but going hand-in-hand with his conservatism was the ever-present desire to so adapt the Constitution that it would respond to the changing needs and requirements of the people."

If we who are assembled here today would honor Lincoln, we can render no greater service than to work for simplification of government; no greater achievement than elimination of rule by men and thus return to a rule of law, administered not for classes of society, but for all Americans.

Thus we may honor Lincoln in a living, powerful, permanent memorial to his name, a government of the people, for the people, and by the people.

Even as Lincoln, we may at times see many of our efforts go down to defeat, as we already have, but even as Lincoln's experience, it is an honorable defeat.

"I am not bound to win," he said, "but I am bound to be true. I am not bound to succeed, but I am bound to live up to what light I have. I must stand with anybody that stands right; stand with him when he is right and part with him when he is wrong."

Could there be a more simple yet moving expression of a moral code than this which has so indelibly been stamped on the history of American statesmanship?

He had scarcely assumed the duties of the Presidency before he was called upon to shoulder a multitude of additional burdens. He found extreme difficulty in selecting his cabinet, and it was in most instances complete submission to the ideals of those chosen, that he won for himself the personnel he insisted upon having. And even then, every member of his cabinet considered himself far above his master in intellect, in knowledge of national affairs—all of them believed themselves in full possession of greater ability to guide the Nation.

Lincoln was a man overburdened with sadness almost from his boyhood. His life was made up of one disappointment after another but not once did he flinch under the terrible strain. Researchers have come to the conclusion that his domestic life was not as trying as some historians would have us believe. Mary Todd came to Springfield from Lexington, Kentucky, and was one of

the most cultured women of that age. It is doubtful, according to present-day historians, if Abraham Lincoln ever met a more highly cultured woman than the one he was to marry within three years after they first met.

While she possessed a finished education, she lacked the ability to say in simple and beautiful language what her Saint-like husband was capable of expressing. No man in our early history, had the extraordinary talent for saying things so beautifully, so expressively and so inspiringly as Mr. Lincoln. Self-educated, and under most trying circumstances, he had a gift of expression and culture that few have ever equaled.

Lincoln had few intimate friends, but they brought him a degree of happiness, and it was the understanding and loyalty they displayed which strengthened him in his years of turbulent leadership.

"Now he is with the ages," said Secretary of War Stanton when Lincoln's life had ebbed away. Mad John Wilkes Booth, in a moment of infuriated hate, inflamed through months of chicanery by political enemies and powerful interests opposed to Lincoln's method of handling the slave question, committed the act which took the life of this great man. If Lincoln had lived, historians agree, there would have been less bitterness during the era of reconstruction. Lincoln's leadership would have brought victor and vanquished together in a peaceful and united effort to heal the scars.

The first official commemoration of Lincoln's birthday was in reality a memorial service arranged by Congress "to express the deep sensibility of the Nation to the event of the decease of their late President." Although nearly 10 months had passed since his demise, the fact that Congress was not in session at the time of the tragedy, had postponed, until the Members returned to Washington, the formal expression of grief.

Upon learning of the assassination of the President on April 14, 1865, several Congressmen hurried to Washington and met in the Senate reception room at the Capitol at noon on April 17. A committee of 4 Members of each House was appointed to report at 4 p. m. the same day and recommendations were adopted with respect to funeral arrangements and resolutions of sympathy.

Today there is no North, no South. We are welded together in a common cause for the advancement of the United States behind the stars and stripes. "One Nation under God indivisible, with liberty and justice for all."

On January 30, 1919, President Calvin Coolidge issued a Lincoln Day proclamation that seems appropriate to repeat on this occasion. It is entitled "Lest We Forget":

"Fivescore and ten years ago that divine providence which infinite repetition has made only the more a miracle sent into the world a new life, destined to save a nation.

"No star, no sign, foretold his coming. About his cradle all was poor and mean save only the source of all great men, the love of a wonderful woman. When she faded away in his tender years, from her deathbed in humble poverty she endowed her son with greatness.

"His presence filled the Nation. He broke the might of oppression. He restored a race its birthright. His mortal frame has vanished, but his spirit increases with the succeeding years, the richest legacy of the great century.

"Men show by what they worship what they are. It is no accident that before the great example of American manhood our people stand with respect and reverence."

In our Nation's Capital City stands a beautiful memorial to the everlasting fame of this inspired man. I have stood with awe and reverence before this great work of art on numerous never-to-be-forgotten occasions. As I looked upon the lifelike and somber countenance of the Great Emanci-

pator, he seemed to breathe life; he seemed to plead for continued faith in our beloved country.

A most impressive sight is to view this beautiful creation of man's genius at night, when subdued lights behind the colossal work of sculpture present a scene that will live long in the memory of everyone who views it.

The memorial of Abraham Lincoln, was not built until the generation that knew the man had passed. In 1922, the memorial, which had been erected by Congress, was formally presented to the Nation. It was designed by Henry Bacon and is regarded by many as the outstanding attraction of Washington. It is a beautiful rectangular temple of white marble with a colonnade of 36 Doric columns, 1 for each State existing at the time of Lincoln's death. Within the central hall is a colossal statue of the President—the work of Daniel Chester French. On opposite walls are two memorial tablets, one containing Lincoln's Gettysburg Address and the other his second inaugural address. Above the tablets are two large mural paintings, Emancipation and Reunion, by Jules Guerin. The Memorial stands, most fittingly, in a setting of dignified grandeur on the banks of the Potomac River, at the western end of the Mall. It has an impressive approach on broad steps and wide terraces. A pool lying between the Lincoln Memorial and the Washington Monument faithfully reflects the classic outlines of both, with the dome of the Nation's beautiful Capitol Building reflected against the horizon beyond. It presents a picture that will live in the minds of the visitors as long as life shall last.

Certainly if we seek inspiration for an attack upon the problems of government which face us today, it is to be found in the immortal memory of Abraham Lincoln.

If we fail to preserve for ourselves and our posterity this Union for which Lincoln gave all, he will have lived and died in vain, and the lives of over a million Americans will have been sacrificed and hundreds of blood-stained battlefields will have been war-torn for no good purpose.

All the benefits and glories earned by us through the ages, now appear to be the envy of much of the world. One hideous ideology of government is especially active in a ravenous ambition to destroy everything that free men have striven and given their lives to perpetuate, through nearly two centuries of government that has advanced the pattern for which men patriotically gave their lives at Valley Forge; for the ideals Lincoln championed and which he set forth imperishably at Gettysburg; for the noble hopes for which Americans gave their all at San Juan Hill, in the Argonne Forest, Iwo Jima, Korea, and are now facing added perils at Formosa. The ideals for which they gave their all were good in those instances; they are worth fighting and dying for today.

Slavery was wrong in Lincoln's time; communism is wrong in our time. If we are to perpetuate the ideals which this Nation has championed for the past 2 centuries, it is timely to rededicate ourselves to the American Creed, the last paragraph of which reads: "I therefore believe it is my duty to my country to love it; to support its Constitution; to obey its laws; to respect its flag; and to defend it against all enemies." If we rededicate ourselves to that principle, we will overcome much of that terrible ideology of government which is our sworn enemy; we will fully realize that those who are unwilling to stand up and speak for and defend America, but invoke the so-called fifth amendment to the Constitution, are enemies of our philosophy of government, and they shall be so recorded in our minds.

Lincoln said: "Our reliance is in the love of liberty which God has planted in us. Our defense is in the spirit which prized liberty

as the heritage of all men, in all lands everywhere."

Let us face the future with new enthusiasm. Let us determine to preserve our Republic at all costs, so "that this Nation of the people, by the people, for the people shall not perish from this earth."

Never in the history of our wonderful Nation has there been such a need for unity and patriotism and understanding and a willingness to fight for these principles as the need which faces us today. Undaunted, Lincoln fought for the principles he espoused after a long series of defeats and disappointments. Are we to be charged with being less patriotic and less inspired?

Lincoln also said: "Men will pass away—die; but the principle of democracy will live forever." To which I should like to add: "Providing we are alert to and subdue dangers which now are gnawing at our foundation."

"Lord God of Hosts, be with us yet,
Lest we forget, lest we forget."

The Continuing Problem of Communist-Front Groups in the Nation

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, February 28, 1955

Mr. WILEY. Mr. President, last night it was my pleasure to address the Knights of Columbus in Kenosha, Wis. I referred to numerous problems, notable among which is the antisubversive issue. I send to the desk the text of the address I delivered at that time. I append to it a most interesting article written by the nationwide syndicated columnist, Mr. Victor Riesel, and carried in the February 18 issue of the New York Daily Mirror and other newspapers coast to coast. It refers to the continuing problem in our Nation of Communist-front groups which solicit the names of the unwary and the gullible, and misuse the names of others.

I ask unanimous consent that both items be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address and article were ordered to be printed in the RECORD, as follows:

THE CHALLENGES WE FACE AT HOME AND ABROAD

(Address by Senator WILEY before Kenosha Knights of Columbus 50th anniversary banquet, in Kenosha, Wis., Sunday night, February 27, 1955)

I consider it a real honor to have been invited to join you on this occasion of your 50th anniversary.

I value this opportunity to rejoice with you on this half-century landmark, as well as the opportunity to learn your views, and to share with you my convictions concerning the challenges we face, as individuals and as a Nation.

THE K. OF C.'S GREAT RECORD

I am honored by your invitation for other reasons. Although I am not one of the million loyal members of your distinguished organization, I admire and respect you for the things for which you stand.

No one could read an issue of Columbia without sensing at once your deep convic-

tions on matters of national concern, your keen sense of civic responsibility, your abiding faith that right makes might, your grim determination that America shall remain free, that her enemies abroad shall not prevail, and that communism at home must not be tolerated.

I salute you for your record—for the constructive deeds of Father McGivney down to the present day—of charitable concern for needy widows and children.

I salute you for your firm stand against juvenile delinquency and against harmful literature.

I salute your loyalty to country, to you who have sent a higher percentage of your sons to defend our country than virtually any other group in America.

Yours is indeed an organization of which America rightfully can be proud, and to which all of us owe a great deal.

LEGISLATION AGAINST COMMUNISM

Since the Knights of Columbus are dedicated to the service of God and country, it is only natural that I submit to you some observations particularly on the foremost menace both to God and to country. I refer, of course, to the menace of international communism.

If time permitted, I would be happy to set forth for you now some of the things which I, for one, have tried to do down through the years in opposing the atheistic, international Communist menace—for example, some of the bills which I have introduced.

I should like to point out now, however, that for one thing, in the present Congress, I have introduced legislation to stiffen the penalties against seditious conspiracy either advocating to overthrow the United States Government by force or violence or conspiring to do so.

I SUPPORT ANTI-RED INVESTIGATIONS

I have given my support to the various vital investigating committees which are hard at work on this problem.

From time to time, as you know, there have been arbitrary proposals to force all of these congressional investigating groups into one.

I, for one, oppose such an effort. I believe that an important service can be performed by having the House Un-American Activities Committee, the Senate Investigations Subcommittee, and the Senate Internal Security Subcommittee, each fulfill their respective responsibilities in this important field.

This can and should, of course, be done without duplication of effort, with maximum of coordination, so that there is no waste in either manpower or resources.

I have seen, however, occasions when the individual interests and background of some committee chairman or members of one of the committees have made each of these groups, in turn, especially qualified to work on some particular phase of the complex Communist problem.

On the other hand, if all these investigations were centralized into 1 source, there might be a committee chairman of that 1 group whose interest might be so specialized that he might pass over some of the important aspects of the Communist problem.

SMACK DOWN ON RED FINANCES

I want to state that one phase which has hardly been studied is the matter of cracking the Communist conspiracy in the one place that it will hurt most; namely, the pocketbook. Vast sums of money have been collected by the Communist conspiracy in our country, most of it through Communist fronts. Large, inordinant sums have come from some wealthy people. Other large, in the aggregate, sums have come through smaller donations by considerable numbers of dupes.

There are indisputable evidences that the Communists have been guilty of financial

trickery, in keeping the books, both on their own party organization and on their Communist fronts, as in the instance of the misnamed National Committee for Justice in the Rosenberg case, in so-called defense of the atom traitors.

However, ex-Communists have testified how, time and again, large sums of money have been transferred secretly from group to group, including to and from Red-dominated unions, by all sorts of bookkeeping juggling.

In addition to these sums from American origins, there are the considerable top-secret sums made available by the Soviet Union and its intelligence networks.

So I, for one, believe that the Internal Revenue Bureau should crack down on Communist finances. The Internal Revenue Bureau should assign a sufficient number of skilled agents to make sure that income taxes, social-security taxes, and all other taxes are actually being paid by the Red groups just as law-abiding, patriotic Americans must pay such taxes.

I believe that a careful study of Communist-front books would provide many leads for tracing down numerous secret phases of the Communist conspiracy. And so, I have corresponded with T. Coleman Andrews, the able Commissioner of Internal Revenue, for this purpose. I intend to follow up, because I cannot say as yet that he has given me the sort of complete assurances of an all-out effort such as I seek.

I do not believe that the Internal Revenue Bureau can sit back and wait for evidence to show up. The Communists are too sly to permit obviously phoney bookkeeping to be readily noted.

Unless you assign crack squads of agents to this task and for a long enough period of time—agents not only trained in detecting financial trickery, but agents who really know something about the Communist conspiracy, who can recognize the names of individuals and groups, then the full story of the Red financial network will not come out.

THE DISGRACEFUL MATUSOW EPISODE

Now, I want to say just a word about one particular anti-Red phase which has recently been giving serious concern to all of us who have fought against the Communist menace. I refer, of course, to the disgraceful situation involving the self-admitted liar, Harvey Matusow.

I do not purport to have any final observations as to the overall meaning of the current activity of this contemptible individual.

It seems quite clear, however, that he is trying deliberately and maliciously to cast a cloud over as many as possible former Communists who have confessed.

The fact of the matter is that, as John Edgar Hoover has often stated, the genuine defector from Communism is one of the greatest assets which we have in the fight against the Red menace. How else can we ever find out the secrets of the Communist conspiracy?

We really only have two means: (1) by placing patriotic agents inside that conspiracy, and (2) by encouraging defection by those who have had their stomach full of communism and who want to return to the American fold.

A great many former Reds have confessed their sins. They have confessed—in full and in truth—to the FBI. They have cooperated with the FBI. The Bureau has checked, double checked, and triple checked their stories in order to make sure that the ex-Communists were not lying or exaggerating or casting a cloud over any possible innocent individual.

This process of cross-checking must be intensified, particularly now, in view of the disgraceful Matusow episode.

Matusow's current allegations must be analyzed with greatest care and skepticism. Perjury charges must be carefully weighed. The Communists are capable of such trickery that we should not be surprised at almost any tactic they, or Matusow, may adopt. We must not permit them or their accomplices to prevent genuine defectors from deserting the party and telling all to the FBI. We must maintain our confidence in the Bureau.

SUPPORTING J. EDGAR HOOVER

And on this latter point, recently I noted that an educator from one of the New England universities conducted a vicious personal attack upon Mr. Hoover.

I do not have the full absurd text of what he said, but I can say this: There are few individuals who have been more intensely and effectively devoted to trapping the guilty and protecting the innocent (whether it is in connection with communism or general crime) than has John Edgar Hoover.

For more than three decades, he has been a faithful public servant. This untarnished, uninterrupted service in highest public office—under both Democratic and Republican administrations—proves the universal esteem with which he is rightly held.

I wonder if that educator stopped to think that one of the highest priority aims of the Communist Party in the United States has always been to smear and destroy John Edgar Hoover.

I am not accusing the educator personally of anything. I am simply pointing out the facts.

A man has a right to speak his opinions and to have those opinions weighed on their merits. But no man should shoot off his mouth before checking the facts, particularly on so important a subject as this, and involving so faithful a public servant as Mr. Hoover. And no man should open his mouth before he figures out whether he is unwittingly serving ends which are contrary to the best interests of our beloved country.

COMBATING RED MENACE ABROAD

Now, just as we must be adequate to meet the Communist menace at home, we must be adequate to meet it head on abroad.

Fortunately, the United States has taken a strong stand against aggression in the western Pacific Ocean. And by our very firm policy in relation to protecting Formosa, the Pescadores, and related areas, we have lessened the danger of war.

Our strength increases the possibilities of peace; weakness before communism, appeasement of communism, increase the danger of war.

The very fact that the Peiping radio is full of continued angry threats and vicious denunciations is proof of the fact that the Communists know that we are not bluffing.

We are determined to keep the Formosa bastion as a vital link in our chain of security in the western Pacific. The northern tip of Formosa is but 500 miles from Japan. The southern tip is but 100 miles from the Philippines. We must defend Formosa, the Pescadores, and such related islands as the Joint Chiefs of Staff determine are necessary in order to make sure that our Pacific security chain is not broken.

It has been estimated that if we were to lose Formosa we might have to retreat in effect far back across the Pacific. That would bring Soviet bombers still closer in range to American shores.

MODERN MILITARY PREPAREDNESS ESSENTIAL

As we view this Communist problem, we know that here at home we must be prepared against any military emergency.

The Knights of Columbus have contributed so many men to the uniform of our country that I need hardly remind you of the admonition of the Father of Our Country, whose birthday we celebrated last Tuesday:

"To be prepared for war is one of the most effectual means of preserving the peace."

I know that none of you are fooled by so-called apostles of peace—false apostles, who preach unilateral disarmament—apostles who often are inspired by those who would destroy us. Nor, for that matter, are we fooled by those who seek to hide behind our Constitution, especially when their own sinister purpose is its ultimate destruction.

I am not one who believes that storm clouds on the horizon will cause us to panic. Nor am I one of those few who fear that Americans are not equal to the task.

You and your organization are but a symbol of the answer that America can and will provide. You, who stand for the dynamic principles of your organization; you, who have stood by your country before; you, who have demonstrated your loyalty to country and your determination to keep her free; you can provide the answer yourselves.

One of these answers is, of course, modern-type, military preparation. Just as the Boy Scout says, "Let us be prepared," so must we be alert to the dangers which threaten us—be prepared for any eventuality—be equal to any occasion.

We must guard the far-flung ramparts of the free world. We must taken every step necessary to maintain our own military preparedness.

Our giant industries must be maintained in a position for instant mobilization. Our people must be psychologically prepared for any emergency.

This is particularly important in the new jet-atomic age when time and space have been dwarfed by intercontinental guided missiles.

Enemy bases may exist only 3,300 miles from Milwaukee. Projectiles may someday soon be launched at a velocity of 10,000 miles per hour.

Yes, the need for up-to-the-minute military preparation is evident.

I need not remind you of the obligation of every American boy who may be called upon to defend his country. He is entitled to receive the type of modern military training (especially under field conditions) from his Government which will enable him to defend himself adequately and perform his duty with honor.

At the same time, we know that any system of universal military preparation must be scrutinized most carefully. The dangers of militarism that have enslaved other nations must be avoided. A tragic pattern of human bondage must never leave its scar across this beloved land of ours. Preparations for war, which are necessary to preserve the peace, must always be accompanied by adequate safeguards of our democratic principles.

PREVENTING JUVENILE DELINQUENCY

Of course, interwoven with the problems of youth, is that of juvenile delinquency. The stand of your organization against this dreaded social malady among our youth is well known. It deserves the merit it has won.

In Congress, as a member of the Senate Judiciary Subcommittee on Juvenile Delinquency and as a former member of the Senate Crime Committee, I have sponsored the Juvenile Delinquency Control Act. I am deeply convinced that the moral standards of our youth are more than an indication of the level of our civilization. They are a direct indicator of the world of tomorrow.

For each of you know that the thoughts in the minds of our young people today will be the actions of our leaders of tomorrow. And, by safeguarding the moral climate of our youth, we are preserving for them the heritage they deserve.

The work your organization has done in this field is outstanding. I can think of no single contribution to the American way of life more beneficial. I congratulate you and urge you never to cease your vigilance.

Yet, there is a caution we must observe. As serious as this problem is, we must not lose our perspective. We must not forget that last year, some 18 million boys between the ages of 10 and 17 were not picked up by the police for any crime whatsoever. This vital statistic somehow escapes attention in our eagerness to solve the problems of juvenile delinquency.

By all odds, the great majority of our youth—over 95 percent—are law-abiding youngsters, living and learning and eager to take our place in the building of tomorrow. Our confidence in our youth must not be shaken by the bad example of a few.

DELINQUENCY AND THE MASS MEDIA

There is one particular phase of this juvenile delinquency problem which I want to mention.

It is the matter of the strong influences through public media of communications—on our Nation's youngsters. I refer to the printed word, the spoken word, and the visual scene: namely, books, magazines, motion pictures, radio, and television.

I am not one of those who believes that there is any one single cause of the present wave of juvenile delinquency.

You cannot, for example, trace it alone or even principally, to programs full of violence on radio or television. I would oppose any overstatement to that effect by our Senate subcommittee, or by any other source, were such overstatement submitted. Obviously, juvenile delinquency is a complex problem. It arises from a great many causes: from broken, divorced, or separated homes, and neglected children; from slum conditions, where the children don't have facilities for wholesome play, recreation, and growth; from lack of constructive influence by the schools; from physical and mental handicaps that are untended by society; from inadequate spiritual education and a preoccupation with material acquisitions; from inadequate police forces and improper rehabilitation by courts or by juvenile homes, and from other sources.

Fortunately, here in our own State, we have set a comparatively good example of combatting the problem, both of adult and of youthful crime. Fortunately, our Badger facilities are among the finest in the Nation. And, yet, we know they can be improved.

We know, too, that by and large American books, magazines, radio, and television are sound. But there is a small minority among books and magazines which are definitely of salacious, indeed, pornographic content. These must absolutely be cleaned from the Nation's newstands and from the mails. That is why time and time again, I have taken up this problem with the Postmaster General. That is why I will continue to support legislation in accordance with sound judicial process—to eliminate such pornographic literature.

Then, with relation to radio and television, I have urged a greater concentration on wholesome programs. This problem can be met, in part, by American parents insisting upon wholesome radio and TV fare for their children. Voluntary patronage or nonpatronage of sponsors' products is just about the most powerful lever for assuring good programs and curbing unwholesome ones. Government censorship as such is not the answer, except in programs clearly beyond the border of good taste.

I have stated publicly, too, that this country could use a topnotch regular radio-TV program, or programs, dedicated to the problem of combating juvenile delinquency, as such. The story of youthful waywardness can be and should be told without sensationalism, without exaggeration, without phony melodramatics, without still more suggested violence. It can be told simply, yes, even entertainingly.

It can be shown that juvenile delinquency is not something totally offset that hap-

pens to the abnormal child or the abnormal situation; it can happen in or out of the so-called normal home, with parents of fine background who are not vigilant to protect average youngsters.

What I want are down-to-earth, realistic radio-TV programs that tell the story of the average American home, the many wholesome influences in it that prevent delinquency, and yes, the all too common conditions in it, like parental neglect, which contribute to juvenile delinquency.

CONCLUSION

Now, my friends, this has been a gratifying experience for me. It has been a real pleasure to visit with you about a few of the problems which confront us daily in Washington. The pleasure of meeting with a group of dedicated and concerned citizens is always a stimulating and challenging experience.

I have passed along to you a few of the ideas and problems that have occupied my attention in recent days. In turn, I trust that you will give me the benefit of your advice and counsel—that you will not hesitate to tell me your problems, your views, and your considered opinions on issues affecting Wisconsin and our Nation.

Your problems are my problems. Thank you and God bless you.

SCIENTIST EASY PREY FOR PROPAGANDIST OUTSIDE LAB

(By Victor Rieser)

Explanation, please.

Prize-winning nuclear scientist Dr. Harold C. Urey has just written that the greatest danger to this country is a powerful revolutionary country, namely the U. S. S. R.

Yet, in the same message, soon to be made public, this atomic expert defends convicted spies and the perjurer, Alger Hiss, who helped make the Soviet Union the greatest danger to this country.

The atomic spies slipped to Russian intelligence the blueprint for the atomic trigger, the sky platform, and the famed proximity fuse. Alger Hiss delivered the inner secrets of our diplomacy.

Yet, Professor Urey, writing in the forthcoming Bulletin of the Atomic Scientists, asks: "What is it that Alger Hiss . . . did that profoundly or even moderately put the United States in a less favorable position? How much damage have all the arrested and convicted agents actually done to the political and military position of the United States?"

Would it be too emotional to suggest that the answers come from the mothers of GI's dead in Korea?

In the same message from Dr. Urey, we see that he says that the "way we handled the Rosenberg (atomic spy—VR) trial" makes him "feel less secure for myself and my family."

We respect Dr. Urey's right to express himself so freely in words which would be howled down in the market place were they not written by one whose profession is viewed with awe by so many of us. But we do not respect his judgment in reflecting on men who are as skilled in their field as he is in his; namely, the jurists of the United States Supreme Court who upheld the convictions of Hiss and the spies.

We do not respect his taking the platform offered last week by a subsidiary of a pro-Communist agency devoted to a fight for the release of an Alcatraz prisoner by the name of Morton Sobell, a man who stole secrets from our Nation for the benefit of what Dr. Urey himself describes as our greatest menace.

But most important is the unscientific approach to all this by scientist Harold Urey. He agreed to accept a testimonial dinner on February 12 from something called the Chicago Sobell Committee, 20 West Jackson Boulevard, Room 1301, Chicago, Ill. Phone: Webster 9-5992.

Why did not Dr. Urey use his research skill to learn that this committee is a subsidiary of the National Committee To Secure Justice for Morton Sobell.

These committees were set up to smear the United States. They use the same techniques, down even to the same exploitation of spies' innocent children.

Did not Professor Urey know that some of those who signed the imitation parchment paper scroll given him by the subsidiary of the National Rosenberg-Sobell Committee (headquarters, 1050 Sixth Avenue, New York, N. Y.; phone, LO 4-9585) are now bitter over being deceived into sponsoring what turned out to be a rally for a convicted spy and not merely a testimonial dinner?

We have spoken to one who signed such a scroll thinking he was adding his name merely to a list of persons honoring scientist Urey. This signer is the great fighter for human rights, A. Philip Randolph, head of the AFL's Brotherhood of Sleeping Car Porters.

Randolph is greatly disturbed over the emphasis on the spies at the dinner to Urey. He points out that he received an innocuous letter asking him to join in hailing Urey as a scholar.

"I signed a tribute to Dr. Urey as a distinguished scientist and scholar. I signed in good faith," Randolph told us.

"If any group then attempts to use my name and the name of my union for ulterior purposes—and especially pro-Communist purposes—they are doing something reprehensible. My union and I have been in the forefront of the fight against Communists." Surely now Dr. Urey will use his great talents as a scientist to investigate and expose all this.

Or will he?

The Salt River Valley Water Users Association and the Tennessee Valley Authority

EXTENSION OF REMARKS OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, February 28, 1955

Mr. GOLDWATER. Mr. President, several weeks ago there appeared in the Arizona Daily Star an editorial concerning remarks I had made about the TVA and the Dixon-Yates contract. In the editorial there was a discussion of the workings of the Salt River Valley Water Users Association, in my home State. That was not factual in every aspect, particularly when the editorial tried to compare the association with TVA. Because the editorial was published in the Appendix of the RECORD, and has subsequently appeared in newspapers, I now ask unanimous consent that an answer which I wrote to the editor of the Star, Mr. William R. Mathews, also be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FEBRUARY 21, 1955.

Mr. WILLIAM R. MATHEWS,
The Arizona Daily Star,
Tucson, Ariz.

DEAR BILL: Once before it was necessary for me to answer an editorial of yours that touched upon some basic thinking of mine. That was the occasion when you asked me, "What kind of a Republican are you?" and, if you will recall, that answer required far

more words than I like to burden anyone with, particularly a busy editor.

Now you have questioned my stand on TVA because I say it is socialistic, and you evidently do not agree with me, and, in the saying, you try to compare TVA with the Salt River projects, and I find it necessary to resort to a lengthy explanation, which I feel will explain to you why I do not like this approach that has been used under false colors in the State of Tennessee.

I do not consider the Salt River Valley Water Users Association in any way comparable to the Tennessee Valley Authority. I quoted Mr. Norman Thomas as an authority on TVA being socialistic. If he thought for one minute that the Salt River Valley Water Users Association was socialistic, I am sure he would have eulogized it as such years ago. I accept him as an expert on this subject.

I heartily endorse Federal assistance in the development of our streams for irrigation, flood prevention, navigation, and other beneficial uses, including the production of hydroelectric power. Had it not been for Federal assistance, the Salt River project would not have been developed to its present status or, let me say, developed to that status as expeditiously. I still believe a project as sound as it is would have been completely developed by local interests in time. Federal assistance was necessary to the development of many other fine reclamation projects in the West and it will be required in the future for many other fine developments such as the central Arizona project.

Congress, in its wisdom, decided to encourage reclamation development in the West, and in particular that of Government lands. It not only authorized loans for this purpose but offered further assistance, or subsidy, if you please, by making the loan interest free for a certain number of years. I am proud to say that a Republican administration, under the dynamic leadership of that great President, Theodore Roosevelt, made this possible by passing the Reclamation Act of 1902. I am happy to say that succeeding Democratic and Republican administrations have recognized the wisdom of the act and have not only continued it but have improved it. This is to the credit of both parties. The present administration has recommended the most ambitious of all reclamation programs, including the upper Colorado River development, which I was happy to cosponsor.

I feel confident that it will support our central Arizona project as soon as the court settles the question of water rights between our State and California.

In addition to irrigation this administration has initiated a farsighted policy—the partnership approach—for furthering flood prevention, navigation, and other benefits including hydroelectric power that come from the development of our river basins. This program I heartily endorse. It will result in more extensive development than could be accomplished by the Federal Government trying to go it alone.

The purpose of the above statement is to let you know how I stand on development of our water resources. I have no quarrel with Tennessee over the fact that the Tennessee River Basin has been developed. In fact, I am very happy that Tennessee or any other area can benefit from development of its water resources. However, I would not want what has happened in that State to happen to my State. Under the guise of flood control and navigation, the river has actually been developed for production of hydroelectric power. Their greatest irreplaceable resource—land—the best land in the State, has been inundated and lost to production forever. Better flood control could have been provided without losing this land. But if that is the way Tennessee wants it, I certainly offer no objections.

My criticism of TVA is that it has not done exactly what the Salt River Valley Water Users Association has done. The water

users got some help from the Government to build a storage dam, some canals and to install a powerplant at the dam. The cost of this work was beyond the ability of the water users at the time. The Salt River Valley Water Users Association is a true cooperative of farmers. The electric power it produced was primarily intended to operate its facilities and provide electric service for its members. It sold excess power and used the money to reduce water costs to its members. When it needed additional power it financed the additional dams and steam plants through the private investment money market and pledged the land of its members as security. It did not run to Uncle Sam for another handout. When its facilities were completed, it took over the operation and management and has run them on a businesslike basis. It has paid interest—sometimes high interest up to 6 percent—on its borrowed capital. It has assessed its members sufficient money to meet all of its costs including repayment of the money advanced by the Federal Government ahead of schedule. It got no gifts from the Government for flood control and other benefits provided by its facilities as did TVA. No, it is paying back all the Federal and private money and has never defaulted on a single obligation.

The Salt River Valley Water Users Association-Government arrangement is a true partnership that has worked out to the everlasting good of the State. The Government loaned a helping hand when it was necessary, but the people have retained their own independence and initiative and are beholden unto no Federal bureau or bureaucrat.

It is true that Salt River Valley Water Users Association pays no taxes, but you will remember that the Internal Revenue Department contended from 1936 on that it did owe Federal income tax on the profits it made from the sale of electric power. It was only after it organized the power operations into a separate and distinct public power district and made a cash settlement with the Revenue Department that it was relieved of further Federal income tax liabilities.

Public power districts, municipalities, etc., are tax exempt on the theory that they are subdivisions of the State and operate on a nonprofit basis. A true cooperative is tax exempt on the theory that at least 85 percent of its service, and therefore its income, is derived from its own members. The original concept of tax exemption for States and their political subdivisions was based on services normally performed by Government or segments thereof for the people, such as schools, roads, public buildings, etc. I am sure it was not originally thought of or contemplated to carry over these tax exempt privileges to the operation of proprietary businesses, otherwise through Government tax-exempt competition all such businesses will some day of necessity come under Government ownership. It must also be remembered that at the time these tax-exemption laws were set up, taxes, and in particular Federal income taxes, were not much of a business problem.

In the operation of a tax-exempt proprietary business it is not the state or segment thereof that gets out of paying the tax; it is the individual, the business or industry using the service that gets out of the taxes. Why should an industry located in a public power area escape paying taxes on the electricity it uses and an industry located in a private utility area, maybe right across the street, pay as much as 24 percent on its power bill for tax purposes? I am not suggesting the Salt River Project Power District pay taxes on its power operations so long as similar operations are exempt over the United States. And I am not suggesting that true farm cooperatives pay taxes on their power operations so long as they serve their members on a nonprofit basis, but when either starts serving business establishments and industries, I see no reason why such

businesses or industries should be exempt from taxes on power that other businesses have to pay.

We have discussed the Salt River Valley Water Users Association; now let us see wherein TVA differs. Let me tell you that I have made quite a study of TVA since the Dixon-Yates controversy came up and now realize for the first time what it is all about. Let me also tell you that the propaganda this country has been fed on TVA at public expense, could hardly have been excelled under a dictatorship and a controlled press.

TVA was originally sold as a flood control and navigation development with hydroelectric power incidental thereto. It had not been underway long before a public power clique decided to take over. The first step was to kick out Dr. Arthur Morgan, the Board's first Chairman, and put Dave Lilienthal in. After that the main emphasis was put on power development. I will not dwell on flood control and navigation except to say that instead of providing flood control to protect valley lands, TVA has permanently flooded with lakes more land than the Army engineers estimated would be flooded by the undeveloped river once in 500 years. The interest on the money invested in navigation facilities and the cost of operating and maintaining them alone costs almost as much as the all-rail rate on the same volume of freight. Besides that, the big percentage of water traffic results from TVA's own use.

Instead of providing reasonable flood protection, saving as much valuable land as was possible and improving navigation within economic limits and producing all of the hydroelectric power that could be economically developed from the primary undertakings, and turning this power over to the people to be distributed through existing facilities, either private or public, the TVA operators planned a Federal power monopoly. They schemed with a public power advocate, Harold Ickes, to use Public Works Administration funds for loans and grants to compete with the private electric companies and in this way forced them to sell their properties to the Government. The cities of Tennessee, under the persuasion and guidance of TVA, bought the electric distribution systems within their city limits. The cities operate the municipal electric systems and purchase their power from TVA at wholesale. These cities are now under captive contracts with TVA. They cannot build their own generating plants and produce their own power if they want to. TVA tells them what they shall charge for power and what to do with the money they take in. The local people not only have no voice in running TVA but are not allowed a free hand to run their own distribution systems. The situation is even worse than described above. TVA runs Tennessee. It has such a grip on the State, including its politics, that no candidate for political office, regardless of party, has a chance of election if he does not follow the TVA line. A farmer loses his free fertilizer and can no longer be a TVA cooperator if he supports a candidate that TVA objects to. This political and economic power is in the hands of a three-man Board of Directors appointed by the President and confirmed by the Senate. The people of Tennessee have no say in the selection.

TVA claims it has averaged earnings of 4 percent on the power investment over the years. Yet it pays no interest on the money it gets from the Federal Treasury but the people, through taxes, have to pay an average of 2.6-percent interest on this long-term financing. We taxpayers have had to pay out in interest alone over \$240 million on money advanced to TVA for expenditures other than those connected with flood control and navigation. TVA has returned to the Treasury through fiscal 1954 only \$37 million, about one-third of the interest

the rest of us have had to advance on this venture. It is not the Authority or the State of Tennessee that is getting out of paying this interest, it is the power consumers, individuals, businesses, and industries, many of them competing with other sections of the country.

TVA pays no Federal taxes and only token payments in lieu of State and local taxes. Once again, it is not the Authority or the State of Tennessee that dodges these taxes but the individuals, businesses, and industries consuming the power. If these TVA customers were paying their fair share of taxes it would mean just that much less the rest of us would have to pay. As it is we lose both ways. We are being taxed to support TVA and the TVA consumers get out of taxes the rest of us pay on power we buy.

TVA conducts special forestry and soil-conservation programs. Arizona and the other 26 States depend on the Department of Agriculture for such programs. Why should one State be singled out for a special program through some separate Government authority?

TVA operates a fertilizer program but the great development programs in this country, aside from atomic energy, have been through the initiative of private industry, not Government. Why do we have to turn to some Government authority for this work in one section of the country?

Salt River Valley Water Users Association by good business management, running its own affairs, paying its own way, financing its own expansion after an initial start, in other words through initiative of its own members, has contributed greatly to the growth and prosperity of Arizona. What has TVA, an all-powerful Federal authority done for Tennessee? After the expenditure of over \$4 billion of Federal funds on TVA and atomic energy installations in Tennessee, that State has shown less advancement in those things indicative of prosperity than its neighboring States. I gave the Senate statistics supporting this statement last year and they have not been disputed. It is not because the State lacks the natural advantages of its neighbors. It is my opinion that the people have become so dependent on a Federal authority they have lost their own initiative.

TVA already has cost the people of Arizona \$3,595,000 and the annual subsidy to TVA from Arizona is \$175,000. If the Dixon-Yates contract does not go through and TVA is allowed to build another steam plant, it will cost Arizona at least another \$235,000. I do not object and am sure the good people of Arizona have no objection to lending a helping hand to any section of the country, but we certainly have a right to expect those receiving help to put their operations on a sound businesslike basis as Salt River Valley Water Users Association has done and not be the continuing drain on us that TVA has been for over 20 years.

Sincerely,

BARRY GOLDWATER.

Can Communism and Capitalism Coexist in the Same World?

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 28, 1955

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address

entitled "Can Capitalism and Communism Coexist in the Same World?" delivered by George E. Stringfellow, senior vice president of Thomas A. Edison, Inc., and longtime business associate of the late Thomas Alva Edison, at Fort Lauderdale, Fla., on January 14, 1955, before the Temple Emanu-El, together with certain statements indicating the reaction to this address on the part of prominent Americans.

There being no objection, the address and statements were ordered to be printed in the RECORD, as follows:

CAN CAPITALISM AND COMMUNISM COEXIST IN THE SAME WORLD?

(Remarks by George E. Stringfellow, senior vice president, Thomas A. Edison, Inc., and long-time business associate of the late Thomas Alva Edison, before the Temple Emanu-El, Fort Lauderdale, Fla., January 14, 1955)

Ladies and gentlemen, when Rabbi Marius Ranson invited me to address your Friday evening religious service, he paid me a great compliment and I want to express my gratitude to him and to you for this unusual opportunity.

I am honored to take part in any program with which Rabbi Ranson is associated. This meeting brings to my mind our many associations when he was with us up North. We in New Jersey miss Rabbi Ranson. He was a friend and a spiritual adviser. He served our community with honor and distinction in our many civic, social, and philanthropic endeavors. He left a void in our midst which no one has filled. I am sure he brought to Temple Emanu-El's congregation and to your neighbors the benefits of his rich scholarship, his clear and far-reaching vision, and his devotion to duty.

I am particularly honored to speak to you tonight. As a Christian I am conscious of the contribution the Jewish religion has made to our spiritual philosophy and to our general way of life. And, it is about our way of life that I shall speak to you tonight.

Many people today are concerned about the welfare of our country and the preservation of our way of life. Millions are asking, "Can capitalism and communism coexist in the same world?"

This question has been on my mind for a long time and although I am not an expert or an oracle on capitalism or communism, I believe the answer is obvious.

The nature of communism has stumped many an expert. "I cannot forecast the action of Soviet Russia," said Winston Churchill in 1939. "It is a riddle wrapped in a mystery inside an enigma," concluded the great British statesman.

I will not undertake to do what Churchill couldn't do—predict Russia's actions—but I will state without fear of contradiction that one of the two major systems that now divide the world will survive the other. That is not a very astute analysis, as no system of government has ever achieved immortality. In fact, no political, economic, or social system in written history, or even prehistory, has ever survived unchanged.

Human systems of organization, like every other living thing on this small planet, are the subject of inevitable change either by orderly evolution or by revolution. Neither communism nor capitalism will be an exception.

The Communists recognize this basic concept of changing life and, convinced that capitalism has passed its peak and is ready to decline, hope to achieve their dream of world domination by hurrying the process. If they can't attain that goal by peaceful process such as the cold war, they are doubtless prepared to grab by means of revolution what they can't win peacefully.

COMMUNISM

Before we go further, let us make sure we agree on our definitions. By "communism" I refer to the communistic system of government now in control in Soviet Russia and her satellites and in Red China. Under their regimes, man is regarded as a soulless, animated machine to be enslaved, used, and consumed by the state for its own glorification.

CAPITALISM

By "capitalism" I mean the economic-political system that now prevails in the United States. I distinguish our capitalism from the imperialistic capitalist systems now in dissolution, under which Great Britain, France, Spain, Italy, Holland, and even little Portugal have for a few centuries profited economically. They became rich on the basis of their colonies and although they introduced certain material blessings and even encouraged spiritual growth by supporting missionaries, nevertheless, in every colony the deep, fundamental relationship between the imperialist and the subject race was one of power—raw, physical power based essentially on gunboats and machine guns.

In my discussion of communism versus capitalism, I define capitalism as the political-economic system which protects freedom of enterprise as well as freedom of thought, worship, speech, and assembly, and other civil rights for its own citizens as individuals, limited only by reasonable restraints. I speak of the system which has encouraged free enterprise to attain a per capita productivity beyond the wildest imaginings of a few decades ago; the system which brought about such wide and equitable distribution of its material benefits, as to have almost abolished poverty and insecurity.

If communism and capitalism, whose antagonistic goals are apparent in their definitions, are to coexist for a substantial period of time, it must necessarily be a peaceful coexistence. In an atomic war, the extinction of one or the other systems would be virtually inevitable, if indeed, either could survive the holocaust.

With both systems armed with atomic weapons to the point where the only alternatives open to both are war that could easily destroy both, or peaceful coexistence, we are up against our original question. Stalin gave an answer to this question in his book *Problems of Leninism*, when he said, "It is inconceivable to me that communism and capitalism can live in the same world. Sooner or later one or the other must conquer."

It could agree with Stalin in this instance, although we arrived at our answers in different ways. Let us examine the reasons for reaching this conclusion:

I am convinced that the communistic system contains the seeds of its own destruction. The saber-toothed tiger was a formidable fellow. However, his extinction was the result of his own terrible weapon, which became his handicap and his impediment when the supply of his large prey became exhausted.

All forms of tyranny and despotism eventually destroy themselves. Though temporarily successful, they breed the desire to resist faster than the tyrant can generate power to overcome the resistance. Political structures without the cement of mutual trust and love of fellow men eventually fall apart. Those who cannot be safely enslaved must be liquidated. That is why one purge must of necessity follow another.

Capitalism is a threat to communism. Knowledge of the blessings of the competitive system must be kept from the victims of communism lest that knowledge give hope and the courage to resist tyranny.

Gen. William H. Wilbur, in his recent book, *Guidposts to the Future*, tells how the Communist leaders fear the Voice of America

and of the subtle and cruel Soviet program to shut it out. For example, a class of Polish schoolchildren were asked by their teacher to identify a number of melodies. The little hands went up in recognition of well-known Polish songs. Then another tune was played and several children raised their hands, not realizing that it is one frequently played on the Voice of America program. When those children returned home a few hours later, their parents had all gone to parts unknown, never to be heard of again.

The abominable use of fear and terror is a frightful and immediately effective weapon, but it will destroy the user, just as the awful fangs of the now extinct tiger destroyed him.

The Communists recognize belief in God as a further threat to their philosophy. They boldly assert that belief in God is an "opiate of the people" and "must be destroyed everywhere before communism can be safe anywhere." No greater indictment could be drawn of any movement than to say it cannot exist in a religious atmosphere. We in America practice brotherly love and we recognize God as the Great Architect of the Universe.

With two ideologies so diametrically opposed as to make peaceful coexistence untenable, and with the realization that an atomic war could bring about total destruction of one or both adversaries, what hopeful options are open to the world?

It is clear that we cannot sit idly by and let the Communists skillfully maneuver ideas and events to their advantage. We, too, must guide the natural course of things so as to derive the maximum benefit from them.

JOHN THE GARDENER

This reminds me of the story of John the gardener, which the Hon. Albert W. Hawkes, former United States Senator from New Jersey, and a long and close friend of your rabbi, tells with such force and effectiveness.

In a small, attractive community, the owner of a large lot in the center of town allowed the property to become an unsightly dump heap, and couldn't be persuaded to clean it up. However, he was not averse to having the town do it. The city council, with a plan to make the ugly lot into a beautiful flower garden, borrowed John the gardener from one of the wealthy citizens of the town who owned a magnificent estate with beautiful gardens.

In about a year's time, John the gardener had cleaned up the place and converted it into a thing of beauty. Everybody complimented him and told him that no one else could have done such a wonderful job. John's head began to swell and he really began to believe that he was a superman.

A minister of the gospel heard of John's growing conceit and decided to help John straighten out his thinking. The minister said to John, "John, this is a wonderful piece of work you have done. But I hope you remember you couldn't have done it without God's help. It was God who put the ingredient in the soil, and the characteristics in the seeds and sent the rain and the sun."

John readily agreed that without God there could have been no garden at all, "but," he reminded the minister, "don't forget what a terrible mess this whole property was when we left it to God alone."

And so I would remind you that if we leave it to God or to John the gardener alone to destroy communism, this godless form of government may make such a mess of our world that capitalism cannot live in it.

However, there is hopeful evidence that the people are turning to God for help. In the period from 1945 to 1954 the number of church members in the United States increased from 72 million to 95 million—an increase of 13.7 percent, as compared with a 12.5 percent increase in the Nation's popu-

lation. Today 59 percent of the population of the United States are church members, as compared to 16 percent in 1850, when the record was first available.

Even in Russia the Communists are discovering that too many Russians go to church and are stepping up their program to combat this movement which is a threat to their atheistic philosophy.

As further evidence that people are turning to God, there is the fact that Dr. Norman Vincent Peale's book, *The Power of Positive Thinking*—a religious work, written by a clergyman, has been at the top of the best-seller list for 114 weeks. For more than 2 years this little book has outsold any other book to the general public.

Communism is its own greatest enemy. In time its cancerous nature will eat away at its vitals. In the meantime, we must keep ourselves strong spiritually, economically, and militarily, and exercise a reasonable amount of wisdom in combating this godless force. In this way our way of life will survive this crisis.

"George Stringfellow's thesis contains both logic and a welcome ray of hope as to the outcome of the present bloodless war between communism and the free competitive system called capitalism. * * * If we keep ourselves spiritually, economically, and militarily strong, we can count on the self-destruction of communism." (Robert Gardiner Wilson, Jr., 33d degree, past imperial potentate, member, board of trustees, Shriners' Hospitals for Crippled Children, probate court judge for Suffolk County, Mass.)

"I wish there were more people in America who had the courage and conviction that George Stringfellow possesses. I say this after reading his address, *Can Capitalism and Communism Coexist in the Same World?*" (E. V. Rickenbacker, chairman of the board, Eastern Air Lines, Inc.)

"Temple Emanu-El was filled to capacity. Rabbi Marius Ranson presented George E. Stringfellow, the speaker, as one of America's leading industrialists and consecrated Christian layman. The members of the congregation sat in rapt attendance as the speaker delivered his address, *Can Capitalism and Communism Coexist in the Same World?* in which he fearlessly attacked the Communists' way of life. * * * It was an hour we shall never forget. * * * America needs more such men in this crucial hour." (Dr. Carl C. E. Mellberg, minister, Simpson Methodist Church, Paterson, N. J., chaplain, Salaam Temple, AAOONS.)

"George Stringfellow exemplifies friendship in all of its noblest phases. He has hundreds of devoted friends throughout the United States because he is a real and devoted friend. * * * It has been one of the dreams of my life to have George Stringfellow deliver an address from my pulpit to my friends. That dream was fulfilled in his great address, *Can Capitalism and Communism Coexist in the Same World?*" (Rabbi Marius Ranson, Temple Emanu-El, Fort Lauderdale, Fla.)

"I think George E. Stringfellow's address, *Can Capitalism and Communism Coexist in the Same World?* is one of the most remarkable and understanding that I have read in a long time." (George E. Sokolsky.)

"George E. Stringfellow has set down the problem of survival in clearly spoken and very understandable words. Every American should read them." (Frank S. Land, 33d degree, imperial potentate, Mystic Shrine of North America, and founder and secretary general, Order of DeMolay.)

"Here is a hard-hitting, sound, sagacious statement of some fundamental truths; I wish Dr. Stringfellow's admirable address could be read and pondered by all Americans." (Hubert M. Potat, past imperial potentate, AAOONS.)

"I feel that George Stringfellow's address, Can Capitalism and Communism Coexist in the Same World? should be published so that even he who runs may read. Take heed and join the crusade advanced by this great American." (Arthur H. Raith, potentate, Salaam Temple, AAONMS.)

"To me, it is always a privilege to read a speech by my honored friend, George E. Stringfellow. He never fails to bring inspiration and sound common sense to his readers." (Norman Vincent Peale, pastor, Marble Collegiate Church.)

"George Stringfellow is a realistic, successful, industrial leader. His comments in his address, Can Capitalism and Communism Coexist in the Same World? reflect his philosophy, couched in the simple, lucid dramatic language characteristic of him." (Archle T. Keene, president, Indiana Technical College, Fort Wayne, Ind.)

"It is always a headline when a layman puts into plain words the ideals that we men in the pulpit are trying to emphasize. This George E. Stringfellow has done in the sermon Can Capitalism and Communism Coexist in the Same World? which he preached at the Temple Emanu-El in Fort Lauderdale, Fla." (Rev. Dr. William F. Rosenblum, rabbi, Temple Israel of the city of New York.)

"Mr. George Stringfellow has long been a spokesman for religious faith, and his prominence in business and political and benevolent affairs gives his preaching exceptional force. The truth spoken incisively here is of primary importance." (Harry Milton Taylor, minister, Calvary Methodist Church, East Orange, N. J.)

"Mr. George Stringfellow's address, Can Capitalism and Communism Coexist in the Same World? is one of the best analyses of this important problem that I have ever read. His clear-cut ideas define . . . the real issues which confront the world today, and the conclusions which he draws pinpoint convincingly and emphatically that the church offers the one great hope of a just and lasting peace." (J. Goodner Gill, vice president, Elders College.)

"Our imperial high priest and prophet's address, Can Capitalism and Communism Coexist in the Same World? is a forthright and fearless exposition in defense of our American way of life. . . . I hope it will be given wide publicity." (Albert H. Flebach, 33d degree, past imperial potentate, AAONMS.)

"Noble George E. Stringfellow has given his address, Can Capitalism and Communism Coexist in the Same World? great thought and consideration. . . . Noble Stringfellow is doing his patriotic duty in his effort to make American citizens understand that our system of government cannot coexist with communism and in pointing out what the citizens can and should do about it." (Albert W. Hawkes, former U. S. Senator from New Jersey.)

"Once again, which has repeatedly happened, illustrious George Stringfellow has given a stirring message in his address Can Capitalism and Communism Coexist in the Same World? God give us more men like George Stringfellow who are capable of giving to the world a message like this one." (Albert Ellis, 33d degree past potentate and recorder, Maskat Temple, AAONMS, secretary-treasurer, Shrine Recorders Association.)

"I believe Noble George Stringfellow's address Can Capitalism and Communism Coexist in the Same World? is excellent and I sincerely hope that it is given wide circulation." (George H. Rowe, 33d degree, past imperial potentate, and member of the Supreme Court of New York State.)

"It is gratifying to know that one of my associate imperial officers is making a major contribution to the obvious need for alerting America on the subject of Americanism and the dangers thereto encompassed in godless

communism. Furthermore, Noble Stringfellow's contribution reflects a motive of true patriotism beyond question." (Walter C. Guy, 33d degree, deputy imperial potentate, AAONMS.)

"We are now approaching another crucial period in the life of our country when clear thinking is indicated. In my opinion, our imperial high priest and prophet, Imperial Sir George E. Stringfellow with his astute analytical diagnosis of the acute problem of communism and capitalism is doing just that." (Harold Lloyd, 33d degree, past imperial potentate and member, board of trustees, Shriners hospitals for crippled children, AAONMS.)

"The truth Noble George Stringfellow has stated needs to be repeated over and over again. . . . I consider it a privilege to have my name linked to his address, Can Capitalism and Communism Coexist in the Same World?" (Harvey A. Belfa, past imperial potentate, chairman emeritus, St. Louis unit Shriners hospitals for crippled children, AAONMS.)

"Do not fail to read George E. Stringfellow's address Can Capitalism and Communism Coexist in the Same World? . . . it is needed by you and by me . . . in bolstering our spirit for the fight for survival which lies ahead." (Adrien B. Hommel, 33d degree, commander in chief, Valley of Paterson, N. J., northern Masonic jurisdiction, United States of America, AASR of Freemasonry, and past grand master of the grand lodge of the Most Ancient and Honorable Society of F. & A. M. for the State of New Jersey.)

"Can Capitalism and Communism Coexist in the Same World? is a splendid address and should, in my opinion, receive wide circulation." (Alfred G. Arvid, 33d degree, past imperial potentate, AAONMS.)

"This sermon by George E. Stringfellow, is, in my opinion, one of the clearest outlines on this subject that it has been my pleasure to read." (Walter S. Gibbs, 33d degree, illustrious potentate, Crescent Temple, AAONMS.)

"George Stringfellow's sermon is full of wonderful words and food for thought." (Gerald D. Cray, imperial chief rabban, AAONMS.)

"It is a hopeful sign when one of our truly great businessmen will appear in a church or holy temple and stand and be counted for God and make such a timely and well-developed pronouncement in favor of our way of life, under God, as against a godless Communist." (Galloway Calhoun, 33d degree, past imperial potentate, president and chairman of the board of trustees, Shriners hospitals for crippled children, AAONMS.)

"George Stringfellow, with his customary forthrightness, forcefully explodes the theory of peaceful coexistence that Communist party lines and Communist dupes are trying to purvey to the American public." (Charles Edison, former Secretary of the Navy and former Governor of New Jersey.)

Their Rules, but Red Witnesses Are Always the Same." The editorial was published in the February 19 issue of the Saturday Evening Post, and is a very timely one.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COMMITTEES CAN CHANGE THEIR RULES, BUT RED WITNESSES ARE ALWAYS THE SAME

Sometimes it is said that we ought to create some tribunal as lofty and unassailable as a British Royal Commission to replace congressional committees as probers of Red infiltration. The comrades show less enthusiasm for this idea than they once did, since the Canadian Royal Commission rooted out the Dominion's Reds with no more compunction than a gardener trapping moles.

Australia now has a Royal Commission investigating Soviet espionage and its connection with domestic Communists as an aftermath of the Petrov case. The distinguished commissioners are making a noble effort to carry on in the Liberal tradition, with public hearings. How are they making out? The London Times reported this passage from the testimony of W. H. Bird, Victoria, secretary of a seamen's union.

"Mr. BRD. I have come here to tell you what I know, without this boy [indicating Mr. Pape, junior counsel to the Royal Commission] interrupting me all the time. . . .

"Mr. PAPE. You are here to answer questions, not to talk.

"Mr. BRD. Dry up. I know what I have to say without you telling me.

"Seamen in the gallery began to applaud, calling out, 'Good on you, Bill.' The commissioners retired to allow the gallery to be cleared, amid calls of 'This is a free country,' 'You can't take it,' 'You're a lot of cowards.' If it all sounds familiar, it is because the method used by the party to disrupt social institutions is the same in every case and every country.

They've been doing it for years. In November 1928, at Zagreb, Yugoslavia, one Josip Broz went on trial for Communist agitation and propaganda, contrary to the law of the realm. The defendant told the presiding judge arrogantly: "I do not recognize the bourgeois court of justice, because I consider myself responsible only to my Communist Party."

When he was sentenced to 5 years and led away by the guards, there was the standard shouting match, joined by supporters in the packed audience. Broz, of course, is now better known as Marshal Tito, and the interesting fact is that his official biography cites this as one of the glorious episodes in his career.

There isn't much you can do with Communists except let them yell. But it would be a mistake to amend our procedures to make their obstructive tactics easier.

Hells Canyon

EXTENSION OF REMARKS OF

HON. RICHARD L. NEUBERGER
OF OREGON

IN THE SENATE OF THE UNITED STATES
Monday, February 28, 1955

MR. NEUBERGER. Mr. President, there is a great dramatic appeal in the name Hells Canyon, an appeal which undoubtedly evokes a wide variety of mental images about the geography of the area involved in the struggle to save this section of the Snake River for full, multi-purpose development.

Committees Can Change Their Rules, but Red Witnesses Are Always the Same

EXTENSION OF REMARKS OF

HON. ANDREW F. SCHOEPEL
OF KANSAS

IN THE SENATE OF THE UNITED STATES
Monday, February 28, 1955

MR. SCHOEPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Committees Can Change

Recently, Gus Norwood, executive secretary of the Northwest Public Power Association, made an airplane flight over the Hells Canyon area. Later, he wrote a vivid editorial for the Northwest Public Power Bulletin, which not only gives an excellent bird's-eye view of this rugged and remote region, but also spells out the significance of Hells Canyon as a challenge to the foresight of Americans in seeking full development and wise use of their resources.

So that the Members of Congress will have the benefit of this word picture as discussion develops further on Hells Canyon, I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WINGS OVER HELLS CANYON

(By Gus Norwood)

Flying up the deepest gorge on the North American continent is high adventure which will often return to haunt the memory.

We arrive at the Spokane airport at 6:30 on a crisp morning. The West Coast Airline DC-3 glistens with frost. Overhead not a cloud greets the rising sun. The clear, blue sky promises unlimited visibility.

Not given to formality the pilot says he will gladly detour a little to fly over the Nez Perce damsite and the more famous Hells Canyon damsite. The first leg of the flight is about an hour from Spokane to Lewiston, Idaho. The second leg from Lewiston to Boise requires 2 hours, of which the first half is up the grand canyon of the Snake River.

Wheatlands of the rich inland empire checkerboard the route to Lewiston. But Lewiston itself lies in a deep valley at the confluence of the Clearwater and Snake Rivers. All around this deep valley stretches the bleak plateau of dry farming wheatlands. Also on this plateau on a high bluff is the airport.

As if presaging the wonder and awe of the next hour is the takeoff from Lewiston. The pilot merely taxis to the end of the runway and keeps going, like taking off from an aircraft carrier. Seconds later the plane soars easily hundreds of feet above the broad swelling flow of the Snake River. Yet on each side of the edges of the plateau bound our pathway and as the plane climbs, the rim of the benchlands, changing to foothills, climbs also.

CANYON HOLDS ONE-EIGHTH OF FUTURE POWER

In this Pacific Northwest country of titanic proportions the famed Columbia River receives the glory as America's greatest hydroelectric resource with little credit or mention that one-third of its waters come from the mysterious and remote gorges of the powerful Snake River. Yet in these gorges one-eighth of the Nation's future water-power awaits the engineer. Unspoiled by railroads, highways, and towns, useless for farming, the yawning chasms of the Snake and its great tributaries the Clearwater and Salmon Rivers offer over 11 million kilowatts of future hydroelectric power, the energy of 21 Bonneville Dams.

Defining the boundary between Idaho and Oregon the maps show the Hells Canyon of the Snake to be some 50 miles long. But actually the entire central portion of the river is encased in a canyon from the time it leaves the southern Idaho plain at Weiser until it reaches Lewiston 180-river miles or 150-air miles later. In this reach the river drops from 2,077 feet above sea level at Weiser to 757 feet at Lewiston, a total drop of 1,320 feet.

The sluggish Mississippi River drops about half a foot per mile, but the amazing Snake

plunges into the canyon below Weiser and keeps on plunging, dropping 5 to 10 feet per mile. Even from the plane one sees and almost hears the roaring crashing rapids with their churning white water.

The plane is half empty and we shift from side to side as the friendly steward points out the Grande Ronde River where it joins the Snake and as we fly across the border from Washington into Oregon up the west bank of the Snake River.

CONTINENT'S DEEPEST GORGE

Ahead, looking like a tumorous swelling of the earth, lies a vast hump of mountains split by the deepest gash on the North American continent. Like two medieval fortress walls these mountain ramparts face each other for many miles along the Snake River trench. On the Oregon or western side lie the Wallowa Mountains with Sacajewea Peak slightly the highest at 10,033 feet. On the Idaho or eastern side the Seven Devil Mountains show their sawtooth pinacles along the very brink of Hells Canyon with the He Devil standing at 9,387 feet.

We're at the Nez Perce damsite. Forty-six miles above Lewiston, 2½ miles below the mouth of the Salmon River and 5 miles below the mouth of the Imnaha River lies the rock cradle of the proposed 615-foot high Nez Perce Dam. This is the Army's proposed project for generating 1,980,000 kilowatts of power and storing flood waters in a reservoir reaching 63 miles up the Salmon and 64 miles up the Snake to the toe of the proposed Hells Canyon Dam.

To the eastward one traces the upper portion of the curving abyss of the Salmon River, the "River of No Return," as it recedes into mountain ranges yet unnamed. Under the morning sun, still low on the horizon, the canyons lie in deep shadow made more ominous by trails of vapor and fog banks. Powdery snow on the northerly slopes helps to etch further the rugged landscape.

Now we are in the Hells Canyon, over 1,000 feet deeper than Arizona's mile deep Grand Canyon. The plane must be flying at about 8,000 feet, almost 7,000 feet above the water, yet one feels that the pilot is flying too low because the mountains crowd close. The jagged points of the Seven Devils tower above. Someone said Hells Canyon was so named as the playground of the Seven Devils. At least their sharp shadows play along the eroded wall.

BLUFFS FORM DAMSITE

The canyon is a broad V miles wide at the top and with an undulation of granite buttresses or headlands crowding in upon the river every quarter mile or so and each such pair of buttresses looks like another good damsite. The steward points out a sheer bluff which stands straight up 4,000 feet above the turbulent waters.

At the Hells Canyon damsite the pilot obligingly makes a wide S turn crossing the river. Down there the engineers will someday place a dam higher than Hoover Dam. It will raise the river from a tailwater level of 1,475 feet above sea level to 2,077 feet, a rise of 602 feet. Its reservoir will back water to the head of the canyon at Weiser 92 miles upstream.

What's that ahead? The river, which has seemed dark and forbidding in the gloomy shadow of the canyon, now curves around a rocky promontory and is flooded by the warm morning sun. Deep in its trench the narrow ribbon of water shimmers almost blindingly like a stream of molten silver.

As the pilot leaves the river for the shortcut to Boise, one sits back for the first time to ponder the wonderment of this river. Even when the Nez Perce and Hells Canyon projects are built, the fabulous gorge will remain. Man's highest dam will not reach 10 percent up those canyon walls. Thus in America's greatest and deepest chasm man can place

huge dams to store the unruly and devastating floodwaters and put them to work for the good of mankind producing more power than the output of Grand Coulee Dam. Still there will remain for all future generations the primeval, awesome beauty that is the Hells Canyon of the Snake River.

Right To Work Law Conflict Broadens

EXTENSION OF REMARKS

OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, February 28, 1955

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Right To Work Law Conflict Broadens," which was published in the Prescott Evening Courier.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RIGHT TO WORK LAW CONFLICT BROADENS

Union labor leaders, and maybe sincere rank and file members, lately have been waging a crusade against the so-called right-to-work laws of a number of States. Whether their efforts to induce Congress to adopt nullifying statutes would be effective if successful is problematic, since such legislation might conflict with the Federal Constitution. Anyway, Arizona's experience fails to offer evidence wherein the law has restricted organized labor's activities. Despite the clamor for suppressing the measure, no examples so far are recorded that emphasize its alleged unfairness.

The move to abrogate the statutes through Washington cooperation naturally brought reaction from those favoring them. Hence, due to labor groups bringing pressure toward erasing the States' authority, an association recently was created to fight the movement for voiding the various laws whose merits are yet to be proved by the opposition. In outlining the purposes of the new formation, its chairman, E. S. Dillard, stated:

"The National Right to Work Committee declares its keynote belief to be that unionism by compulsion is utterly wrong and is a rising menace to the future of the United States.

"This organization will strive diligently to accomplish a single major objective, which is to establish in the United States the principle that Americans must have the right, but not be compelled, to join labor unions.

"Labor unions hold in their membership hundreds of thousands of American citizens against their will. Furthermore, thousands of persons have lost their jobs because they would not bend the knee to such compulsion.

"Emphasizing these and the many related facts and the injustices inherent in them is the determination of this committee. Further, the committee intends to defend the right to work principle against all who would invade it, whether unions or employers.

"A basic fundamental of American democracy is for every individual to have the right to earn one's own livelihood without being compelled to join, and pay money to, any organization. The National Right to Work Committee expects to carefully avoid injecting itself into the many complicated problems of labor-management relations. The committee will not oppose the expansion of voluntary unionism.

"The committee's conviction is that, in keeping with American guarantees of personal liberties, unionism must be voluntary,

devoid of compulsion. The intentions of this committee are to sponsor a program sufficiently broad and adequate to accurately present this whole problem in its many details not only to the American people but also to those men and women who exercise the authorities of government.

"When analyzed, this right-to-work problem presents political and economic issues which are of deep and far-reaching importance. Ranking first among these issues is whether or not justice is violated when a one-sided State of law protects the individual's right to join a union while providing no protection whatever for the right not to join a union.

"Another of these issues is this: Shall the Federal Government be allowed to strike down all State laws which seek to give the individual free choice as regards labor-union membership? American policy is positively set against the evils of monopoly in business and yet the question arises whether labor unions shall be permitted to achieve monopoly over the working forces of the Nation.

"A basic principle of our Republic is to protect civil liberties and minority rights against majorities. Shall this principle have no effectiveness in the basic realm of working and earning a living? The National Right To Work Committee hopes to convince the American National and State Governments and the whole populace that failure to eliminate unionism by compulsion will represent a triumph for collectivism. Already widespread unionism by compulsion has drastically encroached upon, and has severely damaged, various American individual rights.

"The foregoing paragraphs present broadly the fundamental policy and objective of the National Right To Work Committee."

"Flat Wheel" Harry Karr Retiring After 52 Years on Rails

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. VAN ZANDT. Mr. Speaker, tomorrow, March 1, 1955, is the retirement date of Harry A. Karr, of Washington, D. C., one of the most able passenger traffic men in the railroad industry.

"Flat Wheel" Harry, as he is known to Presidents and other officials of the Government, has served the Pennsylvania Railroad Co. for 52 years, spending 30 of them in Washington, D. C., as a division passenger agent.

Having worked under Harry Karr as a representative of the Pennsylvania Railroad traffic department not only did I learn to know him as an excellent supervisor but also as one of the most likable persons I have ever met.

In addition, my friend Harry has the reputation of being one of the most persistent "go-getters" in the railroad passenger field. Competition was his meat, and regardless of how keen it was, Harry Karr fought for the business without sacrificing any of his principles.

As a retired railroader Harry Karr will now be able to enjoy to a fuller extent the comforts of his home and family, which

consists of his charming wife and son Harry. Credit for "Flat Wheel" Harry's accomplishments in the railroad industry is shared by his wife and son, who have constantly been at his side and supporting him in all his daily endeavors.

The February 27, 1955, issue of the Washington Post and Times Herald carried the following article which is a deserving tribute to one of the grandest employees of the Pennsylvania Railroad system.

The article follows:

"FLAT WHEEL HARRY" RETIRING AFTER 52 YEARS ON RAILS

(By Edward T. Follard)

Harry Karr says farewell to railroading Monday.

He is retiring as division passenger agent of the Pennsylvania Railroad after 52 years of service with that company, 30 of them here in Washington.

"Flat Wheel Harry," as he has been called, has traveled with five Presidents of the United States—Coolidge, Hoover, Franklin D. Roosevelt, Truman and Eisenhower. He sometimes gives the figure as six, because he was the railroadman in charge of the special train that bore the flag-draped body of Warren G. Harding from Washington to Marion, Ohio, in 1923.

Now a spry 66, Karr enjoys talking about all but one of his trips. When he comes to that one—a 3 week journey on a special train with Mme. Chiang Kai-shek—he shakes his head, and on his face appears a look of pain and bafflement. It was, he says, the most terrible trip of his career.

Mme. Chiang Kai-shek had come to Washington on February 17, 1943, to be the guest of the Roosevelts at the White House. The First Lady of China, as she was called at the time, caused quite a stir.

A famous beauty, who as Mel-Ling Soong had been an honor student at Wellesley College, she had an aura of romance about her; and, besides, hers was the voice of Free China, an ally of America against Japan.

All hearts went out to her when, attired in a split skirt and sables, she glided into the halls of Congress and spoke eloquently for an all-out effort in the Pacific.

There were whispers around the White House that Mme. Chiang Kai-shek was difficult, but they came from the servants and never got into print.

At any rate, Harry Karr had no reason to feel apprehensive when he got a telephone call from the White House one day. It was from Mike Reilly, then chief of the Secret Service there. He told Karr that FDR wanted him to get up a special train to carry Mme. Chiang on a tour of the United States.

Karr did a good job in making up and manning the 7-car special, or at least he thought he did. The Pullman porters assigned to the train were handpicked. They included Bill Reed and other veteran porters who had traveled with Presidents and who were known for their skill and courtesy.

The rolling stock, including a private car, was first rate and so was the food for the dining car. The late Jim Maloney and other Secret Service agents were aboard as guards.

The itinerary called for a visit to Wellesley in Massachusetts, to New York, Chicago, San Francisco, and Los Angeles. The trip was to end at West Palm Beach, Fla., where Mme. Chiang would board a plane for the flight back to China.

Among those traveling with Mme. Chiang was her niece, Miss Jeanette Kung. Harry Karr says it will be a long time before he forgets her.

Miss Kung, who affected a boyish haircut, began to complain in the name of Mme. Chiang. She told Karr that the trip was too rough. She complained about the service.

"Mme. Chiang doesn't like the way you stopped the train," Miss Kung told Karr.

On other occasions, Karr recalls, Miss Kung complained because the train did not stop so Madame could get the latest editions.

In Chicago the party left the train for a night and put up at the Drake Hotel. The Secret Service assigned Karr to a room on the same floor as the Chinese entourage.

Miss Kung happened to pass Karr's room when his door was open. Seeing him inside, she said to him:

"What are you doing on the same floor with us?"

Karr explained the room had been assigned by the Secret Service. Miss Kung called the hotel manager and demanded that he be moved to another floor. He moved voluntarily.

On the way across the prairies, Karr recalls, Mme. Chiang decided to give a tea party for the lady journalists. She asked Bill Reed, the porter assigned to her car, to prepare cookies and garland them with the colors of China. Bill had no way of doing this, since he lacked the necessary ingredients, and he told Karr.

Another railroadman wired ahead to North Platte, Nebr., to appeal for help. The wives of railroadmen in North Platte went into action, made the cookies with China's colors, and that crisis was solved. Madame was pleased.

By this time, however, a really alarming situation had developed. The Pullman porters, saying they couldn't stand the nagging by the Chinese, threatened to leave. Karr and others finally persuaded them to stick it out.

One day, according to Karr, Miss Kung reached a peak in her complaining. She said that if Karr and the others didn't do more to make Mme. Chiang comfortable, she would have to make some other arrangement for the journey.

"If you were in China," Karr says Miss Kung told him, "you would have your heads cut off."

Karr still finds the experience sort of incredible.

"We did everything in the world to please them," he says.

It was different traveling with Presidents, he says, and spins many a yarn about them. Coolidge, he recalls, liked to prowl up and down the special. One evening "Silent Cal" ventured into the club car where the newspapermen were locked in a game of poker.

Coolidge, unnoticed, stood in back of George Durno, White House reporter for the International News Service. Durno had a tremendous hand—four aces. Coolidge gave him a jab in the back.

Durno, looking around, saw it was the President and became so excited the four aces tumbled out of his hand. That ended his chances of making a killing.

Karr traveled with President Hoover in his ill-starred 1932 campaign, and he vividly remembers an incident at the railroad station in Des Moines, Iowa. The Chief Executive was booed.

"That is not a nice thing to hear," he says.

President Roosevelt, Karr recalls, was unfriendly to the Pennsylvania because the head man of Pennsylvania at the time, W. W. Atterbury, was a prominent figure in the Republican Party. He made it clear his favorite railroad was the Baltimore & Ohio.

Ironically, the train that bore FDR's body to Hyde Park in 1945 was a Pennsylvania Railroad special. In charge of it was Karr.

Harry's legion of friends and admirers are throwing a cocktail party and reception for him at the Willard Monday from 6 to 8 p. m.

United States Relations With Latin-American Countries

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, February 28, 1955

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting article concerning our relations with Latin American countries, written by Mr. Nathaniel P. Davis, formerly the distinguished United States Ambassador to Costa Rica, and published in the Glens Falls (N. Y.) Star. I commend this article to the attention of my colleagues in the Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PEN SKETCHES

(By Nathaniel P. Davis)

Recent events in Central America once more bring to the fore the plaguing and complex question of military aid and training for foreign governments whose avowed foreign-policy objectives are similar to our own. An editorial in the Post-Star a few days ago drew a parallel between arms aid to Central American countries and to those of the Near East. It might be profitable to broaden the scope of our thinking on this matter to the whole world. And because we have had more experience with arms aid to Latin America, and greater opportunity to compare results with intentions, perhaps a review of some recent history of this continent can lay the foundations for some general principles of worldwide application.

When the United States entered World War II it urged all of the American Republics to follow suit. Most of them did so promptly, and before the fighting was over all but Argentina had declared war on one or more of our enemies. It will be recalled that in the early days of the war there was considerable hostile submarine activity off the coasts of North and South America and some widespread and well-grounded fear that German and Japanese agents might stir up military and sabotage activities in South and Central America to the detriment of our supply of strategic materials from those areas. When the United States urged its Latin allies to take preventive measures against such possibilities as well as against possible sea or air borne raids on their territory, most of them replied quite truthfully that they could only do so if we could furnish arms and other military equipment and train native personnel in their use. We did so quite generously considering our own state of unpreparedness, but quite inadequately considering the use to which they might have to be put.

We trained and equipped a modern mobile unit in Costa Rica. It never fired a shot at a German or Japanese, but was used by the Government to upset an election and plunge the country into civil war. We helped to create a small but effective force in Venezuela. It never got into the war either, but its officers overturned a popularly elected government and set up a military dictatorship which still rules the country by force of arms. American machineguns, military vehicles, and air facilities in Nicaragua seem to have confirmed the dictator president of that country in his belief that might makes right. Brazil's Army and Navy, rehabilitated and equipped by the United States, did take an active part in the Italian campaign and in patrolling the high seas. They also

took a determining part in installing one president and ousting another.

These examples, by no means an exhaustive list, disclose a pattern which we should not ignore. It is not enough for a government to declare its solidarity with us in our opposition to military threats from Moscow. Before putting arms in its hands for the avowed purpose of common defense against that threat we should inquire very carefully as to the sincerity of that avowal. We ought to know by now that there are countries where the possession of arms by the organized few makes it certain that they will win the next election or upset it if by chance they lose. We ought also to know that there are countries which can think of more immediate and more interesting uses for modern arms than keeping them handy for an aggression that may never occur, particularly if the arms we give are better than those of a neighbor.

We ought also to satisfy ourselves as to the ability of the recipient to use the arms effectively for the purpose for which they are supplied. The mere possession of modern arms, without intelligent leadership, organization, some resources, and a will to defend oneself, plus a sincere and demonstrated devotion to democratic ideals, does not add strength to the democratic coalition. Quite the reverse. It is no service to democracy to arm would-be dictators just because they call themselves democrats. It is no service to world peace to arm would-be aggressors against small states just because they say they fear aggression against themselves by a larger one. And it is no service to anyone to put our reliance on bigger and better armaments for everyone not on the other side of the fence. Careful discrimination in this matter might add to Western strength, save the taxpayers some money, and contribute to the growth of democracy the world around.

The Highway Program

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Monday, February 28, 1955

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Highway Program," which was published in the Washington Daily News of February 23, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE HIGHWAY PROGRAM

It is hardly necessary for anyone to point out the inadequacy of our present highway system, although President Eisenhower did a realistic job in his special message to Congress.

Anyone who rides in a motor vehicle is aware of the appalling accident toll, the extra cost poor roads impose on commercial traffic, congestion, and the usefulness of the highways in wartime.

The President was less realistic in his statements on how the huge program he has outlined might be financed. He said he rather favors special bond issues, to be paid off out of a big boom in tax revenues from highway users which his advisory committee thinks is in the offing.

The committee, you may remember, recommended that the Federal Government put up \$31 billion in the next 10 years, the States and local governments the remainder of a

total of \$101 billion. The committee wanted to borrow this money, but not to count it as Federal debt.

We don't think Congress will buy any such deal, no matter who proposes it. We hope Congress won't accept any highway program which involves more Government debt.

The President says the States "cannot effectively" meet the need for a vastly expanded highway system. The only reason they can't is lack of money. And the same applies to the Federal Government. It is more deeply in debt than any State.

If ever there was a time when the country could afford to pay for the roads it builds, as it builds them, it is now. If we are going to borrow money in good times for the things we need, and pass the cost along—at a high rate of interest—to future generations, what are we going to do for the things we need in less good times?

We need a highway program. But first we need a way to pay for it. We hope Congress concentrates on that phase of it.

The Statehood Issue

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. MULTER. Mr. Speaker, the following editorial which appeared in the February 20, 1955, issue of the New York Herald Tribune is deserving of our attention:

THE STATEHOOD ISSUE

Hawaii and Alaska moved at least a shade closer to admission to the Union on Wednesday. A combined bill to confer statehood on the 2 Territories was approved, 19 to 6, by the House Insular Affairs Committee. It has still to be released by the Rules Committee, which blocked a somewhat similar measure last year, but Speaker RAYBURN indicated that this year it may have better success. There is a possibility of a Presidential veto, but a compromise within the bill, proposed by Alaskan Delegate E. L. BARTLETT, may have removed the grounds for such action.

The President's reservations on the subject of Alaskan statehood were intimated in a sentence of his state of the Union message: "As the complex problems of Alaska are resolved, that Territory should expect to receive statehood." One of these complex problems is, clearly, national defense. Secretary Charles E. Wilson, calling attention on Tuesday to the great size of the Territory, its sparse population, limited communications, and strategic location, told the Insular Affairs Committee that it would be in the interest of the national security that Alaska remain a Federal Territory.

On the point of the relation between national security and Alaskan statehood, opinion is by no means unanimous. Ernest Gruening, Governor of Alaska from 1939 to 1953 and author of a recent book on the Territory's problems, believes with a number of military leaders that the grant of statehood would, if anything, strengthen Alaska's defenses. In any event, the compromise authorizing the President to set aside up to 40 percent of northern Alaska as a defense zone, should meet objections on this score.

A serious consideration of the claims of Hawaii and Alaska to a place in the Union is long overdue. The Insular Affairs Committee has done its part by approving the combined bill. Now it is up to the House to take action.

Democrats and the TVA

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, February 28, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Democrats and the Truth," written by Ralph McGill, and published in the Atlanta Constitution of January 4, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE DEMOCRATS AND THE TRUTH

(By Ralph McGill)

Democrats take over the Congress tomorrow. There is no vindictiveness in them. There is no great anger. Certainly there is none directed toward Dwight D. Eisenhower. But more and more Democrats feel that certain of the men about him, and some of their friends, have deceived him and have used the confidence he has in them for the benefit of special interests.

So, there will be some investigations.

There will be a look at some of the curious aspects of the Dixon-Yates Co., created to build a plant on the edge of TVA's territory.

TVA's annual report, an official and factual Federal document, has just been published.

TVA's opponents, in large measure, have succeeded in doing two things. One, they have ignored the flood control features of the valley plan. This control not merely prevented great, almost annual damage, it enabled general farm plans to be worked out.

TRUTH

Agricultural wealth—which paid increased taxes on its land and income, grew with the years. New businesses, selling machinery, seed equipment, and other items, came into being. They paid new taxes. The purchasing power of the vast valley grew—and so did the tax total to local and Federal governments.

In addition, the recreational facilities produced new business. This, too, brought new taxable wealth to the TVA area.

Also, the lives of the people were improved in many ways. Income, schools, diet, a better standard of living—many intangibles of great value to the Nation came out of TVA.

Opponents of TVA have succeeded in obscuring most of this benefit to taxation and the general betterment of the area and, through it, the Nation.

Secondly, not content to try and make TVA appear as merely another power operation, its relentless foes have sought to make it seem an operation entirely subsidized by the Government. They have spoken of it as if it were operated wholly at the expense of the Federal taxpayer.

This is not true.

The truth is available in the report.

Last year TVA earned 3½ percent net profit on its power installation.

Over the whole period of its existence it has averaged 4 percent annually.

By law it is required to pay back into the Federal Treasury (to the taxpayers) across a period of 40 years the total cost of all its power installations.

TVA PAYMENTS

It has actually paid back \$101 million, of which \$20 million was returned during the last fiscal year.

In addition, TVA has paid about 5 percent of its power-sales revenues, exclusive of those from Federal agencies, in lieu of taxes.

The enemies of TVA may argue about these figures all they wish, but the truth remains—TVA does pay taxes; it is not getting a free ride at the expense of the taxpayer.

Not only that, but the report shows the TVA rivers are carrying an increasing amount of freight. Research continues in fertilizers, chemistry, and physics.

More than that, it is TVA which is carrying a major load of national defense in the power field.

Without TVA the atomic bomb and later developments would have been long delayed. Future defense plans depend largely on TVA.

All the dam sites long ago were used up. But the valley and its development demand more and more power. It is already worth more to the Nation, as the New York Times said editorially, "than many divisions of troops, many ships, and many airplanes. What it does and can do might make the difference between victory and defeat, or even between peace and war."

That is true.

It is a great national asset.

That greedy men seek to destroy it is one of the more sordid chapters in the long history of greed.

Early Casualty of H-Bomb

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. BOLLING. Mr. Speaker, the following editorial which appeared in the Washington Evening Star of Thursday, February 24, 1955, well states the urgent necessity of prompt study leading to a new and more effective policy of industrial and urban dispersal. This could be done either by a Commission as suggested by Defense Mobilizer Fleming or by a congressional committee as proposed in my House Concurrent Resolution 66.

EARLY CASUALTY OF H-BOMB

One of the first casualties of the hydrogen bomb already is being buried by the Government. It is the much-publicized dispersal program for cities and industrial centers, drawn up before the ghastly and far-reaching effects of the H-bomb had been tested. Defense Mobilizer Arthur S. Flemming has told Congress that previous dispersal plans have been outmoded by developments in the grim realm of nuclear explosives. And he has sounded an urgent call for establishment of a special commission to prepare a rush report to Congress on the problem.

The hydrogen bomb has blasted into oblivion the so-called mileage yardstick setup by the civil defense authorities for dispersal of Federal defense and private industrial plants outside of the big cities. That yardstick provided for placing of key buildings and installations at least 10 miles beyond the limits of probable targets of enemy atomic bombers. Washington, of course, stands high on the list of such targets. The Office of Defense Mobilization even went so far as to propose a policy under which no new Federal buildings would be erected here except those housing agencies of a non-sensitive nature.

The old yardstick went out the window when estimates of blast and fallout hazards were confirmed during the H-bomb tests in the Pacific. The Atomic Energy Commission recently revealed that the fallout danger zone of a hydrogen bomb encompasses some

7,000 square miles. Ten-mile dispersal zones, or wider ones, would be completely inadequate against such an attack. Nor would previous plans for rapid evacuation of cities be of much value against the frightening background of the nuclear-fusion threat.

Under the circumstances, Mr. Flemming's suggestion of a prompt study of the new situation by a special commission makes sense. How much hope of survival such a group might be able to offer the potential victims of an H-bomb war, however, is a question which is as uncertain as the intentions of the men inside the Kremlin.

Swiss Watchmakers Lose Tiny Bit of United States Market

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, February 28, 1955

Mr. DIRKSEN. Mr. President, the reasons for the watch tariff increase are widely misunderstood. I was, therefore, gratified to see in the Chicago American of February 20 an article, by Hal Thompson, which clearly states the case with great objectivity. I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SWISS WATCHMAKERS LOSE TINY BIT OF UNITED STATES MARKET

(By Hal Thompson)

There was much wailing and gnashing of the teeth last year by the Swiss watch industry when the United States, in the interest of maintaining its own watch trade as part of a defense preparedness program, boosted the tariff on watch imports.

By lifting the tariff, the United States admittedly hoped to provide a larger portion of the domestic market for its own watchmakers.

The Swiss watch industry, however, hollered loud and long that the action of the United States was discriminatory, that it didn't square with this Nation's professed liberal foreign-trade policy and finally it asserted that the financial loss might well high prove irreparable to Switzerland.

IGNORE UNITED STATES EXPLANATION

Never once to our knowledge did the Swiss ever take cognizance of the number one reason given by the United States for taking such action—the protection of the domestic watch industry, so that it might be ready to turn out military weapons and parts should an emergency arise. That, they probably assumed, was a phony argument.

Well, for the edification of the Swiss it may be reiterated that it wasn't a false contention, but was the principal motivating factor that influenced the tariff commission to recommend the boost in duties on Swiss watches.

The United States needs the watch industry as a link in its defense program and it is committed through this administration to see to it that such facilities are maintained.

But getting back to the breast thumping which the Swiss watchmakers engaged in last year when the notice of the impending tariff hike was issued. At that time they were certain that they would immediately lose the bulk of the American market.

Experience has now shown that they were a bit too pessimistic concerning their industry's prospects in this country.

Figures on exports of Swiss watches for 1954 now are at hand. They show that such exports to the United States on a dollar basis were down only 6 percent from the preceding year.

Such exports last year netted the Swiss watch industry 1,039,915,622 Swiss francs, approximately \$239 million. In the previous year these exports were 1,106,682,297 francs, or \$254 million.

Final statistics on this Nation's exports to Switzerland are not as yet available. However, it is doubted that they will fall below the volume of Swiss watch imports and probably will be a lot larger.

SHOULD BE APPRECIATIVE

Instead of continuing to rail against the United States the Swiss should be appreciative of the flow of American dollars to their nation to help pay for the Swiss exports. So far it hasn't been slowed down very much through the boost in the tariff on Swiss watches. The sum of \$239 million should go a long way toward helping the Swiss industry to assist financially in the maintenance of that nation's defense force.

The United States watch industry also should be afforded an opportunity to assist this country in meeting its defense requirements.

Edith S. Green, Representative From
Oregon

EXTENSION OF REMARKS OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES
Monday, February 28, 1955

Mr. NEUBERGER. Mr. President, all the State of Oregon is proud of Edith S. Green, Oregon's first woman Member of Congress in 16 years. We know that she will make an outstanding record that will be a credit to her State, her family, her sex, and her country. I ask unanimous consent to have printed in the Appendix of the RECORD a very informative article about Mrs. GREEN and her noteworthy career, which appeared in the Oregonian of Monday, February 21, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EDITH GREEN FINDS CAPITAL BUST, INTERESTING

WASHINGTON.—After 6 weeks of representing Oregon's most populous congressional district, Mrs. EDITH GREEN said of her new job: "I like it very much. It exceeds all my expectations."

That includes, she said, the stacks of letters to be answered as well as the many new challenges, the long hours, as well as the many friendly Oregonians who stop in to say "hello."

As one of 17 women lawmakers in this 84th Congress, Mrs. GREEN is a member of the largest band of women ever to sit in the national legislature. And she has happily discovered there is "certainly no discrimination" by the men who once made lawmaking exclusively their province.

Mrs. GREEN said the transition from ex-Representative Homer D. Angell's departure from office to her entrance into it was made smooth by Angell's helpfulness in turning over his files on such matters as pending

immigration cases and appointments of young men from Oregon to West Point and Annapolis, as well as his advice and counsel.

"Mr. Angell was very cooperative and kind," said Mrs. GREEN. "I have found that other Congressmen have not had the same experience, so that is why I especially appreciate it."

Representative GREEN has good cause to feel grateful on another score, in view of the choice committee posts she received from the Democratic leadership. She got her first choice, Labor and Education Committee, plus a special dividend, Interior and Insular Affairs Committee.

EDUCATION FIRST INTEREST

As a former schoolteacher, Mrs. GREEN's first love is legislation to promote improvements in the Nation's educational process. She favors a broad program of Federal aid to the States for support of local school programs, and said she thought President Eisenhower's recent proposal "does not meet in any degree the severity of the problem."

One of her first bills introduced in Congress was in this general field—a measure to authorize \$7,500,000 annually for Federal payments to the States for use in extending the public library service to rural areas.

Her first concern in the field of her other committee is power. When the time comes she expects to throw her weight in the committee to gain favorable action on legislation to authorize a high Federal dam in Hells Canyon on the Oregon-Idaho border. This may be the next big fight in that committee, now that statehood for Hawaii and Alaska has been approved by a 19 to 6 vote in which Mrs. GREEN voted for both.

ELASTIC SCHEDULE FOLLOWED

With committee hearings taking a big bite out of her mornings, Mrs. GREEN in her first week's office has operated on an elastic daily schedule which usually bulged out at both ends into this sort of typical day:

8:30 a. m.: Breakfast meeting, usually 3 or 4 mornings a week. Each Wednesday it is with the Democratic freshman lawmakers, who elected her president of their group, the 84th Club. Others are various groups and associations.

9:30 a. m.: Arrive at office, scan first batch of mail to come in, deal personally with most important matters, confer with administrative assistant, Don Larson, and delegate assignments to staff. Her staff here includes Larson and two secretaries, Sue Mills and Patricia Hobbs.

10:30 a. m.: Off to a committee meeting until noon.

Noon: Lunch, almost invariably with visiting Oregonians, whom Mrs. GREEN says "make home seem much closer than 3,000 miles away."

12:30 or 1 p. m.: Go to House Chamber for afternoon session, unless House is in recess for day, which sees her back at office for scheduled appointments. She has average of three afternoon appointments, often with Oregonians who have come personally to the Capitol for solutions to the problems with the Government. Others on calling list have included labor officials and representatives of various groups trying to enlist her backing for this or that bill or cause. Among them was Mrs. Elizabeth Roelcloud, of 3120 Southwest Schools Ferry Road, Portland, who is currently associate director of the American Indian Development Program of National Congress of American Indians. She sought to familiarize Mrs. GREEN with Indian problems that may arise in the Interior Committee.

6:30 p. m.: Dinner, usually at nearby restaurant.

8:30 p. m.: Back to office to finish up answering mail, which has been running 50 to 100 letters daily since Congress convened.

The No. 1 plea numerically in the mailbox of the Third District Representative has been

from the postal workers of the Portland area for the 10-percent pay raise they want from Congress. Mrs. GREEN is on their side, having cosponsored a bill to this effect.

Next on list of topics of current concern in Portland, judging by her mail, has been foreign trade, with many conflicting views being voiced. Mrs. GREEN backed up her support of continued reciprocal trading by voting this past week for the broadened trade bill advocated by President Eisenhower. In preliminary skirmishing on the bill, she went along with those who voted to open the bill up to amendments on the House floor, but later switched her vote to prevent this after Speaker SAM RAYBURN made a dramatic plea for reversal of this action. It carried by one vote, 193 to 192.

While most of her correspondence comes from her district, Mrs. GREEN has been surprised to find women from throughout the Nation writing to endorse her bill to lower from 65 to 60 the age at which women qualify for social-security benefits.

NEWSLETTER ISSUED

To keep in touch personally with many of her constituents in Multnomah County, the Congresswoman has begun writing a newsletter which went to 10,000 homes the first run and is to go to many more in subsequent editions. And she is dicker with Portland radio and television stations for time in which to present periodic reports.

"I want to let the people in my district know what we are doing here and what my views are on the issues," said Mrs. GREEN, explaining she hopes this will increase their interest in national affairs so they will "let me know what they think."

Another device for keeping in closer touch with constituents, said Mrs. GREEN, is her local office in the Portland Post Office Building where Mrs. Sybil Rinke maintains office hours from 10 a. m. to 6 p. m. daily and 10 to 1 Saturday. She said she finds this is particularly helpful to constituents who might find it difficult to explain their problem in a letter directly to her and can't afford a trip to Washington, D. C. She said "dozens" of persons have discussed such problems with Mrs. Rinke, who has communicated with the Congresswoman about them.

Like many other women who have made successful political careers, such as Mrs. Dorothy McCullough Lee, Portland ex-mayor now on the Federal Parole Board, and Senator MARGARET CHASE SMITH, Portland's new woman lawmaker doesn't despair at the little time her job may leave her for housekeeping.

She and her husband and son have an apartment in the suburbs in which they slept on cots "camping out style" until their furniture arrived from Portland after some delay last month. They are now looking for something a bit larger.

"But I have never been one to sit at home," declared Mrs. GREEN. "I like work—challenging work. All the issues I am concerned about are here, and this is the best opportunity one can have to do something constructive about them."

The Greatest Wonder: The Epic of the Four Chaplains

EXTENSION OF REMARKS OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES
Monday, February 28, 1955

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the

RECORD an article entitled "The Greatest Wonder," published in the Red Lantern, the publication of the 40 & 8 organization. The article refers to the 4 chaplains, 1 a rabbi, 1 a Catholic priest, and 2 Protestant ministers, who went down at sea on a troopship during World War II.

To my mind the story here retold records one of the most wonderful examples of unity in our country, and the article should receive the very careful consideration of all Americans, particularly at this time.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GREATEST WONDER

A dozen years have passed since the German torpedo found its mark and the United States troopship *Dorchester* went under the icy Atlantic off Labrador. Six hundred lives were lost that night—and yet, in the annals of American history, this disaster must be listed as a victory, not a defeat.

For in those grim moments on the sinking ship, the American dreams of unity took substance. Amongst the frightened and the dying, 4 men of God walked together—1 Catholic, 1 Jewish and 2 Protestant. Calmly, quietly, they helped the boys into their lifebelts and bolstered their morale with words of hope and encouragement as they leaped over the side. Deftly they administered to the needs of the wounded, easing their pain, offering God's solace and reassuring as they waited for the end to come. And resolutely—as one man—they made their heroic choice. To stay with the ship; to give their own life belts to four youngsters unable to reach their own; to go down with the injured, praying, comforting, inspiring to the very last.

George Fox, Alexander Goode, Clark Poling and John P. Washington stood on the deck of the *Dorchester*. Their backgrounds were different; so were their creeds. But their spirit—the spirit of American unity—was the same. The men in the lifeboats saw them, arms linked, Bibles in hand, till the waters swallowed the ship. Those men and all future Americans will see them thus in their minds forever.

World War II was still far from over. Some of the bitterest battles were yet to be won. But, pitted against nazism with its vicious doctrine of racial and religious bigotry, were the teamwork and brotherhood symbolized by the Four Chaplains. The news of their heroism helped seal the fate of the German superman.

Twelve years have brought many scientific wonders to America's arsenal. But the epic of the Four Chaplains reminds us that however fast our planes, however powerful our weapons, the greatest wonder and the greatest strength still lies in our national brotherhood—in the fellowship that unites and protects us all.

Federal Aid for School Construction

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, February 28, 1955

Mr. SPARKMAN. Mr. President, recently there appeared in the Decatur Daily, of Decatur, Ala., an editorial entitled "What Are You Waiting For?"

The editorial deals with the proposed program of extending Federal aid for the construction of school buildings, and the editorial relates particularly to the hearings which have been conducted by the Senate Committee on Labor and Public Welfare, under the chairmanship of my distinguished, very able, and long-time colleague, the senior Senator from Alabama [Mr. HILL].

I think the editorial is a very good one, and is interesting, informative, and thought-provoking. Therefore, I ask unanimous consent that it be reproduced in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT ARE YOU WAITING FOR?

Senator LISTER HILL, who has had as much to do with the education and welfare of the American people during his term of service in the Congress as any man, continues to spur the Congress toward action in meeting the increasing American school crisis.

Indicative of progress is the representation in Washington before committee hearings from back home. In our own county of Morgan both superintendent of county schools Lester Wooten and Decatur superintendent of schools Walter Jackson have testified as to school needs. There have been many others. The appeals to committee members is straight from the grassroots.

Senator HILL is saying in substance to fellow Congressmen, "What are you waiting for?" in the following statement made to the Senate Committee on Labor and Public Welfare:

"The Senate Committee on Labor and Public Welfare held extensive hearings on school construction legislation last spring. In those hearings witnesses provided a very complete picture of the education crisis as of that time. It is our purpose at these present hearings to bring the information on the needs of our Nation's schools up to date.

"The need for speedy action to meet the situation in our schools becomes more urgent every day. There is no need for lengthy proceeding at this time, particularly since our committee made such a full inquiry last year. What is needed in this emergency is to take emergency action.

"There is no more pressing problem confronting the Nation today than the crisis in our schools. Each day the shortage of classrooms grows more severe and we are finding ourselves with fewer and fewer trained teachers. School operating expenses have risen to new heights. The total financial demands are so great that, despite heroic efforts in community after community, we continue to fall further and further behind as each year brings a new and greater floodtide of children into our schools.

"Today it is estimated that over one-half of the classrooms in the Nation are so overcrowded as to make effective teaching almost impossible. Every 15 minutes of everyday our tremendous birthrate is bringing 30 more children into the population—creating a need, in effect, or another classroom and another teacher. Within 3 years our shortage of classrooms throughout the Nation will have climbed to 800,000. Day by day we are falling behind, with serious damage to our children and to the Nation. Millions of American boys and girls are being denied their American birthright—the right to an adequate education. Our national security is being endangered by the inability of our schools to provide the basic training needed by many who might become scientists and engineers and research workers and leaders in every walk of life. We are stricken by the worst wave of juvenile delinquency in our

history because children are neglected and too often left to roam the streets.

We know that this past year enrollment again broke all records. We were short at least 370,000 classrooms last September and faced a net lack of about 135,000 new teachers.

People throughout the country are demanding, rightfully, that the Congress act to remedy these intolerable conditions. They are troubled not only for the well-being of the children themselves, but by the possibility that our superiority in the struggle against communism may be menaced by our failure to maintain American brain-power to overbalance the Soviet bloc's massive brawn-power."

Dissent and Separate Views of Commissioner Chet Holifield on Commission Report on Medical Services

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. HOLIFIELD. Mr. Speaker, the Hoover Commission released as of today—February 28—their recommendations regarding medical services furnished by the Federal Government to veterans, military personnel, and others.

I present herewith a copy of my dissenting and separate views to the majority recommendation and ask unanimous consent that it be printed in the Appendix of the RECORD:

DISSENT AND SEPARATE VIEWS OF COMMISSIONER CHET HOLIFIELD ON COMMISSION REPORT ON MEDICAL SERVICES

The burden of the complaint in the Commission report is that (1) too many persons are receiving medical (particularly hospital) care at Federal expense; (2) they are receiving more care than is necessary; and (3) the Federal Government is maintaining more facilities than are needed to take care of the present patient load.

The Commission therefore proposes that no more general hospitals be built by the Veterans' Administration, that some VA hospitals be closed, and that hospital care for veterans with non-service-connected disabilities be limited in several ways. An effort is made, also, to reduce disability allowances to veterans.

Furthermore it is proposed that the general hospitals of the Public Health Service be closed and that merchant seamen no longer be given medical care by the Federal Government. Other beneficiaries and their dependents now receiving care at such hospitals (commissioned officers of the Public Health Service, and employees of the Coast Guard and Coast and Geodetic Survey) would be shifted to military hospitals for treatment pending the development of voluntary health insurance plans for all Federal Government employees.

Hospital and clinical facilities of the military services would be reduced by making one service in a given geographic area responsible for taking care of all military patients, whether Army, Navy, or Air Force. Dependents of military personnel would have access to military medical facilities only until such time as voluntary contributory plans for health insurance are developed by the Federal Government.

My objections to certain parts of the report are summarized as follows:

1. Hospital and other medical facilities of the Federal Government should not be curtailed in the face of impending civilian defense needs and greater Federal responsibilities in meeting them, which have yet to be clearly defined. Recent disclosures of the potential danger of radioactive fallout to millions of people are reason enough to make us pause and proceed with care.

2. Until the health insurance programs proposed by the Commission for Government employees generally and for dependents of military and certain other Government personnel are fully developed, and their adequacy demonstrated, I am opposed to any reduction whatever in the Federal medical services presently available to such persons.

3. It is not in keeping with congressional intent to take a narrow and restrictive view of hospital care for veterans. Although the veteran population will decrease, medical needs will increase as it grows older. On the basis of present and authorized hospital facilities, the Veterans' Administration should be able to plan and provide a stable program of medical care to veterans without severe restrictions on eligibility.

4. The proposal to make veterans who receive medical care for non-service-connected disabilities liable for future payment is wholly unrealistic. It poses awkward and difficult problems of assessing costs and enforcing collection in future years. It would create inequities as between those who received care in the past and those who receive it in the present or future.

5. Medical care for merchant seamen in hospitals of the Public Health Service in an historic function of the Service dating back to its inception more than 150 years ago. Whatever the arguments for discontinuing such medical care, certainly the Federal Government has a responsibility to see that suitable alternatives are developed within the maritime industry before terminating present arrangements. Huge subsidies paid to ship owners and operators by the Government should provide sufficient leverage to cause the industry to initiate and develop a program of medical care for merchant seamen.

I would add as a general comment that the repeated mention in the report of alleged waste in expenditures for Government medical facilities and services should not make us lose sight of the tragic waste of human life resulting from inadequate medical care.

The Government is said to be furnishing some type of medical service to 30 million people. Among the millions of taxpayers who do not receive such assistance, or receive it only in minor degree, are many families unable to meet the present high costs of medical care.

When the Government faces up to this problem and takes the initiative in devising an adequate medical insurance system for the whole population, perhaps it will be relieved in substantial part of the heavy demands for direct medical services and resultant large expenditure cited in this report.

From Yalta to Formosa

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mrs. ST. GEORGE. Mr. Speaker, on last February 11 the Yalta treaty was 10 years old. This tragic blunder should be remembered by all and sundry, because we can sometimes learn from our errors. We can only do this if we face

up to these errors squarely, with penitent and contrite hearts.

The following article by Mr. William Henry Chamberlain retells the whole dismal fiasco and points up once again that it might be well if we would stand by our friends, instead of trying to win over enemies who are still bent on our destruction as much today as they were 10 years ago:

FROM YALTA TO FORMOSA

(By William Henry Chamberlain)

The 10th anniversary of the Yalta agreement between Roosevelt, Stalin, and Churchill, which came on February 11, 1955, should not be overlooked. Not that it is a date to inspire any feelings of pride or happiness. Yalta was one of the greatest moral and diplomatic defeats in the history of the United States. But the memory of defeats is sometimes more instructive than the recollection of victories, especially at a time when new defeats of the Yalta type cannot be ruled out.

Yalta has been a main target of the white-wash brigade of the Roosevelt administration, of course, and historians and apologists. Desperate efforts have been made to prove either that Yalta was a regrettable military necessity or that the original pact would have been excellent if Stalin had only kept his word; that Roosevelt agreed to nothing that was dishonorable or contrary to United States national interests.

So it is worthwhile to recall those features of the Yalta pact which mark it as both a crime and a blunder and a sort of Pandora's Box, from which most of our international troubles in the postwar era have emerged.

First, Yalta signalized the abandonment of the free Poles, who had been fighting on our side during the war, the throwing over of their representative government and the acceptance of a made-in-Moscow puppet regime which has been governing Poland as a Soviet province ever since. At the same time, although the Atlantic Charter is hypocritically invoked in the past several times, there were several flagrant and obvious violations of the Atlantic Charter assurances of self-determination for peoples.

The Soviet Union was allowed to incorporate, without a plebiscite, about half of Poland's prewar territory and about one-third of the prewar Polish population. Poland was given "compensation" in the annexation of considerable areas which were historically and ethnically German. This was emphatically a case when two wrongs did not make a right.

The Soviet Union was also assured a stranglehold on China's most industrialized area, Manchuria, and this was done without consulting or even informing the ally concerned, the Nationalist Government of China. The United States in the Yalta pact set the seal of its approval on the dismemberment of Germany and on the use of German slave labor as "reparations." The United States and Great Britain consented to be policemen for the execution of a kind of fugitive slave law. They assumed the obligation to return to death or concentration camps Soviet citizens who were found in the western zones of occupation.

No amount of apologetics on the part of Dean Acheson, the Alsop brothers and Arthur Schlesinger, Jr., can obscure the plain historical fact that Yalta was a tremendous factor in the consolidation of the super-Genghis Khan empire which the Kremlin built up from the Baltic to the Pacific. Yalta made the United States and Great Britain accomplices—"unwitting handmaidens," if one prefers the expression—in the underwriting of this empire.

News of the Yalta agreement was a blow to anti-Communist forces of freedom everywhere, among the Poles and the other peoples of Eastern Europe, among the Germans,

among the Chinese. If the United States and Great Britain were not prepared to stand up to Stalin, how could weaker countries, or resistance groups within these countries hope to do so?

It is sometimes argued by apologists for Yalta that Stalin received under this pact little which he had not taken, or could not have taken by force of arms. But this overlooks the vital point that American and British military sanction made the Soviet dictator's tremendous land grabs very much easier.

Even after Yalta, underground groups in Poland continued the struggle against Russian and Communist rule. They were only suppressed after thousands had been killed on both sides in the unequal struggle with the government troops and police. Had there been no acquiescence in Poland's mutilation and the subjugation by the Western powers, the underground struggle would, in all probability, have been much harder to put down.

Another argument of the Yalta apologists is that it was a great moral victory to persuade Stalin to sign his name to some promises about democracy, free elections, etc., all of which he broke without the slightest intention of keeping. In view of Stalin's long previous record of bad faith, this is something like hailing it as a sign of financial genius to accept without question at face value the checks of a notorious fraudulent bankrupt.

Was there an alternative to the Yalta sell-out of Poland, of Nationalist China, of the ideals of Western civilization? Of course there was. The United States could have announced that it stood on the ground of the Atlantic Charter, that it did not propose to annex foreign territory itself and would not recognize as legitimate one square mile of Stalin's annexations beyond the prewar frontiers of the Soviet Union. Behind this declaration would have stood the power of a country that was still fresh in the war, that had achieved the mightiest concentration of air and naval power in history, that would soon detonate the atomic bomb. The Soviet Union, on the other hand, was exhausted in manpower and resources, had sustained enormous casualties and was dependent on American lend-lease trucks, food, and field telephones to keep its offensives rolling.

The chances are that Stalin would have bowed to such a firm and clearcut statement of purpose. And if he had proved intransigent, the showdown in 1945 would have been less costly and risky than a showdown in 1955, or in 1965.

Yalta was not an isolated lapse. It was a consequence as much as a cause, a consequence of the persistently favored delusion of the Roosevelt administration that, if Stalin was only flattered and appeased enough, he would become a cooperative dogooder in a brave new world.

In the interest of this delusion American public opinion was systematically drugged by the agencies for molding public opinion during the war. And it must be recognized that some eminent commentators, columnists, and magazine editors were pretty willing drug addicts.

As a result, it was only by stealthy, almost underground methods and in publications of limited circulation, like Human Events, that the less pleasant facts of Soviet behavior in newly annexed territory were brought to light. American public opinion at the time of the Yalta conference had been deliberately denied the facts on which it might have judged what a monstrous thing it was to hand over people to Communist rule or to send back Soviet refugees.

Few Americans at that time realized that the Soviet Government had murdered 15,000 Polish officer war prisoners in cold blood in the Katyn Forest and elsewhere (this atrocity was conveniently ascribed to the Nazis); that about a million and a quarter human

beings had been deported from eastern Poland under circumstances so cruel that about a quarter of them perished; or that similar atrocities were committed in Latvia, Lithuania, and Estonia.

I happened to be present at a small, informal dinner in a representative medium-sized American city just after the news of Yalta was announced. One of those present was an Estonian woman who had escaped from that Baltic country before the Communists took over. Her husband, less fortunate, had been shot. She knew, and I knew, that Yalta amounted to ringing down the curtain on freedom in Eastern Europe for a long time.

But the other guests—not Communists or fellow travelers, just average Americans—were enthusiastic over what they considered the happy news of agreement at Yalta. Had not Raymond Gram Swing assured them that "No more appropriate news could be conceived to celebrate the birthday of Abraham Lincoln" and Senator ALBEN BARKLEY given his blessing to "one of the most important steps ever taken to promote peace and happiness in the world"?

By appropriate coincidence the 10th anniversary of Yalta comes at a time when tremendous pressure is being put on the United States to repeat the Yalta formula of giving the Communists everything they want in the Pacific. Again we are being called on to sacrifice a loyal fighting ally, Chiang Kai-shek, in pursuit of the will-of-the-wisp of placating and appeasing an implacable and unappeasable enemy in Peiping and in Moscow.

Have we learned the bitter unmistakable lesson of Yalta, that appeasement in international relations, like blackmail in personal relations, never pays off and never ends? In that case we will keep up our clear "No trespassing" sign around Formosa and give the power-drunk dictators in Peiping the choice between backing down on their tail talk about liberating Formosa or taking on the United States in an air and naval war, in which there will be no privileged sanctuary, as in Manchuria during the Korean war. In this case we will win, whatever decision may be taken in Peiping, and will regain in Asia and in the world some of the prestige that was lost by the war fought with one hand tied behind our back in Korea and by the policy of shaking first a fist, then a finger, in Indochina.

But the decision to bring the United Nations, of unhappy memory for its ignoble role in Korea, into a picture as an agency for bringing about a cease-fire is full of ominous possibilities. Very few members of the United Nations are wholeheartedly committed, as we are, to keeping Formosa and the adjacent islands free from Communist domination.

We have had the spectacle of a distinguished British thinker, Bertrand Russell, going temporarily off his rocker and suggesting that 1955 may see the end of the human race, unless the fighting in Formosan waters is stopped. We can rely on Prime Minister Nehru of India, on the basis of his past performance in Korea, to serve up all sorts of 99-percent surrenders to Red China in the guise of acceptable compromises.

There will be a Tower of Babel chorus of voices urging us to be "flexible," not to stick at a trifle like surrendering the offshore islands which are so essential for the defense of Formosa. Few if any voices will urge the Chinese Communists to be flexible.

It is worth remembering that 10 years ago we sacrificed a fighting loyal ally, Free Poland, and in the vain hope of placating Stalin and winning a peace. Let us not imagine that we shall appease Mao Tse-tung and buy peace, in our time or for any long time, if we offer up Free China as a sacrifice in a Formosan Yalta.

Hon. Pete Jarman

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. RABAUT. Mr. Speaker, it was with a heavy heart and much regret that I belatedly learned of the passing of a colleague and friend, the Honorable Pete Jarman, Congressman from Alabama for the years 1937 through 1949.

Despite the great distance separating our respective constituencies, I found that the common ground of this House afforded me the privileged opportunity of knowing this great American. The tribute I wish to pay him, on the advent of his passing on February 17, is best told by way of the following anecdote:

It seems that at this particular time, Mr. Jarman was a member of the committee having jurisdiction over the Public Printer and, hence, the publication of the CONGRESSIONAL RECORD. In those days the RECORD was printed in two columns instead of the present three columnar arrangement. The then Public Printer, Mr. Augustus E. Giegengack, had sought for some time to change the format of the RECORD so as to effect a sizable economy of some \$200,000 per Congress; but for some reason had not been too successful in selling his idea to the committee. Mr. Giegengack brought the matter to my attention which I, as a member of the Appropriations Committee, pursued in a statement on the floor when the matter came before this House. After presenting the case for revision of the RECORD, I was forcefully asked by Mr. Jarman if I would yield—which I granted. He consumed the first 5 minutes excoriating the Appropriations Committee's position in concerning itself with a matter not properly their primary concern. His indignant objections were interrupted by the Speaker's gavel giving notice that his time had expired. I immediately asked if the gentleman from Alabama desired additional time; for I felt that he had not touched on the merits of the question in his preoccupation of reprimanding the Appropriations Committee. The next 5 minutes were spent in the same manner as the first 5; for he was exercised greatly by what he considered an imposition on his committee's rights. But at each additional grant of time his vindictiveness waned until he culminated some 45 minutes later somewhat spent. He never honored my question on the floor, but was later instrumental in revising the RECORD to its present form and effecting the great savings.

Some time later I encountered the lovely Mrs. Jarman in a casual social gathering where, in her inimitable charming manner, she assured me that Pete intended nothing personal in his remarks. Strangely enough, I had felt no personal abuse from Pete Jarman's comments; instead, I was struck by the vitality of his manner in standing up to

what he considered an encroachment of authority. It was principle, not personality that brought his verbal wrath upon our heads. This misunderstanding was the beginning of a long and memorable personal friendship with a truly great American who jealously guarded the principles of Jeffersonian democracy with uncompromising dedication.

In this day when expediency is sometimes confused with principle, the absence of men like Pete Jarman shall be noticeable. His service to country has been recorded here; his spirit, I pray, shall always permeate the proceedings of this House.

I tender to Mrs. Jarman deep sympathy in this time of her great bereavement and sorrow.

Thirty-seventh Anniversary of Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a letter sent to me which includes therein a resolution adopted by the priests and people of St. Casimir's Parish, in Westfield, Mass., at a meeting in St. Casimir's Hall on February 20, 1955:

WESTFIELD, MASS., February 20, 1955.

The Honorable JOHN W. McCORMACK,

Majority Leader,

House of Representatives,

Washington, D. C.

DEAR MR. McCORMACK: February 16, 1955, marked the 37th anniversary of the declaration of Lithuanian independence. To commemorate the event with appropriate patriotic exercises, the priests and people of St. Casimir's Parish in Westfield, Mass., and their guests from the surrounding cities and towns assembled together at St. Casimir's Hall in Westfield on February 20, 1955. In the course of the celebration those assembled unanimously adopted the following resolutions:

"Whereas in 1940 Soviet Russia, in vicious conspiracy with Hitlerite Germany and in brutal violation of all the treaties and obligations solemnly underwritten by her, invaded Lithuania with armed forces and, against the will of the people, annexed her to the Soviet Union, and, in 1944, following the defeat of the German armies on the eastern front, again took over that country in complete disregard of the wartime policies and obligations to which the Soviet Union was co-signatory with the United States and other Allies of World War II;

"Whereas Soviet Russia absolutely refuses to stop the persecution of religion in Lithuania, to exile her freedom-loving people into the cold, bleak wastes of Siberia, to plunder her people and institutions, and to separate the members of one family, one from the other;

"Whereas military aggression is not the sole means of enslaving people today, nor are conventional arms the only ways of conquest, intrigue, subversion, propaganda, and economic pressure are also weapons which have been used to diabolic perfection by the sadistic Kremlin masters;

"Whereas the United States has always followed a democratic policy based on the prin-

ciple that a true and lasting peace cannot exist in the world unless the peoples of every nation, be it large or small, are permitted to determine for themselves their own form of government, without the interference of any outside source; and

"Whereas the Government of the United States refuses to recognize and has on repeated occasions denounced the subjugation of Lithuania and the other Baltic States by Russia and the present President of the United States in his preelection campaign talks has stated that Lithuania and other countries like her should be freed from Russian aggression; Now, therefore, be it

"Resolved by the American citizens of Lithuanian descent of the city of Westfield, That a new committee to investigate the facts and techniques of Communist aggression be appointed by the 84th Congress in order to continue and complete the work splendidly done, during the last Congress by the select Committee on Communist Aggression headed by former Representative Charles J. Kersten; be it

"Resolved, That the United States Government sponsor a resolution in the United Nations based upon the finding and conclusions of said investigation, denouncing the Soviet Union as an aggressor against all the nations now enslaved by communism; be it

"Resolved, That the Government of the United States ratify immediately the Genocide Convention, an act which will open up the way for Lithuania to present her just and legitimate case to the free world and without which little hope remains for the poor unfortunate victims of Soviet tyranny and aggression; be it

"Resolved, That we express our profound and sincere gratitude to the United States of America for the tremendous support it has given to Lithuania by refusing to recognize the unjust enslavement of the Republic of Lithuania, by the Soviet Union and by continuing to recognize the diplomatic representatives of Lithuania in the United States, and that the Government of the United States enter into no agreements which would in any way acknowledge the fruits of any past, present, or future Soviet aggression; be it further

"Resolved, That the Genocide Convention be immediately ratified by the Senate of the United States so that Soviet Russia may be made criminally responsible for the genocide perpetrated by her in the Baltic States and other countries behind the Iron Curtain; be it finally

"Resolved, That the Lithuanian Americans of Westfield, Mass., once again reaffirming their loyalty to the principles of American democracy, pledge their whole-hearted support of the administration and Congress of the United States in their efforts to bring about a lasting peace, freedom, and justice in the world."

CHAS. A. COVALESKI,
Chairman.
ANTHONY J. ROGERS,
Secretary.

Plea for British Statesmanship

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 10, 1955

Mr. ROONEY. Mr. Speaker, the partition of Ireland, now 30 years in existence, daily becomes a greater irritant to the naturally close and friendly rela-

tions which the people of Ireland seek to enjoy with the British people.

The solidarity of Western opposition to the communism of the East is broken by the absence of Ireland from the community of nations banded together for the mutual defense of Western civilization. Lacking the actual jurisdiction over a part of the natural territory of the Irish Republic, Ireland is unable to commit her people or her land to the NATO countries, since such commitment would imply the acknowledgment of British sovereignty over the subjected six counties in her north.

Mr. Liam Cosgrave, Ireland's Minister of External Affairs, recently called upon British statesmen to set an example for the rest of the world by the ending of the partition of Ireland. In this connection, I include with these remarks the following United Press article from the Washington Daily News, Monday, February 7, 1955:

PLEA FOR BRITISH STATESMANSHIP—IRISH FOREIGN MINISTER CALLS FOR END OF PARTITION

DUBLIN, February 7.—Liam Cosgrave, Irish Minister of External Affairs, called on Britain today to end the north-south partition of Ireland "as one of the greatest possible acts of statesmanship" toward strengthening the free world against the dangers of communism.

In an exclusive interview with the United Press, Mr. Cosgrave said unification of the six British-controlled counties of Northern Ireland with the Irish Republic "would not only begin a period of real and sincere friendship between England and Ireland, but allow Ireland, with her strong racial attachments to the United States, to become a new and important link between America and England."

Mr. Cosgrave said no state in the free world was more opposed to communism than Ireland.

ANTIRED

"The Irish Government has no relations with any of the Communist states nor does it propose to enter in such relations," he declared.

But, he added firmly, it is difficult for Ireland to consider membership in the anti-Communist North Atlantic Alliance so long as the question of her own sovereignty "hangs like a baneful specter over our foreign policy."

He said Ireland would never recognize nor reconcile herself with permanent British rule in the six counties of northern Ireland.

"We can no more yield forever to partition of our country," he said, "than Germany can to her division between east and west."

Britain should realize this inevitability, he said, and take the first opportunity to allow consolidation of the country under the Irish flag—"she should not allow the Irish problem to be another one of too little and too late."

Mr. Cosgrave, a vigorous man of only 35 years, spoke with great feeling in discussing what he described as the right of the Irish people to live as one nation.

COOPERATION

He said there was some encouragement in signs of increasing cooperation between the republic and the six northern counties. He cited the electrification projects on the Erne River, fisheries control in the Foyle Estuary, and joint control of the Great Northern Railway linking Dublin with Belfast, principal city of the British-ruled north.

"I know that British leaders are terribly anxious over the possibility that some day atomic bombs will be dropped out of the skies

in the region of the Irish Sea and destroy England. In an international situation which makes such an eventually possible, it is obvious that England could be greatly aided by having Ireland as her true friend, a friend that could be made by ending partition now, without waiting for it to be exploited by people who are enemies of Britain and Ireland alike, and who profit by such divisions within the free world."

Who Are the Irresponsibles?

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial entitled "Who Are the Irresponsibles?" which appeared in the February 25 issue of Labor's Daily:

WHO ARE THE IRRESPONSIBLES?

(By Willard Shelton)

President Eisenhower's indignation at what he labels the "fiscal irresponsibility" of the Democratic tax-cut plan seems the emotion of an Executive who is able to tolerate only his own kind of irresponsibility, which of course, he considers mere hardened common sense.

Mr. Eisenhower didn't call the personal income-tax cuts advocated and passed by Republican congressional leaders in 1953 irresponsible.

He didn't think it was irresponsible fiscally to kill the corporation excess-profits tax at the end of 1953, and to advocate and sign another tax bill in 1954 that in the name of technical corrections gave corporations enormous favors in the way of quick writeoffs on equipment and carry-forward, carry-back devices for lowering actual tax payments.

His Treasury Department lost about \$1½ billion in corporate tax revenues in the first 7 months of the current fiscal year as a result of these tax revisions, but Mr. Eisenhower didn't think it wrong to grant these favors even at the expense of a still-unbalanced budget.

The Eisenhower administration threw all its heavy guns into a fight last year to grant special tax favors to corporate stockholders, with the great bulk of relief going to the families with the largest income from stocks.

Democrats fought the plan, and forced modification of the original program, but the principle of greater favors to investors than to people who earn their incomes from current work was written into the law. This scheme is costing the Treasury some hundreds of millions of dollars in taxes that otherwise would have been payable on April 15, and applicable against the \$4.5 billion deficit Treasury Secretary Humphrey expects. But the President didn't deem that tax cut for stockholders "irresponsible."

The only time Congressmen act with fiscal irresponsibility, according to the administration theme, seems to be when they propose a tax cut that would do something for the low-income and medium-income families.

It becomes especially wicked, apparently, when they attach this plan to an administration-backed revenue bill and thus make it impossible for the President to veto it as a separate item.

Mr. Eisenhower, of course, could veto the whole bill and demand reenactment of his

own program minus the Democratic amendments, but this would require moral courage on his part and the capacity to wage a successful fight over the head of Congress by appealing directly to the people. He does not seem to view this alternative with relish, preferring to talk about the alleged lack of courage of Democrats in refusing to make it easy for him to outmaneuver them.

The Democratic-sponsored \$20-per-person tax cut may never go through. It faces opposition in the Senate from such orthodox financial leaders as Senators Bryan and George, both Democrats—who were also orthodox enough last year, incidentally, to support the President on tax cuts to favor corporations and their stockholders.

It passes understanding, however, that the only tax relief tolerable to the President is "trickle-down" relief, with the public supposed vaguely to benefit eventually by the money corporations save on their tax bills—and with Mr. Eisenhower permitted next year, the election year, to have all the advantage of general tax-cut proposals.

Hoover Commission Report on Medical Services

EXTENSION OF REMARKS

OF

HON. JOHN H. RAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. RAY. Mr. Speaker, I wish to call the attention of my colleagues to the Hoover Commission report on medical services which was released to the press yesterday and which will shortly come before Congress. The report contains many sweeping and, I think, dangerous innovations. Today I wish to call attention only to recommendation No. 15 and a part of recommendation No. 17.

No. 15 is "that the provision of hospital and clinical services to American merchant seamen by the Federal Government be ended."

No. 17 provides that, except for certain institutions not pertinent to my comments, "the Public Health Service should close all of its general hospitals."

Since 1798 the Federal Government has provided some medical and hospital service to American-flag seamen, under authorities enacted, and with funds appropriated, by Congress. There are now, I believe, 12 general hospitals owned by the Government in which such cases are handled. One is known as the Public Health Service Hospital on Staten Island, in the district I represent.

The Public Health Service Hospital on Staten Island is one of the largest general hospitals operated by Public Health Service. It has 800 beds and has been running 80 to 85 percent filled. Something like two-thirds of its patients are American seamen. If service to those seamen were to be ended, as the report recommends, the hospital would of course have to close entirely. Beyond that, recommendation No. 17 expressly urges that it be closed.

Closing of that hospital would be calamitous in many ways for the community and would be a serious step backward for the Government. Such a

move would work against the Government's policy of developing and maintaining a strong privately owned and operated merchant marine to be available for Government use in time of emergency, as well as for Government and private business at other times. And with present uncertainties as to whether or not, and if so when, a national emergency will develop, it seems unthinkable that the Government would consider closing an 800-bed hospital now fully staffed and equipped, in the part of the country in which that hospital stands.

I have the highest regard for the Hoover Commission and its work thus far, but not for this report. While I have spoken today only of the Public Health Service general hospitals in relation to merchant seamen, there are a number of other recommendations which seem open to serious question. It is fortunate that recommendations 15 and 17, as well as some of the others, cannot be made effective without first repealing or amending existing statutes. That fact insures time and opportunity for adequate study and consideration of the revolutionary changes proposed.

Señor Miguel Alemán, Former President of Mexico, Encourages Joint Action in Promoting Economic Development of Latin America

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. WOLVERTON. Mr. Speaker, as a result of several visits to Mexico, the countries of Central America and South America, I have become greatly impressed with the economic future of these countries and the possibility of the extensive development of their resources.

In view of the above I have been a strong and persistent advocate of closer relations between our Nation and those to the south. I regret that the advantage of such a policy has not been recognized as fully as it should have been. I trust, however, that a better understanding and a greater cooperation will grow out of the combined efforts that are finding expression in many different ways.

In this connection, I call attention to the Inter-American Investment Conference opening in New Orleans on February 28, 1955. This conference was initiated in Washington officially; then the idea was taken up unofficially by several parties and sponsored by the city of New Orleans through its International House and by Life and Time magazines. The individuals in charge of promoting the idea are Mr. Edgar R. Baker and Mr. Rudolph S. Hecht.

Señor Miguel Alemán, former President of Mexico, was invited to attend but was unable to do so because of prior engagements in Central and South Amer-

ica. However, he sent the conference a message, as follows:

Latin America requires capital for development, designed to enlarge her economy on a plan of collaboration with her private capital resources, through sound investments creative of new sources of wealth and of labor, making for the real permanent advancement of each of her countries and of the hemispheric community.

We are all good neighbors and loyal partners and should furthermore be devoted in common to the principles of democracy applied to human fellowship in all its aspects and everywhere.

In the spiritual field, by consecrating ourselves to the service of the fundamental liberties to believe and to think, as well as of the freedom to express thoughts and beliefs.

In the economic field, by joining our efforts in order to make the progress of our countries an exemplary thesis set before the world, conceived in the following terms:

That private investments made for the equitable profit of all concerned do firmly uphold, together with justice, the peace among nations.

That in order to abolish the dire impoverishment which is one of the breeding grounds of communism, it is not enough to aim at a decorous poverty; the decided promotion of a generous and honorable abundance for all is what is needed.

This is now possible in the New World, as proven by the determination that inspires the Inter-American Investment Conference.

The spirit of cooperation and mutual helpfulness expressed by former President Alemán are entitled to serious consideration. A recognition of such principles would help materially in promoting goodwill between the respective nations in the Americas.

Work of the American Friends Service Committee

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. REUSS. Mr. Speaker, the American Friends Service Committee has long been known for its practical application of the principles of Christianity. Its wide range of activities is indicated by the following summary taken from the January 1955 issue of the American Friends Service Committee Bulletin:

QUAKER SERVICE TAKES MANY FORMS

COLLEGES

Staff members in 10 regions and New York City visited 350 college campuses to recruit workers and leaders for 55 summer projects and held 75 one- and two-day conferences on world affairs.

COMMUNITY RELATIONS

We worked to integrate members of minorities (most of them Negroes) in employment (Dallas, Chicago, Columbus, Greensboro, N. C., Indianapolis and Philadelphia); housing (Philadelphia, Chicago, and two areas near San Francisco); and the classroom (Washington, D. C.). We helped Indians adjust to city life in Rapid City, S. Dak., and Los Angeles. On reservations from Maine to California our staff encouraged self-help projects of economic and social betterment.

CONSCIENTIOUS OBJECTORS

Two staff members counseled several hundred objectors and visited 1,000 others in prisons, Army stockades, and at work in hospitals across the Nation. We assigned 9 conscientious objectors who sought work with the AFSC to projects in the United States, 19 to Mexico and El Salvador, and 12 overseas.

EDUCATIONAL MATERIALS FOR CHILDREN

Thousands of youngsters aided children overseas by making mitten trees at Christmas or becoming friendly beggars at Halloween. Traveling exhibits and booklets like *If You Were a Child in Korea* enabled children overseas to share their games and crafts with American youngsters.

FOOD

We shipped 2,338 tons of surplus food to 6 nations (and plan to send more than twice as much in 1955). Three-fifths of food shipments last year went to Germany; Italy and India each got 14 percent; France 5 percent; Austria 2 percent; and Korea less than 1 percent.

HIGH SCHOOLS

Staff members in 6 regions held 1-day or weekend conferences on world affairs for high-school students, who also participated in 3 summer work camps, 7 summer institutes, and a unit in Mexico. Students also met United States and foreign leaders 7 seminars in Washington, 3 at the U. N., and 1 combined session.

INSTITUTIONAL SERVICE UNITS

Ninety-six volunteers from 68 colleges worked during the summer at mental hospitals in 6 States (Arizona, Illinois, Indiana, New Mexico, Rhode Island, and Vermont) and at 2 reformatories in Illinois. (Two year-round units were dropped at the end of the year for lack of volunteers.)

INTERNATIONAL CENTERS

The AFSC staffed or help finance centers in seven countries: The Netherlands, Denmark, Switzerland, France, Austria, India, and Mexico, as well as Davis House and International Student House in Washington, D. C., and Quaker House near U. N. headquarters in New York.

INTERNATIONAL STUDENT SEMINARS

Nine seminars in world affairs of 2 to 4 weeks' duration were held in the United States, Japan, India, Germany, Austria, Switzerland, and Yugoslavia. Participating were 343 students of 48 nationalities including 28 Americans.

INTERN PROJECTS

Summer projects in 5 cities (Atlanta, Chicago, Cleveland, Philadelphia, and St. Louis) gave 112 young people, most of them college students, a taste of factory life. Year-round intern projects with community agencies in Chicago and Oakland, Calif., added an extra 23 recruits during the summer.

LEADERSHIP CONFERENCES

Rising young diplomats explored the roots of international tension and their own resources and responsibilities at AFSC-sponsored conferences again last summer in Switzerland.

NEIGHBORHOOD CENTERS

Nine of these houses, which began by meeting physical needs, now foster fellowship: 4 are in Germany, 3 in Japan, and 1 each in Israel and in Pakistan. A similar center near San Francisco seeks to build racial brotherhood.

PEACE EDUCATION

Nearly 4,000 persons attended 23 summer institutes on world affairs—9 for families, 7 for high-school students, 6 for adults, and 1 for college students. Several regions trained community peace leaders the year round and we had special programs for leaders of labor unions, farm groups, churches, and friends meetings.

PRISONS

Two regional offices in California sponsored prison-visiting programs. In the summer of 1954 young volunteers worked in two Illinois reformatories.

QUAKERS

Reports from International Affairs representatives stationed in foreign capitals were circulated during the year.

REFUGEES

In Germany, we helped refugees who had been homeless for 10 years and new arrivals from East Germany find homes and jobs, both by giving funds to other groups and by programs of our own. In Korea, we staffed a hospital and sought jobs for widows. In Austria AFSC loans have helped refugee tradesmen, farmers, and professional men re-establish themselves.

SCHOOL AFFILIATION SERVICE

Pupils in 112 American schools exchanged essays, classmates, teachers, and ideas with children in 128 partner schools in France, Germany, England, Italy, Japan, Jordan, and the Netherlands.

SELF-HELP HOUSING

Work continued on a slum-prevention project in Philadelphia where tenants have become owners by making a downpayment of 700 to 1,400 hours of labor.

SOCIAL AND TECHNICAL ASSISTANCE

Ambassadors in shirt sleeves assisted pre-industrial peoples in India, Israel, and Jordan raise bigger crops, battle disease, and overcome illiteracy. (Similar problems are being tackled by UNLA in Italy, to which AFSC has given funds, and by young Quaker volunteers in Mexico and El Salvador.)

UNITED NATIONS

An office and a year-round residence in New York provided a meeting place for U. N. delegates and a base for the team we assemble for each General Assembly session. Quaker working parties studied mediation, charter revision, and relations with Russia. A Quaker representative in Paris maintained close relations with UNESCO; one in Geneva worked with U. N. agencies on such international problems as food, health, and human rights.

Civilian Defense

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial which appeared in the Newark (N. J.) Star Ledger newspaper under date of February 24, 1955:

CD's No JOKE

The Atomic Energy Commission's announcement that one H-bomb could kill almost everybody in a 7,000-square-mile area should serve as a much-needed spur to Civilian Defense.

We've treated CD as too much of a joke. The reason, of course, is fatalism. Most people act as if they can't do anything about atomic attack anyway, so they pooh-pooh the work of CD.

The Commission pointed out that one H-bomb could kill every human in a 7,000-square-mile area—unless they were adequately prepared for it.

CD is the only adequate preparation. The people who pooh-pooh it are wrong. They might be dead wrong.

New Attack Levelled at School Freedom

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. McDONOUGH. Mr. Speaker, there is today in the United States a movement to destroy our private school system which since the establishment of this Nation has augmented our public school system in providing adequate educational facilities for our youth.

As a Nation we have been ever mindful of the vital necessity of providing public educational facilities free to our citizens. We have built a vast public-school system at the grade and high school level. We have established free State universities where a college education can be obtained for minimum cost to the student.

But the unprecedented growth in our population, especially during the past decade, has overtaken our public-school system so that overcrowding and short sessions are seriously imperiling the efficiency of our public schools.

The fact that we have an excellent private-school system at this time has proved an invaluable aid in providing additional facilities to carry some of the overload now felt by our public schools.

In the field of higher education, our State colleges have never been adequate to provide facilities for all those wanting to attend a university, but privately endowed colleges and universities throughout the Nation have carried the main responsibility for higher education of our youth.

It has been as fundamental to our American way of life to permit parents to choose between public and private schools for the education of their children as it is allowed every American the right of free worship, and any attempt to destroy the private school in the United States should be met with instant opposition by every American who cherishes our heritage of liberty and individual freedom of choice.

The National Educational Association through its Educational Policies Commission has made a serious attack upon the right of private schools to continue in the United States, an attack which cannot go unchallenged.

In reply to this ill-advised attack, the following article and editorial which appeared in the Tidings, of Los Angeles, Calif., of which Msgr. W. E. North is editor, clearly state the case for our private school system which has contributed so much in raising the educational standard of our Nation, and the fallacy of attacks against our private schools which attempt to destroy them:

NEW ATTACK LEVELLED AT SCHOOL FREEDOM—NEA COMMISSION INFERS ONLY STATE CAN EDUCATE

A new policy statement by a national public school teachers' group was strongly attacked this week as inferring there was no room for private schools in America and suggesting they be put out of business—by law.

Msgr. Frederick G. Hochwalt, director of the Department of Education, National Catholic Welfare Conference, took sharp issue with "Public Education and the Future of America," made public last Monday.

The Monsignor says the booklet "purports to prove historically that the whole American tradition calls for a universal public school."

The booklet is the work of the Educational Policies Commission, a joint agency of the National Education Association and the American Association of School Administrators. The commission is a small but influential research group. A foreword to the pamphlet says "publication in this form does not constitute formal approval by the sponsoring associations."

"WILL DISTURB CATHOLICS"

"We are convinced that any plan to force all children into a common school is a serious threat to the future welfare of our Nation," said Monsignor Hochwalt.

He added that these policies from such a high source in the public-school profession will disturb and confound many Catholic educators as well as parents, but that they are ready to meet the challenge.

In its study, the commission, which includes some 26 educators, said:

"Faith in public education rests ultimately on two beliefs: that a particular kind of education must be designed to support a particular way of life, and that public education will best support the American way of life."

In an address before the meeting of the National Catholic Educational Association last August, his eminence Samuel Cardinal Stritch, archbishop of Chicago, while citing the tremendous influence of the tax-supported school on our country and its future, added this comment:

"We do not admit that these tax-supported schools are, to the exclusion of private and group conducted schools, the educational system of our country. In this educational system we must include all the schools which exist and function under our laws and Constitution."

PARENTS CRITICIZED

"In its latest publication, Public Education and the Future of America, the educational policies commission of the National Education Association has called upon all Americans to make an act of faith in public education," said Monsignor Hochwalt. "This appeal has been phrased in terms of a neo-nativist orthodoxy that virtually equates certain values of our American way of life with the highest values of heaven and earth."

"Good Americans must believe, the policies commission says, that public schools develop moral and ethical commitments common to all great religions, that public education gives the best support to the American way of life, and that public schools alone can teach the real meaning of brotherhood because they intermingle children of all religious faiths."

"In effect the Commission's report labels Americans who believe in the values of both public and private education as persons of questionable loyalty to America's ideals. It infers that parents sending their children to private schools lack faith in public education and in a sense should be reprimanded for their failure to give full allegiance to an uniquely American institution like the public school."

"The report seems to urge all Americans to make the public schools good enough to put the private schools out of business. Although the writers of the report admire the complexities of American life it is quite apparent that they cannot tolerate a complex of educational systems, both private and public. They see and deplore the tyranny of the single school systems of Fascist and Communist countries and then with surprising illogic demand that the American way

be made secure by a common public school system."

OREGON CASE CITED

"This report could be the beginning of a crusade to persuade all American parents to send their children to public schools. It purports to prove historically that the whole American tradition calls for a universal public school."

"It even goes so far as to suggest that the Supreme Court of the United States may have made a mistake when it invalidated a law compelling all children to attend public schools. There is a possibility, the report infers, that the fulfillment of the historic common school ideal may necessitate a reversal of the Oregon decision."

These policies from such a high source in the public school profession will disturb and confound many Catholic educators as well as the parents of Catholic school pupils. But they are ready to meet the challenge. They will refuse to profess faith in the report's doctrinaire assertions about democracy and the American way. They will resist every effort of the organized public school profession to seek laws that would force all children to attend public schools. They will continue, now as before, to build and to expand their flourishing private school system. They will not be intimidated by assertions that their devotion to private education makes them less American than their neighbors who favor public education for their children.

We are convinced that any plan to force all children into a common school is a serious threat to the future welfare of our Nation. Indeed, the very best safeguard against totalitarianism in our land is variety, diversity and independence of schooling.

In the Oregon School Case, decided on June 1, 1935, the Supreme Court held the Oregon anti-private-school act of 1922 to be unconstitutional.

The Oregon law required all children between the ages of 8 to 16 years—with very limited exceptions—to attend the public schools. The Sisters of the Holy Names of Jesus and Mary, and the Hill Military Academy obtained an injunction restraining the State from enforcing this law. The Supreme Court upheld this injunction and reaffirmed the right of parents to direct the education of their children.

The meaning of this momentous decision for education, says the booklet of the Educational Policies Commission, has been a subject of debate almost from the moment it was handed down. There seems little doubt but that most citizens and educators took it to mean that the vast majority of American children would continue to attend public schools—as was then the case—but that the way would be open for those who so desired to attend private institutions. On the other hand, the decision has been followed by a substantial expansion of private—particularly church-related school facilities.

EDUCATIONAL FASCISM

The National Educational Association again fondles the dictator's baton in its briefcase. Through its educational policies commission it deplores the existence of the private school, finds it inimical to the American way of life, berates the patriotism of parents who yet patronize other than public schools, laments the Oregon decision of the Supreme Court upholding the rights of parents in education, and calls for its revocation in the educational wave of the future.

One would think that public educators had enough problems of their own these days without tormenting their lot with the advocacy of regimentation in education. A little shelf full of books by even friendly critics has appeared lately bewailing their failures and shortcomings. Unprecedented demands by the schools are being made on

the tax coffers of the Nation, and the citizens begin to be disturbed with the insatiable appetite of a new Moloch. Meanwhile, the Federal machinery is being oiled for at least insurance of multimillion State and local programs for education.

Much is made of parenship in education when the big partner is under attack, or when the fortunes of yet another bond issue are at stake, or when the people murmur and fume with visionary departures from the traditional curriculum. When professors are justly suspicioned for un-American affinities, who is expected to rush to their defense but secretaries and presidents in private education? Let the little partner seek only the redress of unjust taxation and the silence thunders dissent while the plot proceeds to banish freedom of education in the land yet free.

All this cant about public schools and the American way of life is so much bosh historically, philosophically, and pedagogically that it hardly merits attention. The American way of life embraces unity in diversity, and uniformity is utterly alien to it. These educational Fascists who tirelessly seek conformity in education are thought-brothers to the systems of tyranny they so glibly condemn. The depth of their nonsense is sounded in the statement that public schools alone can teach the real meaning of brotherhood—this we must suffer from the clique that hesitates even before the proclamation of the Fatherhood of God.

What are they afraid of, or what kind of society do they plan, this group that presumes to sway the schools of America to its whims? Surely, the little 10-percent partner with its feeble resources offers no serious competition to a system with the sky the limit at its beck and call. No, the fear lies in the constant reproach which private education offers to a scheme of schooling in secularism and sentimentalism which presumably, if unquestioned, will move the American temper docilely to embrace the ways of a semisocialist society. Education is the first concern of the totalitarian. And they are Fascists—whether red or brown, it hardly matters—who subtly insinuate State compulsion in the field of education.

The NEA should rather be about the betterment of the public schools. Benjamin Fine, its favorite reporter, essays in the New York Times a piece about the inadequacies of teacher-training preparation. He finds our schools of education crowded with courses that teach how to teach but not what to teach. He trumpets a return to general education, to English, history, mathematics, and science for those who will presume to teach English, history, mathematics, and science. He finds only seven States with sufficient and satisfying programs of teacher preparation. Mr. Fine writes naively as if to startle the smugness of the educational Ph. D's for whom jargon is more important than geography.

Here is but one field that could profit from the deliberations of the doctors for a generation or two. Meanwhile, we could enjoy surcease from these rash forays into fields foreign to the traditions of the free people.

The Summerfield Reclassification Plan

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. BYRD. Mr. Speaker, we in West Virginia, have suffered mass unemployment

ment and the misery that comes with that economic illness.

The current depressed economic conditions have not made things easier for post-office employees. Let no one make any mistake about that.

On the contrary, the economic problems of the area have closed the possibilities of self-help that the postal workers had formerly turned to. The West Virginia post-office employees had sought to supplement their meager incomes by getting additional part-time jobs and by having their wives work. But when the bad unemployment situation developed, the part-time jobs disappeared and the opportunity for large-scale employment of women ended.

The additional income upon which the post-office employees have had to depend for so long, therefore, ceased to exist.

West Virginia and the post-office employees in the State have some peculiar economic problems, but the need for an adequate postal wage increase is nationwide. It is up to us in Congress to meet that need.

When I say an adequate wage increase, I mean one that will really help post-office employees out of their really bad economic situation. Such an increase, I believe, is the 10-percent increase contained in several bills which have been introduced during this session.

I sincerely hope that Congress will approve the 10-percent increase for the postal workers, and I also want to urge that we flatly reject the Summerfield reclassification plan. This bid for extra powers by an appointed official is dangerous, not only to the post office employees' rights but also as a giveaway of congressional powers.

Last year Congress was assured in some of the most determined lobbying that has ever been carried on by a Government department that the Summerfield reclassification plan, then offered, carried no dangers. Yet, according to press reports, the Postmaster General in testimony a few weeks ago, in effect, admitted that many of the charges made against the 1954 plan had basis in fact.

The present plan, the Department assures us, removes all these problems. But we had assurances from the same people last year that no such problems even existed.

The present plan is still shot through with loopholes for downgrading of employees; it still involves the surrender of authority over tens of thousands of postal positions by Congress; it still provides meaningless raises of \$210 a year to the rank and file employees and munificent grants of \$4,000 a year to some top officials.

Even the postal positions which Congress would continue to control would suffer under this scheme. A Washington newspaper recently called the job descriptions of the Summerfield plan "frauds." It said that these descriptions are written so as to justify the salaries the Department wants to pay.

Any plan that has this type of unfairness to it, should be rejected at the outset. But the Summerfield job reclassification plan has the distinction of

not only being unfair—in part a "fraud"—it is also dangerous.

It merits the same rejection that Congress accorded to its parent plan last year.

Arabs Step Up Border Attacks; Number of Incidents Increase

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. MULTER. Mr. Speaker, the following news item which appeared in the February 18, 1955, issue of Israel Digest is deserving of our attention:

ARABS STEP UP BORDER ATTACKS; NUMBER OF INCIDENTS INCREASE

JERUSALEM.—An Israel soldier was killed and 2 wounded early this week when a patrol near Hirtet Sika in the south was attacked by a group of 20 soldiers of Jordan's Arab Legion who had occupied a hill in Israel territory. The Israel unit routed the Jordanians from the hill. Israel has requested an emergency meeting of the Israel-Jordan Mixed Armistice Commission to consider this violation of the armistice agreement.

This incident was only one in a wide series of attacks from across the Jordanian, Egyptian, and Syrian borders which have taken place during the last 2 weeks. The following is a partial list of these incidents:

On February 1, an Israel soldier was wounded when automatic rifle fire was opened from an Egyptian position at an Israel unit near Nahal Oz in the Negev.

On February 1, an Israel patrol was fired upon from Syrian positions when it encountered infiltrators near Kfar Szold in upper Galilee.

On February 2, a Syrian position opened automatic fire at four Israel fishing boats on Lake Kinneret (Sea of Galilee).

On February 2, Israel boats on Lake Hule were fired upon from across the Syrian border.

On February 2, Syrian soldiers fired across the armistice lines at a group of children in Kfar Szold.

On February 4, armed Jordanian infiltrators stole building materials from Elat, Israel's southernmost port on the Red Sea.

On February 4, shots were fired from a Syrian position at members of Sh'ar Yashuv working in the settlement's fields.

On February 5, an Israel patrol encountered a group of armed Jordanians at Kfar Saba in the Sharon. The infiltrators fled across the border.

On February 7, a vehicle belonging to Kfar Szold came across a stone barrier south of the village. While removing the barrier, the occupants were attacked by rifle fire from a Syrian position.

On February 8, an Israel soldier was wounded by Arab Legion fire in the Sakhedria quarter of Jerusalem.

On February 9, an Israel unit was attacked by Jordanian fire southeast of Rosh Ha'Ayin, in the hills of Judea. Two Israelis were wounded.

On February 9, an Israel patrol in the area of Duweima in the Negev was attacked by armed Jordanians. On that same day, an emergency meeting of the Israel-Jordan Mixed Armistice Commission condemned Jordan for firing upon an Israel patrol in the same area on January 25.

On February 9, armed Jordanians opened automatic fire upon members of the settlement of Shlabin in the Latrun area.

On February 11, fire was opened upon an Israel patrol by members of the Jordan National Guard in the Duweima area in the Negev. Later, the same patrol was attacked in the area of Hirtet Sika.

On February 13, an Israel boat at Lake Hule was attacked from Syrian positions.

The Great West

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, February 28, 1955

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "The Great West," written by Dr. George S. Reuter, Jr., and Mrs. G. S. Reuter, of Monticello, Ark.

There being no objection, the article was ordered to be printed in the Record, as follows:

THE GREAT WEST

(By Dr. George S. Reuter, Jr., and Mrs. G. S. Reuter)

Truth is always desired. A love for our Nation is normal. Thus in telling of the greatness of a section in our country is just relating a noble heritage. The writers recently returned from a 7,500-mile trip where positive values were noted. This trip carried them through the final 3 of the 48 States.

After leaving Joseph T. Robinson's Arkansas, Oklahoma was entered. The names of Joshua Bryan Lee, Elmer Thomas, Ernest W. Marland, Roy J. Turner, Robert S. Kerr, and A. S. Mike Monroney have given greatness to this State.

In Kansas, George McGill, Walter A. Huxman, William H. Burke, Edward W. Patterson, Randolph Carpenter, and John M. Houston, have been the statesmen. At Greensburg is the largest hand-dug well in the world, which represents a natural wonder.

In Colorado, Edward T. Taylor, John A. Carroll, Wayne N. Espinall, Byron G. Rogers, Edward P. Costigan, Alva B. Adams, Edwin C. Johnson, Teller Ammons, William Adams, Walter Johnson, and William L. Knous have been the pacesetters. It now appears Alva B. Adams, Jr., has a great future. From an institutional point of view, Dr. Sam Bradford's sermons Looking to Jesus and Guaranteed Security at famed Beth Eden Baptist Church and the Conservative Baptist Theological Seminary at Denver, represent eternal values. In a lighter vein it is C. E. Beach and his beautiful horses. Also, beautiful Rocky Mountain National Park is a lasting sight.

George W. Norris, Roy L. Cochran, and Charles W. Bryan, have been Nebraska's pride and joy. Of course, William Jennings Bryan made contributions in so many parts of America, that a single State may not classify him.

In South Dakota, the names Tom Berry, William J. Bulow, Herbert E. Hitchcock, Fred H. Hildebrandt, and Theodore B. Werner ring out as faithful servants of their people. Many speak highly of the late Peter Norbeck.

Mount Rushmore National Memorial is located in Custer State Park, near Keystone, S. Dak. The heads of George Washington, Thomas Jefferson, Abraham Lincoln, and Theodore Roosevelt are carved to the proportions of a man 465 feet tall. They are carved in the granite escarpment of the mountain, and this is one of the highest points between the Atlantic Ocean and the Rocky Moun-

tains. The late Gutzon Borglum was the artist-sculptor.

Another unusual scene in South Dakota is the Badlands National Monument. Congress has set aside this area to preserve the enchanted area for the perpetual enjoyment of the Nation. Writers have tried unsuccessfully to describe the beauty here.

The trial of Jack McCall for the killing of Wild Bill Hickok in Deadwood, S. Dak., on August 2, 1876, is reproduced 5 nights per week. While McCall was acquitted, he was arrested again at Cheyenne, Wyo., by a United States marshal. He was tried in Federal court at Yankton, S. Dak., and hanged in 1877. Some would question whether this was double jeopardy. McCall is classified as "bad" by the people in that section, even though the motion picture presented him as a grand person with a lot of bad luck.

The Passion Play at Spearfish, S. Dak., is shown three times a week during the summer, and is one of the truly great events in our Nation. Josef Meier plays the role of Christ. The entire ensemble consists of 250 players.

In North Dakota, John Moses and Thomas H. Moodie have rendered real service. Many admire the independence of WILLIAM LANGER. The State has many possibilities in the years ahead.

Joseph C. O'Mahoney, Lester C. Hunt, H. H. Schwartz, Leslie A. Miller, William Jack, Sam Tully, Paul R. Greever, and John J. McIntyre have rendered the State of Wyoming the same high type of service in Government that is found in the beauty of Yellowstone National Park.

Yellowstone National Park is the largest and oldest of our national parks, with an area of 2,213,206.55 acres of federally owned land, lying in Wyoming, Idaho, and Montana. The average elevation of the park is between 7,000 and 8,000 feet. Altogether there are about 10,000 separate and distinct thermal features. Most geysers are located in seven principal basins—Norris, Lower, Midway, Upper, Thumb, Heart Lake, and Shoshone. Old Faithful, Daisy, and Riverside erupt at regular intervals. John E. Erickson, Thomas J. Walsh, James E. Murray, Burton K. Wheeler, Elmer E. Holt, Roy E. Ayers, John W. Bonner, and Michael J. Mansfield have given Montana a proud heritage.

While sharing with Wyoming and Idaho concerning Yellowstone National Park, Montana also has Glacier National Park. This park lies athwart the Rocky Mountains. Its glaciers are among the few in this country which are easily accessible. It comprises approximately 1 million acres. Among its high peaks are more than 60 glaciers and 200 beautiful lakes. The spectacular Going-to-the-Sun Highway links the east and west sides of the park, and it crosses the Continental Divide at Logan Pass at an elevation of 6,664 feet.

Idaho's fame is partially through Yellowstone National Park. Also, C. Ben Ross, James P. Pope, Glen H. Taylor, Charles C. Gossett, Bert H. Miller, and Gracie Bowers Pfost have rendered outstanding service to our Nation. Hungry Horse Dam services this area, and after visiting this large dam it is easy to understand the philosophy of these statesmen. It is a wonderful project and a sound investment. Exclusive of irrigation, it will cost \$102,900,000 but the entire cost plus interest will be returned to the Federal Government.

Vancouver, British Columbia, is a beautiful city near our Nation. Kitsilano Beaches, the International Airport, the city hall and archives, the trans-Canada Highway, Chinatown, the public library and museum, Harbour Navigation Pier, North Vancouver Ferry, the art gallery, the Burrard Yacht Club, and the Royal Vancouver Yacht Club are important places to see.

Not only is Seattle, Wash., the home of the August William Hempelmenns, but the State has many attractive features. No State capitol grounds are better kept. No greater statesmen can be found than Monrad C. Wallgren, Homer T. Bone, Lewis B. Schwellenbach, C. C. Dill, Warren G. Magnuson, Hugh B. Mitchell, Clarence D. Martin, Henry M. Jackson, Charles H. Leavay, Don Magnuson, and Clyde V. Tisdale.

Oregon has one of the newest and most beautiful capitol buildings. Portland is one of the most scenic cities in the Nation. Alfred E. Reames, Charles H. Martin, Walter M. Pierce, and Nan Wood Honeyman have given splendid service to America. The entire world knows the greatness of WAYNE L. Morse, but only God knows how many more fine services he will render. Mr. and Mrs. Richard L. Neuberger represent the ideal couple in this grand Nation.

California has the beauty of the famous redwoods of San Francisco, of Palo Alto, of Los Angeles, of Long Beach, of San Diego, and many events. Americans like to recall the War Memorial Opera House in San Francisco and the United Nations, but Mrs. Edward B. Reuter at Palo Alto represented the best in American education whether at Stanford University, the State University of Iowa, or Flak University.

The noted Old-Fashioned Revival Hour of Dr. Charles E. Fuller at Long Beach is serving the world for the 29th year. There may be found Mrs. Fuller and her letters, Rudy Attwood and the quartet, Leland Green and the chorus, George Broadbent at the organ, and Dr. Fuller preaching on The Blood Sprinkled Mercy Seat.

Also, the Fuller Theological Seminary at Pasadena under the leadership of Dr. Fuller and Dr. Harold John Ockenga, of Boston, is making a mark. The faculty is outstanding and sound. Here there are 250 students from all parts of the world. The plant represents over half a million Christian dollars and much effort.

Then there are the California statesmen who have meant so much to our civilization: William G. McAdoo, Helen G. Douglas, Culbert L. Olson, Upton Sinclair, Jerry Voorhis, James Roosevelt, Will Rogers, Jr., Robert L. Condon, and Sheridan Downey.

Dr. Richard S. Beal, of Tucson, Ariz., is not only the "desert saint," but he has been termed the father of an ideal American family. The Painted Desert is an inspiration to behold.

Henry F. Ashurst and Carl D. Hayden have been the grand old statesmen of Arizona. Ernest W. McFarland, George W. P. Hunt, Dr. B. B. Moehr, R. C. Stanford, Robert Jones, Sidney P. Osborne, Dan E. Garvey, Isabella Greenway, John R. Murdock, Richard F. Harless, and Harold A. Patten have maintained that noble tradition.

New Mexico has an interesting civilization. There is much evidence of a beautiful blend of the Old and New World. Dennis Chavez and Clinton P. Anderson represent such a culture. Many fine things have come from the worthwhile service of Carl A. Hatch, Sam G. Britton, Clyde Tingley, John E. Miles, John J. Dempsey, Thomas Mabry, David Chavez, Jr., Antonio M. Fernandez, and Georgia L. Lusk.

Texas is large, beautiful, and mighty. Its might can be both good and bad as indicated by able former Speaker Sam Rayburn. James V. Alford, Morris Sheppard, Tom Connally, Wright Patman, Marvin Jones, Maury Maverick, Ralph Yarborough, and Lindley Beckworth are some of the other truly great Texas statesmen.

It was good to return home after reliving many of the experiences that made America great. While 1954 resulted in the passing from this world of Lester C. Hunt (June 19), Albert J. Merklin (June 27), Mrs. Joe Lee Allen (July 13), Blair Moody (July 20), Mrs.

Ruth Bryan Owen Rohde (July 20), Alcide de Gasperi (August 19), Getulio Vargas (August 24), Robert L. Doughton (September 30), and Robert H. Jackson (October 9), the West will join together with the other section to continue our heritage.

More Facts on Drought Damage

EXTENSION OF REMARKS

OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. EDMONDSON. Mr. Speaker, under leave to extend my remarks I include the following article from the Washington Post and Times Herald of Sunday, February 27, 1955:

TWENTY MILLION ACRES ARE READY TO BLOW

(By Aubrey Graves)

The specter of continuing and worsening drought hovers over many areas of the country, particularly the southern Great Plains. After 4 (and in some cases 5) dry years, some sections face conditions that can become more acute than those of 1954.

Compounding the accumulated effect of prolonged drought come depressing reports of greatly below normal winter precipitation.

In 11 Western States as of February 1, the mountain snowpack and reservoir storage for instance, were reported to be low—in some areas dangerously so.

More than 4 million acres of land have been damaged by wind erosion this winter, according to late Soil Conservation Service advices. Most of this soil blowing occurred in December. The high-velocity-wind months (March and April) are yet to come.

"We are praying that in the period immediately ahead we get more moisture than we get wind," Harvey Dahl, Agriculture Department drought program official, said last week.

MORE DISASTER AREAS

Last spring's soil blowing was the most widespread and severe since 1938. In some localities, moisture and crop conditions have deteriorated still further since then. In the 1954 emergency, 945 of the Nation's 3,000 counties were given Federal drought relief. Today, about 1,050 counties are officially designated disaster areas.

In Colorado, the mountain snow cover in some regions is down to 50 percent of normal. The upland soils are dry. In 47 Colorado reservoirs, storage is only about one-fifth of normal. In New Mexico, flow of the three streams feeding into the San Luis Valley is expected to be three-fourths of normal. In this area, the reservoir storage is 50 percent below the 10-year average.

In greatest jeopardy this spring are southeastern Wyoming, the extreme southwestern corner of Nebraska, eastern Colorado, western Kansas, the extreme northeastern part of New Mexico, and the panhandles of Oklahoma and Texas. More than 20 million acres, according to statements by Agriculture Department spokesmen, are ready to blow.

Soil Conservation Service Administrator D. A. Williams blames present difficulties largely on two things: (1) The continued plowing up of rangelands unsuitable for cultivation, and (2) improper farming and grazing methods. "There are now," he says, "about 7 or 8 million acres in cultivation in this region that should never have been cultivated."

There were few dust storms back in the early days when the hoofs of Indian ponies and buffaloes were about the only things that

agitated the prairie sod. Until the coming of the white man (about 1870), wild grasses held the topsoil in place. But with the white man came the plow.

Moist seasons favored the first crops the settlers planted. They plowed up ever more land. But in 1890 came a dry growing season. The drought persisted for 4 years. Crop disasters were general in the Great Plains in 1894. Many farmers moved away.

In 1896 came the rains, and shortly afterward the farmers returned. Fortune in the form of weather favored them for most of the next 14 years.

By 1912 the pendulum had swung back. In that year 65,000 acres of cropland in one Kansas county alone blew away. In the following spring, 38 dust storms lowered visibility to less than 1 mile on the Southwestern plains.

In 1933, though the soil was extremely dry, only 22 hard blows occurred; the winds that spring were unusually mild. Forty storms plagued the area in 1935. In 1936 there were 68; in 1937, 72.

During these years, President Franklin D. Roosevelt proposed to plant belts of trees to serve as windbreaks at points throughout the Great Plains where cultivated fields were most unprotected. Farmers were educated to the advantages of contour plowing and strip cropping in combating erosion.

THE QUICK PROFIT

The great demands for wheat and cotton created by World Wars I and II are blamed for man's misuse of much Western soil. It was not just the "suitcase farmers" of those eras who were responsible. These were the fly-by-nights who came in, leased lands and put in crops. In years of good crops, they took a quick profit and departed, leaving the fields devoid of protective winter cover.

The landowners themselves were guilty of the same offense, to a lesser degree. When they saw the possibility of making more money by plowing than by leaving their holdings in grass, they plowed.

Only one State—Colorado—has a law which really forces a man to protect his farmland in time of drought. Landowners there are required to "chisel" their fields when the soil starts blowing. A narrow plow point turns up moist soil in small ridges to arrest the destructive action of the wind. The State itself performs this service, and levies the cost of it against the treated land, just as it levies taxes. A few other States have wind erosion laws but with far less teeth in them.

SCS Administrator Williams believes that one of the big jobs of his agency is to induce farmers and ranchers of the arid and semiarid areas to farm and ranch "according to the existing climate, not according to what they hope it will be."

Soil surveys of the region show a wide variety of land conditions, ranging from that suitable for permanent cultivation (if good soil and water conservation practices are used) to that suitable only for range. In between these extremes are areas of hazardous croplands.

A farmer may produce profitable crops on this land in wet years, but he usually has a crop failure in drought years. And when drought persists, the soil starts to blow away.

"After the soil blowing starts, it is too late to plant grass on the land," Williams points out. "Hence, it usually continues to blow until another wet spell comes. By that time, much of it may have been so seriously damaged that it will no longer produce profitable crops even in the wet years."

Williams says that our present dilemma was caused in part by improper methods of cultivating and grazing.

"The improper farming or grazing," Williams adds, "is not always done by the man whose crops and land are damaged. Some fields with an excellent cover or productive

stubble or straw are covered with drifting silt or sand from nearby unprotected fields. Some good grassland was smothered with dust from adjacent misused land.

There were many conservation farmers who followed the best advice they could get, yet saw their crops ruined and their land damaged by their neighbors' careless practices."

The problem of wind erosion, he insists, must be attacked on a community basis.

Williams reports that farmers cooperating in soil conservation measures in the potential dust bowl areas are practicing stubble-mulch tillage (leaving winter crops or wheat stubble and high-cut cotton stalks on about 5.5 million acres. They are "plowing on the contour" on another 6 million acres, and have built about 150,000 miles of terraces. They have reseeded nearly 1 million acres to grass since 1938.

There are at least 7 million acres of land which should not be cultivated at all, Williams says—land with thin or sandy soil, or land in low-rainfall areas. "These should be diverted to grass as soon as possible," he says.

The persistent drought harassing the farmer makes the men in the city street wonder what has been happening to the weather in recent years. Has less rain and snow fallen on the country as a whole, and has the climate actually got hotter?

Dr. Harry Wexler, chief of the Scientific Services Division of the United States Weather Bureau, has a quick answer to the latter question. The earth, he says, has become only 2.2° hotter in the last 60 years. In Philadelphia, the rise has been 4° since 1870.

The weather scientists assure that, on the average, the 48 States as a whole receive just about as much precipitation one year as another. It is just that the pattern shifts.

In recent years the Pacific coast, the northern border of the country, and New England have been getting more than their normal share of the precipitation. The Great Plains and the South, including Maryland and Virginia, have been short-changed. Some reason is given to hope that the pattern will change back again, sooner or later.

Virginia, in particular, hopes it will be sooner. Arlington and Alexandria found it necessary to ration water last summer. Some Fairfax County areas were left dry by the private-utilities companies for days at a time. Wells went dry that had never gone dry before.

Prolonged dry weather decimated crops throughout the northern part of the State. And many a Virginia Guernsey got her drinking water courtesy of the volunteer fire department, which hauled it to her in fire engines.

Virginia uses about 1,300 gallons of water per capita per day. The average citizen, of course, does not use that much. The manufacture of 1 ton of steel, for instance, requires 65,000 gallons of water. It takes 300,000 gallons to make a ton of rayon.

More than 27,000 gallons of water is needed to irrigate an acre of land to the depth of 1 inch, and there were more than 700 irrigation systems taking water from Virginia streams during last summer's drought.

Virginia has an annual rainfall of about 42 inches. About one-third of it flows away unbeneficially to the sea.

With population increasing the way it is, there is a growing conviction that Virginia will have to adopt some sort of legislation regulating the use of water, perhaps as the Western States do. A State legislature commission on water resources opened public hearings at Staunton Friday. It hopes to make water use recommendations to the next general assembly.

"The State needs a water code which recognizes the rights of everybody," said Dr. H. N. Young, director of the Agricultural

Experiment Station at Blacksburg, and a member of the commission.

By "everybody" he meant the farmer through whose fields a stream runs, the farmer who lives near a stream and feels he has a right to some of it, and the city fellow miles away who depends on the stream for his drinking and bath water.

Thoughts From the Grassroots

EXTENSION OF REMARKS

OF

HON. JOHN C. WATTS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. WATTS. Mr. Speaker, under leave to extend my remarks, I wish to insert an editorial appearing in the Winchester Sun, of Winchester, Ky., on Friday, February 11, 1955.

In his article entitled "Patient But Firm," the writer dwells briefly and succinctly, but comprehensively, upon our Nation's stand in Far Eastern affairs—the Defense of Formosa. It is a confirmation of my thoughts, and I feel those of a great majority of the membership; it stresses and emphasizes many of the factors underlying our recent action whereby we definitely, resolutely, and clearly demonstrated to the world that in such matters partisan politics were laid aside, and that we stood shoulder to shoulder—united in the common cause; that, truly, we were Americans first.

In view of the concise and accurate analysis of the mental processes of the Chinese Communists; and the splendid treatment covering the events leading up to the necessity for such outward indication of unity, it is my notion that a sober reading of this exceptional editorial will be of interest and value to each of us.

PATIENT BUT FIRM

It cannot be denied that a risk of war is involved in the decision to stand firm at Formosa and to assist in the evacuation of the Tachen Islands. But no course of action the free world can pursue in these times is free of risk and it may be that a bold policy will pay greater dividends in the long run than would one of timidity and vacillation.

The Communists have demonstrated in the past that the one thing they respect is strength. A show of weakness or indecision has always been interpreted by them as an invitation to grab something that doesn't belong to them.

It would be hard to find in all history a nation as powerful as ours which demonstrated as much patience, endured as much provocation from another power without retaliation. In Korea the Red Chinese intervened and turned what should have been a United Nations victory into a stalemate—yet rather than risk extending the war we refrained from air or land attacks on the Chinese mainland. They intervened in Indochina—again they enjoyed impunity. They shot down our planes and imprisoned our soldiers and civilians without cause. We still managed to keep our tempers.

Now we have decided to draw the line beyond which we will not retreat. We have made it plain that we will not shoot first, that we will exercise every decent restraint—but we do not intend to back down. This firmness, this assertion of quiet strength may yet avert disaster.

Committee of California State Bar Delegates Recommend Amendments to Emergency Detention Act of 1950

EXTENSION OF REMARKS
OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. ROOSEVELT. Mr. Speaker, under the leave to extend my remarks in the RECORD, I wish to call attention to a study of the Emergency Detention Act of 1950 that was prepared by a duly constituted committee of the California State bar delegates as a result of a resolution adopted in 1952 and the amendments recommended by the committee.

It is, of course, the duty of the Congress to pass legislation to promote the general welfare and provide for the common defense. International unrest and the attitudes of Russia and Red China have brought the question of national security into prominence. It is certain that the Congress had the national security in mind when it enacted this law in 1950, but when we start dealing with the national security we must not, in its name, destroy or jeopardize the security of the individual citizen. We must try to balance values then in passing laws so that we do not sacrifice too much of one in order to achieve the other. These lawyers say, in commenting on judicial decisions, that hard cases make bad law. The same is equally true of the legislative processes—dangerous times can make bad law. But, even as we pass the laws we should be willing to listen to criticism of the legislation and willing to study recommendations for improvement. This, I think, is particularly true when those recommendations come from such a respectable source as a committee of the bar association of a State.

With these thoughts in mind I am inserting at the conclusion of my remarks some amendments recommended by the Committee of California State Bar Delegates. While I think that the avowed purposes of the amendments are good, I am not yet ready to say that I think all of them or only these should be amended. For example, I am advised that the proposal to confer original jurisdiction in the Supreme Court can be accomplished only by an amendment to the Constitution of the United States and not by act of Congress. It is my intention, however, in the immediate future to look into some, if not all, of these proposals as amendments to the Emergency Detention Act of 1950.

Under the leave to extend my remarks in the RECORD, I include the following report:

AUGUST 6, 1953.

To the Conference of State Bar Delegates:

In re: Report of the committee of State bar delegates formed pursuant to the 1952 conference Resolution 47, to study and report on title II of the Internal Security Act of 1950, known as the Emergency Detention Act (1950).

The above-named committee, of which the undersigned is chairman, reports as follows:

Title II of the Internal Security Act of 1950, known as the Emergency Detention Act of 1950, does without doubt represent not only a complete break with the American and Anglo-Saxon concept of civil rights and liberties, but also a complete departure from the American tradition and the American way of life. There is no question but that, under the act, American citizens, in time of emergency, can be held in custody for a day, a year, or a lifetime (on secret evidence given by unrevealed witnesses) and can be deprived of reputation, property (and indirectly of life). This power is, by the act, vested in and may be exercised by a preliminary hearing officer of whom no particular qualifications are required for appointment to his position.

Since 1798 the President of the United States has had the power to confine enemy aliens in time of war for no reason other than that they are enemy aliens. The committee feels strongly that, in time of grave emergency, there should be legislation which will give the executive branch of the Government a like power with respect to enemies of the Government who are citizens, or have acquired citizenship (often with calculation) and who are thus better enabled to perpetrate or conspire to perpetrate espionage and sabotage.

The committee, therefore, feels that this act should not be repealed, but that it must be amended in many respects unless this country is now prepared to build up a secret police and follow a policy of detention on suspicion alone, a policy which has, in the past, been the weapon of absolute monarchs, and which, in our time, has been used with such devastating effect by Hitler in Germany, Mussolini in Italy, and the rulers of the Soviet Union since its inception. This committee recommends amendments to the act because it feels that the United States should not adopt the terroristic weapon of a police state which is the very weapon keeping in power that government against whose ideology and world aims this act was purportedly legislated.

In time of grave national emergency, it may be imperative that potential, dangerous enemies of the State be picked up on mere suspicion by knock-on-the-door arrests, but it is equally imperative that means be provided for preventing the abuse of that power and for quickly rectifying mistakes.

Fundamentally, it is imperative, too, that the time and circumstances under which this sinister and extraordinary power may be used, should be clearly defined, and that unequivocal and specific regulations be set forth for the exercise of such power. There should also be a clear definition when the right to use such power ceases.

"In matters such as concentration camps, therefore, there is still great wisdom in the words of the Kentucky Resolution of 1798: 'In questions of power * * * let no more be heard of confidence in man, but bind him down from mischief by the chains of the Constitution.'" (50 Col. Law Review 761, 775, Protective Custody Act.)

The committee's analysis (appended hereto as an addendum) of the act has impelled it to make the following recommendations for amendment or change.

COMMITTEE'S RECOMMENDATIONS FOR
AMENDMENT OF CHANGE

1. The definition of "emergency" as fixed by subdivisions 1, 2, and 3 of section 102 should be amended so as to change subdivision 3. Subdivision 3 now reads as follows: "Insurrection within the United States in aid of a foreign enemy."

This should be changed to read:

"Declaration by concurrent resolution of both Houses of Congress that there is an insurrection in the United States in aid of a foreign enemy."

If subdivision 3 is not so amended, it would require no stretch of the imagination to

conclude that the language could apply to any simple strike in the country. A strike, as pointed out in the addendum, could easily come within the definition of an insurrection.

2. Section 102 (a) now provides: "In the event of any one of the following:

"(1) Invasion of the territory of the United States or its possessions,

"(2) Declaration of war by Congress, or

"(3) Insurrection within the United States in aid of a foreign enemy, and if, upon the occurrence of one or more of the above, the President shall find that the proclamation of an emergency pursuant to this section is essential to the preservation, protection and defense of the Constitution, and to the common defense and safety of the territory and people of the United States, the President is authorized to make public proclamation of the existence of an Internal Security Emergency."

This portion of the act should be amended to provide that within 20 days after the proclamation of an emergency by the President of the United States pursuant to the above, the Solicitor General of the United States must, on behalf of the people of the United States, bring an action against the President of the United States in Declaratory Relief of which the Supreme Court of the United States shall have original jurisdiction. In said action, the Attorney General shall set forth the facts pertinent and request the Supreme Court to declare whether or not the President of the United States is justified in declaring a national emergency by the facts as they existed at the time of the presidential proclamation even though the conditions of items 1, 2 and 3 of the act have been met. The act should further provide that the Supreme Court must decide said action in Declaratory Relief within the 60 days after the filing of the action by the Solicitor General.

Amendment should be made to require the Attorney General of the United States to defend the action on behalf of the President of the United States. If the decision of the Supreme Court is a tie, this shall be deemed to be a disaffirmation of the fact that there is an emergency. The statute should also provide that the emergency may be terminated at any time by any one House of Congress rather than by the concurrent action of both Houses as is now provided.

3. The act should be amended to provide that, after the emergency has been declared, the chief security officer shall be, not the Attorney General as now provided, but a Justice of the Supreme Court or a Judge of the Circuit Court of Appeals who shall be forthwith appointed by the Chief Justice of the United States. There is no reason why either judge could not take a leave of absence from judicial duties during an emergency to handle so important an executive and administrative position. Each already has a position for life. The attainment of such eminence is demonstrative evidence that such a person is one of solid background, of a high order of integrity and one who has an objective perspective. In addition, such an amendment avoids the concentration of power in the Executive. Upon the proclamation of an emergency, all powers vested by the act in the Attorney General should be vested in the chief security officer, with certain exceptions.

4. The Attorney General, however, shall retain the power to issue warrants of arrest and warrants of arrest could still be served by such officers of the Department of Justice duly authorized to do so by the Attorney General.

5. The act should be amended to provide that preliminary hearing officers shall be appointed by the chief security officer and, further, to the effect that a preliminary hearing officer must be a person who is licensed to practice law. The feeling of the

committee is that any judge of a court of record, whether it be State or Federal, should automatically be eligible for appointment as a hearing officer. In short, in lieu of having untrained men who may be appointed to what is presumed to be a temporary job with all the temptations of pressure and bribery, the additional burdens created by a national emergency could, by the act, be placed upon judicial officers who have to a certain extent demonstrated their qualifications and ability to serve the public in an impartial and disinterested manner and who have some training in the judicial and legal processes.

6. Amendment should be made to provide that immediately after the service of a warrant, the officer serving the warrant should deliver the detainee into the official custody of some official who has been designated for the purpose of keeping custody of detainees and the official custodian to whom the detainee has been so delivered should be obligated (with penalties attached) forthwith to notify in writing the next of kin of the detainee or to deliver a written notice forthwith to such third person as may be designated by the detainee. The detainee, however, should not be obligated to give the names of his next of kin or of any other person.

In addition to the foregoing notice and irrespective of whether or not it is given, the official custodian of detainees must, in any event, give written notice to the State bar or some other organization or official which or who shall be designated for that purpose in the act so that the organization or person, in turn, can notify the attorney who has been provided pursuant to the recommendation hereinafter made to assist detainee in the preservation of his rights.

7. The act should define with much more certainty than it now does, the various criteria upon which the finding of probable cause can be based. Perhaps the act should definitely state that there can be no finding of probable cause merely because a person belongs or has belonged to an organization which the Attorney General has listed as subversive, or because a person has made statements which hold up any person who is or has been connected with the Federal or State government to public or private ridicule, scorn, contempt or hatred, or who merely criticizes our institutions, Federal or State. It seems that criteria should be evolved which will require definite and specific findings by a preliminary hearing officer.

8. Amendment should be made to provide that all hearings should be public, and each hearing before a preliminary hearing officer should be held in the county of the detainee's residence.

9. Provision should be made that when a preliminary hearing officer has heard evidence not disclosed to the accused, or when the evidence has been disclosed and the name of the witness kept secret, and as a consequence of any such hearing, the accused has been detained, such detention shall not continue for more than 30 days from date of hearing unless prior to the expiration of a 30-day period, the accused has been accorded a public hearing at which all evidence has been disclosed and at which he is confronted with all witnesses with full right of cross-examination.

The act should further be amended to provide that, when a detainee has been released because of a failure to disclose evidence or the names of witnesses within a 30-day period, as in the preceding sentence provided, such detainee cannot be further apprehended for detention unless he is to be accorded a hearing in which all the evidence and the names of all witnesses are fully disclosed.

Further amendment should be made with respect to secret evidence or failure to reveal the names of witnesses which will require

the Government to submit evidence of every kind and character and the names of all witnesses to the preliminary hearing officer on the first detention, and the preliminary hearing officer shall be empowered to examine and cross-examine said witnesses and call other witnesses if he so desires in secret.

10. Amendment should be made to insert specific provisions requiring arraignment when practical within 24 hours, but in no event can detainee be held for more than 120 hours without being arraigned and informed of his rights. Upon such arraignment, the preliminary hearing officer must set a date for the actual hearing not more than 30 days after the preliminary hearing unless an extension of time is consented to in open court by the detainee.

11. Since the nature of the charge does not permit of a double-jeopardy defense, the act should be so amended as to provide that the detainee shall not be apprehended or tried a second time unless at the time the subsequent warrant for arrest is issued, the Government has new, additional, and different evidence from that which was previously adduced.

12. As an added safeguard, the act should be amended to provide that a detainee who has exhausted his appeal rights and who is nevertheless held in detention should have the further right to be heard de novo at 90-day intervals, the first de novo trial to commence 90 days after his appeal rights are finally exhausted. Each such de novo trial should be held before a different preliminary hearing officer. Provision should be made which would require that the preliminary hearing officer must release the detainee unless he finds affirmatively as of the time of the de novo trial, that the detainee is and will continue to be a security risk.

13. The detention review board should be made up of lawyers who have had a minimum of 10 years active practice within a 15-year period prior to the date of their appointments. Service in any legal, judicial, or legislative branch of the Federal or State Government shall constitute active practice. It should be required that 1, but not more than 1 shall be taken from any one of the circuit court of appeals districts in the United States. Since there is a serious question as to whether one detention review board could handle the volume of appeals which would be certain to ensue, consideration should be given to the establishment of more than one board with correlative powers.

14. The nature of shelter and transportation, and the type of food to be furnished detainees, should be set forth with more particularity.

15. Machinery should be provided whereby a draft is made of every lawyer in the country as of the time of emergency. There should be set up authority whereby the court or president of a bar association formally selects the lawyers of every metropolis, town, and hamlet, and gives each a number upon the arrest of any detainee of such metropolis, town, or hamlet. The lawyer so provided must defend the detainee. Compensation for the lawyers' time would be provided on a scale to be set in the act. Whether the lawyer be a so-called corporation lawyer or civil or criminal lawyer, and whether his income be \$300,000 or \$3,000 a year—the lawyer must act as counsel for the detainee through every stage of the proceeding. The detainee, on the other hand, need not accept the lawyer so assigned. He may engage counsel on his own. Any counsel accepting such employment does not, by virtue thereof, lose his draft status. The detainee, instead of substituting the new counsel, for the one he would have had assigned to him by reason of the draft, could engage personal counsel to collaborate with the lawyer who has been

drafted for him. The name of such collaborating counsel might or might not appear, depending upon the wishes of the detainee. Collaborating counsel, by accepting employment, does not avoid his draft status. The mechanism so set up eliminates the possibility or probability that persons apprehended and detained would not be able to employ competent counsel. No detainee, however impoverished, could be without counsel. No opprobrium could attach to counsel who appeared for any detainee if such appearance were mandatory under the law.

The committee, therefore, recommends that this conference of State bar delegates and the board of governors of the State bar of California memorialize the Congress of the United States to the effect that the act in question be amended or changed in the above respects.

Respectfully submitted.

LESTER WM. ROTH,
Chairman, Conference of State Bar
Delegates Committee on Emergency
Detention Act (1950).

Committee members: Lewis W. Boies, Jr. (Fresno),¹ William N. Byrd (Brawley), Roy E. Chapman (San Bernardino),¹ Faber L. Johnston, Jr. (San Jose),¹ John L. Martin (Los Angeles), George G. Olshausen (San Francisco),¹ Timothy I. O'Reilly (San Luis Obispo), Jeremiah R. Scott (Eureka), Peter N. Teige (San Francisco),¹ John A. Wilson (Stockton).

Attention is called to separate report of Mr. Olshausen, attached.

SEPARATE REPORT OF GEORGE OLSHAUSEN

1. I agree with the main report as far as it goes. The amendments which it proposes are an improvement over the act as it stands, and, as far as they go, I am in favor of them. 2. I am still of my original opinion that the Detention Act provisions should be repealed in toto.

a. No such methods were used in our history, at any time, previous to World War II.

b. There have been five rebellions in American history. (Shays' Rebellion, 1786; Whisky Rebellion, 1794; Aaron Burr Conspiracy, 1807; Dorr's Rebellion, 1842; Civil War, 1861.) In all of them, and in the two wars against England, the enemy was English-speaking of the same ethnic stock and on our own soil. The Civil War had basically the same mechanical facilities, except for the airplane, the telephone, and the radio. The opportunities for spying and sabotage were at least as great as they are today, even conceding that persons now get themselves naturalized for purposes of sabotage.

Yet in *Ex parte Bollman* (8 U. S. 75, 2 L. Ed. 554), arising out of the Burr conspiracy, Chief Justice Marshall insisted on admitting the defendants to bail; in *Ex parte Vallandigham* (28 Fed. Cas. 874, 925 Fed. Cas. No. 16,810) Lincoln had Vallandigham only removed to a distance from the Federal lines, not imprisoned.

c. The assumption underlying continuance of the act is that the detention-camp methods of World War II will be used again anyway, so they should be brought within an orderly procedure. (See par. 56 of the committee's analysis.)

There is no connection between the Imperial Japanese Government and the Communists. The assumption in advance that the methods of World War II will be used next time, rather than the method of some previous war, seems to me to indicate a change of mood rather than a change of circumstances.

¹ Denotes members of committee who affirmatively have indicated their approval of this report.

This being so, I do not think that an attempt to change this mood should be given up as futile before it is undertaken. (See par. 62 of the committee's analysis.) If the bar expects to exercise leadership, it must attempt to influence opinion, not merely be swept along by it.

d. Since this act goes beyond anything heretofore decided by the Supreme Court, I would not concede its constitutionality. I consider unconstitutionality an additional ground for repeal.

Planned Use of Great Lakes Water Calls for Recognition of Sanitary District Diversion Bill

EXTENSION OF REMARKS

OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. SHEEHAN. Mr. Speaker, there is a growing realization throughout the Great Lakes area that there is a real need for a program of planned use and planned conservation of Great Lakes water in order to benefit all of the citizens located in the Great Lakes region.

More and more communities are thinking in terms of conservation and use of Great Lakes water, and they certainly must look sympathetically on the heretofore somewhat controversial question of diversion down the Sanitary District Canal at Chicago.

John H. Byrne, executive director of the Lake Erie Watershed Conservation Foundation, recently expressed the thought that an additional diversion of 1,000 cubic feet per second into the Illinois Waterway would not adversely affect any of the boundary States or the levels of any of the lakes. A bill to authorize this increased diversion was introduced in Congress this year by Congressman THOMAS O'BRIEN, of Chicago. All of the Cook County Congressmen, both Democrat and Republican, are united behind the measure, H. R. 3210. It proposes to increase the diversion of water for a 3-year period, until the Army Corps of Engineers will have been able to make a more thorough study of the matter.

An interesting article on the subject, written by Chesly Manly, appeared in the Chicago Sunday Tribune of February 20. The article is as follows:

PLANNED USE OF GREAT LAKES WATER URGED— HIGHER DIVERSION WINS SUPPORT (By Chesly Manly)

Interstate and international cooperation for the planned conservation and use of Great Lakes water is being urged on both sides of the boundary with Canada as a result of greatly increased consumption and consequent shortages of water at many points inland from the lakes.

Demands for the use of Great Lakes water to supply vast inland areas have induced many long-time foes of Chicago's so-called water steal to reconsider that question sympathetically, as one of many problems that call for understanding and a mutual respect for mutual rights and interests.

NEW SLANT ON DIVERSION

For example, John H. Byrne, of Cleveland, executive director of the Lake Erie Watershed Conservation Foundation, declared in an interview that he has great sympathy for the problems of the Chicago area. Experts have advised him, Byrne said, that an additional diversion of 1,000 cubic feet per second into the Illinois waterway from Lake Michigan, as proposed in legislation now pending in Congress, would not appreciably affect the levels of the lakes.

Byrne produced a reprint of a column by John W. Love in the Cleveland Press, setting forth various proposals for supplying the interior of Ohio with Lake Erie water and adding:

"We may yet rue our agitation over the Chicago 'water steal' of the 1920's."

CANADIAN FOR INCREASE

Another recent example of the changing attitude toward Chicago's problem was the statement by J. W. Murphy, member of the Canadian Parliament from a district on Lake Huron, that Canada should immediately agree to an increased diversion of water into the Illinois waterway from Lake Michigan. Murphy declared that other members of Parliament representing lakeshore constituencies were alarmed about property damage resulting from high water levels.

The volume of water flowing through the Great Lakes system, averaging about 240,000 cubic feet per second from Lake Ontario into the St. Lawrence River, is stupendous. One-fourth of this volume would supply the whole United States, with a population of 164 million, at a per capita rate of 250 gallons per day, which is the amount pumped by the city of Chicago for domestic, industrial, and commercial use by a population of 4½ million.

POINTS TO VAST SUPPLY

Byrne cited records from the Army Corps of Engineers showing that a half inch of water from the surface of Lake Erie, 9,940 square miles, would supply the daily requirements of the Nation's public water systems and that a depth of 3 inches from this lake would supply a population of 1 billion. And all five of the Great Lakes have a total surface of 95,100 square miles, more than 9½ times the size of Lake Erie.

Until a few years ago there was little interest in the lakes except as a great inland water transportation system which provided incidental benefits of hydroelectric power and served domestic and sanitary purposes along their shores.

Cheap transportation on the lakes, together with an abundance of iron ore and coal, made the Great Lakes region the most productive industrial area on earth. Water conservationists now maintain that the potential of the lakes for further development is limitless, provided conflicting interests can be reconciled and served by regional cooperation.

PROBLEMS UNDER STUDY

Here are a few of the problems in which the conservationists are interested:

1. Pollution of the St. Clair River and Lake St. Clair by municipalities and industries in southwestern Ontario may force Detroit to pipe its water from Lake Huron through a system that would cost more than \$200 million. Detroit, which now gets its water from the Detroit River, below Lake St. Clair, has threatened to sue the Province of Ontario, in the Canadian courts, as it has a right to do under the 1909 boundary waters treaty with Canada.

2. Milwaukee, long a center of opposition to Chicago's diversion of water from Lake Michigan, pollutes the lake by closing the gates of its sewage treatment plant, during rainstorms and thaws, in order to maintain the quality of the commercial fertilizer it

manufactures from sewage. Anthony Oils, president of the Chicago Sanitary District, has threatened to initiate a suit by Illinois against Wisconsin.

PROMOTING OHIO SYSTEM

3. The Lake Erie Watershed Foundation is promoting a plan for an integrated water system that would supply 23 counties in northern and northwestern Ohio with Lake Erie water. Fort Wayne, Ind., which is in the Lake Erie watershed, would be included in the system. While Akron, Ohio, rubber manufacturing capital of the world, is planning to bring its water 40 miles from Lake Erie, Syracuse, N. Y., is considering a project to pipe its supply about the same distance from Lake Ontario.

4. Governor Stratton's committee on metropolitan water and sanitation has submitted plans for an integrated water supply, waste disposal and storm drainage system that would provide Lake Michigan water to a metropolitan area comprising all of Cook and Du Page Counties, 5 townships in eastern Kane County and 9 in northern Will County.

URGES MICHIGAN CANAL

5. H. B. Tukey, head of the department of horticulture, Michigan State College, for years has advocated the construction of a canal to connect Lakes Michigan and Huron across northern Michigan and provide water for a vast supplemental irrigation system. He told a water conference at Elyria, Ohio, last November 23 that his project was closer to realization than many realized.

6. Dr. A. E. Berry, chief sanitary engineer of Ontario's health department told the Elyria conference that streams and ground water are not adequate for Ontario's rapid population growth and industrial expansion and that lake water must be supplied for inland development on a large scale.

DIVERSION FROM HUDSON BAY

7. Canada already diverts an average of more than 5,000 cubic feet per second of water from the Hudson Bay drainage basin into Lake Superior, through the Ogoki River and Long Lac projects, and engineers estimate that at least 12,000 cubic feet per second could be diverted.

Water conservationists maintain that such an increase in the water yield of the Great Lakes, together with regulating works and increased outlet capacities to control their levels, would assure an inexhaustible supply of lake water for unlimited development purposes in the eight Great Lakes States and Canada's Ontario province.

A plan for a Great Lakes basin compact, open to the eight Great Lakes States and to Canada's Ontario and Quebec provinces, was announced last December at a meeting of the Council of State Governments in Chicago. Under this plan, a commission, representing each State or province adhering to the compact, would make studies and recommendations on all lake problems.

SEE POLITICAL IMPACT

Proponents of the plan maintain that the States and Provinces would constitute a powerful, political force which could make itself heard in Washington and Ottawa. State Representative Albert Hachmeister, Republican, of Chicago, a member of the committee which drafted the compact plan, voted against it on the ground that it appeared to be aimed at preventing additional diversion of water from Lake Michigan into the Illinois waterway.

Proponents of the compact scheme deny any such purpose but do not deny their long continued opposition to Chicago's demand for increased diversion to establish and maintain a clean stream in the waterway. Oils and other sanitary district officials regard the proposed compact as a device to

stall and defeat the legislative relief desired by Chicago.

ILLINOIS MAY CHANGE STAND

If this legislation is enacted, with or without a veto by President Eisenhower, and the dispute over Chicago's rights is thus settled, Illinois officials may have a different feeling about the proposed compact. Its proponents will have an opportunity to demonstrate their sincerity by continuing to press for it, without reference to the Chicago diversion question.

Whatever the motives of politicians may be, conservationists on both sides of the Canadian boundary regard regional planning and cooperation as indispensable for a proper utilization of the Great Lakes water resource. Ontario's Berry told the Elyria conference that in respect to water problems "the border must not act as a barrier but both countries must act together to reach a solution which will be best for all."

Ohio's Byrne, winner of the 1951 Ohio Governor's award for his work in conservation, agrees that the peoples of the two countries must seek common solutions to common problems.

TIME FOR IMAGINATION

Byrne cited a statement by an electronics expert about machines that see better than eyes, calculate more rapidly than human brains, communicate faster, and farther than the human voice, record more accurately than memory, and act faster and better than hands.

"A machine does not possess a soul or imagination," Byrne added. "Man does. The time has come to arouse his thinking and imagination for the utilization of our physical, mental, and moral forces. Our goal is to seek in the various regions of the Great Lakes a form of regional authority, acceptable to the citizens, for the conservation and distribution of water to the various communities within the watershed on a plan undreamed of not many years ago."

CITIES INDUSTRIAL SUCCESSES

"Cities that stop growing because they have reached the limit of their water capacity are like industries that must restrict their progress on account of scarcity of local processing materials. Industries have found a way to solve these problems. So must cities. The oil and steel industries are good examples."

"Transportation of ore, oil, gas, and lumber by pipelines, boats, and rails, have brought abundant supplies from long distances to their plants after local resources had shrunk below their needs. Transportation of water over natural courses and by pipeline may become the foremost undertaking on this continent as population continues its huge growth."

One Hundred and Sixty-third Anniversary of the Bill of Rights

EXTENSION OF REMARKS

OF

HON. RICHARD W. HOFFMAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. HOFFMAN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address delivered by State Commander Irving Breakstone, of the Department of Illinois, American Legion, upon the 163d anniversary of the Bill of Rights. In the course of his address, Commander

Breakstone announced a new policy for the Legion's Department of Illinois, calling for a program of adult education directed toward a better understanding of the ideas of the Constitution. This very important policy statement follows Commander Breakstone's address.

BILL OF RIGHTS DAY

(Address by Irving Breakstone, State commander, the American Legion, Department of Illinois)

Commander Lipsner, Past Commander Manos, Judge Geroulis, distinguished guests, ladies and gentlemen, first, I want to thank Commander Benjamin B. Lipsner, of Aviation Post, who needs no introduction either in the State of Illinois or any other city in the Nation, he being the founder of the United States airmail system; I want also to thank my good friend Past Commander Nicholas G. Manos, of Hellenic Post, who have made possible this fine gathering of distinguished Americans. I want particularly to thank General Woodward, General Homer, General Kerner, General Whitney, Chicago's highly honored Postmaster Carl A. Schroeder, and all other patriotic Americans gathered here on this occasion.

We have just listened with intense interest to a historical discourse on American history and on the history of ancient Greece as well as some historical facts pertaining to our Bill of Rights by one of the most illustrious members of the Illinois bar, Past Commander Ralph M. Synder, which makes one proud and does honor to this occasion. Such scholarly and highly educational discourse gives one food for thought and makes us cognizant of the great contributions by our forefathers as well as ancient Greece to civilization. Only one steeped in the rich lore of history, philosophy, and literature and a devout student of the arts could be capable of expressing so eloquently these facts pertaining to the influence of our Bill of Rights and its comparative analogy to ancient Greece upon our glorious Republic and civilization in general. I regret that every schoolchild in America could not have been here today.

I want to thank our scholarly State's Attorney Judge John Gutknecht for his fine and timely talk and while I regret the inability of our distinguished United States District Attorney Robert Tieken to be personally present, we are indeed honored and appreciative of the presence of his first assistant, the Honorable Alexander O. Walter, himself a veteran and a man of high ideals.

While Judge James A. Geroulis is a member of Aviation Post, Hellenic Post nevertheless join in the presentation of this beautiful flag which will henceforth adorn the courtroom of our distinguished comrade as an ever present reminder of God and country to all who may appear before the bar of this court.

As commander of the Department of Illinois of the American Legion, I have particularly chosen the occasion of these ceremonies to open our drive to be known as Education for Freedom Week, and commemorating the 163d anniversary of the adoption of the Bill of Rights. It is altogether fitting that we pause in tribute to the memory of the great men of our Nation who drafted the original document to which the Bill of Rights was made a constituent part. Under our Constitution, this Nation has enjoyed, and still continues to enjoy, the highest standard of living ever attained in history. We are an orderly society, with liberty and freedom for every citizen, in a measure seldom, if ever, equaled and never eclipsed on this earth.

Only 22 amendments have been attached to the Constitution. Of these, the first 10 constitute the Bill of Rights, which we celebrate today. These ten were added because

the conventions of several States refused to ratify the Constitution in its original form until they had been assured that the Bill of Rights would be made part of it.

The fourth and fifth amendments to the Constitution give us a clue to the genesis of the Bill of Rights. It is a reference to the ancient right expressed in the phrase, "Every man's house is his castle." Lord Coke expressed this principle nearly 400 years ago when he stated: "The house of every man is to him as his castle and fortress, as well as for his defense against injury and violence as for his repose." At that time, this principle had been the law of the land for more than 1,000 years.

The makers of our Constitution and the framers of the first 10 amendments were never tired of quoting these immortal words of the elder Pitt:

"The poorest man may in his cottage bid defiance to all the force of the Crown. It may be frail; its roof may shake; the wind may blow through it; the storms may enter; the rain may enter—but the King of England cannot enter. All his forces dare not cross the threshold of the ruined tenement."

When ratification of our Constitution was pending before the Virginia Convention, the eloquent patriot, Patrick Henry, declared that he was "most awfully alarmed," that the document threatened the liberties of his country, among other reasons because it lacked a Bill of Rights. Henry challenged the view of James Madison, the so-called father of the Constitution. He challenged the views of the galaxy of scholars and statesmen who had drafted the Constitution and even that of the eminent George Washington, who had presided over the Constitutional Convention.

The Virginia Convention, after prolonged debate, ratified the Constitution by a bare majority of 10 votes, but only after James Madison had pledged his word that, at the earliest opportunity, he would use his energy toward placing in the Constitution the requisite amendments guaranteeing each citizen's rights, privileges, and immunities.

As soon as the Virginia Convention had finished the work of ratification, it adopted resolutions for the addition of a Bill of Rights as demanded by Patrick Henry, and these resolutions were forwarded to the Governors of the various States.

The first measure considered by the first Congress of the United States of America, under the new Constitution, was a bill to raise revenue to pay the expenses of Government. On July 21, 1789, James Madison, then a Member of the House of Representatives, introduced the second measure. This was a resolution to consider amendments to the Constitution in accordance with the pledges of faith and honor which had been made by public men everywhere in securing ratification of the Constitution.

The Bill of Rights amendments were ratified by the States within 2 years and 3 months. Thereafter, as far as Americans are concerned, and as far as the Constitution itself is concerned, they became as much a part of the original Constitution as if they had been signed on September 17, 1787, when the main instrument itself, was signed.

The 10 amendments constituting the Bill of Rights are restrictions upon national power. All the rights and immunities enumerated were already in existence. They did not owe their origin to the Bill of Rights. As had been stated in the immortal Declaration of Independence, these rights were inalienable and had come from the Creator. The Constitution was established, among other purposes, to make these God-given rights secure against oppression, secure against oppression even from the Government which the founding fathers were setting up.

The Bill of Rights amendments deal with 13 points covered by the opening words, "Congress shall make no law." The first 4 points view the citizen as a soul, or mind. Religion, speech, and the press, public assembly—all reflecting man as a spiritual being—shall be forever free from interference by Congress. The next 3 points protect the citizen's person, home, and effects from high-handed star-chamber methods of Government, such as are practiced in every totalitarian country today. The next 4 define the citizen's rights when involved with the criminal law.

These 11 points are double-clinched by the last 2—the one, warning that failure to mention a particular right in the bill must not be construed as denying that right's existence; the other, warning that a power not granted to the Federal Government is not thereby left ownerless but is reserved in full to the States or to the people.

The Bill of Rights is the law the people lay on their Government, but—notice—not on themselves. They themselves violate it with impunity. They constantly deprive others of what they will not permit Congress to deprive them. Does religious persecution exist in this country? Certainly, both public and private. Is free speech ever restricted by force, and violence, and boycott? Why, peaceable public assembly has been at the mercy of the mob in any number of our communities. Have you ever heard of the forcible invasion and destruction of private property in this country? Many times. And other rights also have been violated or denied. The law is written in the Constitution, but not on our hearts, which alone makes a law effective. Otherwise, all of us would know what some of us do not know, that to keep our own rights, we must respect the rights of others.

This great charter of the American—the American as a soul, as a citizen, as a political sovereign—has come to its 163d anniversary in circumstances emphatic with warning that rights entail duties. Evade the duty and you lose the right. May this anniversary serve to engrave sharply the meanings of both in the deep places of our minds.

The faith of our forefathers gave them the strength to plan for the ages. May we, with equal faith, guard our birthright and hand it down to posterity so that this heritage of liberty and this Nation, under God's will, may long endure.

In pursuance of this goal, the American Legion, Department of Illinois, takes this occasion to announce the following statement of policy:

"STATEMENT OF POLICY, THE AMERICAN LEGION, DEPARTMENT OF ILLINOIS"

"The American Legion, Department of Illinois, announces a new approach to the problem of Americanism. This approach is the positive one of emphasizing the importance of understanding and advocating the principles which are our heritage as Americans and to which we are loyal.

"In the past the Legion has devoted a major portion of its Americanism program to rooting out Communists and other enemies of Americanism and to exposing the nature of communism as the enemy of American principles. Our zeal to protect Americanism from subversion and un-American sets of loyalties has sometimes appeared to take the historic form of a fight to extirpate persons and ideas deemed heretical or disloyal. This phase of the Legion's Americanism program has received an emphasis out of all proportion to its extent and importance when compared with other Legion Americanism activities, such as those carried on in the schools and veterans' hospitals,

"In concentrating on the negative phase of fighting the enemy, we have neglected the positive phase of Americanism set forth in the preamble to the constitution of the Legion, which places us under the obligation of upholding and defending the Constitution of the United States of America. The preamble obligates us to safeguard and hand down to posterity the principles of justice, freedom, and democracy.

"To fulfill this primary obligation of Americanism, it is obvious that we must first understand the ideas of the Constitution which we are sworn to uphold and defend. We must understand the principles of justice, freedom, and democracy we are sworn to safeguard.

"This positive approach to the problem of Americanism is in conformity with present thinking of the American Legion at the national level.

"In accordance with this understanding of our obligations as Legionnaires, every post in Illinois has been instructed to appoint an education for freedom chairman, who will be responsible for implementing the education for freedom program in his community. By enlisting the aid of educators, experts in constitutional law, writers, TV and radio commentators, etc., the legion will bring to every community a series of programs as traditionally American as the old town hall meeting or cracker barrel session.

"The program will be based on the reading and free discussion of the basic documents and critical issues of our heritage, especially the Constitution of the United States and the writings of great Americans like Abraham Lincoln.

"It is the principles and ideas expressed in these important source materials, as they have been defined and redefined by great Americans in times of crisis paralleling our own, which we must first understand if we are to protect them in the present global battle of ideas between our own free world and the dictatorships.

"This will be the first American Legion program of its kind. It will be a novel entry of the Legion in the field of adult education. It will be a new way of implementing the principles of the preamble of its own constitution.

"Education for freedom programs will bring to people in the State of Illinois an understanding of principles and ideas to which Americans are loyal—principles and ideas which, if dropped behind the Iron Curtain and actually practiced there, would prove more powerful than any H bomb.

"This is the Legion's operation freedom."

We adopt the language of our national commander, Seaborn P. Collins, who says: "I want you to know how grateful I am personally, and how appreciative all Legionnaires are for the additional prestige which the Department of Illinois is earning for the Legion through your education for freedom program. The positive approach to Americanism embodied in this program reflects the thinking of your organization on the national level. . . . Every other department of the Legion will be made fully aware of this inspiring program. Each department will be encouraged to further the objective of promoting greater public understanding and love of the principles and ideals which are our heritage as Americans. The American Legion's preamble obligates us to uphold and defend the Constitution of the United States, and to safeguard the principles of justice, freedom, and democracy. Our positive program of Americanism is one important way by which we discharge this obligation."

Socialism by Spending

EXTENSION OF REMARKS

OF

HON. EUGENE SILER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. SILER. Mr. Speaker, under leave to extend my remarks, I wish to include and have printed in the RECORD an editorial in the February 28, 1955, edition of *Realtor's Headlines*, a weekly publication of National Association of Real Estate Boards, which I think my patriotic colleagues will find very thought provoking and something that should be read and considered by all of our leaders that do not wish to see socialism come upon America. The editorial follows:

If you are permitted by the Federal Government to keep any part of your income, this is, in effect, a subsidy to you and your family. Feeling is growing in Washington that the income of the American people is a national asset which belongs to the National Government to be disposed of by it as political leaders think best.

There are 76 million people in our country, according to a tabulation of *Look* magazine, who now receive Federal money or equivalent benefits. That is nearly half of our whole population. It seems incredible, doesn't it?

Every day it becomes more difficult for businessmen to accumulate capital from earnings to expand or invest. The financial tycoons of the future will be labor unions and other institutions that do not have to pay Federal taxes.

Our private-enterprise system can be destroyed just as certainly through high taxes and unlimited Federal spending, as through political action by Socialists or Communists.

Deficit spending, now popular, is the surest way to promote continued inflation and render valueless the savings and the security of our people. Why we should have deficit spending in times of great prosperity is difficult for anyone with commonsense to understand.

Blowing up "bugaboos" to frighten voiceless taxpayers into despairing acquiescence to the extortions of the Federal Government has become a fine art. Government departments spend over \$100 million a year selling the American people on big spending and deficit financing. The newest plan for Federal spending is to set up a kind of double budget. One will be for regular expenses; the other, a so-called investment budget. Whatever an anesthetic they try to give, the tax bite will be just as painful.

They can't even spend the money as fast as it is appropriated. Some of our giveaway agencies still have billions of dollars authorized in the past, but not expended. The same is true with respect to whole departments.

Isn't it about time that by constitutional amendment we limit this taxing and spending orgy? Should we not adopt a provision that would hold down Federal taxing and spending in any year to a seventh of the national income for that year, unless we get into war and two-thirds of the House and Senate agree from year to year to spend more if necessary? Should we pledge the faith and credit of the people through the Federal Government without the consent of our States? If they are not asked about a

matter of this kind, then our Federal system of sovereign States becomes meaningless.

It is true that the Members of Congress may not agree to submit any such limiting amendment to the various States. The Members of Congress that you elect and send to Washington become infected with the same spending mania that has placed us under the rule of a giant bureaucracy that has its finger in the business and affairs of every single one of us.

Members of Congress are now increasing their own salaries so that they can spend your money with greater comfort. This is the best evidence that there is no intention in Washington to reduce the Federal budget, or to stop spending money we do not have.

Our only hope lies in the 40 million home and property owners of the Nation who, if aroused to the gravity of the issue, can force a change in policy and the adoption of constitutional limits on the runaway Federal Government.

HERB NELSON.

The Cairo Trials

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 10, 1955

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following letter which was sent to Secretary of State Dulles by Dr. H. Bernard Birnbaum, president of the Bensonhurst Zionist District No. 19:

BENSONHURST ZIONIST DISTRICT NO. 19,
Brooklyn, N. Y.

SECRETARY OF STATE,

Department of State, Washington, D. C.

DEAR SIR: A resolution passed at a meeting held of the District No. 19, Zionist Organization of America, reads as follows.

"The number of Jewish victims of the odious trials held at Cairo has now reached four.

One, according to the Egyptian authorities, took his own life in the cause of the trial, and two more were put to death this week-end.

"We rise in their memory and convey to their families expressions of our deep-felt sympathy. Just as other regimes in the past have resolved to similar criminal devices, have thereby in the end sealed their own doom.

"Egypt has chosen to revenge itself on Jews in whose hearts there is a longing for Israel. Revolting sentences were imposed by military courts and the head of State confirmed the execution of some—life imprisonment or long term of penal servitude for others.

"Egypt will not be sustained by the blood which it has thus far spilled. Nor will Israel nor the Jewish people ever forget these, their blessed martyrs. Their love for the people will vanquish the hatred surrounding them.

"We as organized Zionists pay tribute to, and record our profound appreciation of the efforts which were made all over the world. Particularly by the Government of these United States, to save the condemned in Cairo, and we are voicing herewith our contempt and horror at the heartless rejection by the rulers of Egypt, of these urgent representations made to them.

"As the same time, we gathered at this moment wish to express our recognition of the efforts of all those who did what they could, by word and deed to save human lives and prevent the gallows from casting its

shadow on the relation between Israel and Egypt."

Very truly yours,

DR. H. BERNARD BIRNBAUM,
President.

West Coast-Hawaii Airlines Case

EXTENSION OF REMARKS

OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. BEAMER. Mr. Speaker, membership on the Interstate and Foreign Commerce Committee brings those of us fortunate to serve with that body in intimate contact with civil aviation and its multiple problems. I have been particularly interested, in the past few weeks, in what has taken place regarding the so-called West Coast-Hawaii case as determined by the Civil Aeronautics Board with the concurrence of the President.

There seems to be a great deal of misunderstanding as to what President Eisenhower did and did not do in the West Coast-Hawaii case. Since the record is clear, the misunderstanding must be created by those having a motive to do this.

The certificates for the Seattle/Portland-Honolulu route were first issued in 1948. Then, as now, there was a contest between Northwest Airlines and Pan American Airways as to which should be certificated.

The CAB decided, by a 2-to-1 vote, to give Northwest a temporary 5-year certificate. Northwest had argued that it could develop traffic to Hawaii from the Central and Eastern States which it serves on its transcontinental route. Pan American had argued that the route was important to it for through trans-Pacific traffic. Pan American had argued also that it could operate more economically than Northwest because it already had installations at both ends of the route required for other operations for which it was permanently certificated, whereas Northwest had these at Seattle only.

Pan American sought reconsideration of the decision, claiming that the Board had been misled into various errors. President Truman directed that Pan American should be given a temporary 5-year certificate in addition to Northwest because "the national security and the public welfare require the establishment of the most direct and expeditious service between the Northwest and points on the existing services of Pan American Airways, Inc., in the South Pacific, Philippines, Japan, and other points in the Orient served by that company."

When the certificates expired in 1953, both companies applied to have them renewed. There was again general agreement that only 1 of the 2 should be selected.

The Board's staff investigated the claims of the two carriers. They de-

cided Pan American had the better case. They found that Pan American had demonstrated by experience the truth of the assertions, made 5 years before, that it could operate the route more economically than Northwest. They found this would continue to be true in the future. They found that, on the evidence available at the time of the hearing, neither carrier had developed much through traffic. Since it appeared that the route would require subsidy whichever carrier was chosen, the choice should go to the one that would require less.

The CAB's examiner, who heard the evidence, agreed with the CAB's staff. He recommended also that Pan American be selected. He agreed with the staff's analysis of the relative costs. He also relied heavily on President Truman's determination that broad national interest considerations required an operation by Pan American. If one carrier was to go, as everyone including Northwest then agreed, it must therefore be Northwest.

The five-man Board reversed its staff and its examiner and selected Northwest over Pan American. Just why, its opinion does not make very clear. It admitted—at page 13—that—

Upon consideration of the route structure of Pan American and Northwest, there can be little doubt that Pan American enjoys certain cost advantages which should enable it to operate the route at less total cost, and therefore, for less mail-pay subsidy, than Northwest.

It referred—at page 15—to a last-minute offer by Northwest to operate the route without subsidy but said that this proposal was not made at any earlier stage of the proceeding and was neither presented in detail nor subjected to critical scrutiny and that therefore the Board's decision was not predicated on this offer. Concerning the examiner's point as to President Truman's determination that broad national interest considerations required operation by Pan American, it specifically noted that these matters are properly within the province of the President—page 10.

On February 1, 1955, President Eisenhower advised the Board of his disapproval of this decision. He stated that he believed the choice of Pan American "will contribute most to the sound development of our air-transportation system in the Pacific." Quite obviously the President was acting on the same broad national-interest considerations that had led President Truman to determine in 1948 that Pan American should initially be certificated and to which the five-man Board had itself referred as being within the President's province. Since the hearing the amount of through traffic carried by Pan American over this route to points beyond Hawaii has tremendously increased. The loss of this through traffic to foreign-flag carriers, which would have resulted from the elimination of Pan American in favor of Northwest, was undoubtedly a factor in the President's decision. In any event, the President was simply going back to what the CAB's own staff and examiner had recommended, on a basis which the

five-man Board had recognized to be within his province. His selection of Pan American was no more a promonopoly decision than was the Board's selection of Northwest.

While Northwest's friends would have seen absolutely nothing wrong in a decision establishing a Northwest monopoly of this route and throwing off Pan American, which had become the carrier preferred by a large majority of the traveling public, they were horrified at the elimination of Northwest in favor of Pan American. All the stops were turned loose. The President was informed by the Board that although the opinion written as recently as November 26, 1954, stated—page 11—that all parties and the examiner agreed that "the operation would require substantial Government support in the form of subsidy mail pay for the foreseeable future," it now appeared that all of the Pacific operations would shortly go off subsidy. The President therefore altered his decision and directed that both carriers should be allowed to operate over the route so that both might have "an equal opportunity to demonstrate their capacity to develop adequate traffic to operate without subsidy or prove definitely that the route cannot economically support two carriers."

Both actions taken by the President were sound in the light of the facts before him at the time. If the route would require continued subsidy, as the Board's opinion had said it would, the route should be operated by only one carrier and that the carrier which had demonstrated that it could operate at lower cost and for which the route was a link in a through international operation rather than a stub end—page 15. If circumstances had changed so that the route can be operated without subsidy, the Board should have advised the President and not allowed him to be misled by the contrary view stated in its opinion. For if no subsidy is needed, then by all means both these carriers, which had developed a substantial business on the route in competition with each other, should be allowed to compete on fair and equal terms in the future.

Deadline Dates for Veterans' Benefits

EXTENSION OF REMARKS OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 10, 1955

Mr. BERRY. Mr. Speaker, assembled here is a list of several deadline dates before which eligible veterans must act if they wish to take advantage of certain benefits.

July 25, 1956: For those now in training under the World War II GI bill, no additional education or training may be afforded after this date except for veterans who may have additional training time under the Armed Forces Voluntary Recruitment Act of 1945.

July 25, 1956: In general, no vocational rehabilitation under Public Law 16 based on World War II service may be afforded beyond this date except for certain hardship cases who are granted an additional 4 years in which to train.

July 25, 1957: No guaranty or insurance will be available on World War II GI bill loans for homes, farms or businesses after this date except for those who have established a later terminal date under the Armed Forces Voluntary Recruitment Act of 1945.

January 31, 1963: Those who start their education or training within their required 3-year period must complete their training under the Korean GI bill by this date or 8 years after discharge, whichever is earlier.

January 31, 1964: For vocational rehabilitation under Public Law 894, eligible disabled veterans of the Korean conflict must start in time to finish their rehabilitation by this date or 9 years after separation, whichever is earlier.

January 31, 1965: For GI loans on homes, farms or businesses, eligible veterans of the Korean conflict now have until this date to receive VA guaranty or insurance as a result of the President's proclamation. No further guaranties or insurance may be issued after that date on loans made to veterans under the present law.

The Korean benefit termination dates apply to eligible veterans except in certain hardship categories. For these, an additional 4 years are granted by law in which to complete their rehabilitation.

Seriously disabled veterans of the Korean conflict may apply for a \$1,600 grant toward the purchase of an automobile or other conveyance, but they must apply within 3 years after they leave service or they forfeit the benefit. The President's proclamation set January 31, 1955, as the end of the Korean conflict period, during which eligibility for this grant may be established. This means injuries to be covered by the law must have been sustained in active service on or before that date.

No application deadlines prevail on the other VA administrative benefits for veterans of the Korean conflict on the wartime basis. These include: hospitalization and domiciliary care for non-service-connected disabilities; compensation for service connected disabilities or death at wartime rate; pension for total and permanent and non-service-connected disabilities or death; reimbursements of burial expenses and a flag to drape the casket.

Progress Through Inflation

EXTENSION OF REMARKS OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial

from the Washington Daily News of February 28, 1955:

PROGRESS THROUGH INFLATION

It may have been mere coincidence, but is interesting that just after the House of Representatives had voted a \$20 borrowed-money cut in income taxes, the Council on Economic Progress came out with a big-spend, tax-reducing program for the Government.

The \$20 deficit-making tax whittle voted by the House was sparked by Democratic politicians trying to beat President Eisenhower to the punch before the 1956 election campaign starts.

The Council on Economic Progress is run by Leon H. Keyserling, who used to be economic adviser to President Truman, back in the days when inflation was rampant.

Mr. Keyserling claims the way to national prosperity is to increase Government deficits by several billions through spending more and taxing less. This is a theory highly popular in quarters opposed to the Eisenhower administration.

It is not exactly in line with statements of Mr. Keyserling back in 1951 when he urged still higher taxes, firmer wage and price controls and Government economy as a means of fighting inflation.

In the 15 years before President Eisenhower took office, excessive Government borrowing and a succession of deficits had created such inflation that the purchasing power of the dollar was cut almost in half. Now, for 2 years, there has been no more inflation, to the immense benefit of millions of Americans—especially the least well-off who depend on pensions or other forms of fixed income.

Inflation can sap our defense program, imperil our financial stability, lower our standard of living and impoverish millions of Americans. It is the road of "progress" toward disaster. And its nursemaid is Government borrowing.

More Americans Are Traveling Abroad

EXTENSION OF REMARKS OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, on January 10 of this year I introduced H. R. 1795, a bill designed to increase American travel abroad by raising the dollar limit of goods tourists can bring into the United States duty free. The importance of the bill is that it provides a valuable means of enabling our allies to earn dollar currency, thus decreasing their need for direct loans and grants. The bill is an important part of the administration's foreign economic program.

Under leave to extend my remarks I ask unanimous consent to include an article from the New York Times of Sunday, February 27, 1955, which discusses in detail the number and categories of Americans who traveled abroad in 1954:

HOUSEWIVES LEAD IN TRAVEL ABROAD—70,242 WENT TO FAR PLACES IN 1954 TO ESCAPE KITCHEN—UNITED STATES GIVES PASSPORT DATA

Nearly half a million Americans picked up passports, packed their bags and left for

foreign parts last year. A fifth of them were from this city.

The State Department's annual count of passports showed that 250,000 traveled by ship, that housewives were bigger gadabouts than anybody else and that more Americans went abroad on personal business than for any other reason.

The Department gave out 452,059 passports to persons in all 48 States. This city, the only municipal listing in the table, supplied 82,855 travelers, more than any State. The nearest number to that was California's with 33,458 foreign-bound citizens. Trailing the passports totals were 867 Wyoming residents.

Three out of four of the American travelers crossed the Atlantic to visit Western Europe. They required 339,024 passports for that area. Latin America drew 49,736 passport requests, the Near East 16,239, eastern Europe 15,702, Africa 14,244, the Far East 10,109, and Australia and New Zealand 6,059. Only 936 passports were issued for travel in Canada where the documents are not normally required.

MANY GO JUST FOR FUN

A total of 179,534 Americans told passport officials that they had personal business abroad. But 170,832 confessed that they traveled just for the fun of it. Commercial business accounted for 48,469 passports and education for 23,081. The remainder went away for employment, religious, health, or scientific reasons.

Ships carried 253,065 passport holders to foreign strands, while 194,923 others traveled by airplane. Automobileists received 2,719 passports and train travelers used 1,342.

Passports were taken out by 70,242 housewives to get as far from the kitchen sink as possible. They were many lengths ahead of the 35,114 clerks and secretaries who followed them. But the latter were ahead of their bosses, who received 34,576 passports.

MANY LABORERS GO ABROAD

Laborers (skilled) were not too far behind the swivel-chair men, accounting for 31,537 passports. Laborers (common) were common travelers, too, taking 23,023 border-crossing documents. Passports were issued also to 29,080 students and 20,986 teachers.

The report noted that 22,381 retired Americans got the traveling papers. Another 21,425 citizens proudly said that they had no occupation. They might have been anything from international rod riders to international playboys.

Merchants picked up 11,828 passports. Other categories spanned the alphabet from accountant (3,408), through farmer-rancher (7,446), and musician (1,328), to writer (6,908).

However, men edged out the women 236,906 to 215,144. Native-born Americans numbered 292,138, while naturalized citizens totaled 159,911.

Tax Cuts and Irresponsibility

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to revise and extend my remarks, I wish to insert in the RECORD 2 editorials from the Capital Times, of Madison, Wis. The editorials deal with the Democratic sponsored tax cut of \$20 and the Republican opposition to this proposal.

I wish to draw these editorials to my colleagues' attention because last year—when we voted on tax cuts for the benefit of a very few—there was no talk of irresponsibility on the part of Republicans. However, it appears that the Democrats are charged with irresponsibility when we sponsor legislation to give the small or average taxpayer some needed relief.

Following are the 2 editorials from the Capital Times—the first is from the February 23, 1955, edition and the second editorial is from the February 24, 1955 issue:

TEN-THOUSAND-DOLLAR SALARY INCREASES FOR CONGRESS—YES; \$20 TAX DEDUCTION FOR ORDINARY GUY—NO

Many of the Republican Congressmen who have just voted themselves a \$10,000-a-year pay increase have announced that they will fight the Democratic proposal to give the taxpayers a \$20 tax reduction. Secretary of the Treasury Humphrey, who endorsed the tax reductions and other give-aways to corporate wealth in the last session, is aghast at the proposal for a tax reduction for the little fellow. Yet they charge the Democrats with playing politics.

It seems to us that if the Democrats were playing politics, as the Republicans are charging, they would have waited until next year to make their proposal. This is not an election year.

It seems to us too, that the Democratic proposal is necessary to stop the continued drift toward depression. It will add some much needed purchasing power that will help to check growing unemployment and the continued slide of farm prices.

The signs that we are heading into the same economic climate that preceded the great depression of the 1930's are increasing. The Wall Street Journal published a national survey on February 21 showing that a growing number of bankers and businessmen fear the American consumer has shinned a little too far out on the credit limb.

From the East, New England, Midwest and South came reports that installment buying, the precursor of the great depression, is way up. Slower pay trends are very much in evidence. More checks are bouncing. Repossessions in some lines are the worst in 10 years.

Consumer credit at the end of 1954 had reached a record high of \$30.1 billion, up 2 percent from the record high of the previous year.

Economists, of course, disagree on where the credit saturation point is for our economy. But this much is certain: As long as the present trends continue businessmen will be forced by the pressure of competition to ease credit terms.

The administration has been trying the old trickle-down theory, giving tax reductions to the favored few on the theory that investments would be increased in productive facilities at a time when we are not using our present productive facilities to capacity.

What is needed to put the economic machine on the tracks is more purchasing power. A \$20 tax reduction for everybody will be a step in the right direction.

TALK ABOUT IRRESPONSIBILITY

Reporting on the President's press conference Wednesday, the Associated Press said in connection with the President's remarks about a \$20 tax reduction.

"Speaking with marked show of irritation, Eisenhower said that when anyone talks about cutting Federal revenue when spending is greater than income, then we are reaching some kind of a height in fiscal irresponsibility."

In 1954, the Eisenhower administration

added \$3.1 billion to the national debt. It spent that much more than it took in.

But in 1954 the Congress of the United States with the approval of President Eisenhower did the following things:

1. Allowed the excess-profits tax to expire, costing the Government more than \$2 billion.

2. Passed a tax bill that gave special tax exemption to the 6 percent of the American people who receive income from stock dividends.

3. Renewed a 27½-percent exemption on the gross income of oil drillers as a so-called depletion allowance.

4. Gave corporations depreciation write-offs in the new tax law which, according to the New York Times, will cost the Government \$1 billion in taxes this year.

5. Handed out millions in other tax reductions to corporations and the wealthy.

All this was done in a year when spending was greater than revenue. But now, when it is proposed to give a tax reduction of a piddling \$20 to the average guy, it becomes the height in fiscal irresponsibility.

We suggest that the President is demonstrating something that might be called the height of political irresponsibility by his remark at the press conference.

Political Handout

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. WIGGLESWORTH. Mr. Speaker, in his farewell address, President Washington warned against the danger of excessive party politics under our form of Government.

There being constant danger of excess—

He said—

the effort ought to be, by force of public opinion, to mitigate and assuage it.

A fire not to be quenched, it demands a uniform vigilance to prevent it bursting into a flame, lest instead of warming, it should consume.

In this connection, I call attention to the editorial printed in the New York Times of February 24, 1955, inserted in the CONGRESSIONAL RECORD of that date at page 1707 by the gentleman from Illinois [Mr. SPRINGER], entitled "Political Handout."

In this connection, also, under leave to extend my remarks, I insert the following editorials:

[From the New York Times of February 23, 1955]

THE TAX HANDOUT

By the narrow margin of five votes Democratic proponents of the \$20-a-head tax handout succeeded yesterday in the House of Representatives in tacking this flagrantly political proposal onto an administration measure calling for the continuation of present excise and corporation taxes. By a wider and less partisan margin this hybrid bill—half of it destroying what the other half is intended to do—was then approved by the House and sent to the Senate.

It is to the Senate, therefore, that we must now look for enough political courage to defeat a project which would increase the Federal deficit, bring new inflationary pressures to bear on the economic situation

and relieve many thousands of present taxpayers from making any direct contribution whatever toward the support of their National Government. Politics had its heyday yesterday on Capital Hill.

[From the New York Herald Tribune of February 26, 1955]

RAID ON THE TREASURY

The House Democrats advanced to their raid on the Treasury yesterday with a discipline and unity which they seldom display in worthier causes. The Republicans, fortunately for their own credit, showed a similar solidarity, but failed by a hair's breadth to muster enough votes to protect the public purse. Now the issue goes to the Senate, whose Democratic members may be able to take a longer view of their responsibilities.

The strict party line-up in the narrow victory of the \$20 tax cut is illuminating. If the measure, in itself, had elements really favorable to the national welfare or even if it seemed that a sizable fraction of the electorate would be fooled by it, the party lines could hardly have been drawn so sharply. There would have been a more vital defense in debate, a greater tendency to split ranks. Tax cuts are usually hard for Representatives to resist, no matter which party sponsors them. On this occasion, however, only 5 Republicans went over to the other side, while 16 Democrats found the measure too much for their party loyalty. The partisan, vote-getting aspect of the scheme was too apparent.

It is to be hoped that the Senate Democrats will realize the folly which the House majority has perpetrated. If not, the voters certainly will be able to do so. The American people are not unused to legislators who try to win votes by a crude kind of appeal to the pocketbook. But the callous Democratic appraisal of the voter's intelligence and integrity as being worth \$20 a head—payable by the voter himself, in one way or another—should neither be forgotten nor forgiven.

[From the Washington Star of February 26, 1955]

FIELD DAY FOR POLITICS

On a day during which a majority of the House could hardly have looked less like responsible legislators deserving a \$7,500 pay boost, the Virginia delegation acquitted itself with distinction. Seven of the eight Virginia Democrats in the House voted, on the key test, against the transparently political Democratic proposal to give \$20 in the form of a tax cut to every man, woman, and child in the country. In the end, the House approved the proposed tax cut, but if only 3 of the 205 Democrats who voted against the motion to recommit the proposal had joined the Virginia Democrats the scheme would have been defeated.

This tax-cutting device is a thoroughly bad and reckless project. Its political coloration is clearly revealed by the fact that the Democrats tied it to legislation requested by the President to postpone excise and corporate tax reductions scheduled to take effect on March 31. The effect of this is to put the President in a position where he cannot veto the \$20 tax reduction, which will cost the Government \$2,100 million in its first full year, without also vetoing the extension of the corporate and excise taxes, which would cost the Government \$2,800 million. In other words, a veto would produce a net loss to the Government of \$700 million, and this, of course, is why the Democrats tied the two together.

It has also been claimed that the Democrats, in putting through the \$20 tax cut now, are merely doing what the President indicated he would do next year. This is not accurate. What the President said in his state of the Union message was that he was hopeful that further tax cuts can be made

next year, and that they will "be possible when justified by lower expenditures and by (other) revenue increases." Thus, the President's expressed hope was subject to two qualifications. The \$20 Democratic project, on the other hand, is subject to no qualification, and, if finally enacted, will become effective next year regardless of what the Government's fiscal condition may be at that time.

It is this which makes it such an irresponsible political maneuver, and it is this which argues so persuasively for a Senate reversal.

[From the Washington Star of February 27, 1955]

DEMOCRATS HELD GUILTY OF SHABBY POLITICS (By Frank R. Kent)

Not infrequently the smartest of our politicians outsmart themselves. There are many examples of this. The most recent seems to have been given by the Democrats in and out of Congress in the unrestrained violence and practical unanimity with which they have lined up against the so-called Dixon-Yates contract. Even now when there is plain evidence that they have badly overdone their attack, the Democratic politicians still continue to kick this issue around with unabated ferocity.

At the moment, prospects are that the contract, with the President's unwavering support, will be ratified by the Congress and the loud threats of taking it to court coming from the more garrulous of the demagogues will not materialize. One reason for this is that the opinion is practically unanimous that the courts would completely uphold the legality of the contract. This, however, does not diminish the stream of demagogic oratory still being loosed at the administration on this subject. Nevertheless, it is true that some of the more cautious Democrats are beginning to realize that the completeness with which their so-called leaders have made this a party question in the end is likely to leave them in an untenable, not to say ridiculous, position.

It does seem that the facts have begun to catch up with them. Most of the important newspapers in the country are supporting the President's position and no first-class economist, outside the labor field, has taken a stand against him. Nor have the Democrats supported their charges that the contract is a sinister plot in the interests of private power companies; that it is evil in its conception, economically unsound, wasteful of the people's money, and worst of all, a diabolical plot to destroy the more or less sacred Tennessee Valley Authority.

No evidence that stands up under scrutiny to support any of these dreadful allegations has been presented. Both the Atomic Energy Commission and the Securities Exchange Commission have indorsed it. The idea that it will interfere with the AEC's military work is regarded as utterly fantastic. Altogether, the Democrats are playing a particularly shabby kind of politics on this issue. Except for the Democratic politicians (particularly those from Tennessee) there would be no controversy at all over this contract and the notion that they can "keep it alive for years" is absurd. For the predicament in which they now find themselves they can thank the recently retired Democratic chairman, Stephen Mitchell, whose mistakes his successor, Chairman Paul Butler, seems determined to continue.

Another untenable position the House Democratic leadership has taken and which seems entirely dictated by politics is in their demand for a \$20 income-tax reduction for everybody at this session. The unbalanced state of the budget, the great increase in defense expenditures and the increasing size of our unprecedented national debt make any proposal to lower taxes this year seem indefensible and unsound. None but the professional labor economists and the Demo-

cratic politicians advocate it. Obviously, the purpose of the latter is to head off the tax reduction which the President hopes to make next year. To do this they are willing to reduce Federal revenue this year by several billion dollars, thus vastly adding to fiscal difficulties not only for this year but next.

The House already has put through this \$20 decrease, but it is exceedingly unlikely to pass the Senate. Not only will the administration oppose it, but such powerful Democratic Senators as BYRD, of Virginia, GEORGE, of Georgia, and others already have declared their opposition. In addition, there seems little more public demand for this \$20 tax reduction than there is popular hostility toward the Dixon-Yates proposal.

Soon or late, when the showdown comes on these two issues the belief is that the President personally will lay the facts before the American people. And when he does there will be no convincing answer to him because the facts are all in his favor and in both cases the causes he advocates are clean and sound. It is not tribute to the intelligence of the Democratic leadership that it should have permitted itself to get so far out on this exceedingly precarious limb. They can't possibly substantiate their position either as to Dixon-Yates or tax reduction. Their contentions constitute the worst exhibition of demagoguery seen here for a long time.

The New York State Maritime College

EXTENSION OF REMARKS

OF

HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. DORN of New York. Mr. Speaker, I bring to the attention of the House the following resolution from the legislature of the State of New York, introduced by Assemblyman Joseph R. Younglove, asking that the present appropriation for the State Maritime College be continued:

RESOLUTION MEMORIALIZING THE PRESIDENT AND THE CONGRESS OF THE UNITED STATES TO CONTINUE THEIR PRESENT APPROPRIATION FOR THE STATE MARITIME COLLEGE

Whereas the New York State Maritime College has been of inestimable value to our national defense and to our educational system; and

Whereas it is the oldest nautical school in the United States and since 1946 has been a degree-granting college; and

Whereas the ever present emergency which seems to continue from year to year requires the type of training offered by our State Maritime College; and

Whereas the national educational program requires an expansion of educational opportunity as offered by the New York State Maritime College; and

Whereas the many illustrious alumni of this college provide convincing proof of its value in our educational program: Now, therefore, be it

Resolved (if the senate concur), That the President and the Congress of the United States be respectfully memorialized to continue their present appropriations for State Maritime Colleges; and be it further

Resolved (if the senate concur), That copies of this resolution be transmitted to the President of the United States and the Secretary of the Senate of the United States and the Clerk of the House of Representatives and to Members of Congress elected from New York State, urging them to devote their efforts to accomplish the purposes of this resolution.

Appendix

Career Planning in a Changing World

EXTENSION OF REMARKS

OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. BEAMER. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the following speech delivered by Mr. Millard Cass, Deputy Under Secretary of Labor, at the College of William and Mary:

ADDRESS BY MILLARD CASS, DEPUTY UNDER SECRETARY OF LABOR, AT THE COLLEGE AND CAREER DAY PROGRAM, COLLEGE OF WILLIAM AND MARY, WILLIAMSBURG, VA., FEBRUARY 24, 1955

CAREER PLANNING IN A CHANGING WORLD

That the world is changing is a truism too obvious to require proof. Even in the lifetimes of those now in college, we have developed guided missiles, jet propulsion, atomic energy, television, electronic computers, radar, tubeless tires, antibiotics, numerous alloys and plastics, and countless other products.

Back in 1937 the only commercial transportation from here to Europe was by boat. This required 4 days on the *Normandie*, which was then the world's fastest ship. Today, planes regularly fly the Atlantic in approximately 12 hours.

It was 1930 before we had a telescope that was able to locate the planet Pluto, which comes within 2 3/4 billion miles of the earth. Now the 200-inch telescope at Mount Palomar Observatory captures from stars light which has been on its way to the earth for 2 billion years and has traveled at the rate of 6 trillion miles a year all that time. The distance of such stars from the earth runs into literally astronomical figures.

Change and progress are not, of course, new to the American scene. The difference between the technological advances of this generation and those which preceded us is basically in the rate, degree, and intensity of the progress.

You men and women now in college may, therefore, wonder in planning about the future. You may ask whether skills acquired today will be obsolete before they are perfected through experience. You may even feel that career planning in this changing world is futile. I do not blame you for being puzzled, but there is no need to be apprehensive.

Each generation of Americans has thrilled to the promise of new inventions. Some workers in each generation have viewed with fear, however, the effect which new industrial developments would have on their own opportunities for employment. Such fears—then and now—cannot be discounted. Industrial progress has oftentimes involved displacement of some workers. Always, however, it has required the employment of others in the new processes. Many basic inventions which at the time appeared to reduce job opportunities in fact opened vast new fields of employment. This was true of the invention of the steam engine by Oliver Evans in 1755, the steam locomotive of John

Stevens in 1825, the Duryea Brothers' automobile of 1896, and the Wright Brothers' airplane in 1903.

It is up to us to be aware of the economic problems which arise from industrial progress and to render help whenever possible to those who are displaced by technological advances. It is up to those planning their careers to plan with a view to meeting the changing demands of a changing world.

The number of jobs available to our people has constantly increased through the years. Labor-saving devices have reduced our work but not our work opportunities. They have made it possible to reduce the workweek and lengthen vacations, thereby increasing our leisure time, improving our health, and expanding our cultural and educational activities. The marvelous inventiveness of the American people has thus helped rather than hindered our forward progress. Our ever-rising standard of living is based upon the industrial development of our Nation and the skill, ingenuity, and industry of our people.

There are some who have seen in the development of atomic energy cause for great fear. Like any other powerful force, atomic energy can be used to create or to destroy, to promote progress or to devour things we hold dear. Fire, gunpowder, dynamite, and electricity all share with atomic energy the power to make life more pleasant and fruitful or to destroy persons and property.

There is no more need for our generation to be paralyzed by the fear of a mushroom cloud than there was for prehistoric man to quake at the sight of fire, for the people of the Middle Ages to recoil at the threat of gunpowder, or for our own grandfathers to be petrified by the development of electric power or shaken by the explosion of dynamite.

Fire, gunpowder, dynamite, and electricity have all brought more blessings than sorrow to mankind. I am confident that this great new development of our generation will also, in the years ahead, become a benefactor of man and a servant of the human race. Already we have started to reap rich dividends from atomic research in the fields of medicine and agriculture, and have taken the first steps toward commercial production of electrical energy by atomic power.

I am convinced that we shall meet successfully the dilemma which nuclear fission has posed. We shall be able, through the peaceful uses of atomic energy, to bequeath to our children a better world than that we received from our parents.

As President Eisenhower said in his magnificent address to the General Assembly of the United Nations on December 8, 1953, we are determined "to find the way by which the miraculous inventiveness of man shall not be dedicated to his death, but consecrated to his life."

Underlying all other economic and social change in the United States is the rapid growth of our population. Nearly 4 million children were born each year between 1948 and 1953. Last year, the number exceeded 4 million for the first time in our history. As a result, demographic experts predict that our population will increase to between 200 and 220 million by 1975. This increase in population will stimulate the economy by creating growing markets.

Men and women now in college will be about in the middle of their working lives in 1975. At that time, the labor force of

the United States will be over 88 million, according to the Bureau of the Census—20 million more than now. We will need one-third more jobs for a work force of that size.

Of course, not every industry or every occupation will increase employment by one-third. For a second significant trend in our economy is the shift in manpower requirements as between certain industries. This shift has brought about a substantial realignment in recent years in the employment opportunities in the various sectors of our economy. Some industries, such as agriculture and mining, have been declining in employment for some years. Other industries, such as railroads and textiles, have been remaining relatively stable. The Department of Labor's occupational outlook studies suggest that some of the other basic industries, such as steel, electric power, and automobiles, may expect only moderate increases in employment over the next two decades.

Greater than one-third expansions will therefore have to take place in other segments of the economy—for example, such rapidly growing industries as chemicals and electronics manufacturing, health services, and educational services. We may need a half-million more teachers in the next 10 years to take care of a 50-percent increase in school enrollments.

The industrial trend in the years ahead, then, is definitely toward an increasing proportion of employment in services and a decreasing proportion in the goods-producing industries.

A third underlying trend in our economy is increasing productivity. Changing technology increases productivity and affects employment opportunities, as well as the whole social and economic framework of the changing world.

Output per man-hour in the economy as a whole has grown by about 2 percent compounded annually over the long run, and some studies indicate even more rapid growth in recent years. The heavy expenditures on factory construction and new equipment over the last 8 or 10 years have had a substantial effect on increased productivity. So has the increase in the number and percentage of our workers who are skilled.

The dramatic impact of technological advances upon our entire way of life can be illustrated with the important effects of a few products developed in the last 20 years, such as nylon, plastics, frozen foods, television, and antibiotics, which have already become taken for granted as a part of our daily lives, and atomic energy.

On the horizon we can see the beginnings of a few new developments which may have the same far-reaching effects in the next 20 years, such as solar energy, the gas-turbine engine, automation, and electronic computers.

We must assume that in the future technological development will proceed at an accelerated pace because the number of scientists and engineers in the United States is growing rapidly. In the 1930's, when the basic research was done which later gave rise to nylon, television, atomic energy, and antibiotics, there were less than one-quarter of a million engineers in the United States. There are now over half a million. The number of scientists has grown equally rapidly. Taking engineers and scientists together, we now have between three-quarters

of a million and one million people engaged in pushing back the frontiers of knowledge in the natural sciences and converting this new knowledge into practical use in industry, medicine, military applications, and our daily lives. There is every reason to think, therefore, that the fruits of their labor, which we will reap 20 years from now, will be even more impressive than the gains over the past two decades.

A fourth major underlying trend, and one that results directly from increasing productivity, is a vast and very widespread increase in consumer purchasing power. It is safe to predict that the American people will continue a steady gain in purchasing power out of an increasingly productive economy as long as there is no all-out war. This means, of course, a higher standard of living in terms of housing, leisure, vacations, labor-saving devices, education, and health services.

A fifth aspect of our changing world is the growing importance of international events to us in the United States. Our position of leadership in the free world provides us with a challenge and a responsibility. Today's college students will have to strive toward a greater understanding of the people of other countries so that, as thinking citizens of the United States, they can help our country exercise its leadership effectively.

What are the implications of all of these developments for you who are attending college today?

In the first place, the rapid changes of the past and the prospect of even greater ones in the future suggest that no individual can count upon making a career in one occupation or working for one employer his whole life. He must strive to maintain flexibility. Our studies of occupational mobility have shown that in every field there is a great degree of mobility into and out of the occupation, from one employer or industry to another, and from one part of the country to another.

To a person in college, getting a broad educational background is extremely helpful. It makes possible greater flexibility in the years ahead and increased mobility. Many of you are now struggling with subjects which seem at first glance to be quite remote from your chosen field of endeavor. You may wonder why a foreign language is important or what you are going to do with the mathematics or English which you are required to study. I think when you graduate and start to work, you will find that practically every subject you studied in your college career is of real use to you.

In order to progress in the world, to earn a good living and to find satisfaction from his work, a person must be qualified to accept the many and varied employment opportunities which come his way in the course of a lifetime. Now is the time when you must acquire the basic tools and the fundamental knowledge necessary to adapt yourselves to changing jobs in this changing world.

Even in professions like law and medicine, changes are constantly taking place and a broad background of education and training is essential in order to keep up with new developments. For example, commercial air transportation has opened to lawyers the new and specialized field of aviation law. The same is true of atomic energy, which has brought in its wake legal problems far different from those we have faced before. This is also the case in medicine, where new drugs and new methods of treatment require constant changes in techniques. New medical problems have been posed by radiation and, on the other hand, we hope to find new cures for old ailments through atomic research.

In addition to the need to be informed of international affairs so as to discharge your responsibilities as citizens, you should be interested in them in connection with your career planning. The number of jobs in all phases of international work has increased tremendously in the past 15 years and will continue to grow. These positions are in a number of Government agencies engaged in international affairs and technical assistance programs. They are also available in industrial firms having export business or overseas operations, as well as tourist and travel businesses.

The increased opportunities in the international field may confront many of you now in college with attractive job opportunities for which you can qualify if you have, for example, taken seriously your study of foreign languages. Thus, a subject which now seems to have no practical value may pay great dividends in the years ahead.

Many economists, statisticians, chemists, and physicists have found in later years that it is as important to be able to write a good letter as it is to know the technical tools of one's specialty. The English compositions which may seem like drudgery in college may, in fact, lay the groundwork for a good impression upon some business associate in later life. Too many of us forget that a large majority of the people with whom we deal may judge us by the letters they receive from us or the articles we write.

Just 2 months ago, the national manpower council at Columbia University released its study of a Policy for Skilled Manpower. This report points out that the nuclear age will not eliminate the need for skilled workers. Quite to the contrary. The more highly complex and automatic the machinery of production and daily living becomes, the more skilled technicians are required to produce, operate, and service this machinery.

The skilled worker will have to have a broad base of training and experience to meet the changing and increasingly complex problems he will face. As the research staff of the national manpower council found: "Automatic machines will require highly skilled maintenance and repair men. Atomic generators will require maintenance men who are more skilled than at present. Many of today's electricians will have to learn electronics if they are to retain their skilled status. Pipefitters may have to learn hydraulics. A skilled worker who formerly measured with calipers and now uses a micrometer will soon have to learn to work to tolerances measured with light waves." This is just as true in the professional and scientific field.

The college graduate of tomorrow will find, as so many of us have already found, that learning is a continuing process. The truth of the matter is that the college degree you will earn does not certify that you have learned anything of great moment in the business world. A college degree just certifies that you are ready to begin learning how to use to practical advantage the theoretical training you have already acquired. This truth does not confront only the college graduate. I have heard skilled craftsmen, who served an apprenticeship and worked as journeymen in their trades, state that they were only then beginning to acquire the well-rounded skill that permitted them to be justly proud of their ability.

All of use, whether we are in the skilled trades, in a professional field, or in the world of business or finance, continue to learn throughout our working lives by study and by experience. We must keep up with the changing developments, new tools, novel problems, and modern techniques in our vocations.

These facts emphasize the importance of a broad educational background which can

provide a foundation for future learning and facilitate the acquisition of knowledge throughout one's working life. This changing picture has prompted Secretary of Labor James P. Mitchell to give a new direction and increased impetus to the training activities of the United States Department of Labor.

As Secretary Mitchell has said: "For the training of our workers we use many sources—schools and colleges, vocational education, apprenticeship, the Armed Forces, and the on-the-job training courses of industry. We must reexamine all of these with a view to determining whether the methods they employ and the skills they teach are keeping pace with the temper of our times and the requirements of our economy. We must constantly reevaluate our training programs to determine whether we are training enough of the people we need in the skills we require."

Security is one of a number of factors worth considering in choosing a vocation. It is not the only or even the main factor, however. Yet, in the past 20 or 30 years there has been a growing emphasis on job security. People are deeply interested in protection against depressions. Security in this sense of permanence is not always consistent with opportunity. Relatively secure jobs, such as those in public utilities, retail establishments, or in the local, State, or Federal Governments, do not always offer the greatest opportunity to advance, the greatest earnings, or the greatest job satisfaction.

The United States is dedicated to the maintenance of a high level of employment and business activity. We believe that we have learned a few things about how to forestall serious depressions, and that we have developed mechanisms and programs to cushion our economy against economic declines, and to stimulate business when an incipient downward trend is spotted. We have come so far along the road of economic stability that all of us can appropriately face the future with confidence. The strength of our economy was fully demonstrated in the economic downturn of 1949-50 and in the decline through the first half of 1954.

I certainly would not advise any persons planning their careers today to choose their path upon the basis of economic fears or a depression psychology. Those whose main interest in choosing a career is security may find that they are paying a very high premium for insurance against something that is not very likely to happen.

You here at William and Mary are to be commended for holding a Career Day. This occasion provides an opportunity for you to give attention to job openings that might presently be available, and also to give thought to the broader aspects of career planning. I hope that today's program has been of both immediate and long-range assistance to all of you. But to get real returns from this program, you must follow-up; you must continue to think about and plan your careers, and to use the counseling facilities of your college.

In closing, I should note that by your presence here at this fine college you have already shown that you have a real interest in career planning. Merely by attending college, you are taking effective steps to prepare yourselves to meet the challenge of the world of tomorrow. Through your studies, extracurricular activities and social contacts, you are equipping yourselves to face the problems of this troubled world.

In you, and millions like you, studying in colleges, secondary schools, vocational schools and through apprenticeship and on-the-job training of industry, is the hope of our Nation.

The Wall Street Journal Shoots From the Hip and Misses

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, there are two ways of doing things—the right way and the wrong way. No more striking example of these two ways of doing things has come to my attention for a long time than the handling of the same set of facts by the New York Herald Tribune of February 24, 1955, and the Wall Street Journal of the same date. Both papers were reporting on the hearings held by the subcommittee of the House District of Columbia Committee on legislation cosponsored by 12 of my colleagues and myself to create a Federal commission to formulate plans for the construction in the District of Columbia of a civic auditorium, including an Inaugural Hall of Presidents and a music, drama, fine arts, and mass communications center.

One of the witnesses who appeared and testified in support of these bills was Robert W. Dowling, president of the City Investment Co., of New York, and president, also, of the congressionally chartered American National Theatre and Academy. The same day Mr. Dowling appeared before the subcommittee he repeated an offer he had made a few years ago to President Harry S. Truman to raise through private subscription from businessmen, foundations, and wealthy individuals whatever sums were necessary to build the kind of cultural center envisioned in these 14 bills. The New York Herald Tribune, the Washington Post and Times Herald, and the Washington Evening Star handled this story the right way. The Wall Street Journal handled the story the wrong way. I include the following material for the information of my colleagues who will undoubtedly have this legislation before them shortly for decision:

[From New York Herald Tribune of February 24, 1955]

PLAN FOR FINE ARTS CENTER IN WASHINGTON IS REVEALED

WASHINGTON, February 23.—A group of New York art patrons stands ready to underwrite the entire cost of a national fine-arts center in Washington. Representative ADAM C. POWELL, Jr., Democrat, New York, said today. Such a center, long proposed, would cost from \$15 to \$20 million.

Representative POWELL made his statement while testifying before a House District of Columbia subcommittee studying a bill to establish a commission which would plan such a center and a civic auditorium.

"I can state positively," Representative POWELL said, "that a group associated with the arts for many years and spearheaded by one of the biggest investment corporations will completely finance the project without one cent of expense to the United States."

The group would want from Congress only Federal land to build on, Representative POWELL continued, and indicated the probable site would be near the Smithsonian In-

stitution on the wide Mall which leads from the Capitol to the Washington Monument.

DOWLING HEADS GROUP

Representative JAMES H. MORRISON, Democrat, Louisiana, chairman of the subcommittee later said the head of the group, Representative POWELL, was talking about, is Robert W. Dowling, president of the City Investment Co. in New York, who also is board chairman of the American National Theater Academy, a private group promoting the American theater.

Representative MORRISON said Mr. Dowling had told him there was an excellent possibility that funds could be raised by private subscription to build a cultural center here second to none in the world.

NOT YET ORGANIZED

In New York last night, Mr. Dowling described the phrase "excellent possibility" attributed to him by Representative MORRISON as describing the situation accurately. He said the matter has been discussed by a number of groups, but that no organization has been formed nor any steps started toward raising the funds for the project.

[From the Wall Street Journal of February 24, 1955]

CULTURE BY DECREE

Like many other people in this country, we're all for culture. But like many others, we're not for all-out culture. We think people ought to be free to take it or leave it.

So we don't like the idea of the Government getting into the business of building theaters and cultural centers as proposed recently to a congressional committee. Some officials of the American National Theatre and Academy suggested that Congress pass a bill which would set up a District of Columbia Auditorium Commission, which in turn would plan construction of a civic auditorium including an inaugural hall of Presidents and a music, fine arts, and mass communications center in the Nation's Capital.

The ANTA says that the center is necessary because of the State Department's cultural exchange program; France, for instance, has placed at United States disposal five Government national theaters there for painting exhibits and for performances of the Philadelphia Orchestra and Oklahoma. We think that's fine; it will doubtless do us more good for Europeans to see some American folklore and hear music by Americans than some of our other efforts to make friends there have been able to accomplish.

The trouble is, ANTA says, that while everything's up to date in Paris, France, the same isn't true of Kansas City or New York or Washington. There just aren't five Government theaters where visiting troupes or art collections from abroad can be housed to reciprocate in the exchange of culture. There isn't even one.

Well, we think that state of affairs is sound. For one thing, we doubt if there is such a lack of private space as ANTA says; a couple of years ago the Austrian exhibit packed the crowds into the art gallery the Mellons built in Washington. For another, you can't get culture by decree any more than the Treasury can get taxes by osmosis. For still another, why should taxpayers in San Antonio or Seattle or Sarasota be forced to contribute to a National Theater in Washington or New York which they may never have the chance to see? It would make as much sense to pass a law saying that every collector of old masters must scatter some surrealism about the walls.

There's even a better reason in our view why this proposal should be voted down. Art has languished and the theater has been prostituted everywhere exactly to the extent of Government interference and control.

Though he didn't mean it that way, what we mean was put very well by President Derwent of ANTA when he told the House District of Columbia Committee:

"Only in America do we lag behind in the establishment of a National Theater. We need to counteract efforts of Russia—the Russians use their arts in propaganda."

Exactly.

FEBRUARY 26, 1955.

Mr. WILLIAM H. GRIMES,

Editor, the Wall Street Journal,

New York, N. Y.

DEAR MR. GRIMES: I am very interested in the editorial "Culture by Decree" which appeared in your publication on Thursday, February 24, particularly because it was inaccurate in several respects.

As you know, I am 1 of the 13 House Members who introduced bills creating a Federal commission to formulate plans for the construction in the District of Columbia of a civic auditorium, including an Inaugural Hall of Presidents and a music, drama, fine arts, and mass communications center. All of these bills provide that the proposed commission shall "endeavor particularly to formulate a method of financing the project on a self-liquidating basis."

The Nation's Capital is particularly disadvantaged and underprivileged in cultural matters in comparison with other world capital cities and many cities in our own country, we are told by competent observers who cannot be accused of making political hay or of trying for partisan advantage. In his message on the state of the Union last month the President declared that—

"In the advancement of the various activities which will make our civilization endure and flourish, the Federal Government should do more to give official recognition to the importance of the arts and other cultural activities."

An appropriation of only \$25,000 is called for in these bills which are sponsored by members of both parties on a strictly bipartisan basis. If your Washington representative had attended the hearings, or if you had taken the trouble to read the New York Herald Tribune of February 24, page 9, to check the facts, you would see that Robert W. Dowling, president of the American National Theater and Academy and the City Investment Co., who testified in support of these bills, repeated an offer he had made to President Truman to raise through private subscription from businessmen, foundations, and wealthy individuals whatever sums were necessary to build the cultural center envisioned in these bills. I would hope, also, that every American, when Mr. Dowling begins his fund-raising campaign, will be given the opportunity to contribute any amount he wishes toward building a great cultural center in Washington which will make the Federal city the Paris of America. Money is raised for the Metropolitan Opera Co. and the Philharmonic-Symphony Orchestra of New York on a national basis and the advancement of the cultural status of our National Capital is a challenge to the loyalty and patriotic love of country which is present in each and every one of us.

As you know, the Congress insists on depriving Washingtonians of the vote and in serving as the city council of Washington—a role it has jealously maintained since the 1870's. The citizens of Washington pay nearly \$170 million, more than is paid by a good many States, in Federal taxes each year. Yet they are deprived of all voice or representation in local or National Government, and the District's Commissioners are appointed by the President. Washington can't build a sewer, collect garbage, or put a dog in the pound without the consent of Congress. Washingtonians would like to

abolish segregation in their Fire Department and there is much discussion of this at the present time with Congress insisting that segregation be maintained. Forty percent of Washington's real estate is reserved for Federal purposes which effectively removes it from the tax rolls. The Government started out with a 50-50 division of costs of running the Federal City but has reduced its contribution over the years until now it is about 15 percent. No other American city is treated like this by private business located within the city's limits. Our forefathers threw the tea in Boston Harbor and went to war when King George III insisted on taxation without representation.

I have been told that the Federal contribution to the civic center at Columbus Circle in New York City was about \$6,500,000. American tax dollars have been used to rebuild opera and music buildings in Europe (see the testimony of the CIO which was inserted in the CONGRESSIONAL RECORD of Feb. 10, pp. A793-A794, by Representative LEE METCALF). Why can't similar funds be spent at home on cultural programs in San Antonio, Seattle, Sarasota, the cities you mention, as well as Cleveland, Trenton, New York, Washington, and other cities and towns across our land? Surely, more money should be spent in each State and in each community on the advancement of the various activities which make our civilization endure and flourish, for, as you may know, all of our cultural programs are finding it increasingly difficult to continue in the face of constantly rising costs.

In my statement on behalf of my bill, H. R. 4215, I said in part: In view of the many roadblocks which have defeated all efforts of earlier Congresses to enact legislation similar to the bills which you are considering here today, it is my considered opinion that it is very important to make a thorough and detailed study of American subsidy, direct or indirect, of foreign art programs and cultural centers. This information should be available through the Department of State and the Foreign Operations Administration. I hope, Mr. Chairman, that you will request this information and include it in the hearing record of your subcommittee. I believe that this information is essential to a general, public understanding of the issues involved in this legislation and to the advancement of these excellent bills in the Congress.

Copies of my bills, H. R. 4215, H. R. 4307, and H. R. 2210 (H. R. 4215 being considered), together with my statement before the subcommittee, are enclosed for the information of your readers and yourself. I hope you will do me the courtesy of carrying this material in order to correct the picture you presented. Dare we hope that once you have established your branch office in Washington the accuracy of your reporting will improve?

Cordially,

FRANK THOMPSON, JR.,
Member of Congress.

THE WALL STREET JOURNAL,
New York, N. Y., February 23, 1955.
Hon. FRANK THOMPSON, JR.,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN THOMPSON: Thank you very much for taking the trouble to write us such a long letter about our editorial, Culture by Decree, and explaining to us your own views on the matter.

I note that you are interested in having the funds for this national theater raised by popular subscription or otherwise financed by private means. The Wall Street Journal would certainly not oppose a national theater financed on this basis and if our editorial gave any such impression, I am very sorry. What we questioned—and what we continue to question—would be the idea of having such a theater paid for out of Federal funds. Our view may be wrong, of

course, but it is our opinion that a government ought not to take money from all the taxpayers and use it to subsidize individual cultural affairs.

You mention some cases where it has been done and can only note that we were opposed to it in those cases also. Specifically, we wrote an editorial opposing the use of Federal funds for the proposed civic center in New York City.

I hope this position does not make you think I am opposed to cultural activities. I personally contribute to both the Metropolitan Opera Guild and the Philharmonic Society and believe that this is the way for Americans to pay for their cultural activities.

You say you hope that the accuracy of our reporting will improve. I do not see from reading over the editorial again where our reporting was in error, although, of course, our opinions might be, but I am sure you will do us the courtesy of not denying us the right to a different opinion.

Sincerely yours,

VERMONT ROYSTER,
Senior Associate Editor.

The Canner in a Consumption Economy

EXTENSION OF REMARKS

OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. BEAMER. Mr. Speaker, the canning industry as a part of the food industry represents the largest and the most vital part of our economy. It is for this reason that, under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD a copy of the address by Ralph O. Paine, Jr., publisher, Fortune Magazine, New York, at the general session of the National Canners Association's convention at Chicago on Saturday morning, February 19, 1955.

The address follows:

THE CANNER IN A CONSUMPTION ECONOMY

It is a very high honor indeed you have conferred by asking me to appear on this program. There seems to be no argument whatever that the annual convention of the National Canners Association is the largest business convention in America. And that is saying quite a lot.

In addition to the honor of participating in this biggest of conventions, there is the very special honor of appearing on the same program with the Secretary of the Treasury. What I really mean is this particular Secretary, not just any Secretary of the Treasury. I don't think it will haunt him if I say that he is the best Secretary of the Treasury in the 25 years of Fortune's history.

Of course I know why I am here; I'm here to get out of the way as gracefully as possible so you can hear what Mr. Humphrey has to say. I feel the same way. So, without wasting any more of your time, I will tender a few observations on the food industry which, in all its manifestations, is by far the largest industry in the country. And the food industry in the United States since the war has confounded both the laws and the prophets.

If I talk more about the food market in general than about the canning industry in particular, it is because I know a little more about food than canning, which of course isn't saying much. Some of my associates, however, have studied this phenomenon in

some detail and are still following it closely because food has played such an important role in this rapidly changing American market.

And the first big point about the food market, as you know, is that, contrary to all historical experience, the American people have increased the proportion of their income spent on food at the same time that their total disposable income was rising, and rising rapidly. How extraordinary this is can be seen when you realize that there was a well-recognized economic formulation to the opposite effect: Engel's law said that the higher a family's income, the smaller the percentage allocated for food. The corollary to Engel's law, namely that the smaller the percentage of national income spent on food, the more advanced the Nation, that went out the window, too. In 1941 Americans were spending 24 percent of their cash income for food. At one point right after the war the figure reached 30 percent for some pretty special reasons which you all recall, but by 1953 it had stabilized at 27 percent. And 3 percentage points applied to total consumer cash income at recent rates is roughly \$7 billion dollars, which is the equivalent of a pretty good sized industry in itself.

Let me emphasize that this \$7 billion more or less is in addition to the tremendous expansion which would have occurred if the food industry had simply maintained its relative market position. Rising consumer income would have guaranteed a great shift to better and higher priced foods; it would also have guaranteed a vast expansion in the convenience market.

Now, we all know, Americans still only eat approximately three-quarters of a ton of food per year. They eat better food and they are eager to pay for service, preparation, processing, built-in cooking, heat and serve, thaw and heat, add water, add milk and bake, and what have you. But how did you get them to spend the \$7 billion more?

This is unquestionably the outstanding selling job of postwar America. And by selling I use Fortune's definition of salesmanship: "Everything that contributes to the salability of a product from the time it is conceived until it is finally used up or worn out."

Apparently the food industry was the first to sense the profound changes that were occurring in American society, and the first to do something about it. You were there with new products, better products, products better designed for the servient society, the growing middle-income market, for the suburban market, for the baby boom, for the working-wife market, even for the all-pervasive barbecue market. And it cannot be contradicted that you sold superbly, for the food industry was taking its rising share of the market, from the clothing industry, from the home-goods industry, and from the automobile industry. A really tremendous achievement.

But what do you do now? The food industry was in there first after the war but other industries are beginning to catch on to this changing American market.

There are some indications that the terrific drive for automobile sales in 1955 may be at the expense of food. The clothing industry is also out in force to regain some of the ground it lost to food. What is the food industry going to do about it?

Before even suggesting an answer, I think it might be profitable to review a few underlying factors which strongly favor the food industry. They are all familiar to you but they are worth recalling for this discussion.

1. The upward trend in the rate of population growth is irreversible for another generation. This works in favor of the food industry, day after day, week after week, year after year. No other industry is such a sure beneficiary of population growth as food. And the birthrate has been so high

for so long that even if it dropped off unpredictably—and there is no reason to suppose it will—another upward surge will certainly occur when all the war and postwar babies start having babies of their own. A United States population of 200 million or more within 20 years seems inevitable.

Moreover there is a sizable expansion in the food market due to start very soon. That expansion will occur as the 37 million postwar babies develop teenage appetites. Children are such a large proportion of the population today that the food market has yet to benefit in full from population growth. For children do eat less than adolescents and adults. Fortune estimates that there is a good \$2 billion additional expenditures for food coming up as the food intake rises from the 2,000 calories per day for a 6-year-old to the 3,800 of a 17-year-old boy.

Another way of putting it is that from now well through the 1960's the rise of the food market should increase about 3 percent faster than population.

2. Productivity is rising faster than population. Output per man-hour on average is increasing at an accelerating rate. We used to think 2 percent per year compounded yielded a pretty fair standard of living. There is now good reason to believe the figure is nearer 3 percent.

That is of great significance to the food industry, for it offers assurance that the United States people will not revert to lower food standards. Three-quarters of a ton of corn meal, sweet potatoes, turnip greens, and salt pork per person will support life after a fashion, but there isn't much profit in it for the canning industry.

3. The United States has arrived at a true consumption economy. The first, and still the only, consumption economy in the world.

Our problem is to get people to consume what we can produce. In the rest of the world the problem is to withhold enough from consumption to accumulate the capital by which production may be increased. In Communist Russia capital formation is achieved by government fiat; the standard of living is kept at a bare minimum, with the result that capital investment there is running very high. Throughout Asia and the Middle East the margin is so thin that capital formation is pitifully small.

In the United States, by contrast, we are over the hump; the more we consume, the more we can produce. In fact, if we don't consume, the whole machine begins to stall. Thrift is still a personal virtue, but the cold fact is that the American propensity to save is probably the most uncertain factor in this new American economy. The choice of spending or not spending is now available to most of the people of the United States over a very wide range of purchases. And they are prone to fads.

You know what happened to butter, and to potatoes. Suppose this crazy backyard barbecue thing went so far that men started to cook food instead of play with it? Men want their raw materials raw; no cans for them. You would be in serious trouble.

Consider what would happen if any very considerable number of people decided to make the old car do for 1 more year, to put up another year with that old 21-inch television, to carry on with that old nonelectric range. These are not very hard choices for Americans to make; a sudden national feeling that it was smart to be thrifty—for 1 year—would bring on a catastrophe that would shake the world.

WHAT HAPPENED IN 1951

How even moderate shifts in consumer attitudes can affect this new economy of ours was highlighted in a startling fashion in 1951. As you will recall, a good recovery from the 1949 readjustment was well underway by the spring of 1950. Then came Korea and a pretty wild 6 months of inflation, with little faith that the Truman adminis-

tration was going to be able to bring it under control. There was every reason to believe that people would continue to turn cash into goods, that is, continue their buying spree.

But what happened? As we put it in Fortune: "In March 1951 the consumer clutched his pocketbook to his breast, spat in the face of world economic forces, and began to save a higher proportion of his disposable income than he ever had in peacetime."

By April the American consumer was saving at the rate of \$20 billion annually and for the balance of the year up to 9 percent of his disposable income. This was a turnaround of 4 percent in the saving rate from the previous year. It was a good thing for the country that he did; this unprecedented and unpredictable savings spree brought Mr. Truman's inflation to a sudden halt, much to the surprise, if not annoyance, of the administration, which, of course, had the ground cut out from under its frantic appeals for a price freeze and direct controls.

It was a good thing for the country, that unpredictable savings spree, but it is frightening to think what would have happened to the economy had this occurred when defense spending was not rapidly expanding, which, of course, it was in 1951. If you were making or selling appliances you would have been acutely aware of the savings spree. For instance:

Refrigerator sales dropped from 6,200,000 units in 1950, "a scarcity year," to about 4 million in 1951, a year of oversupply. Television sales dropped from 7,500,000 in 1950 to a little over 5 million in 1951.

Some hard goods like freezers and unit air conditions, it is true, increased sales in 1951. It was also true that some companies did a better selling job than others. But generally speaking, 1951, was not a good year to be in the retail business. Yet the measurable difference in spending was around \$6.5 billion, but that little 3 percent of consumer income carries enormous leverage.

IMPLICATIONS FOR THE FOOD INDUSTRY

The food industry, of course, is much more stable than consumer durables, and I am not suggesting any direct comparison. What I would like to suggest is the unpredictability of the American consumer—this new consumer who has such enormous reserves of optional buying power. The food industry, as I would like to repeat, has done a superb job of selling in this new economy. And by selling I mean to include not only sales, advertising, promotion, and merchandising; I mean also continuing innovation and improvement to meet consumer needs and wants and tastes. Any industry which can shift its share of the entire consumer market 3 percentage points—up—is some industry.

And it would be a bold man who had the temerity to lecture it. But, as someone who is not in the food industry, I feel I should point out that food is now taking such an extraordinary share of the consumer dollar that, in a very real sense, everyone else in the consumer field has to sell against food.

Can the food industry continue to hold its 27 percent of the consumer dollar? Or will Engel's law—that food expenditures drop relatively with rising income—become valid once more in the United States? Income in the United States is bound to rise, barring war. Can food, can the canning industry hold its share?

Let me say hastily that I hope it does. (That is a paid advertisement for my associates on Life magazine.) There is no limit in sight to the market for convenience. There is no limit in sight for rising quality. There is still an inordinate amount of time spent in the American kitchen—a form of labor which is considered so unproductive that it is not even entered in the columns of gross national product.

The larger question is, How successful will our efforts be in selling what America produces? The limiting factor in this new consumption economy is not production but sales. There is hardly an industry in the country in which the production men are not itching to open the throttle. If they did, of course, we would all soon drown in a sea of surplus goods.

In the overall, of course, the production process also produces the means to buy goods. But this marvelously tuned economy demands very close tolerances. Today the difference between prosperity and recession is very, very small when measured in terms of consumer spending.

Now consumer spending is not the only element in our prosperity. Capital goods and defense spending are both large factors. However, only one man in this room has much influence on defense spending, and as for capital goods, that market depends largely on business expectations, which comes back pretty much to expectation of consumer behavior.

The primary job in business today is to keep the consumer buying, to keep him buying steadily, and to persuade him steadily to buy more.

On Fortune several years ago we asked ourselves this question: "Why do people buy?" That is, after people reach a point where they possess optional or discretionary purchasing power—and today almost everyone in the United States has that in some degree, and at least half the population has it to an important degree. After a prodigious amount of research, we came to a very simple and unavoidable conclusion: People buy because they are sold.

This we discovered had never been admitted by any respectable economists. For to economists, selling, the persuasive element of the distribution process, has always been laughed off as one of the excesses or exuberances of American capitalism. It is treated as "economic waste." It may be. But I find it very hard to believe that the entire apparatus of American salesmanship, advertising, promotion, merchandising, and personal selling has no power to influence the total consumption of goods and services. I not only find it hard to believe; I think it's nonsense.

If the apparatus of American selling did no more than keep a consumer spending 2 percent above what he would without it, then the apparatus of American selling is worth everything it costs.

If the apparatus of American selling can keep people buying, keep them buying steadily and steadily buying more, it will have worked a greater wonder in the world than American production.

Sell more canned foods. Sell better canned foods. But above all, sell. That way it can be truly said of you that what is good for the canning industry is good for the United States.

Are States Rights Disappearing?

EXTENSION OF REMARKS OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. BURDICK. Mr. Speaker, in a republic like ours, composed of member States, the trend is to enlarge the powers of the National Government and limit the power of the States; and this has been true since our Federal Government began.

The ninth amendment of the Federal Constitution declares:

The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people.

The tenth amendment provides that:

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people.

There is no question, therefore, that Federal authority over the police powers of the States was not delegated to the United States by the Constitution, nor prohibited by it to the States, yet we have seen measures passed by Congress that invade the powers of the States. For example, no one will deny that a State has the right to fix hours of labor and to prohibit child labor and other matters pertaining thereto, but the courts have held that labor in connection with the manufacture of goods designed for shipment in interstate commerce is national in character, and that therefore the Federal Government has authority to pass laws which, in an extreme case, may annul a State law. So in criminal cases, such as the driving of a stolen automobile from one State to another, the Federal law controls. Almost any set of facts can be considered of national interest and concern; and when it is, the Federal Government assumes command. The tendency is, and has been for 100 years, to read into a set of facts a national interest.

The more business the National Government gets into in a State, the more the Federal courts ignore State laws. When the Government participates in appropriations for roads and the support of schools, when strings are tied to the appropriations, it is very easy to find a national interest, and hence Congress legislates where the State should and where it has a perfect right to do so.

Wars wreak great havoc with the Constitution. When a soldier is drafted or voluntarily enters the Armed Forces his civil rights end, and if sent to a foreign country the laws of his own country and the Constitution do not protect him in criminal cases. Congress saw fit to pass an act making all soldiers of occupied countries subject to the laws of that country. After a war stops, the whole economy of the country has suffered to such an extent that the Federal Government, to stop depressions and aid those in distress, gets busy with appropriations for relief. It then directs the manner of relief, the agents of relief, and jurisdiction over violations of law with respect to it.

If this course continues, the States will have a very small voice in the affairs of their own Government. That is not what the framers of the Constitution intended, but that is the way it has been interpreted.

Public health programs sound good on paper, but where the Federal Government supports them in a State, the Government will, directly or indirectly, control it. In this case it is easy enough to find a national interest, because the Federal Government wants sound soldiers, and I will not be surprised to see the

health programs carried out in each State with minute details of administration prescribed by the Federal Government. The Government Health Department at Washington will make rules and regulations, regardless of what the States desire.

On the illegal manufacture and sale of intoxicating liquor the Federal Government made great headway in subjugating the States to Federal law and has steadily encroached on their powers since that time.

I personally know of one glaring incident which illustrates well this Government interference in State matters. A merchant in a small town, whose reputation for honesty was not questioned, sold 100 pounds of sugar to an oldtime customer whom he had known for years, who wanted it to put up his fruit. Everything was open and aboveboard, and the sugar was delivered and the fruit saved.

Shortly after the sale revenue officers appeared at this merchant's store and said that the sale was illegal. The storekeeper consulted me about it and I said I would look it up. I did so, and found no law anywhere that would make the sale of sugar for canning purposes illegal. I so advised him. He was later arrested and hauled into a Federal court in Baltimore, tried by a jury and under the charge given the jury by a Federal judge was promptly convicted and sent to prison for 3 months. No one was permitted to see him, and although suffering from diabetes he was given no relief and died soon after his term was served.

What the court relied upon was a regulation issued by the Treasury Department saying that a sale of 100 pounds of sugar or more must be reported to that Department, and providing a penalty. I do not think one Member of Congress knew that there was any such regulation, having the force of law. From a strictly legal standpoint the regulation had been authorized by Congress. That is, Congress gave the Treasury Department the power to make such rules and regulations as it saw fit.

In this case the merchant did not know a thing about the regulation, but the court said they are printed every night in a book known as the Federal Register, and that publication there is notice to everyone. I since learned that the regulations are made during the day, hundreds of them, and published that night. Some of them come in late in the day, just in time to reach the printer. At 6 o'clock in the evening there was no law against selling sugar, but at 7:30 there was.

A successful lawyer in the Federal courts does not need any lawbooks. All he has to have is the Federal Register, and if printed at 12 o'clock at night, he must get a copy and sit up the rest of the night to find out what new law has been passed by some bureaucrat. Here you see the State laws of the State of Maryland set aside and ignored, and a Federal regulation taking its place. This is an extreme case, but a true one, as I know every fact in it from beginning to end.

Surely we ought to stop and listen, or all the power reserved by the Consti-

tution to the people will be lost, and we will have in this country an arrogant Federal Government controlling our every action; and those rights which were guaranteed to the States in the Constitution will disappear forever here in this great heralded democracy.

I do not believe that the public generally recognizes this tendency toward an autocratic Federal Government. Wars, and depressions following wars, with all the distress that comes in their train, has made Government assistance necessary, but as soon as possible Government assistance ought to be discontinued or the Federal Government will usurp all authority down to the smallest township.

For their own good people should not encourage Government hand-outs while able to do for themselves. We did that to the Indians, and now, after a hundred years of dependence on the Federal Government, with very few exceptions, they cannot take care of themselves. We adopted the opposite course of action with the Negroes. With them it was "dig in for yourselves," and as a result the Negroes of today have made most praiseworthy progress. They have shown that they can make their way as well as any other class of citizens.

I hope the American people will not be lulled to sleep by a paternal Federal Government and thereby lose their own initiative, their desire to progress, and see their State governments mere agents of the Federal Government. This Government was never organized to insure success to any individual. All it was intended to do was to give him an equal opportunity, and how successful he becomes is up to the citizen himself. Special privilege can be controlled by law, but the success of a citizen must be determined by himself. Too much paternalism will lead to the destruction of individual liberty.

Reckless Tax Cut

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. FORD. Mr. Speaker, under permission to extend my remarks, I include the following editorial entitled "Reckless Tax Cut," which appeared in the Grand Rapids (Mich.) Press of Saturday, February 26, 1955:

RECKLESS TAX CUT

Politics took over in the House of Representatives Friday afternoon when the Democrats put through a bill to cut income taxes by \$20 for each person and to continue corporation income and excise taxes at their present rates. President Eisenhower had asked that there be no tax cuts. He had requested Congress to continue the corporation tax at its present level of 52 percent, instead of permitting it to drop to 47 percent on April 1, as provided in the present law.

House Democrats made a political football of the tax bill. They talked loud and long of the tax cuts corporations had received

last year and asserted that this was the year to help the little fellow. They were not only willing but happy to vote for keeping the corporation and excise taxes at their present levels, while providing for a tax cut for the little fellow. That way they tried to make doubly certain that he would know they were thinking of him.

Tax cuts are wonderful—but when, as in this case, they mean plunging the Government an additional \$2,200,000,000 into the red they are downright reckless. There is only one reason why house Democrats have insisted on a tax cut this year—it is President Eisenhower's statement that if things go all right a tax cut may be possible next year. If Congress waited until next year, the tax cut would be labeled a Republican reduction. This year if one went through it would be in spite of the administration.

But whether this one does go through remains to be seen. It still has to get through the Senate, and the Senate usually is much more cautious about such matters. It is a fact that the House frequently votes for measures that seem to do something for large numbers of persons (it's been voting a soldier's bonus with considerable regularity since the war ended) and then leaving it to the Senate to put things right. This way House Members get credit for having nothing but the best intentions and are relieved of any responsibility when the Senate balls them out.

It will be up to the Senate again to restore reason, if it is to be restored, because the tax cut has been made part of a package. Since the President does not have the power to veto an item in a bill, passage of the present measure by the Senate would compel him to approve the cut or sacrifice the rest of the bill. And that he couldn't do for the simple reason that it also provides for continuing the corporation tax at 52 percent. If this tax were permitted to drop to 47 percent and certain excise taxes were permitted to lapse the Government would be out about \$3 billion.

The casual observer might view this as a clever bit of maneuvering. But he would be wrong. It isn't clever, it's irresponsible.

Plight of the Dairy Farmer

EXTENSION OF REMARKS

OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. QUIGLEY. Mr. Speaker, the problems attendant with trying to represent the views of all constituents are aptly illustrated by a letter which has been written by one well-known Adams County farmer to another well-known Adams County farmer relative to the plight of the dairy farmer, and the farmer in general. Adams County is a part of the 19th Congressional District of Pennsylvania.

Under leave to revise and extend my remarks, I include the following copy of the letter written by J. Claude Hammond of Gettysburg, to President Eisenhower, also of Gettysburg:

GETTYSBURG, PA., February 26, 1955.
The President, DWIGHT D. EISENHOWER,
White House, Washington, D. C.

Sir: I am one of the thousands of dairy farmers throughout the United States of America who have a few acres of ground and a small herd of dairy cattle, struggling for a meager existence at best.

According to newspaper and radio accounts, members of the Republican Party openly stated that there are too many people engaged in the dairy business and that some of us should be put out of business in order to reduce the amount of dairy products. This is a very cold and heartless way to accomplish an end. If that is what your administration wishes to accomplish, I suppose your collaborators would say you have been successful (success being used in the sense that your administration is accomplishing what it set itself to do). From any point of view, I should think that the word "destructive" would be more applicable. Many dairymen in the State of Pennsylvania, and even locally in Adams County, are being forced out of business because of the inequalities in the prices they receive and the prices which they must pay for things they need.

What class of people does the Republican Party, and the present administration cater to, the wealthy, of course. Ever since I was a boy I have heard this said about the Republican Party. If there was ever any doubt in my mind as to the truth of this statement, all doubts have been dispelled since the last presidential election.

Your administration did not hesitate to reduce taxes for the wealthy class of people who did not need relief and according to current news reports, many large corporations are reporting an all-time high in net earnings, some in spite of the fact that their gross earnings were smaller than in prior years. And what do they, openly and brazenly, attribute this increased net earnings to? Why, the answer is simply and factually stated by them, "reduced taxes." They are doing well as they were before this tax reduction. And now, how do they show their appreciation for this tax relief? They raise prices still more on things we dairymen need to buy (that is if we had the money). How long can this condition continue?

Now when the Democratic members of our Government say that the small taxpayer should have some relief—even a very meager \$30 per person—members of the administration forces cry "inflation, the Government would lose millions of dollars." I wonder why some of the guardian angels of this great country of ours did not think of this phase of the matter when the millionaires of industry had more (unnecessary) millions of dollars literally dumped into their coffers in the form of reduced taxes? With what, I ask you, will the farmers and cattlemen of this country buy the expensive items produced by these millionaires—when many of us have already reached the breaking point, and thousands more are rapidly approaching that point?

The present agricultural program, to me, is grossly unrealistic and in the matter of the dairy business, basically unsound. Take tobacco for instance. Tobacco is supported at 90 percent of parity, while dairy products are supported at 75 percent of parity. Which, I ask you, is more essential to the welfare of the 160 million Americans (either in peace or war)—a cigarette, a cigar, a chew of Brown's Mule, or a cool glass of nutritious, life-sustaining milk? Which would be more beneficial to the hungry workman, or the tired soldier in the muddy trench or bomb shelter? Milk and various other dairy products sustain life. As for tobacco, there has been considerable speculation recently as to whether the smoking of tobacco encourages or even actually causes cancer. Yet tobacco is supported at 90 percent of parity and dairy products at 75 percent (if you can call that support) of parity. Tobacco, of course, produces more revenue—and we must have money to finance our governmental operations. But we must also have a healthy agricultural program—our people must eat as well as smoke.

It is true that prices have skyrocketed in every branch of our national economy, and it

is agreed that prices are due for a downward revision. But, please, Mr. President, do not force the agricultural and cattle industry to carry the entire load of the downward revision while organized labor and big business continue to enjoy an all-time high.

Agriculture is a very difficult branch of our economy to organize for concentrated and effective protective action. The giant industrial labor organizations can effectively defend themselves. And, now, they are talking of another round of wage increases—while the essential and vitally important dairy industry is rapidly sinking to the depths so conspicuous and so prevalent during the Hoover administration.

Please, Mr. President, do not permit our vitally important dairy industry to be beaten to it's knees again. Agriculture in general has crawled on its knees, and even on its belly, for the major part of its existence and we are approaching the prone position again. The noteworthy exception to the above was during the several years of Democratic administration prior to the present Republican administration. Agriculture is willing to shoulder its share of any necessary economic adjustment, but it is unsound and grossly unfair to expect the dairy farmer to carry all or even a major part of the burden of economic adjustment while the rich get richer and the farmer gets poorer.

Respectfully submitted,

J. CLAUDE HAMMOND.

(Blind copy to Hon. JAMES M. QUIGLEY, Member of Congress, Old Office Building, Washington, D. C.)

Forestry Anniversary

EXTENSION OF REMARKS

OF

HON. GEORGE A. SHUFORD

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. SHUFORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Asheville (N. C.) Citizen-Times of February 27, 1955:

FOREST SERVICE ANNIVERSARY

From the first days, America's forests have been the sign and symbol of America's strength.

Coast-running explorers sailed home to Europe with high reports of the virgin forests of pine and hardwood crowding down around bays and riverbanks.

Timber and its byproducts of pitch and turpentine were the first major exports of North Carolina and other Southern seaboard States in the naval stores industry.

Later, as pioneers pushed past the Blue Ridge, they sent back word: "Good forage. Good wood and water here."

Wood and water. Later generations found the two vital resources linked far closer than the first settlers dreamed.

Behind the onrushing frontier, axes flashed and saws whined in an unleashed assault on forest wealth to meet the needs of a fantastically expanding population.

"Cut and move out" was the order of the day. Millions of acres of timberland were cut over and left with no thought of replanting. Slash waste was left where it fell, breeding forest fires that ravage huge areas.

With hillsides stripped, rains gullied out the onetime forest floors to send disastrous floods over lowland riverbanks. With no roots to hold the rainfall back, winter floods gave way to summer dryness.

A few voices were raised early to protest the reckless waste. Forest conservation methods, long practiced in Europe, were

urged to save the dwindling timber resources.

Gifford Pinchot, of Pennsylvania, was one of the first and most dogged campaigners for conservation. He bored many ordinary citizens and angered some profit-hungry exploiters with his endless preachments for guarding natural wealth. In the Biltmore, Pink Beds, and Pisgah woodlands, Pinchot gave the Nation one of its best lessons in scientific forestry.

The Pinchot doctrine took hold as more and more people, lumbermen included, saw the growing results of unregulated forest exploitation.

A program of Federal forest reserves was instituted for setting aside timberlands where scientific forestry methods could be practiced. The program grew into the huge national forest holdings of today.

In North Carolina, Joseph A. Holmes, the State geologist, first called Pinchot's attention to forest reserve opportunities here in 1893.

Today, with the 50th anniversary of the United States Forest Service, North Carolina national forests include 1,138,000 acres of timberlands. They form a vast reserve of managed lumber resources and watershed protection. They give magnificent fringe benefits of preserved beauty and vacation happiness.

The conservation doctrine took hold among private lumbermen with increasing force. Enlightened businessmen saw the folly of destroying the source of their own operations with no care for replacements.

Champion Paper & Fibre Co. was a pioneer in private conservation practices. Bemis Lumber Co., of Robbinsville, and Mead Corp., of Sylva, encourage tree farming and other conservation programs.

The great work of the Forest Service goes on and grows in importance with each year through programs of conservation and research.

This golden wedding anniversary of dedicated men and the great woodlands is one of which all the people can be gratefully proud.

Science Talent Award

EXTENSION OF REMARKS OF

HON. KARL C. KING

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. KING of Pennsylvania. Mr. Speaker, the highest award in the 14th annual science talent search was awarded last night to a boy of my district, Frederick P. Greenleaf, 17-year-old senior of the Allentown High School. This young physicist-mathematician-chemist was awarded the \$2,800 Westinghouse grand science scholarship after 5 days of intensive competition with 40 finalists filtered from several thousand contestants throughout the country.

The people of Allentown and my whole district are very proud of this high honor paid to one of our boys, and we congratulate him, his parents and his school instructors who have guided him in his education.

In this talent contest young Greenleaf expressed his scientific knowledge with a project which demonstrated a process of practical use in separating almost any complex mixture of metals by distillation. I could not fully comprehend his explanation of the process, but it was

apparent that Fred is an expert builder of "stills." Accordingly, I have offered his services as consultant to my congressional colleagues from the hills of West Virginia, Tennessee, and Kentucky.

The more important use of Fred's process will be in diverse fields, ranging from refining operations to atomic energy production. He believes the distillation method of separating mixtures of metals will be quick, economical, and efficient.

Science has interested Fred Greenleaf since he was 6 years old, when he received a chemistry set as a gift. Later he won top honors in the Annual Lehigh Valley Science Fair and competed in the 1954 National Science Fair.

The Science Talent Institute and Westinghouse are to be congratulated for their work in stimulating young talent in the field of technology which will be so important in the future development of our country.

Soil Conservation

EXTENSION OF REMARKS

OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. TRIMBLE. Mr. Speaker, at this time when we are to consider appropriations for soil conservation, I take great pleasure in presenting to my colleagues of the House the following letter of Luther H. King, of Clarksville, Ark., who is president of the Arkansas Basin Association and a great advocate of soil conservation and upstream development. It is one of the best examples of straight thinking that has come to my attention. Mr. King's statement is as follows:

SOIL CONSERVATION

(By L. H. King)

What can we expect of our boy, a young man, who wants to farm and is prepared by experience; has taken his training in our agricultural schools and has the know-how about farming. He has only the means that God gave him to start with; plenty of energy and ambition to succeed, but no means to work with. Place him on the average eroded farm. He has to make a living and would like to earn a little money, but he has the problems of rebuilding the soil that his ancestors have permitted to wash away for over 100 years, and he is supposed to build this soil up for present needs and the 200 million people which we expect to have in the not-to-distant future.

You know as well as I know that he will starve to death, let alone paying for the farm, save some money, and rebuilding the soil, without some aid.

Should the sins of our ancestors in letting this soil wash away be placed on this boy; something entirely beyond his control; something he could not help. I emphatically say "No." Do you expect him to build this soil up to feed this anticipated 200 million people without aid? Again I say "No."

Whose duty is it to rebuild the soil. I say that it is everybody's. Everyone who eats food should pay for this mistake of our ancestors and not this poor boy alone.

Who can claim that this is a waste of money or bad economy to aid this boy. No

one with a sane mind. We are only saving our own hides in furnishing this aid.

I was born and reared on the farm and have farmed all of my life and know from experience the problems of soil erosion. I have seen millions of tons of topsoil go down the little gullies into the small streams and on into the Arkansas River, never to be of any use again. I can think of no worse economy than to permit this to continue. While I am writing this it is raining down in torrents and it makes my heart heavy to think of all the soil that is getting away from us forever. This soil means food, it means life. You cannot eat the soil, but you can eat the food that it produces, and if this soil could be converted into food, and it was being wasted, as it is now, we would be calling in the United States Army to stop it.

Our national debt is big and it would be fine to balance the budget, yet we could live without either, but we cannot live without food, and soil means food.

Are we going to reduce our standard of living to that of the Chinaman and our eastern Asiatic countries and be on starvation. We will if we don't conserve our soil. Our population is increasing and our soil is decreasing. God only gave us so much soil and he placed us guardians over it. We have done a bad job. Christ promised forgiveness of sins and I think it is time we ask forgiveness for wasting our greatest national resource and pledge ourselves now not to lessen soil conservation, but increase it if any change is made.

I know that some people say that it is a donation to the farmer—it is not. It is a donation to save our lives. We cannot help the mistakes of our ancestors in not conserving the soil. Some say the farmers cheat on the program—maybe a few farmers did cheat a little in the beginning of the program before they were educated to the workings and benefits of the program, but today I don't think one single man can be found cheating in our country. I, personally do not want one cent donated to me and I think the great majority of farmers feel the same way. You know that our farmers are honorable and honest in the main and their occupation has made them by nature self-reliant and independent, and I resent the charges of donation and cheating because I know it isn't true.

What can be done to save the soil? Build ponds and small lakes to save a lot of the overflow. Water is always needed on the farm for irrigation, stock water, spraying, fish raising, and fire prevention. Terrace the land to prevent an accumulation of water which makes the gullies. Cover crops, especially legumes, stop erosion; furnishes grazing for livestock, and the surplus may be made into hay and silage.

Fertilizer is an absolute necessity to start the cover crop. It is astonishing how fast the soil can be reclaimed with cover crops, fertilizer, and erosion control.

What to do. The least Congress can do to save the young man on the farm and to save our own lives, is to maintain the soil conservation program. I have farmed 62 years and these ideas are not "pop-ups."

I respectfully submit this for your consideration.

Statehood and Foreign Policy

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. BARTLETT. Mr. Speaker, there never has come to my attention a more

eloquent, convincing, and logical expression why the grant of statehood to Alaska and Hawaii would aid our foreign policy than that which was made on February 22 by Senator JOSEPH C. O'MAHONEY, of Wyoming, when S. 49, the Hawaii-Alaska statehood bill, was under consideration by the Territories Subcommittee of the Senate Interior and Insular Affairs Committee. Senator O'MAHONEY's remarks were made when Under Secretary of the Air Force James H. Douglas was before the committee; they were so appropriate and so right that I take pleasure in presenting the statement here:

Senator O'MAHONEY. Mr. Chairman, we have before us, Mr. Secretary, two recommendations from the Cabinet level. One of these is the letter of the Secretary of Defense, C. E. Wilson, from which I will read this sentence, which, of course, has been repeated several times during the hearing:

"With respect to title II of the bill"—being the Alaskan portion—"however, the Defense Department believes that it would be in the interest of the national security that Alaska remain a Federal Territory at the present time."

Now, those last three words are qualifying words "for the present." They may have little significance, or they may have much. I do not know.

Mr. DOUGLAS. I will be very glad to ask the Secretary if he thought it practical and appropriate to interpret those words.

Senator O'MAHONEY. I think it would be very well if you would do so. It would be helpful.

Now, the other report which I have here is the letter of the Assistant Secretary of State, Thruston B. Morton, dated February 4, 1955, to the chairman of this committee. In the second paragraph of his letter he says, speaking of the two Territories which are affected here:

"It is this Department's view that such action would serve to support American foreign policy and strengthen the position of the United States in international relations."

Senator JACKSON. Senator O'MAHONEY, that seems to corroborate the statement made by the then General Eisenhower in Denver after the Korean war, the very point that President Eisenhower previously made.

Senator O'MAHONEY. When I was chairman of this committee some years ago, and we held hearings on the Alaskan and Hawaiian statehood bills, and the committee endorsed them, I took them to the floor with the deep conviction that what Secretary Morton said was right, namely, that it is an efficient method of defense of the United States and of the freedom for human beings for which it stands, to prove to the Asiatic world that we believe in letting people govern themselves.

We are represented in this cold war as being imperialists who want to step into the shoes of the vanishing empires of Great Britain and France and Holland in Asia.

I have been convinced from the very outset that the most effective thing that we could do in the Pacific area would be to prove to the Asiatics that we do believe in self-government by granting statehood both to Hawaii and to Alaska. And when I say Alaska, I say it because I know that the Aleutian Islands are just directly north of Hawaii, and Bering Strait, only 40 miles across, separates Alaska from Siberia.

I am mindful of the testimony that was given on behalf of the governors of the 11 western States by Gov. Earl Warren, of California, now Chief Justice of the United States. I want to make a part of the record here his statement:

"I am also appearing as a westerner who happens at the moment to be chairman of a governors' conference of 11 western States,

which organization has gone on record several times during the past few years in favor of statehood for Alaska. We in the West believe that the development of any part of the West is of great benefit to the entire West and we consider Alaska as an integral part of the West. We have had the association of its governor in the council of the governors' conference committee 5 or 6 years and we have come to believe that this is the time for Alaska to be given statehood. We believe that we have a particular interest in the defense of Alaska and we believe that if Alaska is given statehood, is given an opportunity to develop its resources and its civilization, that it will be a greater factor in the defense of our Nation than it could otherwise be. We believe in the last analysis the defense of Alaska will come from the civilization that we develop there rather than just from the airplanes we send there or the fortifications that we develop.

"We are of the opinion that Alaska will not develop to the full extent of its potentialities unless it does achieve statehood."

I cannot think of a more eloquent expression of the point of view which this committee has shared in the past. But the testimony that is now presented here on behalf of the Department of Defense is vague and cloudy and uncertain.

The issue before us is whether or not our foreign policy, of which Secretary Morton speaks in his letter, is to be supported by an attitude of the extension of freedom to our own integrated Territories or whether it is going to be hampered by a policy which would seem to indicate that instead of advocating the right of self-government in the Territories, we are being asked by the Department of Defense to insist that the territorial status be maintained in Alaska, but you do not say that as to Hawaii. Alaska is closer to the area of war than is Hawaii. If it is a matter of defense, if there is a present danger, if there are any conditions that this committee does not know of which are governing the Secretary of Defense in what he says, by all means let the Secretary come here and in executive session tell us what they are.

Senator O'MAHONEY. Mr. Chairman, may I make another statement here?

Mr. Secretary, what bothers me about this matter is this: during this period while Congress has been declining to grant statehood to Hawaii and Alaska, the situation in Asia has been deteriorating. At this moment the Secretary of State is at Bangkok seeking to convince southeast Asia, where Thailand now is apparently about to be attacked by the Communists, that its interests lie in joining with the other states of southeast Asia in defense against communism, and the chief obstacle to the progress of the Secretary of State in Bangkok is the fact that we have been represented as only colonials of a different kind.

I cannot understand why it is not clear to the Department of Defense, unless there is something that you cannot tell us, why it is not clear to you that by granting statehood to Alaska and Hawaii we will be telling all of Asia that we are not colonials.

Conference Report on H. R. 3828

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. JUDD. Mr. Speaker, I am opposed to passage of this bill at this time.

I regret the action of the Democratic leadership of the House in bringing up such a bill now. Congress is the board of directors for managing the country's affairs, and I believe Members of Congress are entitled to a fair increase in salaries in line with their heavier responsibilities, greatly increased workload, and the increased costs which they face along with all other people in the Nation. Congress has had no increase since 1946, while other governmental employees have had two cost-of-living raises during that period and deserve a third. It is only reasonable that Congress be given a raise also.

However, the first responsibility of a board of directors is to the organization's employees, in this case the workers in the Federal service. We tried to enact a pay increase for them in the last Congress, and I voted for it twice. Unfortunately, some who pretended to be the special friends of Federal employees were more interested in playing politics with the issue. They blocked passage of the only kind of bill that could become law with the promise that they could get a better bill. The result was no bill at all.

Our first task is to correct that situation. I do not believe that Members of Congress should raise their own salaries until they have first taken care of employees in the lower-paid brackets.

Furthermore, how are Members who vote for the conference report now to resist the demands of all sorts of groups during the remainder of the session for all sorts of subsidies, increased grants, or appropriations? Full independence in using my best judgment on each issue as it comes along is more important to me than the salary increase.

President Eisenhower Should Suspend the Dixon-Yates Contract While the Shadow of Doubled dealing Lies Upon It

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the Record, I herewith submit an editorial which appeared in the February 21, 1955, issue of the St. Louis Post-Dispatch. The editorial entitled "Doubled deal in Dixon-Yates" follows:

DOUBLEDEAL IN DIXON-YATES

The fact that the administration negotiated the Dixon-Yates power contract in thick secrecy, and not at arm's length, was already known. It remained for Senator HILL's disclosures last week to show the Government's gullibility and the extremes to which secrecy was carried right up to the moment when the Alabamian dug in.

Mr. HILL reports that a vice president of a Boston company which was arranging financing for the Dixon-Yates contract was at the same time employed by the Bureau of the Budget as a consultant to advise it on the contract. The versatile gentleman in question is identified as Adolph H. Wenzel,

of the First Boston Corp., which had been consulted on sale of \$114 million in bonds to finance the proposed Dixon-Yates plant at West Memphis, Ark.

Mr. Wenzell was thus serving in two mutually exclusive capacities. As a private financier it was his duty to press the interests of the First Boston Corp. and to argue down any objections which he might entertain in his capacity as an adviser to the Budget Bureau. As a consultant to the fiscal arm of the office of the President of the United States, it was his duty to listen with a skeptical ear to the views he was presenting in his role as a private financier. It all sounds like something out of Gilbert and Sullivan, and as in fact much more successful as nonsense than as public administration.

Senator HILL points out, furthermore, that Mr. Wenzell, the budget consultant, had access to confidential information from the Government's side of the bargaining table—if bargaining table it can be called. Some of this information might have been handy for Mr. Wenzell, the vice president of the First Boston Corp., to have on tap in representing his company's interests. Senator HILL does not know, but he would like to find out.

Senator HILL observes that the chronology of the Dixon-Yates deal issued by the Budget Bureau last August, which was represented as containing all the pertinent facts, contained no reference to Mr. Wenzell or to the First Boston Corp. More recently, when he asked Budget Director Hughes about Mr. Wenzell's employment as a consultant, Mr. Hughes mentioned the Bostonian's work on the TVA program but not his participation in the Dixon-Yates contract, Senator HILL says. Senator HILL says there is "definite indication that these facts have been deliberately concealed from the Congress and the American people."

This is a serious charge. It is all the more serious because these negotiations from the beginning, and continuously since then, have been distinguished by a remarkable lack of candor.

Senator HILL thinks it "imperative" that the Senate-House Joint Committee on Atomic Energy thoroughly investigate the disclosures he has made and any further disclosures to which they may lead. It would be hard to think of any plausible objection to a course so plainly indicated.

Meanwhile, would it not be the part of propriety for the President to suspend the operations of the Dixon-Yates contract while the shadow of double-dealing lies upon it?

Address of Mrs. James B. Patton, Past President General, DAR, Before the Society of Mayflower Descendants, District of Columbia

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. BROWN of Ohio. Mr. Speaker, at the meeting of the Society of Mayflower Descendants in the District of Columbia at the Daughters of the American Revolution chapter house on Massachusetts Avenue in the city of Washington, on the evening of February 4, 1955, the guest speaker was Mrs. James B. Patton. This distinguished and

highly patriotic woman, as is well known, served as president general of the National Society of the Daughters of the American Revolution for the term 1950 to 1953 next preceding the election of Miss Gertrude S. Carraway to that high position. Mrs. Patton is therefore a past president general of the national DAR; and she is presently serving in the very important post of national chairman of the national defense committee of the national DAR. Her address before the Washington Society of Mayflower Descendants was in line with her patriotic sentiments and ideals as so constantly and well expressed during the crowded years of her activities.

Under leave accorded, I am very glad to include her address as a part of these remarks:

ADDRESS OF MRS. JAMES B. PATTON

IS TIME RUNNING OUT?

As Thomas Paine wrote in *The Crisis*, in 1776, "These are times that try men's souls," and so it is today. I am speaking as one greatly concerned about some problems which confront our country.

The United States stands at a crossroad in its history, and for a number of years we have been approaching this crossroad and all of the signs along the way have given us plain warning that we are nearing a new milestone. Everything will depend upon the route we take.

This is the year, 1955, when the Charter of the United Nations comes up automatically for possible revision. It is now, at the present time, that every patriotic citizen should assume his or her responsibility to make certain that the charter is not revised so that any of our sovereign rights as a Nation are taken from us. Keep aware of events as they happen from day to day.

We must remember that the U. N. Charter originally was adopted as a treaty by our United States Senate. Also you will recall there have been cases where judges have upheld the U. N. Charter over our Constitution.

The purpose of the United Nations when it originated almost 10 years ago was to preserve peace on earth and many millions of people rejoiced at the idea. But the U. N. has not preserved the peace.

The strong supporters of strengthening the United Nations always refer to Korea as an example of the united effort of the free world in successfully halting Communist aggression. But on closer examination—with the United States furnishing the overwhelming majority of men, machinery, and leadership and actually being limited by U. N. directives in properly defending our lines—can this be a United Nations victory?

The U. N. caused the United States and South Korea to sign an armistice which is regarded throughout the Far East as a defeat for the United Nations forces. Can we call it any sort of victory as long as we leave even one of our boys in a prison camp on Red soil—and there are reportedly hundreds there?

I think that we all believe in cooperation with other countries which are trying to retain their freedom and we in our country have cooperated at the cost of thousands of American lives and untold billions of dollars.

It has been proved time and again that peace-loving nations cannot do business with the Soviets. The breakdown of the conference at Geneva last June alone proves that point.

In the CONGRESSIONAL RECORD we find the Kremlin blueprint for conquest which has been given to Congress. From whom this critical document was obtained is a closely guarded secret.

The gist of the document is this: Conquest of Indochina by 1955. Complete domination by Communists of the rest of all southeast Asia—that is, Burma, Thailand, and Indonesia—5 years later by 1960. Then in another five years, by 1965, conquest of all of Asia, including India and Ceylon. This to be accomplished without bloodshed, according to the Kremlin. Following these successes this secret memorandum shows the submission of Japan to Communist government "by peaceful means" and waves of Red revolutions which would sweep over the Arab countries, the Philippines, and Africa.

As Senator WILLIAM JENNER said, "It is time that this was brought to the attention of the public and time that we get a policy to cope with it."

In 1930, speaking to young men and women from all over the world who had been brought to Moscow to be trained in espionage so that they might go back to their native lands and practice their nefarious activities, Manulsky had this to say: "War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come in 20 or 30 years. To win we shall need the element of surprise. The bourgeoisie will have to be put to sleep. . . ."

"So we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard-of concessions. The capitalist countries, stupid and decadent, will rejoice to cooperate on their own destruction. They will leap at another chance to be friends. As soon as their guard is down we shall smash them with our clenched fist."

Do you peacefully coexist with men who would thus train youth? We Americans need to remember as we have never remembered before in our national life how definite a sentence of death has been passed upon us by the very power with whom we have been asked to peacefully coexist.

Do you know the last lines of the infamous and secret Communist oath? It reads: "I pledge myself to rally the masses to defend the Soviet Union, the land of victorious socialism. I pledge myself at all times a vigilant and firm defender of the Leninist line of the party, the only line that insures the triumph of Soviet power in the United States."

How may a Communist be recognized? He or she cannot be recognized by merely looking at him. The person may be short or tall, fat or thin, rich or poor. They look and act much like any other human being. Outward characteristics reveal no clues to their attitude toward communism.

When a person professes communism or tangible evidence is produced, it is regarded as definite proof that he is a Communist. On the other hand, he might neither profess his affiliation nor have official credentials, but still be 100 percent Red.

The only way a Communist reveals his identification with this peculiar philosophy of life is through speech and actions. Certainly, if he accepted Communist philosophy, he would be sure to reflect it in his daily life, whether in the classroom or in the factory.

No one can be a true Marxist if he is a member of any church, or if he believes in any religion, or if he even believes in God. A Communist must be an atheist. Marx was an atheist, and so have been all the leaders of communism everywhere.

They are untold numbers who honestly do not regard themselves as Communists yet they are Communists in the making, because they have accepted and put into practice one or more of the identifying characteristics of communism. These people are perhaps the more dangerous to our Republic because they are not aware of the fact that they are collaborating with the Communists. This is something they honestly have no intention of

doing. Yet they can do untold harm when they occupy positions of influence in the levels of Government, labor unions, education, or anywhere that public policy and thinking are generally affected.

Now that we know the master plan for the domination of the world, the type of oath the Communists take and also what has taken place in the world during the last 20 or 30 years, we are cognizant of the fact that time is running out for the United States.

If all of the nations which comprise the U. N. had been sincere in their desire to preserve peace, the world would be very different today.

Various agencies began to spring out of the U. N. and with them many treaties which they hope to impose on the nations.

Some of these proposed treaties are well known to us at this time. The proposed Covenant of Human Rights is an interesting document to read, especially for what it does not say. The same holds true of the Genocide Treaty or Convention, as it is sometimes called. In 1954 the U. N. Assembly unanimously adopted a resolution urging upon every member the ratification of the Genocide Convention. The United States voted for this resolution. At present the Genocide Treaty is lying dormant in the Foreign Relations Committee of the United States Senate, and where we must be certain it will remain.

Secretary Dulles, representing the present administration, has stated that he would not ask for ratification of these two controversial documents at this time. But how do we know what subsequent administrations will do? If these treaties were ever ratified by our United States Senate, they would become the supreme law of the land and our sovereign rights as a nation would be taken from us.

We are a member of UNESCO, a branch of the U. N. As you no doubt know, UNESCO is the United Nations Economic, Scientific, and Cultural Organization. Through this organization our children are to be prepared for membership in a world government. Although the words "world government" are seldom used by UNESCO, all of its propaganda is directed toward that end. The more shocking publications are not issued by UNESCO but spring from conferences and study groups held under UNESCO auspices.

Through an assortment of international agreements we must now go to war in defense of more than 20 separate nations the moment they are attacked. Under most of these agreements the war can start by Presidential order. Thus the exclusive constitutional power of Congress to declare war may be ignored. The Korean war is an example of this type of obligation. We have similar commitments in almost every part of the world.

One of the important links in the chain of international agreements which our country forged is the Yalta agreement. There, the then President of the United States obligated himself to enforce vital provisions of this nefarious document.

As we analyze even a few of these proposed treaties by the U. N. and know of executive agreements, we realize more than ever why we need an amendment to our United States Constitution which would prevent any treaty or executive agreement from superseding our Constitution.

The Status of Forces Treaty, ratified by the Senate in July 1953, deprives American soldiers of their constitutional rights in a supplement to the North Atlantic Treaty. It provides that treason, espionage, and offenses committed in the performance of duty shall subject a soldier stationed in a foreign country to trial by the authorities of his own country. For all other offenses he shall be subject to trial in the courts of the foreign country where he is stationed.

American soldiers, drafted and transported beyond the seas for the defense of foreign

countries, are deprived of their constitutional protections.

Before the approval by our Senate of this treaty, soldiers stationed in foreign countries could be tried only by the military authorities of their own country.

Shall we go ahead and blithely give up our freedoms to foreign nations which jealously guard their own, or shall we work for an adequate amendment to our Constitution?

On January 6, 1955, Senator BRICKER introduced the joint resolution (S. J. Res. 1) proposing an amendment to the Constitution of the United States designed to limit the treaty-making power of the President and the Senate in the following respects: (1) To prevent any treaty in conflict with the Constitution from having any force or effect, and (2) to prevent any treaty from becoming internal law except through valid legislation.

Legislation should be required to make a treaty effective as domestic law. All other countries, with the possible exception of France, Holland, and Mexico, follow this practice.

I believe that the American people are thoroughly aroused over the need for such an amendment and they will not rest until a fully adequate amendment is passed by our Congress and the State legislatures.

The type of legislation called for by the Bricker amendment can never be party politics—it is the very life and strength of our country which is at stake. Party politics would never enter into the question if an enemy should attack our shores, so why bring politics into a question just as vital in that it maintains our Constitution as the bulwark of our Republic?

Each Senator upon entering the office of Senator takes an oath to protect and defend the Constitution. Would not our legislators then be committed to support any legislation required to protect our Constitution? There is no limitation placed in this oath—such as protect and defend within the limits of political expediency.

Have we done enough to let our Senators know that the American people want this added protection now? Individual letters and personal contacts mean a great deal. That is the only way our Congressmen know the will of their constituents.

We believe that our Constitution embodies the most effective system for the preservation of liberty ever devised by the mind of man. However, now, because of existing conditions, this particular amendment to further safeguard our sovereign rights as a Nation is needed.

If you will remember, Article VI, paragraph 2, of our Constitution at present provides that all treaties shall become the supreme law of the land. Do you realize that it takes only two-thirds of the Senators present and voting to ratify a treaty? There is not even a provision that a quorum of Senators be present and not even a roll call vote is taken.

In 1952, treaties with Greece and Turkey were ratified with only six Senators present and voting. Three treaties were ratified that same year by the votes of two Senators—the only ones present when the treaties were presented. Also, in 1952, a treaty with Ireland was ratified by one Senator. It is difficult to believe that this could happen in our country.

Time is running out for our country unless we take a positive stand and act accordingly.

Earl Browder, who headed the American Communist Party for 15 years, declared in 1950 that socialism had progressed farther in the United States than in Great Britain which was ruled by a socialist government from 1945 to 1951.

The term "democracy" has been used so recklessly as to make it almost meaningless. Today it is commonly used in the political phraseology of the Communists. Certainly, we cannot express our concept of our American principles in the same language.

Our Constitution says: "The United States shall guarantee to every State in the Union, a republican form of government."

Our form of government can only rightly be called a "republic." Neither the Constitution nor the Declaration of Independence use the term "democracy" even once. None of the existing 48 State constitutions have any reference to the word.

We in America, and many people the world over, know that here we have something unique in government. We have built our foundations on the premise of individual liberty and free enterprise.

There are those who would advocate more of a "democracy" in this country along the lines of the socialist government of England. Think for a few minutes of how many times our Republic has come to the aid of these "democracies" with loans, gifts, Marshall plans, etc. For us the choice must be obvious—to retain our republican form of government.

I urge each one of you not to join any organization which comes to your community until you have investigated those who are behind that organization on a national level. Many new organizations are and will be formed, with high-sounding names and purposes. Be alert and do not sponsor or join or lend assistance to these organizations or movements until you have made a thorough investigation. Too many fine Americans have been caught in the web of Communist-front organizations. It is so easy to sign your name and so difficult to explain why you did it later on that organization is found to be a subversive one.

Perhaps the Communist Party as such is no longer the chief menace in the United States because many of its members are known and many have been exposed and discredited. The weight of the fight against Communists is now shifted to other groups which operate under the cloak of "respectability." By virtue of their social positions these men and women exert greater influence and so are more dangerous than members of the Communist Party.

According to the FBI, there are only approximately 25,000 hard-core Communists in the United States. But as Mr. J. Edgar Hoover has pointed out: "The extent of dangerousness of the Communist Party should not be judged merely by the extent of its membership."

If and when you should have any information for the FBI, report it to them. Their telephone number is on the first inside page of every telephone book. They will respect your anonymity, if you so request.

If we will be realistic, we must consider the concealed numbers, the great underground menace that is in our very midst. Remember that no people ever voted for communism. But more than 800 million people live under communism because, when they still had the power to protect themselves, they could see only the relatively few enemies above ground, and were not alerted against the great army that remained hidden.

There is no such thing as a permanently free country without effort to keep it that way. Czechoslovakia proved that wealth, industrial power, and a high standard of living were not enough to save it from communism.

It is necessary to understand the oneness, the universality of the Communist movement to know how to fight it. To understand the problems of Europe and Asia, it is necessary to recognize the Soviet state as a single entity, with delegated tasks to member states.

The boys and girls of today are our first line of defense. In their very early life they should be inculcated with the fundamentals of Americanism. This should start in the homes and be continued in the schools with the proper textbooks on American history and government.

We must intensify our religious life as a people. We must restore to our homelife some measure of that information which our fathers and mothers bequeathed to us. We must give our children that sense of responsibility which will give strength to their characters and direction to their lives.

Our youth should understand that with all of the freedoms which our country gives, these freedoms also carry responsibilities which they must be prepared to assume.

Various groups are supporting drives to see that State legislatures enact laws to require the teaching of American history and State history in all schools. Perhaps we have taken our heritage of American principles and ideals so much for granted that we have neglected to instill the same love and reverence for our way of life in our children. We should remember that each generation is a new one and although we are born free we must be taught to recognize the basis of our freedom in order to protect it.

Let us remember the words of Abraham Lincoln in respect to reverence for the Constitution: "Love of the Constitution should be the political religion of the Nation. Let it be taught in schools, in seminaries, and in colleges. Let it be written in primers, in spelling books, and in almanacs. Let it be preached from the pulpit, proclaimed in legislation halls, enforced in courts of justice."

Parents should know the kind of books their children are studying, especially those on history and social science, as well as the type of books in the school libraries. It has been amazing what parents have discovered along this line. Eternal vigilance is truly the price of liberty.

Thirty-five years ago Lenin made this prophecy, "First, we will take Eastern Europe; then the masses of Asia. Then we will encircle the United States of America, which will be the last bastion of capitalism. We will not have to attack it; it will fall like an overripe fruit into our hands."

If we look at the world map of today, Lenin's prophecy must startle us. The confident boast of Lenin that the United States will not have to be attacked because it will be like overripe fruit into the hands of the Communists cannot casually be dismissed.

What so many people fall so tragically to realize is that communism has a world plan and it has been following a carefully set up timetable for the achievement of that plan. Red rulers know what they want with terrible clarity; determined to get what they do want.

Time is running out for us because, given the present pace of the Communist advance, it cannot be long before its encircling pincers will be turning on us.

Far too many people in our country have felt that nothing could ever happen here in the United States to disturb their easy living and the enjoyment of their freedoms, when suddenly they came to the realization that communism in reality was invading this hemisphere as they read and heard of the revolution in Guatemala last summer, as well as troubles in other countries in our part of the world.

When the Director of the United States Information Agency returned last fall from South America he stated that "there are today about 200,000 Communists at work in Latin America, well financed and well organized." He also said that this was in spite of the fact that "13 of the 20 American Republics outlaw the Communist Party."

Certainly the time has come when our Government must reappraise the world situation now that the Communists have moved into the countries in our part of the globe. We cannot permit the Reds to take one piece of territory after another in this hemisphere as they have done in other sections of the world.

How long will it be before the great mass of our citizens realize the infiltration which is in every phase of our national life, in our labor unions, schools, churches, Government departments, and many other places. When will they realize the many years of planning and thoroughness of organization that the Communists have been following to accomplish their end, namely, the ultimate destruction of the great freedoms that are guaranteed to the citizens of these United States of America.

Communism as we know it today is not new in these United States, for it has been at work in small groups or cells for more than 30 years, extending its tentacles of destruction into all walks of life.

We Americans have created a great country and there is so much which is right in our country. Let us compare our country to a beautiful house of which we are so proud, but in many lovely homes there are termites gnawing at the foundations. So there are termites gnawing at the foundations of our Nation. Termites just like subversives are difficult to discover and eliminate.

Our American independence must be preserved. That must be our chief objective in the days which lie ahead. We must be ready to meet the challenge as women unafraid, mindful of our present duties, confident of the future.

As time is running out for our Nation, let us think of the words of Abraham Lincoln: "I appeal to constantly bear in mind that not with politicians, not with presidents, not with office-seekers, but with you is the question: Shall the liberties of this country be preserved to the latest generation?"

In a recent hearing in Washington on the strategy and tactics of communism, Mr. Louis Budenz told a subcommittee that the Communist conspiracy is stronger than ever in the United States. The realization is widespread that the power of the Communists over American life is increasing, and increasing at a frightening pace.

I believe that we cannot take one useful step to safeguard America from Communists in Europe and Asia unless we can find and remove every Communist agent and every Communist collaborator from every position of trust within our gates.

Communist conquest is not something planned for 50 years from now. We cannot fight communism tomorrow. There is only today.

In war, you live in the present or die, and we are at war. The Communist high command is waging war on us today by new and subtle methods of destruction.

As you know, we in the United States have been fighting communism for 35 years. Something must be wrong with our methods. American resistance to Soviet invasion, which had been effective in the twenties, received a setback in 1933 when our country gave recognition to the Soviet Union.

We must remember one thing, Soviet communism is not a party and not an ideology. It is not a leftwing political movement. It is an army, trained and drilled and officered by Moscow.

We need as full and accurate a list of collaborators in high places as we have of the people who have lent their names to the Communists' fronts.

This task cannot be left to our Government alone. The FBI and the Department of Justice have to work with legal evidence. That is the American way. They can catch spies and saboteurs. They cannot deal with a corporation president or a politician or a magazine editor who has made a deal with the Communists.

We need a committee on internal security in every State legislature in the Union. The danger to our Nation is clear. But we have so little time. The enemy is silently pressing deeper and every day the collaborators

seem to be gaining in power over the patriots.

What is America worth to you? What would it mean to you if the beauty of America, the meaning of America, were to be wiped from the earth?

If America were today a conquered nation, with Red Chinese slave drivers forcing our people to work, and Red jailers, under Soviet masters, were torturing our fighting men and clubbing our leaders to death, what price would you pay to win back our country's freedom?

If each one of us would give a part of her time and strength and resources to safeguard America today, we could look forward to the time when the black cloud of Communist barbarity would be lifted from the earth.

The people of this country must know and face the facts and then move forward.

Are we—the American people—going to awaken from our apathy and insist that none of our sovereign rights as a nation are taken from us through treaties and executive agreements? Are we going to insist that a fully adequate constitutional amendment be passed which will prevent any treaty or executive agreement which would supersede our Constitution?

Are we going to insist that this Bricker amendment be ratified or are we going to take the slow train of socialism to communism, or do as some people are advocating, that we revise the U. N. Charter and have world government overnight? The time for us is very, very late.

Before going to bed, one little boy gave this definition of the stars he saw through his window: "They're lights God hangs out so I won't be afraid of the dark." When the clouds are the darkest, we must remember that there are stars behind those clouds.

We must not be afraid. Only with devotion to our ideals and with full faith in God can we hope to succeed in keeping America American.

No Wheat Should Be Sent to the Soviet People as Long as Good Americans Now Unemployed Are Denied This Same Wheat in Their Surplus Commodity Rations

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. VAN ZANDT. Mr. Speaker, the recent Associated Press news article which appeared in the February 19, 1955, issue of the Washington Evening Star revealing the possibility of our Nation donating surplus wheat to the Soviet people is alarming.

In all fairness how can we, as a nation, give our surplus wheat to the Soviet people when unemployed Americans are denied surplus wheat in the form of flour to provide themselves with bread. For months a group of us in Congress representing labor surplus areas have been trying to get action on bills designed to permit wheat and corn to be processed into a form suitable for home consumption, such as wheat into flour and corn into meal. These food com-

modities would be added to the surplus commodities now available for needy families.

Until Congress takes care of our own unemployed Americans with what surplus wheat we have on hand under no consideration should a gift of wheat be made to the Soviet people.

The Associated Press article of February 19, 1955, follows:

[From the Washington Evening Star of February 19, 1955]

PRESIDENT REPORTED STUDYING GIFT WHEAT FOR SOVIET PEOPLE

Secretary of Agriculture Benson said today he has talked over with President Eisenhower the idea of a gift of wheat to Russia and the idea "has not been dropped."

Mr. Benson said, in an airport interview as he was leaving for a Caribbean trip, that in his own opinion the idea is speculative. He added, however, that he and the President have discussed it.

"Of course, I can't tell you what the President said," he continued.

Meanwhile, it was reported that Nelson Rockefeller, who recently joined the White House staff to advise Mr. Eisenhower on international affairs, has been asked to study the wheat gift proposal.

Michael Newsom, master of the National Grange, said his office suggested the wheat gift to the White House shortly after Premier Malenkov resigned with a confession of failure to solve the Russian farm problem.

The American Farm Bureau Federation came out against the giveaway aspects of the proposal. A Farm Bureau spokesman said Russia should buy what wheat it needs with money the Communists now spend on subversive activities in this country.

He said the Russians have a trade balance of around \$50 million in this country which they are unable to spend otherwise and added: "Let them use that money to pay for wheat if they need it."

James C. Hagerty, White House press secretary, had no comment.

The plan, discussed by the New York Herald Tribune's Washington correspondent, Roscoe Drummond, would have the President personally write Russia's new Premier, Marshal Nikolai Bulganin, offering the wheat as a gift from the American people.

Some 675 million bushels of surplus wheat are now held by the Agriculture Department. It is valued at \$1,767,220,000.

Financing Schools, Highways, Hospitals

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Greensburg (Ind.) Daily News of February 22, 1955:

FINANCING SCHOOLS, HIGHWAYS, HOSPITALS

To meet the requirements of its growing population, the United States requires better school facilities, improved highways, and additional hospitals.

If local communities and the States do not assume this responsibility, the Federal Government will be forced to enter these fields.

With Federal aid will inevitably come Federal supervision, since the Government cannot appropriate money for these purposes and sign a blank check to States or local units of government.

At the present time the United States has reached the limit of \$250 billion for its national debt.

One of the proposals which has been advanced has been formation of Federal corporations to defray the cost of these projects. In this manner the limit to the national debt would be bypassed.

These pressing problems were discussed by United States Senator HOMER E. CAPEHART at the Lincoln Day dinner here last week. The senior Senator from Indiana took a realistic view as to these problems and pointed out that schools, hospitals, and highways must be built. He expressed the belief that the best interest of the American people would be served if these projects were assumed by governmental agencies other than the Federal Government.

Senator CAPEHART asserted that he would welcome suggestions from his constituents in Indiana on these problems.

Organization of giant Federal corporations to finance schools, highways, and hospitals has several definite disadvantages which Members of Congress should consider.

Such a procedure would mean that communities and States would rely upon the Federal Government for financing their requirements.

Operation of the Federal corporations would be apart from the Federal budget, and no accurate picture of Federal indebtedness would be possible. This could easily lead to excesses over which Congress would have little control.

In the long run, any indebtedness of Federal corporations will be an obligation which American taxpayers will have to assume. The only avenue for liquidating the corporation will be from Federal taxation.

Some phases of the program can and should be financed locally. Many communities are in a financial position to build modern schools without relying on the Federal Government. On their own initiative many communities, including several in Indiana, are improving their hospital facilities.

The Federal Government could greatly aid highway departments of the respective States through repeal of the 2-cent Federal gasoline tax, making this money available to States for highway construction. Congress has apparently been unwilling to lose this revenue. As a result, Indiana and other States have no alternative but to seek Federal assistance in construction of highways.

In providing for improved schools, highways, and hospitals, four guiding principles could be employed advantageously. They are: That the Federal Government will enter these fields only in instances of exceptional need and inability to pay; that as much as these programs as is possible should be undertaken from local and State resources; that Congress should raise the national debt limit and give taxpayers an accurate picture of the Nation's finances rather than conceal obligations through Federal corporations; that the Federal Government should limit some of its functions so that through a reduction of Federal taxation more money will be in the hands of the Nation's taxpayers for local civic enterprises.

Veteran Affairs

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. BURDICK. Mr. Speaker, the welfare of our veterans is a subject in which we all are greatly interested; and,

therefore, under leave to extend my remarks, I include the following news release of February 23, 1955, in the Record:

WASHINGTON, February 23.—Jack Williams, department adjutant of the North Dakota American Legion, today bitterly assailed Hoover Commission recommendations to close down the only two Veterans' Administration hospitals in North Dakota.

The VA maintains general, medical, and surgical hospitals at Minot and Fargo. Williams, in Washington to attend the American Legion 32d annual National Rehabilitation Conference, criticized the recommendations as being "based wholly on outdated and unrealistic information." He said the Hoover Commission recommendation is certainly not in keeping with the present needs for VA hospital services in North Dakota.

Williams said there is a potential patient load of 63,000 men and women in his State.

He said he would talk today to the North Dakota congressional delegation with Department Service Officer George Rulon, "of the inaccuracies and serious implications of the Hoover Commission recommendations."

Williams denounced the Hoover Commission for attempting to economize Government costs at the expense of the veteran. He said the Hoover Commission report is not founded on facts or the moral obligation the Nation has to the veteran.

"Where would these veterans—who served our country honorably and without stint during our time of need—go for medical care if the VA hospitals at Minot and Fargo were to be closed," he asked.

Rulon said that present patient loads in private hospitals automatically prohibit the influx of patients from the VA hospitals if they were to be closed.

Williams said that North Dakota had more actual battle casualties, proportionately, during World War I than any other State. He said that during World War II, North Dakota ranked third in the number of battle casualties.

"Certainly," he said, "we have a moral obligation to those veterans."

Williams said he saw the attempt by the Hoover Commission to close down the VA hospitals at Minot and Fargo as the first step toward shattering every concept of the veterans' benefits program.

Address of Mr. William Randolph Hearst, Jr.—Part I

EXTENSION OF REMARKS

OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. HILLINGS. Mr. Speaker, I wish to place in the Record a portion of the address of Mr. William Randolph Hearst, Jr., editor in chief of the Hearst newspapers, which was delivered at the National Press Club here in Washington on February 28, 1955.

Mr. Hearst, you will recall, has recently returned from a visit inside the Soviet Union where he had an opportunity to meet the current ruling leaders of that country.

I wish to commend this address to the attention of the House of Representatives because it is a keen analysis of a little-known subject—what is going on behind the Iron Curtain. Mr. Hearst

has very aptly pointed up the fact that the rulers of the Kremlin recognize strength and that the best means of preserving peace is to not let the Politburo forget that the United States is prepared to stand firm in the fight for freedom.

The address follows:

Thank you, Mr. Chairman. Ladies, gentlemen, and colleagues, I would like to clear up one point first. That is to assure you that we had no invitation to Russia. No advance tip of any kind that important things would be taking place while we were there, nor any assurance that we would positively be able to talk with any of the Soviet leaders.

My reason for wanting to go was simply to get a first hand glimpse of the country and its rulers and its people.

It was my father's conception of journalism that it can and should be an exciting and audacious enterprise.

The original suggestion for this trip was made to me at the Gridiron dinner last December by Dave Sentner, a member of your club and bureau chief of the Hearst newspapers here in Washington. I had been mentally kicking the idea around ever since it became apparent that the atmosphere in Russia had undergone a change after Stalin's death.

I told Dave I would go on one condition, and that was that Kingsbury Smith, the INS European general manager, and Frank Conniff, my editorial assistant, go along.

Kingsbury, with nearly 20 years experience as a European correspondent, was, I knew, familiar with the Soviet problems and machinations and knew his way around the European diplomatic circles.

Frank Conniff had served as a war correspondent both in Europe and Asia. In addition to his city-desk side experience as a reporter and rewrite man on the New York Journal-American, he is a student extremely well informed on matters of history and the military. As you probably know, he is also my right hand at home.

With these two close friends and associates, I felt that we could handle any curves they might throw at us.

To my surprise, the visas for the three of us came back in 7 days. We flew to Paris, picked up Kingsbury Smith, and proceeded to Berlin, where we boarded a Soviet passenger plane for the flight to Moscow. It was a twin-engined Convair type of plane, which flew most of the time about 4,000 feet. It made one stop at Vilna, the capital of Lithuania, and landed us gently just after dusk in a snowstorm at the Moscow airport. The flight took 7 hours.

Now for some of my impressions and observations on this trip:

We became aware from the very first day of our arrival that we were getting the red-carpet treatment, or rather what we chose to call the whitewall treatment, from the sides of the gleaming Packard-like ZIs that was made available to us.

We knew we were seeing only what the Soviet leaders wanted us to see and that no secret experiment or unflattering inner problem would be exposed to our prying gaze.

What we saw of the Russian people encouraged us to believe that a strong sentiment of friendliness toward Americans exists among them. When we were recognized as Americans in the streets, the theaters, the restaurants, and stores, we were greeted with smiles and friendly looks. Ten postwar years of anti-American propaganda seem to have had much less effect on the people of Russia than one would expect.

As for an overall impression of life in the Soviet land as seen from two of its main cities—Moscow and Leningrad:

I would say that living conditions in Russia are less bad than the West generally believes but by no means as good as the Russian people are led by their government to think they are in relation to the outside world.

A day in any Soviet city would, I am sure, convince an American shopgirl, factory or white-collar worker that in comparison with conditions in Russia, the United States is the paradise of the proletariat.

Indicative of what little influence the people have on the government that rules them was the apparent lack of popular excitement over the sensational shift in political power that occurred during our visit.

Replacement of Malenkov by Bulganin as head of the government was certainly an event of far-reaching importance. It was accompanied by policy pronouncements which made it clear that the change would affect the life of every individual in the Soviet Union. It meant less consumer goods and greater emphasis on the production of heavy industry.

Such a momentous political event would have aroused public controversy in any western democracy. One would have overheard it being discussed in the busses, subways and restaurants. Yet if there was any discussion of it among the Russian people, it was confined to the intimacy of the close family circle. No one would dare debate the right or wrong of it in public. As far as any public comments in Moscow or Leningrad were concerned, the downfall of Malenkov might never have occurred. We tried to draw out our intourist guide, but not a word would he say. The western envoys likewise told us they had received no reports of any public excitement or agitation over the news.

Some of the Russian translators in the press gallery of the Soviet Parliament at the time Malenkov's resignation was announced were heard exclaiming, almost in a whisper: "It's sensational."

Later, in the streets of Moscow, all was calm. In the shops, people did not even gather around the radios as the news was broadcast. They simply went about their business as usual. If they were listening intently, as they doubtless were, they allowed no sign of it to show. Unusual interest in such things might, I suppose, be interpreted as questioning the wisdom of what the rulers were doing. That would be deviationism, the first step to opposition.

The subjects of our interviews ranged from Khrushchev to Shostakovitch, the composer; from Premier Bulganin to Ulanova, the ballerina; from Marshal Zhukov to Patriarch Alexei, the head of the Russian Orthodox Church, and from Molotov to Sytlana Stalin, the late dictator's daughter.

In addition, we literally spent hours in discussion with the leading western ambassadors, checking our impressions and gauging our reactions against the experience of these diplomatic experts.

Our own Ambassador, Chip Bohlen, was most helpful and considerate. We consulted him every step of the way. We made certain that no move of ours would embarrass American policy.

We turned over verbatim transcripts of our interviews with Khrushchev, Bulganin, Molotov, and Zhukov, to the Ambassador as soon as Kingsbury Smith could type them out following our return from the Kremlin.

I do not think I violate any confidence when I say the Ambassador congratulated us on what we had obtained from the diplomatic as well as professional standpoint.

We felt that America has on the spot in Moscow a man whose training and background have well prepared him for the painstaking job of unscrambling the devious Russian moves and puzzling shifts in Communist policy.

To lend some perspective to our Russian journey, I made certain that at both ends it would be sandwiched by balancing talks with the influential soldiers and statesmen of the free world.

At Paris on the way in, we talked with Gen. Alfred M. Gruenther, the SHAPE commander. Al Gruenther has a keen, agile mind and a penetrating understanding of the problems we face in Europe today.

And on our way home, when our party reached London after a day of flying from Moscow, I experienced the sentimental climax of the whole trip as far as I was personally concerned.

I spent an hour with Sir Winston Churchill in the historic cabinet room at No. 10 Downing St. Earlier in the day we had lunched with Minister of State Anthony Nutting and then talked informally with Sir Anthony Eden at the foreign office.

That hour with Sir Winston was something really special. He listened closely while I gave my impressions of the Russian leaders and ventured a few thoughts on the significance of recent Russian moves.

I assume that one of the questions uppermost in your minds must be whether the new leadership in Russia is more or less likely to precipitate war with us one of these days.

I must say the strongest hope for peace that I found in my 3 weeks' visit to the Soviet Union was the shrewdness of these new rulers of Russia.

These men can be ruthless. They have been merciless. Certainly no humanitarian considerations would cause them to hesitate to wipe us out if they thought they could get away with it.

They believe the end justifies the means. And for them the end remains Communist domination of the world. Khrushchev said so to me quite frankly. He said they hoped to gain the upper hand one day.

Nevertheless, these men are cold, calculating realists. I don't believe they are possessed by the madness that drove Hitler to bring Germany down in ruins. Nor by the recklessness that led Mussolini to tie Italy's kite to the shooting star of nazidom's short-lived conquest.

Crafty all the time, cruel if the occasion, in their opinion, warrants it. Yes. Unquestionably. But they are not paranoids.

They know the destructive power of nuclear weapons. Even if they possess the H-bomb—which British officials doubt—and even if they use it first, they know America has superiority in these weapons and the means to deliver them.

They know that the chance of emerging victorious from a thermonuclear conflict with the United States would be a very slim one. They know the risk of being wiped out along with their system would be great.

Furthermore, as Eden put it and in which we agree, the Soviets have now become the bourgeois of the Communist world. They have established an empire extending from the heart of Germany to the borders of China. They are becoming property owners—cars, television sets, iceboxes, even country homes. They have vested interests to protect.

As long as they feel they are not going to be directly attacked—as long as they know they cannot themselves attack without the certainty of swift and terrible retaliation—I seriously doubt that they will deliberately precipitate a fight with us.

If America was to let down its guard, if the day were to come when the Soviets thought they could deliver the knockout blow that would neutralize the United States, then the temptation to strike would be strong and I would give no odds on them not doing so.

For the present, however, I think they realize they could not pull an atomic Pearl

Harbor on Uncle Sam without getting back a nuclear punch that might well knock the red right out of Russia.

That is why I told President Eisenhower, when I reported to him on my return, that I felt his policy of firmness without provocation, of keeping up our guard and maintaining strong retaliatory force in readiness, was the right one.

The history of Soviet Russia during the past 30 years has shown that one can never be sure what is going to happen, especially within the inner circle of the Red hierarchy. As Marshal Zhukov said to me, "Fortune tellers can go wrong."

Nevertheless, I am prepared to dare a guess about the future of the Soviet leadership—that is, if another Stalin is to emerge on the Russian political scene, it will not be the new Premier.

Bulganin, with whom I talked for over an hour, did not impress me as the type who would be capable of seizing power and making himself the absolute ruler as Stalin did.

He lacked the dynamic personality and forcefulness of Khrushchev. He did not seem to possess the cunning that would be required for victory in a struggle for power with the tough ones in the Kremlin.

Bulganin struck me more as a front man for the principle of collective leadership. That principle, I think, for the time being, at least, continues to be the basis on which the Soviet system is now being run.

With his wavy white hair, trim goatee, and neat mustache, Bulganin has a professional look. As you know, he is a political general, not a professional soldier. Stalin bestowed the title of marshal on him during the war when he was commissar of the armed forces. He has a reputation for being an able administrator and organizer; more of an efficient bureaucrat than political crusader.

In his talk with us Bulganin adopted a conciliatory tone. He seemed to be trying to offset the violent attacks on the United States which he and Molotov had made a few days previously in the Supreme Soviet.

We took him to task for those attacks. We told him we did not see how he could reconcile them with the protestations for improved relations with our country. He denied that the attacks reflected any decision of the new government to pursue a more antagonistic attitude toward the United States. He insisted the Soviet leaders were sincere in their desire for the reestablishment of normal, friendly relations with America.

There is so much double talk in Soviet verbiage that it's difficult to know when they are speaking the truth. However, I do feel they think it is in their own interests to try to improve relations with us.

We thought we smoked out Bulganin on one thing. Molotov claimed in the Supreme Soviet that Russia had surpassed the United States in the production of hydrogen bombs. We called Bulganin's attention to the warnings of scientists that the continued explosion of nuclear weapons would have dangerous effects on human and animal life. We asked him whether Russia would be willing to enter an agreement with the United States and Great Britain to limit the number of these explosions for experimental purposes.

The quick and sharply negative reaction of the Soviet premier convinced me that the Russians are far behind us in the stockpiling of these new weapons, and may not have the H-bomb at all.

Of the four top leaders we met, Khrushchev was in many ways the most impressive. If any of the four were to grab power and build himself up into a Stalin-like dictator, my guess is it would be this boss of Russia's 7 million Communist Party members.

A bullnecked, blunt, and rugged individual, this heavy-set little man with the beady blue eyes and aggressive vitality gave the impression of being the boss of the Kremlin show at the moment, and knowing it.

On the day Malenkov publicly lost his job as premier, it was Khrushchev who dominated the scene in the Supreme Soviet. He nominated Bulganin as successor, and as he did so he remarked that he was sure the deputies would accept the suggestion. There was more than an expression of hope in that remark. It was clear that the "boss" was speaking. No one else was nominated, and no one else spoke for or against Khrushchev's candidate. The vote was called and the hands of some 1,300 deputies sprang automatically into the air. They remained up only a few seconds, then came down. The chairman glanced quickly over the room, said there were no dissenters and no abstentions. Of course, he could not tell whether one or more deputies in the back of the hall failed to raise their hands, but he was confident no one would question his statement. It was interesting to watch Soviet democracy at work.

During our private interview with Khrushchev, which lasted about 2½ hours, he also spoke with the voice of authority. He did not seem to bother to weigh his words the way Bulganin, Molotov, and even Marshal Zhukov did. He was fast on the comeback, and he talked with as much ease about foreign affairs as he did about internal policy.

He made no bones about the hope of the Communists to gain the upper hand in the world one day. But he sought to convince us that the Soviet leadership wants to confine the global struggle between the Communist and Capitalistic systems to measures short of war.

Unlike American Communists, he and most of the other Soviet leaders we met displayed a sense of humor. He laughed and joked and at times showed flashes of wit. He would doubtless order you liquidated without batting an eye if he thought it would serve Soviet interests. But he can be amiable.

He said quite frankly he could appreciate the feeling of our countrymen about Communist China's imprisonment of the American airmen. He added that he personally hoped the matter would be settled satisfactorily. That is more recognition of the wrong that has been done by the Peiping regime to our flyers than we would get from Communists and fellow travelers here at home.

As for Molotov, he seems to have become the elder statesman of the Soviet Government. Always the professional diplomat, he was cautious in his statements and quick to give us the propaganda line. He talked at length about American military bases surrounding the Soviet Union and, referring to our protection of Formosa, labelled it: "United States interference in the internal affairs of China."

From time to time, Molotov offered me a Russian cigarette and while he talked or listened to our questions, he toyed with a match box.

He spoke with an air of self-confidence, as though supreme in the handling of Soviet diplomacy and without worry about what the other members of the presidium might think of his methods.

However, I had much the same feeling about him that I had about Bulganin. I could not quite picture Molotov developing into another Stalin. He seemed to lack the flair for lone wolf leadership.

The western diplomats thought the most important part of our conversation with Molotov concerned the question of a temporary cease-fire in the Formosan area. This had to do with proposed evacuation of Chinese Nationalist forces from the exposed Tachen Islands.

When we put the question to Molotov, he said he thought hardly anyone would hinder such an operation. It was most gratifying to learn upon our return to Washington that

this remark of Molotov had an important bearing on the decision to send the United States Navy to the Tachens to cover the withdrawal of the Chinese Nationalists.

William Randolph Hearst, Jr.—Part II

EXTENSION OF REMARKS OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. HILLINGS. Mr. Speaker, I wish to place in the RECORD at this point part II of the address of Mr. Randolph Hearst, Jr.

The address follows:

Of all the four top men with whom we talked, Marshal Zhukov was the most pleasant. He received us alone except for our interpreter guide. He greeted us warmly when we arrived in his office at the National Defense Ministry. Here was the old soldier who had been on such friendly terms with General Eisenhower in the closing period of the European war and for a short time thereafter. He had stood with Ike beside him in Moscow's Red Square for the great victory parade. He had accepted an invitation from Eisenhower to visit Washington. Ike had offered him his own plane and his son, John, as an aide. The cold war prevented Zhukov from making the trip. He told us that it was his dream to do so, though he doubted that the time was ripe for it.

This husky, forthright military man commanded the defense of Moscow, prepared the Soviet stand at Stalingrad, and let the Red army to victory against Germany. He gave me the impression of being sincere in his expressed hope for improved relations with the United States and the warm sentiments he voiced about President Eisenhower.

I felt almost a sense of relief later when I heard that he had been moved up to the post of Defense Minister. Not because he would hesitate to do everything within his power to defeat us in the event of war between our two countries, but because I believe that soldiers like the President and Zhukov know all too well the horrors of war and want to avoid it. The presence of Zhukov in the high councils of the Soviet regime might be a conservative, perhaps even restraining, influence on recklessness.

Not that I think there is any likelihood of Zhukov exerting a dominant influence on Soviet policy. He strikes me as a soldier, likely to carry out the orders given to him. He also gave me the impression of being a dedicated Communist. Speaking rather proudly of being a member of the central committee, he said: "We soldiers follow the party line."

Nevertheless, I had the feeling that Zhukov is a patriot first and an international Communist second. As long as he remains in the top echelon of the Government I feel he would raise his voice strongly and perhaps effectively against any wild whims for a war that might lead to the destruction of Mother Russia.

With these four coldly realistic men at the top in the Soviet Union, I could not help feeling that any immediate threat to world peace is more likely to come from Red China than Russia.

Khrushchev told us he was confident that the Chinese Communist leaders would show what he described as commonsense in this respect.

If that is so, and we are not going to have war in the foreseeable future, then I believe we are going to face a struggle that may

prove more difficult for us to wage successfully than a military conflict. In the long run, however, this struggle will involve the survival of our way of life just as much as war would.

I am referring to the conflict of competitive coexistence. This is intended to be an ideological and economic struggle aimed at achieving Communist domination of the world by measures short of an all-out, East-West war. That is what we face now. It will be much less terrifying and much less destructive in a material way than a military conflict. It will be far more subtle than the cold war under Stalin. But its ultimate objectives, as far as we are concerned, will be the same.

The second half of this 20th century will determine whether Khrushchev was right when he told me that communism would ultimately gain "the upper hand" through-out the world.

He said it confidently and matter-of-factly, although acknowledging my right to believe that our way of life would become the stronger force.

This indicates the challenge of the future as clearly as any other hint during our 3 weeks' visit to Russia.

The faith of the bald, blunt man who bosses 7 million card-holders in Russia must be matched by a belief just as strong and just as deep.

Time alone will tell whether the free world is equal to the sacrifice, the self-denial, and the courage required to first control and then turn tide against rampant communism.

That means keeping our guard up. It means being prepared for the next 5, 10, or even 20 years to risk war at any moment to restrain Communist imperialism from further military conquests, just as we are doing today in respect to Formosa.

We must not let coexistence lull us into a false sense of security.

Unless and until Russia, Red China, and the rest of the Communist world would accept a really effective system of international control and inspection of armaments, we must maintain in a state of constant readiness a powerful retaliatory force.

I am absolutely convinced that is the only hope of preserving world peace. For let me repeat, if the Soviets or Chinese Reds thought they could neutralize us with a quick knock-out blow, they would not hesitate to do so.

They are not refraining from war because they have renounced it as an instrument of national or international policy. Nor because they are worried about what war would mean for western civilization.

We heard Molotov tell the Supreme Soviet and I quote him:

"World civilization will not perish no matter how much it might suffer from a new war."

He predicted that what would perish would be our way of life.

That should make it clear enough to us that the Soviet leadership does not rule out war because of its possible effect on civilization. It rules it out for the present simply because of the respect it has for the effectiveness of America's counteroffensive power.

That is why we must continue to be prepared.

But preparedness alone will not win for us the battle of coexistence. Something more is needed.

I believe in the strength and ultimate survival of the free world's system, based on human freedom, the dignity of the individual, and private initiative. Quoting to Bulganin the immortal words of Lincoln on Government of the people, by the people, for the people, I made clear my confidence that we will be able to cope with communism on a coexistence basis.

But the mere statement of this creed is not enough.

The western program of building armed strength should be widened into a more flexible and imaginative strategy for competitive coexistence with the Communists in every field and on every front.

While in Moscow I gained the impression that communism was moving ahead in many fields which the present western strategy overlooks.

The arms race is not the only event in which they are competing with us. They have taken sports and culture and the impressionable years of youth and transformed them into arenas of the cold war.

Dedicated materialists though they are, they are working mightily on the minds of men and seeking to capture the imagination of the susceptible.

Our reliance upon armed strength alone as our primary concern is permitting communism to take long strides forward in those fields which we have largely neglected.

By inviting to Moscow picked delegations from the satellite countries and wavering neutrals like India, they strive to convey the impression that Soviet customs are superior to those of the west.

The delegations are carefully chaperoned, of course. They only see what the Communists want them to see. On that basis the good things of Moscow can be impressive—the splendid Moscow ballet, the mosaic-adorned subway, the up-to-date classrooms of towering Moscow University, the new apartment buildings, and the progress that has unquestionably been achieved in the industrialization of a backward, almost primitive agricultural nation.

It would be cause for wonder indeed if the Indians, the Chinese and even the Communists militants of Eastern Europe did not go back to their homelands somewhat impressed.

Sports is another front on which the commissars are moving full steam ahead.

On one frigid night while we were there, 75,000 Moscovites jammed Dynamo Stadium—the local Yankee Stadium—to watch the home team humble West Germany in a hockey game, 10 to 3.

The United States is likely to have a tough time at the 1956 Olympic games in Melbourne, when Soviet Russia enters a team which even now is being prepared for the big test.

America has dominated the Olympic games since their inception. It has also been a source of prestige throughout the world, especially with sport-conscious young people.

How will the youth of the world feel, especially in doubtful areas, if the Russian team ends America's long sway at Melbourne in 1956? Of course, these Russian athletes are not really amateurs. They are professionals. They are trained under government guidance, with government help. They receive bonuses and money prizes.

We should find some way of making sure that our Olympic contenders get everything they need in the way of training opportunities.

The lively arts are another field wherein the commissars are operating with the professed intention of proving to the young people of the world that Russian achievements far surpass the West.

Ballet, the theater, literature—all are shaped toward aiding communism's long-range scheme of world domination. Top artists know they are not only expected to perform, but to give their services at clinics where the plastic minds of youthful visitors can be influenced.

From Moscow radiate troupes of athletes and artists, circulating through the Soviet world and the satellites, venturing into countries like Red China and India with their gospel of communism.

It stands to reason that such extensive wooing of impressionable minds is likely to pay dividends—unless we compete vigorously with the Communist effort and even surpass it.

We have so much more to offer than the Communists that any comparison must show up in our favor.

But it is not enough to sit complacently by while the Soviet Union throws its smaller resources into the scales and makes its weight felt because we do not choose to compete.

Nor is it enough for our leaders to advocate and appropriate large sums for foreign military and economic aid and think they have met the challenge.

Money is not enough. I came away from Russia convinced that only deep thought and long-range planning would suffice to prevail over communism in the conflict of coexistence.

Money spent on foreign aid will not get the most effective results unless it is thoughtfully expended in those fields where it will do the most good.

We should seek to convey to the world—to our allies, to the uncommitted countries especially, and to the Russians if possible—the idea that America is not only proud of its motor cars, its bathtubs, and other material benefits, but also of its cultural achievements.

I believe that any cultural exchange between Russia and the United States is certain to develop in our favor. Within limits, I think such exchanges should be encouraged.

Last year the Soviet Union welcomed a group of American student editors to Russia. The United States of America refused to grant visas to a similar group of young Russian students.

The reason given was that a provision of the McCarran Act made it impossible to sanction the visas automatically. And neither the Justice Department nor the State Department would take the technical steps needed to circumvent the provision.

Somebody was timid on that one.

We had nothing to lose by exposing those young Communists to the wonders of our civilization. Their faith in communism might have been rocked by a view of America with its vastly higher standard of living, its free press, its cultural institutions, its open-hearted give and take.

And I'm sure the traditional friendliness of the American people would have dispelled the Kremlin's propaganda about our alleged warmongering and dedication to the destruction of Russia.

Everywhere we went in official Russia, the case of the student editors was thrown at us. The astute foreign editor of Pravda appropriated Sir Winston Churchill's "Iron Curtain" phrase and asserted it was America, not Russia, that had such a barrier around it.

What I would like to advocate here today is the establishment of a permanent planning board commissioned to formulate a strategy on all fronts for meeting the challenge of competitive coexistence.

This board should be scrupulously non-partisan. It should be culled from the finest minds and talents available, both in public and private life.

It should survey the whole global scene and develop plans for getting the peoples of the world on our side. Sports, the theater, educational exchanges—no field should be neglected in this competition of the two conflicting systems.

Who can doubt that America would emerge on top in any such competition?

My suggestion is not blueprinted. It may even be a little vague. But formulating and implementing it would be the job of the planning group of men and women, each devoting time and energy to developing an overall American strategy in those nonmili-

tary fields for 1955—and for the next generation.

We have a National Security Council. I would like to see a national competitive co-existence council to combat communism.

One side or the other is going to win the battle of competitive coexistence.

It had better be our side.

Everyone and everything we love and cherish is at stake.

I thank you.

The Serious Situation Confronting the Textile Industry

EXTENSION OF REMARKS

OF

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. WIER. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I include a letter from the Textile Workers' Union of America, signed by Arthur Gustafson, president of Twin City Joint Board, and Anna Vanusek, secretary, Lumber Exchange Building, Minneapolis, Minn., with copy of resolution adopted at the national CIO convention in Los Angeles, Calif., December 6 to 10, 1954. The resolution sets forth the serious situation confronting the textile industry and recommends action be taken to prevent widespread unemployment and suffering. The letter and resolution follow:

TWIN CITY JOINT BOARD,
TEXTILE WORKERS' UNION OF AMERICA,
Minneapolis, Minn., February 17, 1955.
Hon. Roy Wier,
Congressman, Third District,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: Enclosed, herewith, is a copy of a resolution which was passed at the national CIO convention at Los Angeles, Calif., December 6 to 10, 1954.

This resolution puts forth the depressing plight which grips the textile industry in the United States and is causing great hardship to all people who are depending on this industry for a living.

The members of Twin City Joint Board, TWUA, most earnestly ask you to do all in your power to have the proper agencies of our Government carry out the suggestions to investigate this situation, and as a result we feel a remedy will be worked out which will bring relief to the textile industry and cause reemployment of thousands of workers who are now unnecessarily unemployed.

Yours truly,

TEXTILE WORKERS' UNION OF AMERICA,
ARTHUR GUSTAFSON,
President, Twin City Joint Board,
ANNA VANUSEK,
Secretary, Twin City Joint Board.

TEXTILE INDUSTRY PROBLEMS

(Resolution adopted at 16th convention of the Congress of Industrial Organizations, Los Angeles, Calif., December 6-10, 1954)

The textile industry preceded the rest of the American economy in the descent to mass unemployment and suffering. Today some 300,000 textile workers are idle, more than 50,000 as a result of permanent mill closings during the last 2 years. Several hundred thousand are working part time. Employment is less than in 1932. Thou-

sands have exhausted unemployment compensation benefits and have been forced onto local relief rolls. The depression in the industry has caused widespread hardship in textile communities throughout the country.

The plight of the industry is due to the failure of managements to fulfill their responsibilities to their customers and workers. Fabric and apparel design has not kept pace with the changing living habits of American consumers. Instead of fashioning materials to whet the appetites of the new suburbanites, the mills have continued to produce fabrics designed for more formal urban living. There is a dearth of fabric and apparel designs suitable for this era of the long, casual weekend, backyard sports, TV-viewing and the home workshop. Expenditures on advertising and sales promotion have been woefully inadequate. Research is needed on the potentialities of textiles for new industrial applications as well as for expansion of old uses.

Consumer per capita expenditures on apparel have not increased in proportion to the rise in total consumer spending because the textile industry has not moved to maintain its position in the consumer market. Employers have resigned themselves to shrinking the industry's capacity without consideration for their public responsibilities. Some have carried their irresponsibility to the point of capitalizing on tax loopholes and local government subsidies to reap financial gain by closing their plants. The welfare of the workers and the community has been ignored in the ruthless drive of a few men to profit from the low tax rate applicable to gains from the sale of capital assets. Others have exploited the industry-hungry towns which used their tax-exempt authority to float municipal bonds to pay for new plants and equipment.

Many companies were forced out of business because of their failure to reinvest the excessive profit earned during previous boom periods. Others were unable to compete in a buyers market because they lacked enterprising management. Their inability to keep pace with new methods, style changes, and merchandising developments made their demise inevitable.

In contrast, there are many companies whose efficiency and superior merchandising have continued to yield profitable financial returns. Corporations with strong financial backing have grown through the acquisition of additional plants. These mergers and acquisitions have resulted in an unprecedented concentration of control in the industry. Some 50 textile giants control half of the industry's basic capacity.

Rapid improvements in textile technology have added to the workers' problems by reducing the amount of labor required per unit of production. Management has taken advantage of these developments to extend work assignments inordinately and has refused to share the gains from increasing productivity. Man-hour productivity has risen at the annual rate of 4.5 percent since 1946 with a total cumulative rise of 36 percent. Combined with a declining total production to an annual rate of 12.7 billion yards from a rate of 14.76 billion yards at the end of 1950, these developments have permanently eliminated thousands of textile jobs.

Imports of textiles, including woolsens and worsteds, cordage and twine, fine cottons, silk scarves and others, have increased markedly and have accentuated the problems of the industry. In the woolen and worsted branch the impact of imports has been most severe because of the shrinking American market and the concentration of foreign exporters of lightweight fabrics for this country.

The Federal Government has abdicated its responsibilities in the textile field. The de-

fense manpower policy which authorized allocation of some Government orders to areas of high unemployment has been scuttled. The protection promised by the Walsh-Healey Public Contracts Act to employers with decent wage scales in bidding for Government contracts has been wiped out by the Fulbright amendment which authorizes court action to prevent minimum wage regulations from being put into effect. Increases in the minimum wage for work on public contracts, from \$0.87 to \$1 in cotton-rayon and from \$1.05 to \$1.20 in woolen and worsted, have been blocked by such litigation. The Government has refused to implement a provision of the tariff agreement which authorizes higher rates to protect the woolen and worsted industry from growing imports. On the other hand the Government maintains a duty on raw wool which adds to the cost of wool products without protecting the wool farmer.

It also supports an artificially high price for cotton which results in the accumulation of a huge cotton surplus and prevents the consumer from enjoying the benefits of lower cotton costs: Now, therefore, be it

Resolved:

1. We call upon the Federal Government to take affirmative action to stem the tide of depression in the textile industry:

(a) An agency should be set up by Congress to represent the textile industry, labor, and the public for the purpose of enforcing a basic 35-hour workweek in the industry at 40 hours' pay. The agency should be empowered in periods of distress to limit machine operations to two shifts per day.

(b) A program of stockpiling needed military fabrics should be created now so that production orders can be released immediately.

(c) American textiles should be used in the same fashion as surplus food and coal for the relief of needy nations overseas. In similar fashion, textiles should be distributed to needy Americans as surplus food is now distributed.

(d) Contracts should be negotiated with mills in distressed manpower areas to reemploy the unemployed.

(e) A systematic investigation should be undertaken of ways to broaden the use of wool fibers as well as cotton. The Department of Agriculture should provide leadership in establishing a wool fabric library to stimulate new design and aggressive merchandising.

(f) Industrial expansion programs must be revised to locate new plants in areas where surplus manpower is available.

2. We support the proposal of the House Ways and Means Committee to disallow, for tax purposes, the deduction of rent from taxable income by industrial companies which lease plants built from the proceeds of municipal bond issues. This action would be a suitable first step in eliminating State and local tax exemptions and other subsidies to private enterprise.

3. All profits and capital gains resulting from the liquidation of mills should be taxed at a special rate of 25 percent and the proceeds used to finance local development programs, to aid workers to adjust themselves, and to set up public works and the development of local resources and facilities.

4. We call upon the Senate Committee on Labor and Education to look into the use of capital-gains taxes, local subsidies, and corporate mergers as stimuli to the liquidation of business enterprises.

5. The Federal Government should provide a research organization for studying methods of broadening the markets for textile fabrics.

The following unions concur in this action: Local Union No. 36, Tracy Chase, president, H. M. Lykke, secretary; Local Union No. 1262, Mary Zeppa, president, Dorothy Frank, secretary; Local Union No. 1260, Arthur Gustafson, president, Lesin L. Adams,

secretary; Local Union No. 1052, George J. Turnbull, president, J. Melton Johnson, secretary; Local Union No. 132, Sidney B. Thompson, president, Margaret Humphrey, secretary; Local Union No. 418, Ople Hopper, president, Wilma C. Ryan, secretary.

Pacific Locks, Panama Canal—Views of Sibert and Stevens

EXTENSION OF REMARKS OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. KEOGH. Mr. Speaker, the history of the Panama Canal, in a large measure, is a record of heated controversy—debate as to choice of route and contentions over type and features of design. Of all the decisions as to design, none have affected more profoundly the planning, construction, and subsequent operation of the canal than that which separated the Pacific locks into two sets.

A brief summary of the background of this decision was presented on May 8, 1948, by Consulting Engineer Harry O. Cole, a builder of the Pacific locks, in a significant address before the Panama Canal Society of Washington, D. C., which was published in the CONGRESSIONAL RECORD, volume 94, part 11, May 21, 1948, page A3191.

In this address, Mr. Cole traces the development of the idea of a summit-level anchorage in the Pacific section of the Panama Canal from its conception in 1879 by Adolphe Godin de Lépinay through its proposal in 1906 by Chief Engineer John F. Stevens and its attempted revival in 1908 by Col. William L. Sibert.

These men were far-visioned engineers of distinction. Though they necessarily had had no experience in operating an interoceanic canal, they recognized and understood the problems of the Panama Canal, and urged the terminal lake solution. Unfortunately, they were unable to secure adoption of their idea. The Pacific end of the canal as constructed contained defects revealed by years of subsequent operation.

The critical situations produced by World War II again focused attention on the study of marine operations in the Panama Canal, at which time I was a member of the Committee on Merchant Marine and Fisheries. It is a great tribute to the vision of these three engineers that a naval officer, Comdr. Miles P. DuVal, who, in 1941-44, was captain of the port, Balboa, after a painstaking study of the problems of ship transit, developed the same plan. This proved to be the first comprehensive proposal for the operational improvement of the Panama Canal ever derived from marine experience. The proposal is described by its author in a notable paper, *The Marine Operating Problems, Panama Canal, and the Solution*, published in the *American Society of Civil Engineers Proceedings*, volume 73, February 1947, page 161, and *Transactions*, volume 114,

1949, page 558. In this Captain DuVal extends full credit to those engineers for their brilliant conceptions.

Fortunately, Chief Engineer Stevens and General Sibert outlined their views on the Pacific lock question in chapter IX of their splendid book, *The Construction of the Panama Canal*, published by D. Appleton & Co. in 1915—one of the best accounts of the construction era.

In order that this illuminating summary by these engineering leaders may be readily available to the Congress, the Executive and the Nation, I include its text:

THE CONSTRUCTION OF THE PANAMA CANAL (By William L. Sibert and John F. Stevens) CHAPTER IX. CHANGES IN THE ADOPTED PROJECT

The exposed position of the proposed lock at the Pacific entrance insofar as ship-fire from an enemy's fleet was concerned, in addition to foundation troubles in the construction of the necessary dams, especially the dam from Sosa Hill to near the mouth of San Juan River, caused investigations to be continued with a view to moving the locks in question inland to a position where the natural hills would protect them from hostile gunfire.

The advantage of a commodious lake at the Pacific terminus were many from a navigation and commercial standpoint, but the military features were considered paramount. The investigations which consisted principally in making borings in search of suitable foundation material were commenced at the old French lock location, at Miraflores, and continued south. These borings soon established the fact that suitable foundations existed at Miraflores for at least two locks. Work was proceeding, building the dams connecting Sosa Hill with the highlands on either side and starting the excavation for the Sosa Hill Locks, so if a change were to be made it was necessary that the decision should be arrived at quickly so as to stop expense on a project that might be discarded. When the question was brought before the Isthmian Canal Commission for recommendation, it was not known that suitable foundation existed at Miraflores for 3 locks and it was thought and stated by those conducting the explorations that there was not a suitable foundation for 3 locks at this site, so 2 locks were recommended at Miraflores and 1 at Pedro Miguel, which plan was approved by the President of the United States.

It was thought by some of the engineers connected with the canal that there would be a great advantage in having the 3 locks in 1 flight at Miraflores, making the 2 ends of the canal symmetrical. Investigations were therefore continued and soon established the fact that the three locks could advantageously be built at Miraflores on a rock foundation, thus making it practicable to carry out a little further up the valley essentially the same plan that had been studied in 1908 and abandoned because suitable foundations had not been located.

As soon as it was ascertained that suitable foundation existed near Miraflores for a duplicate flight of 3 locks, comparative estimates were made for that construction and for the locks separated—1 at Pedro Miguel and 2 at Miraflores. These estimates showed that the 3 locks on the Pacific side could be built in flight one structure for about \$4 million less than if separated. This saving resulted largely from the following facts:

First, that only 1 set of guide and flare walls aggregating a length of about 4,000 feet would be needed if the locks were in 1 structure, while 2 sets of such walls would be necessary if the structures were separated as stated.

Second, that only 20 lock gates and 33 sets of gate valves were necessary if all locks were together, while 26 gates and 51 sets of valves would be needed if the locks were separated. The six extra sets of gates would also require a material increase in length of lock walls to accommodate them.

Third, the smaller number of expensive machines for operating the gates and valves.

Fourth, only one emergency dam would be needed in the first case, and two in the second.

The estimates also showed that the operating and maintenance cost would be about \$250,000 a year less for the three locks in flight.

The advantages and disadvantages to navigation afforded by each of the propositions were discussed. One line of thought led to the conclusion that the navigation interests and the water-supply question would be best met if all the locks of the Panama Canal were separated by material distances, and that where this could not be attained it should be approximated as closely as possible, and that not more than two locks should be built together if it could be avoided; it being thought in the beginning that the saving of water due to the use of intermediate gates could not be affected in a flight of three locks.

These intermediate gates divide the 1,000-foot lock chamber into two smaller chambers of lengths sufficient to accommodate to the best advantage ships of commerce not exceeding 550 feet in length. Ships of this class constitute over 95 percent of the world's shipping which may reasonably be expected to use the canal.

It was also pointed out that a ship breaking through the upper gates in a flight of locks would be more surely and completely wrecked than if it broke the upper gate of a lock where only one lift existed. Gen. H. L. Abbot proved that, if the boats going from Colon to Panama were always passed through the same flight of locks—the west side, for instance—and those going the opposite direction through the east flight, that the same saving of water could be accomplished by the use of intermediate gates in a flight of three locks as could be if the locks were separated—without any cross-filling devices—which devices are of doubtful utility when the locks are used to maximum capacity.

The advocates of the three-lock design contended that it would probably make very little difference to a ship whether it plunged down one fall of 30 feet, or 3; that it would be wrecked anyway; and that the damage to shipping would, in the 3-lock design, be largely confined to the ship actually breaking the lock gates; while if the locks were separated, many other ships might be involved in the disaster on account of quickly draining the levels between locks and grounding the ships in such levels.

It was pointed out in the case of the flight of locks at Gatun that the upper miter-sill, which is about 25 feet above the general lake bottom in that vicinity, would limit the available depth in Gatun Lake, with the water flowing through the locks, to about 31 or 32 feet, and that, as the lake fell, there would be no unusual difficulty in stopping the flow before the largest draft vessel would ground in the anchorage space south of the locks. That is, should such a catastrophe happen, the damage to shipping would be limited to the ship breaking the summit level.

It was also pointed out that should such an accident happen the damage to the canal would be practically limited to the wreckage of the lock gates involved in the collision. The flow of about 100,000 cubic feet per second, which might result from breaking the summit level could not damage the masonry of the lock walls or floors and there was nothing below the locks to be damaged except the sea-level section of the canal. This section is 500 feet wide and 41 feet

deep and would carry 100,000 cubic feet with a mean velocity of about 5 feet per second, or less than 4 miles per hour. In that part of channel immediately below the locks where the guide wall divides it, the velocity should not exceed 7 miles per hour. To have no essential structures below the locks leading to the summit level of a canal, which in this case was a reservoir 164 square miles in area, was considered a material advantage.

It was also pointed out that should a lock gate be carried away at Pedro Miguel, there would develop almost immediately in the section through the Culebra Cut, which was then planned with a width of 200 feet, a current velocity of about 10 miles an hour which would imperil all vessels in such cut and would fill to overflowing in about 30 minutes the small lake between Pedro Miguel and the two locks at Miraflores. This might result in serious injury to the earthen dams and fills at Miraflores unless the spillway in the dam at that place was surely operated in a very short space of time.

It was pointed out that, if three locks were placed at Miraflores, the size and depth of the lake would be so increased over that in the two-lock project that, should a lock gate be carried away at Miraflores, the lake would fall so slowly that all ships in the Culebra Cut would probably have time to safely pass into either Gatun or Miraflores Lakes before currents could be developed in that cut destructive to shipping.

The congestion and consequent difficulties to navigation brought about by providing a lock at the end of a long narrow channel such as the Culebra Cut, due to the fact that ships accumulate and pass each other at locks, was pointed out. It was also pointed out that large ships could not pass each other in a 200-foot channel and that in order to attain the maximum number of lockages per day, it might be necessary to dispatch ships through the cut in fleets and that lakes at both ends of the summit level would facilitate this.

The advantage of such lakes was still further emphasized by the fact that dense fogs are frequent in the Culebra Cut during the year, especially in the rainy season. These fogs rise from 8 to 10 p. m. and disappear about sunrise. The records showed that navigation would experience practically no difficulty in the sea-level parts of the canal on account of fogs.

It was pointed out that the ability to pass ships to the summit level and have there a commodious harborage, where they could await the disappearance of the fog, would be a material advantage.

It was also pointed out that the greatest chance of accident in passing a ship through a lock was in entering the lock from the pool level above, as evidenced by the construction of duplicate lock gates at both ends of a lock next the summit or other levels, and by the construction and maintenance of expensive devices to stop the flow of water through a lock so situated, should its gates be carried away. Such entrance would take place only once if the three locks were in flight in one structure, and would take place 2 or 3 times if the locks were built at 2 or 3 sites.

A board of seven consulting engineers reported confidentially to the President that the better plan would be to build three locks at Miraflores. The matter was never passed upon by the Isthmian Canal Commission. An extended and bitter public discussion was then being carried on in the papers of the United States concerning the type of the canal. Changes in the adopted project could be utilized, it was thought, by the advocates of the sea-level plan in their arguments. Changes in plans were classed as admissions of weakness in the lock-type canal.

It is interesting to note, in this connection, that the Annual Report of the Panama Canal, 1914, shows that the three locks on the Atlantic side of the canal cost \$2,130,000 less than the three locks on the Pacific side notwithstanding the fact that the sand, stone and cement in a cubic yard of concrete in the Atlantic locks cost \$2.01 more than in a cubic yard of concrete in the Pacific locks.

The decision afterwards to widen the Culebra cut to 300 feet will reduce the current in that cut to 6½ miles an hour in case such an accident as that described above should happen. The many devices adopted to prevent accident to the lock gates, of course, make it very improbable that any such accident will occur, and the entrance to Pedro Miguel lock can be still further widened, and thus minimize the disadvantage of having a lock at the end of a long narrow section of a canal.

The change of lock location on the Pacific side was the only change in location of the essential parts of the Panama Canal excepting the following changes in channel location: first, from the Pacific terminal to the south side of the group of islands about 3 or 4 miles off shore; second, the extension of the sea-level section to Miraflores, which route followed quite closely that followed by the French in their last plan.

The change in location of the channel leading from the Pacific terminal to deep water in the Pacific, placing the same on the west side of the islands, was primarily for the purpose of reducing the cost of maintenance, experience having shown that the currents in Panama Bay caused a movement of fine silt along the shore to the westward. By changing the channel and building a causeway on the east side of it from the shore to the islands, this channel silt would be stopped, and furthermore this causeway constituted a line of communication from the shore to the sea-coast fortifications on the island that could be protected by guns on the shore on that side of the canal that would be least subject to surprise by a raiding force.

The Cattle Program on the Fort Berthold Indian Reservation

EXTENSION OF REMARKS OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. BURDICK. Mr. Speaker, the Indian Bureau evidently does not understand the agricultural program among Indians. At the Fort Berthold Indian Reservation in North Dakota the Department advised the Indians to go into the livestock business. Through that venture, the Department thought, the Indians would become self-supporting. This was a good plan, but apparently the experts on agriculture in that Department did not think the plan through.

No one can go into the cattle business for 1 year or 2 years and get very far. This is a long-term enterprise. There have been some losses on the reservation from this livestock venture, but nowhere near the loss which the Department is now forcing on these Indians. Since 30 percent of the cattle loans are in default, the Bureau has decided to advance no more money—and remember, it is Indian

money and not taxpayers' money—and are recommending that the cattle loans in arrears be closed out. In other words, the cattle on hand are to be sold and the proceeds credited on the loans.

Just as soon as this is done those loans will be an almost total loss. If the cattle are sold through forced sale, the Indian will have nothing from which he can get money to pay. What should be done is to tide these loans over, put into the venture more money, and bring the herds up to a good standard of production. In many cases the Indians have bred their original stock up to better beef animals, and that cannot be done in a year or 2 years. It takes time, and these herds should not be sold but financed. These good cattle should not be sacrificed to make small payments on the indebtedness. What would you think of a man who started a turkey venture, bought birds for production, set the eggs, and then sold the turkey hen before the eggs hatched? This would be the same as what the Department is now doing in the cattle business on the Fort Berthold Reservation.

Senator LANGER's committee held hearings at the reservation in October 1954, and pages 116 to 163 of Senate Report, Senate Resolution 89, sets out the whole situation in the cattle business on that reservation. In my opinion the cattle loans must be refinanced in order to do two things:

First. To stop any further losses.

Second. To bring the cattle program to final success.

It cannot be done in a short time, but it can be done with proper financing over a long period of time. I am in the cattle business myself, and it took me several years in breeding better stock and getting a herd built up to a proper size to make my efforts worthwhile and to finally reach a point of success. I reached that point, but I didn't do it in 1 year or even 2.

The Indian Bureau evidently knows but little about cattle raising.

End of Ireland's Partition Draws Closer

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. FOGARTY. Mr. Speaker, in reading the Irish Times of February 17, I was pleased to read an article indicating the willingness of the Irish Premier to meet with the Prime Minister of the six counties to discuss matters of common concern. The article is the result of an interview given to Mr. L. R. Muray and published in the Yorkshire Post. It may be of interest to the Members of the House to know that the Yorkshire Post is owned by the family of Sir Anthony Eden. Mr. Muray is a well known international correspondent, who visited in Washington about a year ago.

Not only does Mr. John A. Costello, Premier of the Republic of Ireland, indicate a willingness to meet with the representatives of the Six County government to settle problems of mutual concern, but also expressed the hope that this might help to create an atmosphere of friendly relations in which the grave problem of partition might also be considered and amicably terminated. The ending of the partition of Ireland has long been a matter of concern to me, and it has been with that in view that I have continuously urged the passage by this House of my resolution concerning Ireland. It has been my hope that such action by Congress would help to spur on the interest in and the solution of the partition problem.

In the course of the interview, Mr. Costello stressed the point that international cooperation was handicapped by reason of partition and that close defense ties with the United Kingdom could not be negotiated so long as the border remained. Based on these remarks, the *Yorkshire Post* also published an editorial regarding the necessity for coordinating defense plans between the two countries.

Knowing the interest of my colleagues in these matters, I am including in these remarks, the article which appeared in the *Irish Times*, recounting the interview with Mr. Costello, and also their reprinting of the editorial in the *Yorkshire Post*.

The two articles follow:

TAIOISEACH WILLING TO MEET NORTHERN PREMIER FOR GREATER GOODWILL

The Taoiseach, Mr. J. A. Costello, is prepared to meet the Prime Minister of Northern Ireland, Lord Brookeborough, "at any time to discuss matters of common concern." These words are a quotation from an exclusive interview recently given to L. R. Muray, and published in the *Yorkshire Post*.

Mr. Costello said that a discussion could create greater good will and prepare for a saner view to be taken of problems; a view that might ultimately lead to a climate of opinion in which the end of partition could be discussed.

"When I asked Mr. Costello about the Irish Republican Army, the extremist underground organization, Mr. Costello said that he could not discuss it with the North except on the basis of the ultimate eradication of the root of all evil—partition," the article goes on.

"The IRA, he told me, did not enjoy very widespread support, though there was sympathy with the young people who got themselves involved in the raiding of Armagh Barracks in Ulster last year, but it should be borne in mind that no party in the Eire Parliament advocated the use of force as a solution of the problem of partition. Ireland's outlook, Mr. Costello said, was to secure international cooperation irrespective of partition, but closer defense relations with the U. K. would depend on circumstances prevailing at the time, and whether or not the problem of partition was solved. The undertaking still stood that Ireland would never allow her territory to be used as a base to attack Britain. No government, however, could contemplate closer defense ties while partition existed. He complained that the British press maintained a barrier of silence on these issues.

"Mr. Costello would welcome further developments of agricultural exports to Britain, and more investments in Ireland by well-disposed people. His Government could not

repeal the Company Act, which laid down that 51 percent of the capital of new companies must be Irish, but it would be glad to operate the special licensing clause of the act, that created exceptions very liberally.

"Mr. James Dillon, the Minister for Agriculture, to whom Mr. Costello referred me, said that he was about to reopen negotiations for a renewal of the 1951 pig and bacon agreement with Great Britain. Mr. Dillon expressed enthusiastic confidence in the future relationship between the two countries. 'By stepping up cattle production here,' he said, 'we can, by common effort, produce the iron ration of meat, in order to ensure that no one can starve out the people of our two islands in the event of war.' Britain, he went on, could never be beaten in any war, provided she was able to hold out the first 12 months. Such cooperation would, at the same time, confer substantial prosperity on 'our two peoples.' Mr. Dillon added that nobody could ever beat an Anglo-American Commonwealth, which by its strength could ensure the peace of the world, and which free nations could join. He smiled when I suggested that Eire would have to join the proposed commonwealth.

"Mr. Liam Cosgrave, the foreign minister, answering a question about meeting the Northern Ireland Premier, said that they would be prepared to discuss matters in a realistic manner, members of both governments had met before to discuss railways and fisheries. The Government of Ireland Act reserved defense and external affairs to Westminster and any general discussion would, therefore, have to be tripartite. Ireland, Mr. Cosgrave said, was willing to do her part in the struggle against communism, but one could not expect her to join NATO since the Atlantic Pact guaranteed the existing borders of the signatories. When I pointed out that the Atlantic Pact was for 50 years only, Mr. Cosgrave agreed that partition had been with them for more than 30 years now. It was a question, ultimately, he said, of a definition and agreement of the term 'realistic.'

"Apart from the reference to the IRA by Mr. Costello which is quoted above, I could gain no information from government sources in Dublin about the secret army. From well-informed sources, however, I gather that the IRA's enrolled membership is about 1,000, of whom 400 to 500 are in active cadres. The IRA leader, whose pen name is McDermott, can draw on those cadres for raiding parties, and my informants expect them to be active in Northern Ireland some time this year. The present policy of the IRA, it was explained to me, was to avoid antagonizing public opinion in the Irish Republic by acts of violence in the republic, but to draw blood and fire by provoking the authorities in the north. By such acts the IRA hopes to revive antagonism against Britain, which has virtually died out among the masses in the republic. The understanding attitude and the sober words of the Northern Ireland judge who tried the raiders of Armagh Barracks baffled the IRA leaders and took the wind out of their sails. One source quoted Pearse, the executed leader of the Easter rising of 1916, as saying to a friend just before he went into action that he and his friends would only succeed 'if the British are stupid enough to shoot us.' According to my informants, the present government is making discreet efforts in conjunction with the Roman Catholic Church to dissuade young men from joining the IRA.

"A recent speech by the Primate of Ireland, Cardinal D'Alton, was referred to as an illustration. On the other hand, neither government circles nor informed opinion appears to be disposed to ponder over the effects that acts of violence by the IRA committed in Northern Ireland might have on the attitude of the British public to the

thousands of Irish subjects employed in Great Britain. It is almost taken for granted that relations will remain unaffected."

COORDINATION OF PLANS FOR DEFENSE NEEDED

A leading article in the *Yorkshire Post*, commenting on this interview says: "Is it possible to secure firm understanding and cooperation on matters of common concern between the Irish Republic and the United Kingdom?" In the exclusive interview which we print on this page today, Mr. John Costello, Prime Minister of Eire, declares himself ready at any time to meet Viscount Brookeborough, the Northern Ireland premier. He suggests that a discussion would create greater good will and prepare for "a saner view to be taken of problems—a view that might ultimately lead to a climate of opinion in which the end of partition could be discussed." It was a sign of improving relations that Irishmen representing all parts of the island attended the Leeds St. Patrick's Society dinner to hear the Irish ambassador, Mr. Frederick H. Boland, last night. Mr. Boland also made a moving appeal for the problem of partition to be tackled. Reactions in this country to this suggestion will be clear. We in the United Kingdom want to put an end to old, vexatious quarrels. We want to create an atmosphere of trust and friendship between our people and their close neighbors—the Irish. But we cannot disregard the wishes of Northern Ireland, nor could we contemplate an arrangement which would deprive us in time of war of the use of the Ulster ports, as we were deprived of the use of the southern Irish naval bases to our grievous cost during the last war. We welcome the undertaking which Mr. Costello assures us still stands—that Ireland will never allow her territory to be used as a base to attack Britain. But we hold that this assurance does not go far enough to ensure the safety of both islands should war come once more.

Closer defense ties are needed between the United Kingdom and Eire, who have so many cherished beliefs and interests in common. Their defense plans should be coordinated to make certain that everything possible is done to keep the lifeline across the Atlantic open. It would be a great advance if representatives of Eire, northern Ireland, and Great Britain could meet for a frank exchange of views on problems of this kind. Is it too much to hope?

Defense and Statehood

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. BARTLETT. Mr. Speaker, I believe the following editorial from the *Evansville Press* of February 25 which appeared also in other Scripps-Howard papers states very well the need for clarification by the Department of Defense of its opposition to Alaska statehood:

Apparently it may be necessary to summon the Secretary of Defense in order for Congress to find out why the Pentagon is opposed to statehood for Alaska.

Senator HENRY JACKSON, Democrat, Washington, is quite justified in demanding that be done if Mr. Wilson refuses to clarify the matter. The officer sent to testify at the statehood hearings hardly did more than repeat the administration's previous vague

mummings about national defense. That is not an explanation and Congress should not accept it, even from the Secretary himself.

If the Armed Forces need large portions of Alaska for military purposes, they need only ask for them. It was to make that clear beyond question that the House statehood bill was amended to specify that 40 percent of northern Alaska can be set aside for military reservations. As a matter of fact, areas in Alaska or in any of the 48 States can be taken for military use, as has happened many times. Statehood for Alaska would not change that situation in any respect.

Alaska's strategic importance and the responsibility of the Armed Forces to defend it are precisely the same now as would be the case if it became a State.

These facts make it difficult to imagine what purpose of national defense could conceivably be served by refusing any longer the legitimate aspirations of the Alaskan people for full citizenship.

Abraham Lincoln

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the editorial entitled "The Great Commoner of Mankind, Abraham Lincoln." It appeared in the East Side News of February 12, 1955, and was written by my good friend, Harry Schlacht. The editorial follows:

THE GREAT COMMONER OF MANKIND,
ABRAHAM LINCOLN

(By Harry H. Schlacht)

One hundred and forty-six years ago a great soul beamed like a morning star on a troubled world.

In a log cabin among the green-clad hills of Kentucky, and in an atmosphere that was similar in its humbleness to the birth of Christ, the first cry of the babe that was Abraham Lincoln fell upon human ears.

He lived for others and sacrificed his all that humanity might live in a better world.

Carlyle said that in Dante 10 silent centuries found a voice.

In Lincoln, America found hers, a voice that pleaded and thrilled and ultimately brought light and life to oppressed mankind.

He was the great commoner of history.

His homely, humble and honest humanity carried him to the heights of rare achievements.

He was a child of the people.

There is no accounting for genius: It has neither ancestors nor descendants, genius is the child of necessity.

Lincoln was the product of a crisis, and a crisis gave birth to his savior.

He was the personification of Americanism, a symbol of all that gives life and strength to the Nation.

His worth is reflected in every impulse of his heart, and in every act of his life, and their splendor shone in one lustrous orbit.

In the firmament of life he moved in a circle all his own, the course of which has never been paralleled.

Lincoln said that "our reliance is in our love of liberty which God has implanted in us."

Our defense is in the spirit which he prized as the heritage of all men everywhere.

He plucked a thorn and planted a flower. He caused in human beings the hardness to vanish, the pettiness and the cynicism to

depart; and in their place he planted flowers of strength and power, love and human kindness.

He knew and obeyed the higher sentiments of his soul.

He traveled the upward trail, for the dedicated his energies to the common good of mankind.

To him America was not so much a place as it was a people, not a creed nor a dream but a breathing thing with a magnificent past and a great future.

Lincoln at Gettysburg was an immortal and soul-stirring scene rich in solemnity and pregnant with historical significance.

Neither the practiced hand of a Raphael nor the art and skill of a Praxiteles could adequately portray it in its original setting.

His Gettysburg address is the fountain spring of the American way of life.

The truths set forth in his historic speech are the foundation stones of free government.

His was the summation of American ideals, a flaming torch for the oppressed peoples of the earth who seek the blessings of liberty.

"Four score and seven years ago our fathers brought forth on this continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal."

These few words constitute the basis of the entire history of all mankind for human freedom.

"Now we are engaged in a great civil war, testing whether that nation or any other nation so conceived and so dedicated can long endure."

By these words, Lincoln sought to emphasize that the supreme question was the survival of popular government, not only ours by "any nation so conceived and so dedicated."

He climaxed his speech with a plea for a lasting democracy in these words:

"That from these honored dead we take increased devotion to that cause for which they gave their last full measure of devotion."

Then followed 14 historic words:

"That we here highly resolve that these dead shall not have died in vain."

This was a declaration of the eternal and inalienable rights of man.

Standing before the graves of our fallen sons, he told his silent witnesses, and the world that:

"This Nation, under God, shall have a new birth of freedom—and that government of the people, by the people, for the people, shall not perish from the earth."

America needs the spirit of Lincoln.

It needs the rekindling of the love of liberty which will rebel against slavery and enslavement.

The spirit of him must give the soul of America its rebirth.

To every generation of Americans is given the task of carrying forward the torch, of passing on to each succeeding generation undimmed the heritage of America's tradition—a tradition based upon the highest conception of mankind the world has ever known.

We are all the defenders of our faith.

America united is America invincible.

The Late Charles Laban Abernethy

EXTENSION OF REMARKS OF

HON. GRAHAM A. BARDEN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. BARDEN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include herewith a press

account of the death of the late Hon. Charles L. Abernethy, a former Member of this body, as carried in the New Bern Sun Journal, a newspaper printed at New Bern, N. C.:

C. L. ABERNETHY SUCCUMBS AFTER LENGTHY ILLNESS—FUNERAL SERVICE FOR FORMER CONGRESSMAN, 82, SET FOR FRIDAY

Critically ill there for the past 2 days, former Congressman Charles Laban Abernethy, one of the best known men in eastern Carolina until illness forced his retirement, passed away at the Kafer Memorial Hospital here at 3:30 o'clock Wednesday afternoon at the age of 82 years. He would have been 83 on March 18. For the 2 years preceding his death he had been confined to his home at 608 Pollock Street in New Bern, and illness had forced him to abandon his law practice prior to that.

Funeral services are to be held at the Centenary Methodist Church in this city Friday afternoon at 3 o'clock. Rev. John A. Russell, pastor of that church, will officiate. Interment will be in Cedar Grove Cemetery in New Bern. A member of the Centenary Methodist Church, Mr. Abernethy organized the Deems Bible Class there, and the Congressman frequently came from Washington to conduct the class while serving there.

A son of the late John Turner Abernethy and Martha Scott Abernethy, Mr. Abernethy was born at Rutherford College, North Carolina. His grandfather had founded that institution and he was educated there. In 1883 he located in Beaufort, N. C., as editor of the Beaufort Herald. He continued in that position for 8 years and took an active part in the upbuilding of the town.

Deciding to take up the practice of law, Mr. Abernethy entered the law school of the University of North Carolina. He graduated from the university and received his license to practice law in 1895. The same year he married Miss Minnie May, of Pitt County, and began the practice of law at Beaufort. For 2 years he was attorney for the town of Beaufort and for the Atlantic & North Carolina Railroad. His law practice is said to have been remarkably successful.

In 1900 he was elected a member of the electoral college and was the youngest of all the members. He served in that capacity again in 1904. In 1902 he was made a leading candidate for Congress, but withdrew in favor of Charles R. Thomas, of New Bern. During the governorship of R. B. Glenn in North Carolina, Mr. Abernethy was appointed by the Governor as superior court solicitor in the third judicial district, which later became the fifth district. At the time of his appointment, he moved to New Bern. He remained solicitor for 12 years.

A former member of the Democratic executive committee, Mr. Abernethy was elected to the 67th Congress to fill the unexpired term of the late Sam M. Brinson. In 1923 he was elected to succeed himself as the representative of the Third Congressional District, and there was no interruption in his 13 years of service in Congress.

It was during the depression days of the Hoover administration, while Congressman Abernethy was serving as a member of the Appropriations Committee, that he secured the appropriation for the present handsome Federal building here to house the post office and the New Bern division of the Federal eastern district court. When that had been completed, he aided the city of New Bern in securing the building being abandoned for use as a city hall. New Bern has been proud of one of the finest Federal buildings and one of the best city halls in the State. There was national recognition of the achievement of the Democratic Congressman during a Republican administration and a depression.

Congressman Abernethy was one of the first advocates of the inland waterways for North Carolina. That was one of the many

projects for eastern Carolina to which the Congressman gave untiring energy. The waterways became a reality during the time of his active service in congress.

An association which began while he was a resident of Beaufort, Congressman Abernethy was a past master of the Franklin Masonic Lodge there. He became a 32d degree Mason. He was a Knights Templar, a member of the Sudan Shrine temple, a member of the New Bern Elks Club, of the Odd Fellows, the Woodmen of the World, the Kiwanis Club, the Red Men, and the Sons of the American Revolution. He was the first president of the New Bern Historical Society.

Survivors include his wife, Mrs. Minne May Abernethy; one son, Charles L. Abernethy, Jr., who was associated with his father in the practice of law in New Bern; two sisters, Mrs. Frances Hardenburgh and Mrs. Dora A. Blount, both of Washington, D. C.; two brothers, Ivan B. Abernethy, of New York City, and Benjamin Abernethy, of Washington, D. C.

With Congressman Abernethy the oldest member of the Craven County Bar Association, the six newest members have been chosen as active pallbearers. They are C. E. Hancock, Cecil May, Lamar Sledge, Kennedy Ward, Raymond E. Sumrell, Raymond Dunn or Elwood Dunn, George Riddle, N. C. Reed, Jr., A. D. Ward, and J. W. Beaman have been named as alternates.

Honorary pallbearers are to be members of the Craven County bar and court officials, and W. C. Chadwick, L. C. Newman, George Wood, James W. Mitchell, Hugh Waldrop, Hugh Swan, S. G. Clark, N. F. Rowe, R. L. Tyndall, T. C. Fitzgerald, Leon C. Scott, Jr., N. E. Mohn, Joe Alben, Marcus Dill, Bryan Duffy, Dr. Charles Duffy, Dr. Richard N. Duffy, Dr. C. H. Ashford, Dr. C. S. Barker, C. T. Midyette, Sr., H. C. Lawrence, and Royal G. Turner.

Fiftieth Anniversary of the United States Forest Service

EXTENSION OF REMARKS OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks made by me before the House Committee on Appropriations March 1, 1955:

Mr. Chairman, and members of your distinguished Committee on Appropriations, I appreciate this opportunity to appear in support of the appropriations for the United States Forest Service. I feel confident that your committee will give the forestry items in the budget the thorough and careful consideration needed to assure their future well-being.

This year marks the 50th anniversary of the establishment of the Forest Service. While February 1, 1905, is considered the birthday of the Forest Service, it really marks the beginning of the great conservation movement in forests, soils, water, and wildlife as we know it today in America, a movement that has captured the imagination, attention, and concern of millions of our people. Today more citizens are interested in what Congress is doing to protect and develop our forest resource than at any time in the history of America.

Congress has always played a big part in the development, use, and protection of the forestry resources of our Nation, not only through legislation but also with appropri-

tions. We have often been generous with the first item and then failed to carry through in an adequate manner our responsibility under the second. Mr. Chairman, over the years Congress has passed numerous bills which will do reasonably well the forestry job at hand—both on our national forests and on State and private woodlands. Often, however, we have failed to appropriate the money needed to adequately carry on the work we have created, or we have been asked to make cuts in the working funds of the great forestry enterprises that have meant so much to our Nation. Under my remarks on page A995 of the RECORD for February 17, 1955, there is mentioned the gratifying progress we have made in forestry in the United States in the past half century. The Members of this and other Congresses can claim some of the credit for these accomplishments.

Mr. Chairman, today your committee is in an enviable and rather unique position, for in this 50th anniversary year of forestry you have a great deal to say as to just how the second half century of forestry in America will go forward. I, therefore, need not remind my distinguished colleagues on this committee that our responsibilities are great. Also, that throughout the Nation many eyes are upon us, conservation-minded eyes, so to speak.

There is an item on page 363 of the printed budget that deserves serious consideration. I refer to the proposed cut of \$1,083,690 in the appropriation for cooperation with the States in forest-fire protection. This reduction in an essential program with the States came as a surprise to me because I know that Congress does not intend to go backward in this vital cooperative work. The 81st Congress passed Public Law 392, which amended the Clarke-McNary Act, to provide an annual authorization of \$20 million for cooperation with the States in forest-fire protection. The appropriation for fiscal year 1955 is \$9,449,500, some \$10 million under what should be the annual appropriation if the full intent of the law were carried out. And now for fiscal year 1956 you have been asked to cut the current appropriation some \$1 million.

The appropriation for cooperation with the States in fire control is one of the most important in the budget. Through it 43 States and Hawaii are assisted in the protection from fire of forests which produce primary forest products worth over \$3 billion and which affect many payrolls and great investments in wood-using industries. This appropriation is the basis for protecting recreational values in State and private lands now estimated to exceed \$4 billion. The sport of hunting and fishing so dependent on good forests now brings about \$9 billion into the economy of this country. I need not dwell upon the need for protecting water resources and the reduction of loss from floods. All these are tied into this appropriation. Therefore, rather than a reduction at this time, an increase which would at least start to bring the Federal share of this appropriation somewhere toward the goal set by Congress would be in order and certainly would have the support of many organizations and conservationists throughout the Nation.

In fiscal year 1954, the total expenditures on this program were \$39 million of which the Federal share (\$9,449,500) as about 24 percent. This indicates that we are still a long way from doing the job particularly in light of a detailed study made jointly by the States and the Forest Service in 1949 which showed a need for an expenditure of over \$48 million to provide basic protection to the forests and watersheds on State and private lands in the Nation. I might point out here that this estimate was based on 1949 prices. Also it provided only a normal or average level of protection and it didn't include any refinements or superior protection facilities by the State government cooperating in the program.

If I appear to be unduly concerned about this item in the budget, it is because we still have about 53 million acres of State and private forest land in this Nation without any kind of organized fire protection. This unprotected acreage is burning at an annual rate of more than 13 percent of the area. In comparison, the burn on the 374 million acres under protection is less than 1 percent of the area. In other words, 7 million acres of the 53 million unprotected acres burn each year while only 2½ million acres of the 374 million acres under protection burn. This indicates that the States are doing a fine job on the areas under this program. It also indicates that the big job ahead is to get these remaining 53 million acres under protection as soon as possible. The members of this distinguished committee know that we cannot do this by a reduction in the amount of Federal participation in the program. We have been 44 years making the above progress—our efforts cannot be relaxed now.

The proposed reduction if not restored would mean that each cooperating State can expect about 12 percent less Federal Clarke-McNary fire funds in fiscal year 1956. The argument that a few States might make up this reduction overlooks the fact that we still have a big job if we are to maintain the present level of protection and at the same time bring in these millions of acres of unprotected land. Also many people forget that cost of living has gone up and that the Federal appropriation now buys less than it did even a year ago.

The woods are full of people. In the forests of my State of Pennsylvania we find millions of people now coming to the woods for recreation. "Smokey Bear" is doing a great job in preventing fires, but in spite of his fine work and the work of everyone else concerned the average number of forest fires on State and private forest lands in 1953 was greater than the average number of fires during the previous 5 years. Simply, this means that there are more people using the forest. If the cooperative funds are reduced at this time the chances are slim that the reduction will be made up by additional State or private funds. In Pennsylvania we are spending \$895,000 each year on this cooperative program; \$188,500 or 21 percent is Federal Clarke-McNary money from this appropriation. The \$20,000 more or less that Pennsylvania will lose if the proposed reduction is allowed could not be taken lightly because it would probably mean doing without several tractors or fire plows or other needed equipment. More seriously, it could mean loss of manpower. Pennsylvania has been in this program since 1920. Forest-fire protection has progressed under the cooperation of the Federal Government, and I urge the committee to give serious consideration to restoring the \$1,083,690 to this fund for cooperation with the 43 States and Hawaii in forest-fire prevention. At the same time, I believe it would be good conservation business to give very serious thought to increasing the overall appropriation by several million dollars. Such an increase would amount to what commonly might be called a cost of living increase to provide for the increased costs the States must now pay for fire equipment, labor, tools, radios, and other facilities for fighting fires. No Member of Congress has ever been criticized for supporting a conservation program as vital to the national welfare as this one.

There is another item on page 363 of the printed budget under State and private forestry cooperation in which I am vitally interested. I refer to the item "Cooperation in Forest Management and Processing." Each year I have discussed this Federal-State cooperative program with the Appropriation Committee. It is a privilege now to discuss it with you.

Since 1940 the Federal Government through the Forest Service has been cooper-

ating with some 38 States in giving technical forest management assistance to the private owners of small woodland properties. As you perhaps know, over three-fourths of all the privately owned productive forest land in the Nation is in the hands of some 4½ million small owners and farmers. Many of the forest problems of the Nation as far as proper cutting and regeneration of the timber crop occurs on these small properties. The problem is so important and caused so much concern that Congress in 1950 passed the Cooperative Forest Management Act which authorized to be appropriated annually the sum of \$2,500,000 for cooperation with the States in advising and assisting the small woodland owners to do a better job of forest management on their properties. The act also included provisions for advising small mill operators to do a better job of sawing logs into lumber and other forest products. There are 50,000 of these small sawmill operators.

The budget this year provides \$632,429 for carrying on this work in 38 States. The States are spending an additional \$1,228,000. The work has just begun in that about 5 percent of the Nation's small owners have been assisted and better management has been started on 21 million acres or 8 percent of the small woodland acreage in the Nation. There has been over 5½ billion board feet of timber products harvested from the improved small forests with a return of over \$100 million to their owners. Basically, however, the assistance of the farm foresters has been to improve the forest-management practices and to get better crops of timber on these small properties.

There are now about 275 farm foresters being employed by the States under the cooperative forest-management program. Some 8 or 10 States are marking time waiting to get into the program when Federal matching funds are available. These are States where the Federal leadership and advice in the development of the woodland management program, training the farm foresters, and review of the work is important. This is a program which has the support of the State officials wherever it is in operation; it is one which is of great importance to the Nation if our small woodland properties are to be brought into full productivity.

My own State of Pennsylvania has been temporarily out of this program for several years due to pressing requirements of surveys on State forest properties. However, it is my hope that Pennsylvania will be among the 7 or 8 other States that are coming into this program if a small Federal increase in this appropriation is forthcoming. Mr. Chairman, I have no hesitation in urging your committee to consider granting the full amount of the authorization in the Cooperative Forest Management Act. And if such action is impossible at this time, I hope you will consider at least an increase of \$100,000 so that more States can employ farm foresters. I know that there would be no criticism from the States or from conservationists throughout the Nation if this program were strengthened and brought up to operating needs of the cooperating States. Any increase, however, which the committee would make in this appropriation would enable the program to go ahead and bring better management on many thousands of additional small woodland properties.

Another item under "State and private forestry cooperation," page 363 of the budget, is cooperation with some 43 States, Hawaii, and Puerto Rico in the production and distribution of forest trees for planting unproductive land in this Nation. This cooperation is under section 4 of the Clarke-McNary Act. Each year a small annual appropriation of some \$450,000 (\$447,061 to be exact) is allowed for cooperation with the States in this worthy project. The States themselves in 1954 contributed \$1,600,000.

In 1954 almost one-half million acres were planted to forest trees under this program. This sounds like a tremendous accomplishment. It is small, however, when we consider that there are around 60 million acres of private and non-Federal public forest lands in need of planting to restore productivity for future timber needs.

Mr. Chairman, while the budget allows the same amount for this program as the appropriation act included last year, I believe it would be good business to consider bringing this cooperative tree-planting program up to the full measure of activity which Congress provided for in the Clarke-McNary Act. I firmly believe this committee would receive the commendation of conservation groups all over America, State foresters, and private landowners if the full authorization of \$2½ million in the Clarke-McNary Act were appropriated so that a realistic and dynamic tree-planting program could be started now and not 20 to 30 years from now when the situation is serious. I visited several foreign countries last fall and saw firsthand the terrible results of allowing denuded, unproductive land to wash away and erode into the rivers and streams. It's too late in many of these countries to do anything about it even though from time to time we have poured millions of American dollars into tree-planting programs far removed from our shores. I think it's about time we do something about this Nation's unproductive land. We can't make much progress by spending millions on conservation projects abroad and only a few thousand here at home.

White pine blister-rust control is another cooperative activity in which the Federal Government has been working with the States as far back as 1916. Federal funds for blister-rust control were reduced from \$2,986,354 in fiscal year 1954 to \$2,570,000 in fiscal year 1955. This represents a reduction of \$416,354. Of the 1955 appropriation, \$165,000 was earmarked for assisting States and private-property owners with control on their lands, a 50-percent reduction over 1954. The 1956 budget carries the same amounts as were appropriated for 1955—only \$165,000 for assistant State and private owners with control.

The sharp reduction in the cooperative item in the 1955 appropriation was predicated on the belief that the States and property owners can and should assume a greater share of responsibility for this and other similar cooperative programs. However, funds provided by the States and local agencies for conducting blister-rust control of their lands totaled \$732,192 for fiscal year 1954 and dropped to \$650,315 for fiscal year 1955. There were reductions in 8 States in 1955 over 1954 totaling \$97,880. There were increases in 9 States totaling \$16,003. This represents a net reduction of \$81,877 in cooperative funds in 1955 over 1954. The State of Pennsylvania was 1 of the 9 States increasing its contribution, from \$25,720 in 1954 to \$25,960 in 1955, an increase of \$240.

The record thus indicates that the States and the local agencies did not absorb the slack occasioned by the reduction in Federal assistance. On the contrary, the overall net action was a reduction in both Federal and local funds for blister-rust control on State and private lands with its consequent curtailment in control work. Treatment on non-Federal white pine areas decreased from 981,165 acres to 687,690 acres, a reduction of 30 percent. For Federal areas the decrease was from 179,033 acres to 165,425 acres, or 8 percent. Here is another area of Federal-State cooperation which should be carefully scrutinized by your committee. The Federal appropriation for cooperation with the States in control work on State and private lands was reduced to \$165,000 in the fiscal year 1955 appropriation act. I respectfully

recommend that this item be restored to the full amount that was appropriated in the fiscal year 1954 appropriation act, namely \$330,000. I urge this action because we are losing ground in the fight to control white pine blister rust. The blame for this backward step can be laid right at the door of the Federal Government.

In my appearance before this distinguished committee, I always consider it a privilege to speak in behalf of protection and management of national forests. Here I refer to the items on page 359 of the Budget. The small increases provided for timber resource management, the sanitation and care of public camp grounds and forest-fire protection on the national forests are a step in the right direction and should receive every consideration. In fact, the \$200,000 item recommended on page 359 should be increased to at least \$1 million.

While the national forests of the East do not have the tremendous volumes of timber sales of those of the West, the sales they do make are very important to communities and the wood-using industries on which these communities depend. The volume of saleable material is increasing rapidly on these growing forests and more thinnings should be made for the good of the trees. However, there are too many situations where the timber needs cutting, communities need the work, and industries need the wood, but the Forest Service does not have adequate funds to put the timber on the market.

It has been estimated that the national forests of the North, South, and East could increase their timber sales by almost 150 million feet a year if the necessary funds were available.

The \$800,000 increase requested in the budget for timber management will provide more sales and more jobs in many communities where unemployment has become a real problem. It is only good business to help people who want to work to help themselves. And it is particularly good business to do this by providing more timber sales since for every dollar spent on timber sales, at least \$10 is returned to the Treasury.

Finally, Mr. Chairman, I want to comment on the item on page 361 of the budget, Forest Roads and Trails, for which an increase of \$1,500,000 is requested to provide the total amount authorized for appropriation in 1956. As I understand this item, it is to complete the access roads needed to make Government timber available in inaccessible areas in the West.

Most of the road money appropriated for national forest roads and trails since before World War II has been spent for timber access roads. The Forest Service needs this timber access road money. There are millions of board-feet of Government timber that should be harvested before disease and forest pests destroy its value.

But other roads are also needed on the national forests. Visitors to the national forests have increased by leaps and bounds since World War II. Last year more than 40 million people came into the forests to camp and visit. Since the CCC camps were demobilized at the beginning of the war, national forest recreation roads and trails have been virtually neglected. During World War II forest road money was spent almost entirely on timber roads. There wasn't enough left to even maintain recreation roads. That was as it should be, but now we should be rebuilding the roads that went to pieces from lack of maintenance and building many more to accommodate the thousands of additional campers, picnickers, hunters, and fishermen.

According to Forest Service records, there are approximately 119,000 miles of existing roads on the national forests. Twenty-five percent of these are recreation roads, but

only a third of them are in good condition. Twenty thousand miles of recreation roads need improving and the Forest Service estimates that another 12,000 miles of new recreation roads are needed so people can reach camping sites and hunting and fishing that is now inaccessible to families in moderate circumstances. Recreation trails on the national forests likewise deteriorated while timber access road needs were consuming forest road and trail appropriations. The Forest Service says that there are enough trails, but 20,000 miles of the mountain trails need a lot of work before they are safe for vacationists.

From the Forest Service, I learned that about \$15 million was spent from appropriated forest road funds for improving and building timber access roads in 1954. But only 5 percent of that amount was spent for improving or building recreation roads and trails. The Forest Service should have at least \$3 or \$4 million a year, just for recreation roads for several years.

On the Allegheny National Forest, in my State of Pennsylvania, we have a lot of national forest timber but since it is accessible after a fashion, we have no claim on the forest road funds earmarked for opening access roads to new timber stands. But there are thousands of people who want the timber roads and other roads on the Allegheny forest made suitable for automobiles as well as for travel by logging trucks. Those people want the Forest Service to continue building timber access roads where needed for getting out national forest timber in the West before it is destroyed by beetles and fire, but they also want a few good roads in the West and here in the East for other national forest users. Now, I might point out to the committee that 16,500 people live inside the forest; 64,000 additional people live immediately adjacent to the forest; 139,000 live in the four counties within which the forest is located; 5,125,000 live within the forest's immediate zone of influence; 47,099,000 people (Americans, Canadians not considered) live within 300 air miles—an average day's motor travel—from the approximate center of the forest. This is approximately 31 percent of all the people in the Nation. Within this area the population pressure is 222 individuals per square mile as compared to a national average of 50, and an average of 17 in the 11 Western States.

Recreation roads must receive more attention and more money or we shall have a few million national forest campers, picnickers, hunters, and fishermen on our necks. The national forests have always been open to public use and always should be. We can't discourage people from going to our national forests for recreation and to get away from their daily grind. The only other alternative is to provide funds whereby roads can be built for recreation needs. Here is one area of use which I urge this committee to give serious consideration.

Mr. Chairman and committee members, I appreciate your earnest and sincere interest in these appropriations for our forestry activities in our Nation. The amount of time you have granted for my remarks is generous indeed and reiterates your interest. This is a matter which should vitally concern every Member of Congress. We have been dragging our feet in keeping up our end of the load on these Federal-State cooperative programs of fire control, small woodland management assistance, and tree planting. Your committee, Mr. Chairman, will be doing the Nation a great service by beginning this next 50 years of forestry in America with adequate funds for Federal participation with the States in this work.

At the same time I urge continued vigilance that sufficient funds are appropriated to properly manage and harvest the resources of our great national forests.

Atomic Era Poses New Water Problems

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and article:

WATERWORKS ENGINEERING,

New York, N. Y., February 24, 1955.

To the Members of the Joint Committee on Atomic Energy, United States Congress, Washington, D. C.

GENTLEMEN: We have the honor of filing with you an advance proof of an editorial entitled "The Atomic Era Poses New Water Problems," which will appear in the March issue of *Waterworks Engineering*.

This editorial bears directly on one important aspect of the new atomic energy law upon which you are scheduled to hold hearings on March 1. Since the safety of the water resources of the Nation are of vital importance to public water supplies, as well as to all other uses of water sources, we know that you will give due consideration to the public health problem to which the editorial refers.

It is essential that the great fund of scientific knowledge of the Atomic Energy Commission be augmented by the specialized abilities of the United States Public Health Service and the State health departments, now that private industry is to be licensed to utilize radioactive materials for peacetime purposes.

If we can be of further service to your committee in this matter, we are yours to command.

Respectfully submitted,

WILLIAM W. BRUSH,

Editor.

ATOMIC ERA POSES NEW WATER PROBLEMS

What to do about radioactive wastes has been quite extensively studied and discussed, especially since the atomic bomb has become a weapon with which we must live. So far, most of the research on handling, storing, and disposing of radioactive waste materials has been carried out by the Atomic Energy Commission. These waste materials have been produced, primarily, at AEC installations where control measures have been developed and utilized to prevent the discharge of hazardous exposure substances. Because of the careful control measures taken at the Federal level, there appeared, during the early stages of atomic research and development, to be little need for any supervision by authorities at the State or local levels.

Since AEC or its agents were the sole producers of such radioactive wastes, it was sufficiently reassuring to know that this governmental body was actively working on the problem of the safe handling and disposal of these potentially dangerous substances. Now that the Federal Government has authorized the licensing of private industry to utilize nuclear products for peacetime purposes, the problem of environmental contamination takes on broader implications. The question must be raised as to whether there is the need, or will be need, under the new conditions, for other governmental agencies to become interested in the control problems which have been exclusively handled by AEC in the past.

Certainly, it is important that, at the beginning of licensing private industry to use atomic power, a sound control policy be

adopted. What are some of the basic factors in setting up such a policy?

The waterworks profession is vitally interested in such control policies because the operations of AEC installations and of private enterprises which may be handling radioactive substances will involve the use of water. This may be from both surface and ground sources, and may also involve discharge of spent waters and wastes back into the Nation's water resources. It is not surprising, therefore, that the American Water Works Association has already urged Congress to spell out, in the new atomic energy law, the responsibility of users of atomic substances to continue the same type of control which has, in the past, been provided by AEC.

The best guaranty that the water resources of the United States will not be impaired by any such uses would be obtained if the agencies most conversant with water problems are clearly given the necessary authority to control and police the proposed new operations.

What are these agencies? They are the United States Public Health Service, the State health departments, and, possibly, local water authorities. It would be desirable for the law, at the outset of the expanded program, to recognize these agencies and to make them a part of the program of controlling any radioactive hazards.

Obviously, waterworks men will turn to their State sanitary engineering organizations for information on how atomic power operations may affect their water supply, how any deleterious conditions may be detected, and what actions should be taken to protect public water supplies from this new type of atomic era hazard.

It is self-evident, therefore, for all State sanitary engineers to be kept fully informed on this new subject so that they may transmit authentic guidance to the waterworks profession.

Though it may be several years before atomic power is utilized by private industries, it is none too early to determine what legal controls should be set up and who should enforce them. It will take the cooperation of the Atomic Energy Commission, the United States Public Health Service, the various State health departments, and other recognized water authorities to formulate and implement a sound policy upon which Federal, State, and local legislation can be based. Waterworks management should be vitally interested in the development of such a plan and assist in its production and acceptance at all governmental levels.

Community Head States Spain Not Anti-Semitic

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following news item which appeared in the *Jewish Advocate* newspaper in Boston, Mass., on February 10, 1955:

COMMUNITY HEAD STATES SPAIN NOT ANTI-SEMITIC

MANILA.—Newspaper accusations in the United States and Britain that Spain has been intolerant of Jews and anti-Semitic

were denied here this week by Daniel F. Baroukh, president of the Jewish community of Madrid, who is currently in the Philippines.

In a statement to the Jewish Telegraphic Agency, Sr. Baroukh noted that 2 years ago he was granted an audience by the Spanish Chief of State, the first such interview granted a Jew in Spain in 450 years. He said he came away from the meeting impressed with General Franco's words and message to the people of Israel.

Sr. Baroukh recalled that 2 years ago the Spanish Government gave its permission for the holding of public high holiday services in a Madrid hotel and that a Spanish Government representative attended the services, as did leading Spanish Catholics, representatives of the American Embassy, and American Jews. In a reference to the refusal to grant a permit to hold similar services in a Madrid hotel this past Rosh Hashonah, Sr. Baroukh said a mistake was committed by his secretary in Sr. Baroukh's absence.

The head of the Spanish Jewish community stressed that during the Nazi regime many Jews were saved by being admitted to Spain. He listed various other gestures by the Spanish Government toward the facilitating of religious services and instruction, and acknowledge its presentation of a magnificent collection of books for the projected Sephardic Library in Jerusalem. Sr. Baroukh said that there are now 35,000 Jews in Spain.

Lebanon, Tenn., Sends Goodwill Ambassador to the Republic of Lebanon

EXTENSION OF REMARKS OF

HON. JOE L. EVINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. EVINS. Mr. Speaker, the promotion of goodwill among the peoples of the world has become in our modern civilization a matter of great importance, for where understanding exists, suspicion and hostility are absent.

In this connection, a goodwill Ambassador from Lebanon, Tenn., in the Fourth Congressional District of Tennessee which I have the honor to represent, is now en route to the Republic of Lebanon on the eastern edge of the Mediterranean. He is Dr. F. M. Baddour, esteemed citizen of this Tennessee city, whose parents were native of the nation of Lebanon. Dr. Baddour, as vice mayor of Lebanon, Tenn., has been joined for this visit instigated by the Lebanese Government, by the official representatives of 22 other cities of the United States which bear the name of Lebanon. His appointment as vice mayor was made as a tribute to this American citizen of Lebanese extraction by action of Mayor William D. Baird and other city officials of the city of Lebanon, Tenn.

This gesture of goodwill, Mr. Speaker, is of such importance that I ask consent to have printed in the Appendix of the Record, along with my remarks, excerpts from articles printed in the Lebanon (Tenn.) Democrat and concerning this visit of Dr. Baddour to the Republic of Lebanon.

The articles include the column Sense and Nonsense, written by Col. J. Bill

Frame, editor of the Lebanon Democrat, a news story concerning Dr. Baddour's departure on his voyage of goodwill, and the proclamation issued by Mayor Baird on the occasion—all of which were published in the Lebanon Democrat.

The articles are as follows:

DR. BADDOUR LEAVES BY AIR FRIDAY FOR BEIRUT MISSION

Friday will be Dr. F. M. Baddour Day in Lebanon, when the new vice mayor and special representative of the Tennessee City of Cedars leaves on a 2-week visit to the land of his ancestors, the Republic of Lebanon, at the eastern edge of the Mediterranean.

Among distinguished guests at Berry Field when Dr. Baddour leaves by air for Washington and New York will be Mayor Ben West, of Nashville, as well as a motorcade of friends and associates from Lebanon.

The vice mayor will be one of more than a dozen officials of American towns named Lebanon to be special guests of the Lebanese Government March 1 to 15.

Gifts from local industries, including representative products of Barry-Carter Milling Co., Lux Clock Manufacturing Co., Texas Boot Manufacturing Co., Lebanon Woolen Mills, and Lebanon Garment Co., were shipped to Beirut by air this week. In addition, Dr. Baddour will take gifts from the Lebanon Lions and Rotary Clubs and the Lebanon Jaycees to their brother organizations in Beirut and also gifts from the Business and Professional Women's Club.

A Bible will be sent by the First Presbyterian Church, of which Dr. Baddour is a member, for presentation to a Lebanese Protestant church.

In Washington Dr. Baddour will be greeted at the airport by Senator ESTES KEFAUVER and Congressman JOE L. EVINS. Senator ALBERT GORE sent his regrets that he will be out of the city Friday.

A reception is planned by the Lebanese consulate general in New York City before the American mayors leave by plane for the Middle East.

Dr. Baddour's father, the late Marion D. Baddour, came to Lebanon in 1834 from Aurson, Syria, which became the Republic of Lebanon in 1946. He was accompanied by 2 brothers, and all 3 settled in Lebanon, but the brothers later moved to Covington, Tenn. Mr. Baddour opened a business in Lebanon, which he operated until 1902, when he returned to Syria, where he met and married the former Miss Adele Haddad, of Hamanna, Syria. They soon returned to Lebanon, Tenn., and reopened a mercantile firm, which they operated until 1926, except for about 2 years, when they went back to Syria on a visit, and then opened a laundry in Alexandria, Egypt, returning to the United States in 1910. In 1923 Mr. and Mrs. Baddour moved to Hughes, Ark.

Dr. Frank Baddour was born in Lebanon, Tenn., and has lived here all of his life, except the 2 years spent as a child in Alexandria, Egypt.

He was educated in the public schools and Cumberland University in Lebanon. He received his degree in optometry from the Northern Illinois College of Optometry and has done postgraduate work at Monroe College, of Chicago; Southern College of Optometry, Memphis, Tenn.; and at Peabody College, Nashville, Tenn.

He is active in church and civic affairs, is a member of the First Presbyterian Church, Men's Club, chamber of commerce, all Masonic bodies, including Shrine and Order of the Eastern Star, Shrine Club, Camera Club, and has the distinction of holding the only honorary lifetime membership ever given by the Lebanon Jaycees and is an active member of the Lebanon Lions Club.

He married the former Miss Rebecca Jewell, and they have three daughters—Mrs.

Richard (Adele) Lykens, of Route 3, Kingsport; and Misses Glenda Ann and Patricia Baddour.

Dr. Baddour has three principal hobbies, either of which could be a full-time occupation. They are breeding fancy rabbits, peony cultivation, and cooking. For many years he maintained a peony farm near Lebanon and also operated an extensive rabbit-breeding business. He has gained considerable prestige as a cook, especially in the art of barbecuing.

Dr. Baddour has many relatives living in the Republic of Lebanon, among them being an uncle, brother of his mother, Abraham Haddad, of Hamanna. His maternal great-grandfather, Simon Haddad, was a Presbyterian minister.

SENSE AND NONSENSE

(By J. Bill Frame)

Tomorrow our new vice mayor and ambassador of good will, Dr. Frank M. Baddour, will leave on his trip to Beirut, Lebanon.

It would be an excellent gesture under any circumstances to send a representative to the country from which we derive our name. But in this instance, it is most fitting, because our representative is a descendant of Lebanese parents, and will have a particular appeal.

Nothing Lebanon has ever done will gain our town as much favorable publicity, and bring our community into needed limelight as will the action of our mayor and board of aldermen in selecting Dr. Baddour as our town's representative.

Mayor William D. Baird should be—and has been—complimented on his appreciation of the gold mine of news stories that will be used in conjunction with the trip, which will certainly place Lebanon, Tenn., in a very favorable light.

And the members of the city council certainly deserve credit for approving the plan.

Following is a bit of interesting material received by Roy Dowdy, president of the Lebanon Rotary Club, from the president of the Rotary Club of Beirut, Lebanon. This is indicative of the importance the Lebanese Government and civic organizations place on the visit of the mayors and representatives of Lebanons in the United States.

"DEAR SIR: Just 100 years ago the first Lebanese began to immigrate to your beautiful United States and now some 200,000 Lebanese are today United States citizens. We in the Middle East are proud of their record of achievement and grateful for the opportunity you have given them.

"Your Lebanon and our Lebanon have a most important thing in common, our name 'Lebanon,' which means 'White Mountain' in Arabic. On the snowcapped Lebanon Range where some of the present cedars of God have been growing for over 3,000 years, you can look down from their heights and see the blue Mediterranean below, indeed something to remember.

"Our Lebanon, from which your community has derived its name, has a long and famous tradition you will be proud to know in person. Our Phoenician alphabet from which all western languages are formed, the Biblical cities of Sidon and Tyre, up to and including some of the most modern installations in the world will give you a panorama of thousands of years.

"The current year of 1955 has been designated by the President of the Republic as 'Lebanese International Homecoming,' and we trust that many Americans of Lebanese descent and other American tourists as well will come to our shores to meet the modern Lebanese at work and at play, to see our famous historical sites and scenic beauties, and to enjoy the many special events we have planned on this occasion.

"It is with great pleasure, therefore, that the Lebanese Government extends to you, the mayor of Lebanon, an invitation to come

and visit Lebanon in the Middle East, as the guest of the Commissariat General au Tourisme, for a period of 2 weeks, from March 1 to March 15, 1955, inclusive, as a gesture of friendship and in grateful recognition of the welcome you in the United States have given all Lebanese at all times, for these last 100 years of our national association. Invitations are also going out to the mayors of the other 22 Lebanons, United States, which list is attached for your information."

PROCLAMATION

Whereas the Republic of Lebanon has invited the municipal officials of the 23 Lebanons of the United States to visit them from March 1 to March 15, 1955, in appreciation of the 300,000 former Lebanese who now reside in the United States; and

Whereas Lebanon, Tenn., has accepted this invitation and will send its duly elected vice mayor, Dr. Frank M. Baddour, on said visit to the Republic of Lebanon; and

Whereas the industries and civic clubs of Lebanon, Tenn., are sending gifts to the President of the Republic of Lebanon by the said vice mayor, who will depart from Berry Field Airport, Nashville, Tenn., at 2:45 p. m. on February 25, 1955; and

Whereas the importance and significance of this trip by the vice mayor of Lebanon, Tenn., is of great magnitude, and the city of Lebanon feels grateful and indebted to its vice mayor, Dr. Frank M. Baddour, for the giving of his time to make the trip, and service to our community.

Now, therefore, I, William D. Baird, mayor of Lebanon, Tenn., do hereby proclaim Friday, February 25, 1955, Dr. Frank M. Baddour Day in Lebanon, and humbly urge and request the people of Lebanon to express our appreciation to Dr. Frank M. Baddour for his sacrifice and service to the community and, if possible, to join the motorcade that will accompany him to the Berry Field Airport.

February 21, 1955.

WILLIAM D. BAIRD,
Mayor.

"Open Covenants Unopenly Arrived At"

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following article from the New York Times:

"OPEN COVENANTS UNOPENLY ARRIVED AT"—AN OBSERVER ARGUES FOR A REVISION OF WILSON'S SLOGAN—HE CALLS FOR A RETURN TO SECRET DIPLOMACY AND AN END TO OPEN NEGOTIATIONS THAT TURN DIPLOMATS INTO PROPAGANDISTS

(By Drew Middleton)

LONDON.—Jules Cambon, of France, who died in 1935 at 90 and who was probably the ablest diplomat of his time, once said: "The day secrecy is abolished, negotiation of any kind will become impossible." The prediction has proved startlingly accurate, although it is unlikely that even the president M. Cambon envisaged the oratorical free-for-all of the past decade—the propaganda sessions that have so largely replaced professional diplomacy.

Now a cautious return to secret diplomacy seems to be in the making. A few recent settlements by secret diplomacy are already on the books. And the way has been opened, after a futile attempt in the United Nations,

for an effort to end the fighting between Communist and Nationalist China through the channels of traditional diplomacy.

Granted that secret diplomacy—meetings in camera between ambassadors and the foreign ministers of the states to which they were accredited—was not perfect. And the world was much smaller when it was widely in use. But it is worth noting that for the century between Waterloo and the Marne secret diplomacy managed to put off a general war in Europe despite the constant shifting of alliances and national combinations and the competition among the great states for overseas empire.

From 1854 the Eastern question, which plagued two generations of statesmen, was dealt with by the cautious, painstaking efforts of the professional diplomats. The great issues and grave crises in Europe, Africa, and Asia which arose out of the development of Germany into a world power after 1870 were confined to reasonable bounds by this diplomacy. It was not a system that favored adventurers, as Louis Napoleon found, but it did favor those who sought a stable, peaceful world on the basis of live and let live. There were no righteous crusades. But there were no world wars.

Why, then, was secret diplomacy abandoned?

One reason was a disastrous misuse of the system. At the crucial time when World War I might have been averted, the Central Powers turned over the conduct of negotiations to impetuous militarists like Conrad von Hotzendorf in Vienna and earnest but loose-thinking rulers like the Kaiser. War came and many thought that it had been caused, in some mysterious way, by the machinations of the professional diplomats in secret session.

Another reason for the fall of secret diplomacy into disrepute was that either the agreements and treaties which were the product of such negotiation were kept secret in toto or important annexes modifying the body of the pact were kept from the public. When at the close of World War I treaties like the Sykes-Picot treaty of May 1916, sharing out most of Asia Minor among Britain, France and Russia, became public knowledge, there was a clamorous popular reaction against such pacts and the methods of secret diplomacy that produced them. Sir Edward Grey, British Foreign Secretary, protested, "In war you will have secret treaties, and you cannot help it. Many things generally regarded as criminal are regarded as inevitable in war." But to no avail.

The revulsion against secret treaties, unwisely extended to secret diplomacy in the popular mind, helped win wide support in the United States and Europe for Woodrow Wilson's slogan: "Open covenants openly arrived at."

Consider the record of open diplomacy. It presents one salient lesson—especially since the close of World War II: it doesn't work. Under the conditions of open diplomacy in the various conferences that have been held between the representatives of East and West, the Russians could not be anything but intransigent.

The reason is that for more than a third of a century the rulers of Russia have been portrayed by their own propaganda as the omniscient and omnipotent executives of an unchallengeable governmental system. Such men cannot negotiate openly, for the concessions they might have to make would, in fact, testify that they were not omniscient and omnipotent, that their system had its flaws, that there were other governments in the world as powerful, as shrewd and as intelligent as that of the Soviet.

Thus, the Council of Foreign Ministers established by the United States, Britain, the Soviet Union, and France at the war's end proved incapable of solving any of the major issues before it. At Moscow and London in

1947 and at Paris in 1949 the Council failed to make headway on the solution of the problem of Germany's reunification, then as now the most important problem in Europe.

Berlin, Trieste, the Saar, the Austrian peace treaty—one by one, the great problems facing Europe were pigeonholed as the inability of open diplomacy to deal with them became more and more pronounced. Intransigence of the Soviet representatives, Foreign Ministers Molotov and Vishinsky, contributed heavily to the failure.

The meetings of the Council, of the Security Council of the United Nations, of the Deputy Foreign Ministers were noisy propaganda platforms rather than diplomatic gatherings. The pattern became boringly familiar. Let us say the Council of Foreign Ministers was discussing German elections. To begin, the Council was not 4 men and their interpreters. It might number 40 or 80, for each Minister was supported by advisers from his own ministry, experts on military and political matters and public relations men.

This was the pattern:

The Russian Foreign Minister rises to speak. He talks on for 2 hours and every word is translated into English and French. The speech advocates powerfully and with a wealth of similes drawn from the more obscure Russian proverbs the Soviet plan for German elections. But the speaker does not end here. He attacks the United States for supporting the Nazis in Bavaria, the British for rearming the Germans in Saxony, and the French for requisitioning German cattle.

By the time the Russian is finished the three other delegations are angry, weary, and well off the track. But the Soviet Minister's harangue is dutifully reported, giving satisfaction to his Government and joy to all the comrades the world over.

The next day the British Foreign Secretary finds that before he puts forward his country's position he must reply in detail to the Russian charges and, since he is human, add a few countercharges about what is going on in the Soviet Zone of Germany. As the meeting progresses all the Ministers are drawn into a propaganda battle. Progress is measured not by accomplishment but by the scoring of propaganda points.

Exaggerated? Not at all. This is what happened, and it went on for week after week until the good sense of George Marshall and Ernest Bevin broke it off.

Perhaps the only thing to be said for these propaganda marathons was that, as Sir William Ridsdale has pointed out, they performed a useful educational function at a time when the British and to a certain extent the American publics had to be informed of the single-minded nationalist ambitions of the Soviet Union. But there were other, less expensive ways of doing this.

The arguments in favor of secret diplomacy are powerful. Only in private can rational discussion be carried out by representatives of conflicting interests. For both East and West the limits are extended when the principle of negotiation in secret is established. Then there is no gallery to play to. One side can offer a concession without fearing that it will be seized upon by the opposition at home and used to agitate public opinion against the negotiators. The other side can consider the concession without being called traitors or spilling the facade of omnipotence. Piece by piece, a settlement can be constructed.

Such negotiations do not necessitate the strain and expense of huge meetings. The Foreign Ministers would be in touch with the negotiations through their envoys but they would meet only to approve the results or to bargain over points which were outside the competence of their ambassadors.

The main argument then for secret diplomacy is simply that it provides the con-

ditions under which diplomats can negotiate. Recent diplomatic history offers two examples of how this works.

One was the crisis that arose out of the blockade of Berlin by the Soviet Union in June 1948, which was in some ways the most dangerous of the postwar period. In the end the Russians got out of an increasingly untenable situation by diplomacy at the United Nations. But it was secret diplomacy, not open. They did not negotiate before the eyes of the cameras and the ears of reporters. Quiet talks were followed by consultation with the Foreign Ministry in Moscow and the State Department in Washington.

There is no sharper contrast between the two methods of diplomacy than the settlement of the Berlin blockade and the open diplomacy of the Council of Foreign Ministers in Paris soon after the end of the blockade. Here, again, diplomatic negotiation was replaced by propaganda, and about all the West got out of the meeting was the impression that Mr. Vishinsky could talk louder and longer than Mr. Molotov.

The second example of successful secret diplomacy was the settlement of the Trieste dispute. For 8 months in 1954 an Italian, an Englishman, an American, and a Yugoslav carried on in secret the delicate, complex negotiations that ended a problem that had plagued the West since 1945.

Two of the negotiators, Manlio Brosio and Dr. Vladimir Velebit, the Italian and Yugoslav Ambassadors in London, did not meet until the agreement was initiated. Representing the chief antagonists in the dispute, the Ambassadors communicated the positions of their nations through two tireless intermediaries, Llewellyn E. Thompson, the United States Ambassador to Austria, and Geoffrey Harrison, an Under Secretary in the British Foreign Office.

On these two cool, perceptive and experienced diplomats fell the principal burden. Individually or together, they interviewed the Italian and Yugoslav envoys, reconnoitering the two national positions. In discussions with their experts on the Trieste situation they sought the areas of dispute most susceptible to adjustment. Then, in other interviews with the Ambassadors, they slowly brought the Yugoslav and Italian positions closer together. There were concessions on both sides. There was hard bargaining. Great discretion was used. There were no press conferences. There were no inspired editorials in the newspapers.

It was unspectacular and difficult, this measured quadrille from embassy to Foreign Office to embassy. There were long messages to be composed to Foreign Ministers and in turn men sat late at their desks in Belgrade and Rome composing answers. It was tedious but effective. It provided the ultimate argument for secret diplomacy: it worked.

There is one serious qualification to any advocacy of a return to secret diplomacy and the relative stability of the 19th century. The diplomats of that era were, on the whole, products of the same general environment. They came from the upper middle class or the aristocracy. They had similar educations and tastes. They had at least one language, French, in common. Cosmopolitan by inclination and profession, they were familiar with the politics and society of nations other than their own. Above all, they had a common interest in maintaining the balance in Europe, and consequently the peace of the world.

The majority of these personal links are nonexistent among the diplomats of today. Even if the Soviet and western foreign ministers spoke French it is doubtful if in this nationalist era they would be willing to carry on negotiations in the old language of diplomacy.

Nevertheless, the trend toward a restoration of traditional diplomacy is encouraging. The prerequisite for its success is the establishment of a balance of power wherever the ambitions of the East and West clash. The lack of a power balance has been one reason for the failure to reach settlements with the two Communist powers. Such a balance rests as much on political unity as on military strength. In Europe that unity is at last in sight. In Asia it remains distant.

If secret diplomacy returns as the most effective manner of international negotiation, it is possible that the U. N., with its facilities for private consultation among delegates, will assume new importance as a clearinghouse for such negotiations. The U. N. Secretariat could be used more extensively in secret mediation between members.

What the world may hope for—in spite of Communist bluster—is that the advent of weapons far more terrible than any foreseen by the diplomats of the past will impose a common interest in preserving the peace. Indeed, the totality of destruction provided by these weapons is in itself one of the best of all reasons for a return to secret diplomacy. War now means not victory or defeat but survival or destruction for nations and peoples. In this situation another round of open conferences which would serve as no more than propaganda platforms would be worse than a waste of time, effort, and money; it would be criminal folly.

Great and trusted leaders of the West like President Eisenhower and Prime Minister Sir Winston Churchill approve the idea of discussions with the East on the great political issues that divide the world. But negotiation will be impossible in these discussions if they are carried on amidst the popping of flashbulbs and to the accompaniment of public speeches. Today's requirement is open covenants unopenly arrived at.

Imports From Communist-Dominated Nations

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include a letter I have received from Mr. Patrick E. Gorman, secretary-treasurer of the Amalgamated Meat Cutters and Butcher Workmen of North America, regarding the opposition of his organization to the importation of meat products from Communist-dominated Poland:

AMALGAMATED
MEAT CUTTERS AND BUTCHER
WORKMEN OF NORTH AMERICA,
Chicago, Ill., February 25, 1955.

Hon. MELVIN PRICE,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN PRICE: I bring to your attention an appalling situation which is developing through the importation of canned hams from European countries and which last year amounted to 99,163,000 pounds. The disconcerting thing about such large importations of this product is that 19,717,000 pounds reached the United States from Communist-dominated Poland.

The United States ships products to some countries, but Communist Poland is not one of them. Dollars obtained by Poland through the sale of hams in the United States

may be used by Poland to purchase in dollar-hungry third countries strategic materials, which, under current regulations, are not permitted to be exported from the United States to Communist countries.

The members of our union, as a result of this, are suffering unemployment. We find no objections at the present time to purchases of canned hams from Germany, Denmark, Holland, etc. There seems to be no excuse why hams from Communist-Poland reach our shores in such large quantities.

Very sincerely,

PATRICK E. GORMAN,
Secretary-Treasurer.

Washington and Small Business

EXTENSION OF REMARKS

OF

HON. HENDERSON L. LANHAM

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. LANHAM. Mr. Speaker, with leave obtained to insert my own remarks in the RECORD, I am including the following column recently appearing in 2,000 weekly newspapers in America entitled "Washington and Small Business," by C. Wilson Harder:

WASHINGTON AND SMALL BUSINESS
(By C. Wilson Harder)

Washington pundits who claim only right-wing Republicans will oppose administration's protective tariff wrecking proposal, with Democrats supporting it, apparently have not marched through Georgia lately.

Representative HENDERSON LANHAM, a Georgia Democrat, takes mighty blast at plan to turn over economy to Acheson-Dulles theories of State Department.

Representative LANHAM feels pending tariff measure would be death blow to Nation's cotton textile industry and cotton growers already feeling effects of one-worlders.

He points out published list of planned tariff reductions includes almost every item produced by United States textile industry.

Representative Lanham also points out while average hourly labor rate in United States textile mills is \$1.30, in Swiss mills it is 43 cents, in England 40 cents, France 38 cents, Italy 30 cents, India 9.5 cents, Japan 13.6 cents.

He further reports it is planned, if Congress approves current tariff-wrecking scheme, to also lower tariffs on foreign-made synthetic fibers.

Thus, plans are afoot to flood United States with foreign cottons made at wages ranging from 10 to 25 percent of prevailing United States wages but at same time, through cutting tariffs on foreign-made synthetics, it is planned to wreck United States cotton farmers even now supported by farm program.

The gentleman from Georgia even states he will ask congressional investigation on who drew up list of planned tariff slashes.

From his study, small business alone will bear brunt of tariff wrecking plans. In cotton textile industry, employing over 1,250,000, 75 percent of industry is composed of small firms who do less than 1 percent of total industry.

The Georgian also made this highly significant statement: "The American people feel that the great mass production industries of the United States are so much more efficient than foreign industries as to be immune to foreign competition. Hence we expect that articles selected for tariff reduction would include products of great super-

efficient mass production industries. They are either not on list at all, or are relatively minor items."

But he does charge through list of tariffs to be reduced Washington planners have selected for destruction many industries composed of small operators, or agricultural operators.

It is interesting that at the same time Congress is being asked to raise by law United States minimum wage rate to more than twice prevailing skilled wage rate in England.

It is also interesting to note that one of the first to testify in support of tariff wrecking was a cabinet officer who formerly headed Nation's biggest manufacturing firm which also operates branches in many of world's cheap labor nations. He was joined by Harold Stassen, whose experience in world trade has been confined to giving away United States tax billions as head of Foreign Operation Administration.

In meantime published figures show that since 1937, while United States tariffs have been slashed by 63 percent, England's have been increased by 20 percent. Thus many feel it is good they still whistle "Dixie" in Georgia instead of "God Save the Queen."

Regulation of Natural Gas Companies

SPEECH
OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. YATES. Mr. Speaker, we have just witnessed the second flanking movement in the two-pronged drive by the Eisenhower administration to sterilize the Natural Gas Act by removing natural gas companies from rate regulation. If there were any doubt that the big oil and gas corporations were the special darlings of this administration, that doubt was dissipated last Saturday when the President's Committee on Energy Supplies and Resources Policy issued its report. Inasmuch as the 8-man committee consisted of 7 members of the President's cabinet and the head of the Office of Defense Mobilization as chairman, it is difficult to conceive that this report does not reflect the Eisenhower policy.

The report continues the administration's long record of flouting the interests of the consumers. If its recommendations are adopted, consumers will pay hundreds of millions of extra dollars into the treasuries of the big oil and gas companies in the country.

The report follows closely upon the first enveloping movement on the consumers' pocketbook which occurred last spring with the decision by the Federal Power Commission in the Panhandle Eastern pipeline case. This decision had the effect of relieving the pipeline companies owning their own reserves from the effect of rate regulation contemplated by the Natural Gas Act. The purpose of the act is to shield consumers from exorbitant charges by companies furnishing natural gas in interstate commerce and it requires the public utility concept of rate regulation, that is, a rate base predicated on actual costs. Until

last spring, the Federal Power Commission had always used this method of valuation, even in the face of Panhandle's militant contention that the current field value of its gas reserves should be considered as the base for fixing its rates. In each instance where the Commission rejected the company's contention and insisted upon regulation based on actual cost, its decision was sustained by the courts. Then on April 15, 1954, for some reason the Commission changed its mind and adopted the company's argument. It apparently preferred the dissenting opinions of the late Justice Jackson to the majority opinions of the Supreme Court of the United States. The effect of the decision on the consumer was enormous. In my own city of Chicago, as one isolated example, 1,450,000 gas users will pay an additional \$5,216,000 for their gas as a result of this decision. And its impact has not yet been fully felt inasmuch as the decision is still on appeal of the courts.

If other pipeline companies are given the same consideration as Panhandle Eastern, and there is no clear reason why they should not—if rate regulation is tied to current market price of gas reserves rather than original cost, the pipeline companies will have been taken out of effective rate regulation.

Now the report by the President's committee marks the second part of the attack on the Natural Gas Act. Essentially, the report advocates enactment of the old Kerr bill to relieve the so-called independent producers from regulation. This recommendation is in direct contrast to the action taken by the previous Democratic administration, for it will be remembered that President Truman refused to bow to the pressures exerted by the oil and gas interests and vetoed the Kerr bill.

The particular form of the committee's recommendation leads me to believe that the committee was guilty either of gross ignorance or willful deception. This is what it said:

In the interest of a sound fuel policy and the protection of the national defense and consumer interests by assuring such a continued exploration for and development of adequate reserves as to provide an adequate supply of natural gas, we believe the Federal Government should not control the production, gathering, processing, or sale of natural gas prior to its entry into an interstate transmission line.

Certainly the committee knew or should have known that the production and gathering process is now exempt from regulation. Why, then, should it attempt to tie that process in with the movement of gas in interstate commerce unless it sought to confuse the issue?

As the Supreme Court has pointed out time and again, the important point is when the gas begins its interstate journey to the gas stoves of the consumers. This may or may not be when it enters an interstate pipeline. In the Interstate Natural Gas Co. case, the court held that it began before it entered the pipeline.

Mr. Speaker, prior to the passage of the Natural Gas Act of 1938, the Supreme Court of the United States has held in

the case of *Public Service Commission v. Attelboro* (273 U. S. 83), that the States could not regulate the transportation of natural gas and electricity in interstate commerce and the sale of natural gas and electricity in interstate commerce for resale. Thus, natural gas companies engaged in interstate commerce were regulated neither by State nor Federal authorities. This void in interstate regulations became known as the Attelboro Gap. It was to fill this vacuum that the Natural Gas Act of 1938 was passed, to fill the regulatory gap beginning at the city gate and extending back to the source of the gas. If the recommendation of the committee be adopted, that gap in regulation will again come into being, to the detriment of the consumer.

Tax Reduction

EXTENSION OF REMARKS
OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the New York Post on Thursday, February 24, 1955. It is entitled "Whose Bull Gets Hooked" and follows:

WHOSE BULL GETS HOOKED

President Eisenhower was indignant yesterday. In a rare burst of anger he denounced the Democratic proposal for a \$20-per-person tax cut next year as "the height of fiscal irresponsibility."

We don't know who steamed up the President, but surely his brain trusters should have briefed him on some recent history. For it was exactly 8 months ago that some other men came up with a plan to shave taxes \$20 a head. There was no protest from the White House; there were no cries of "irresponsibility." Conceivably the reason for the reticence was that the author of the proposal and the 45 Senators who voted for it were Republicans.

The measure was improvised by Senator MILLIKIN, of Colorado, and the Times soberly reported that it was "put forward at the urging of a group of Republicans led by Senator IVES, of New York, to balance off features of the tax bill benefiting business and recipients of income from corporation dividends."

Actually the amendment was an attempt to forestall a Democratic move to boost the \$600 basic-tax exemption. In the ensuing maneuvers both proposals lost out.

The President stands on hollow ground when he sanctimoniously deplores the Democratic tax-cut drive as a threat to fiscal stability. The tax benefits for wealthy individuals and large corporations pushed through by the administration last year were adopted in the face of an anticipated Federal deficit almost twice as large as estimated now. Moreover, as Speaker RAYBURN pointed out yesterday, the Republicans themselves have been pledging individual tax slashes next year; under the Democratic proposal, the reduction would not take effect until January 1.

There may be flaws in the Democratic plan, but certainly the idea is no more subversive now than it was when 46 Republicans voted for it a year ago. If the Democrats deserve

reproach, it is for so belatedly recognizing the merits of MILLIKIN's amendment.

To put it another way, we quote Mr. RAYBURN: "It all depends on whose bull gets hooked."

To Aid Refugee Entry

EXTENSION OF REMARKS OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I insert herewith a letter I sent to the editor of the New York Times, which appeared in a recent issue of that newspaper:

TO AID REFUGEE ENTRY—CHANGES URGED IN REFUGEE RELIEF ACT TO INCREASE EFFECTIVENESS

TO THE EDITOR OF THE NEW YORK TIMES:

On August 7, 1953, the Refugee Relief Act became effective. Ostensibly it was to be a great humanitarian gesture to permit 214,000 refugees, escapees, expellees, and orphans to enter the United States as nonquota immigrants. It was to encourage the taking of risks for the sake of liberty. It was to point up—and again I say ostensibly—that the United States has not departed from its tradition as a land of haven.

I have charged, and continue to charge, that the Refugee Relief Act of 1953 is a dismal failure.

Some 18 months have passed since the bill's enactment, and one-half of its lifetime. Of the 214,000 allotted under this act some 19,000 visas have been granted as of January 28, 1955. In short, a little over 8 percent of the total have received the coveted visas, with the act due to expire in 1956.

I say that the law is bad, but the administration of the law under Scott McLeod is worse. The operation of the Refugee Relief Act is tangled and snarled in nightmares within nightmares, forms, questionnaires, security checks, and duplication.

MANY OPERATIONS

As it is now, we have involved in the operations of one act: The housing authorities, United States Employment Service, the health authorities, the Department of State (both domestic and in the field abroad), the Department of the Army through its investigators, the FBI, the CIA, the CIC, and the CID, not to mention individual sponsorship. In processing each application the local police files are checked and the central police files are checked as far back as is possible. Not only are the files in the place of residence checked, but in all former residences specified by the alien.

In addition checks are made on the records of the courts and the public prosecutors; records of the United States, the CIC, the FBI; embassy files, central files, and files of the Visa Division in Washington. The sponsor's background is similarly investigated.

Mr. McLeod is playing a cruel game by pitting legal paragraphs against human lives. Escapees (an escapee is one who escapes from behind the Iron Curtain into free territory) beckoned by the light of liberty have dared to cross barbed wires, risk gunfire, spent harrowing days and nights in escape from the Iron Curtain countries only to find themselves finally barred by bits of paper. You can rest assured that a real security risk has made sure that all his papers are in order, that he can answer any question, devious or otherwise; that he has provided himself with every kind of documentation. No one single

escapee has come into the United States, although provision is made for 15,000.

In one breath we encourage escapees to come over the border, then the great United States will offer haven, and in the other breath we say although you have risked your neck to come over the border you must overcome and run an impossible obstacle race to come into the United States.

THREE JOBS

Mr. McLeod wears three hats. He is administrator of security. He is head of consular affairs. He is administrator of the Refugee Relief Act. It is a physical impossibility to fill all posts properly and effectively. In the matters affecting the Refugee Relief Act and consular affairs the field officers are constantly seeking advisory opinions from Washington. I know that questions relative to the admissibility of aliens have traveled back and forth in a merry-go-round of passing the buck. If by any chance a field officer should make a decision contrary to Mr. McLeod's interpretation, then he may well find himself subjected to investigation. Hence, everything must be exact—so exact that the hopes of the alien are strangled between commas.

I have introduced a bill which, if enacted into law, will provide for group assurances by reputable voluntary agencies, thus eliminating the bottleneck of the necessity for finding individual sponsors. I have provided that the administrator of the act shall be appointed by the President, with the advice and consent of the Senate, thereby eliminating the language of the present act, which names the administrator as "the Administrator of the Bureau of Security and Consular Affairs established under the Department of State . . ." If passed, Mr. McLeod may walk the plank. It is my purpose to remedy defects of the law and to remedy its administration by the removal of the present administrator.

EMANUEL CELLER,

Chairman, Committee on the Judiciary, House of Representatives.

WASHINGTON, February 25, 1955.

A \$53 Million Kiss

EXTENSION OF REMARKS OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. DORN of South Carolina. Mr. Speaker, it was my observation when abroad that many of our people in positions of responsibility over there instead of representing the interest of the United States gave the impression of being more interested in the welfare of the country in which they are located.

I commend to the House the following editorial from the Anderson (S. C.) Daily Mail:

A \$53 MILLION KISS

We saw a picture on the back page of the Daily Mail Wednesday showing an Italian politician kissing the hand of the American Ambassador to Italy, Mrs. Clare Booth Luce, in appreciation of the American taxpayer—you and you and you, giving the Italians \$53 million to help raise the living standards of the southern sections of Italy and of Trieste.

When is the big giveaway going to end? Haven't we seen enough waste in Italy with American money? And in France and Spain and England?

As you prepare your income-tax return for 1955, do so cheerfully with the knowledge that part of your tax money is going to Italy as an absolute gift.

How many Italians would ever know the aid came from America? When is this constant gravy train riding by Italy and a lot of other fallen empires, like decadent France, to stop? Kiss your tax money goodbye so the "Eyeties" can kiss the Ambassador's hand.

No one can show that the \$50 billion we have expended in foreign aid since the end of the Second World War has made us any friends; all reports are that the result has been just the opposite. In fact, the quickest way to lose a friend—whether nation or individual—is to stop a policy of gifts or loans after it has once been started. For it is only true of human nature that the more you give a man the more he wants; and if you give it to him long enough, he will finally demand it as his right. And in this respect, nations are no different from individuals.

Those who are our real friends now would have been just as much our friends without any foreign aid. And those who give lip-service to friendship just in order to keep the dollars rolling in would long ago have been exposed for what they are.

No one can show that Marshall aid has restored the economy of Europe. No one can show that the economic recovery of Europe would not have taken place much faster and on a much sounder basis without our aid.

In fact, the sound-thinking conservatives of Great Britain will tell you that our aid hindered rather than helped their recovery. They will tell you that the \$4 billion loan we made Britain in 1946 helped establish their Socialist Government in office, and that the succeeding Marshall aid helped keep it in office; that they would have gotten rid of this government—which drove them to the very brink of bankruptcy—much sooner had it not been for the aid we poured into them.

Alaska Road Commission

EXTENSION OF REMARKS OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. BARTLETT. Mr. Speaker, January 27, 1955 marked the 50th birthday of the Alaska Road Commission. It was on that date in 1905 that the Congress created the Board of Road Commissioners for Alaska to work under the direction of the War Department. This Board, appointed by Secretary of War William H. Taft, was charged with the responsibility for location, construction, and maintenance of wagon roads and trails in Alaska. Prior to that time Capt. W. R. Abercrombie had located and constructed a military trail from Valdez to Eagle in 1901, over which mail was carried twice a month with pack-horses in summer and dog teams in winter. In 1904 the Seattle Office of the Army Engineers completed a survey for a wagon road between the same points, Valdez at that time being the northern terminus of the Seattle-Valdez military cable, and Eagle the principal port of entry into Alaska from Canada and the Klondike gold fields.

The first road board consisted of Maj. Wilds P. Richardson, 9th Infantry, 1st Lt. George B. Pillsbury, Corps of Engineers, and 1st Lt. Samuel C. Orchard, 3rd Infantry, and was directed to hold its first meeting in Skagway on May 15, 1905. Major Richardson, being the senior officer, became the first president of what has since been known as the Alaska Road Commission. The first year's appropriation was \$28,000, made available by the Congress from the Alaska fund derived from trade taxes collected outside of incorporated towns, and from liquor licenses.

Some of the earliest projects included a road from Haines up the Chilkat River to the large Indian villages of the Chilkat Valley, road from Fairbanks to the newly discovered gold camp on Pedro Creek, a tributary of Gold Stream, and short roads at Nome where gold had been discovered at and near the beaches. During this first year of the new Board, the overland route from Valdez to Fairbanks was also scouted out, utilizing the first section of the Valdez-Eagle trail between the coast and Gulkana. Based on these first-year studies of the Board, a direct appropriation of \$150,000 was made by the Congress for work in 1906, which permitted start of construction of what is now known as the Richardson Highway, joining Valdez with Fairbanks, and which for years was the only overland route into the heart of Alaska.

The major effort until the late 1920's was directed toward improvement of the Richardson Highway and construction of mining roads in the vicinity of Anchorage, Fairbanks, and Nome. Then followed, in rapid succession, the construction of the Steese Highway from Fairbanks to Circle, the Elliott Highway from Fairbanks to Livengood, the Gulkana-Nabesna Road, and the road from Anchorage to Palmer to serve the colonization project established in 1935 to farm the Matanuska Valley.

The Glenn Highway, designed to connect Anchorage with the Richardson Highway, was started in the spring of 1941 and punched through during World War II. It was the following year that construction was initiated on the Alcan Highway—now officially the Alaska Highway—through Canada and Alaska to connect with the Richardson Highway at Delta Junction, as well as the Tok Cutoff to connect the Gulkana-Nabesna Road at Slana with the Alaska Highway at Tok Junction. Following World War II, construction was initiated in 1946 on the Sterling Highway on the Kenai Peninsula and also on the Taylor Highway, linking the Alaska Highway with Eagle on the Yukon River.

In 1948, at the request of the Armed Forces charged with the defense of Alaska, an extensive program of improving and asphalt surfacing of the main highway system was authorized by the Congress and which included the construction of the important link to join Seward with Anchorage. This program, having an estimated cost of \$108,450,000, is now approximately 84 percent complete, with 812 miles of black top surfacing in place to serve the needs of

the military as well as to aid in the development of the Territory.

The present system of highways in Alaska consists of a total of 4,100 miles, of which 3,791 miles are under the jurisdiction of the Alaska Road Commission and the remaining 309 miles, located in Chugach and Tongass National Forests, under control of the Bureau of Public Roads, the road-building agency for the United States Forest Service in Alaska. The major interconnected system joining the cities of Seward, Anchorage, Valdez, Fairbanks, and the villages of Kenai, Homer, Circle, Livengood, and Chitina with each other and the Alaska Highway, totals 1,372 miles. The important Copper River Highway, now under construction, will eventually link Cordova with this primary system.

The Alaska Road Commission continued under the jurisdiction of the War Department until June 1932, when civilian personnel and operations were transferred to the Department of the Interior with Mr. Ike P. Taylor as chief engineer.

Active heads of the Alaska Road Commission, in order, included:

Maj. Wilds P. Richardson, later general, 1905-17.

Maj. William H. Waugh, 1917-20.

Maj. John C. Gotwals, 1920.

Col. James G. Steese, later general, 1920-27.

Maj. Malcolm Elliott, 1927-32.

Mr. Ike P. Taylor, now retired, 1932-48.

Col. John R. Noyes, now brigadier general, and adjutant general of the Alaska National Guard was loaned to the Alaska Road Commission for 3 years by the United States Army to head up the extensive paving program requested by the military, 1948-51.

A. F. Ghiglione, incumbent Commissioner of Roads for Alaska.

Recent years, starting with the extensive improvement and paving program, have witnessed an increase in construction by contract on those roads which are readily accessible and adaptable to that type of construction. The Alaska Road Commission still continues to open up virgin and isolated areas of Alaska with crews and equipment under the direct supervision of the Commission, following a policy of stage construction whereby length is the initial and primary purpose of a highway in a pioneer country followed by refinements as needed and warranted by economic development. A current project of this nature is the Denali Highway connecting the Richardson Highway with a system of roads in Mt. McKinley National Park. The newest approved project is a road between Fairbanks and Nenana which will be started in the summer of 1955.

Working in cooperation with the Alaska Road Commission, a Federal organization deriving most of its funds from Congress, is the territorial highway organization consisting of the territorial highway engineer and a territorial board of road commissioners with one member from each judicial division. The territorial organization calls upon the Alaska Road Commission to perform a major

part of work financed by territorial funds, thereby preventing costly duplication of effort. Mr. Irving Reed is the present Territorial highway engineer.

This oldest roadbuilding agency of the Federal Government numbers among its personnel many employees who have served the agency for 25 years or more, over half the period of its active life. Appropriate golden anniversary commemorative functions are planned during this 50th year of service to the Territory.

Lithuanian Resolutions

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include resolutions unanimously adopted at a mass meeting of the Lithuanian Americans of Worcester, Mass., held under the auspices of the Lithuanian Aid Association, Inc., on February 13, 1955. The resolutions follow:

Whereas the 16th day of February 1955 will mark the 37th anniversary of the Declaration of Independence by the people of the Republic of Lithuania;

Whereas the Republic of Lithuania, a peace-loving and progressive nation, notwithstanding its loyalty to international treaties and agreements, fell victim to the unprovoked aggression and military invasion by Communist Russia and in spite of all the declarations and obligations solemnly undertaken by the great powers under the Atlantic Charter and the United Nations Charter is still subjected to the premeditated Kremlin policy of physical, national, cultural, religious, and economic destruction;

Whereas no peace and stability in the world is possible as long as that part of Europe comprising over 100,000 million people is held in captivity;

Whereas no nation great or small can today feel protected from the claim of international communism supported, as it is, by all the destructive weapons that modern civilization has devised for mankind; Therefore be it

Resolved, That this meeting voice its gratitude to the President, Secretary of State, and the Congress of the United States of America for the support constantly extended to the cause of independence of the Republic of Lithuania, and especially for the creation of the select congressional committee to investigate the circumstances under which the seizure and incorporation of the Baltic nations by the Soviet Union took place;

Resolved, That the Government of the United States enter into no agreements which would in any way acknowledge the fruits of any past, present, or future Soviet aggression;

Resolved, That the congressional investigation into the facts and circumstances of the Soviet aggression against free nations be continued by Congress, and that decisive and energetic action on the part of our Government be undertaken in the United Nations organization to brand the Soviet Union as an aggressor against all the nations now under the Communist heel;

Resolved, That the Genocide Convention be immediately ratified by the Senate of

United States so that Soviet Russia may be made criminally responsible for the genocide perpetrated by her in the Baltic States and other countries behind the Iron Curtain;

Resolved, That the Lithuanian Americans of the city of Worcester in the Commonwealth of Massachusetts, once again reaffirming their loyalty to the principles of American democracy, pledge their wholehearted support of the administration and the Congress of the United States of America in their efforts to bring about a lasting peace, freedom, and justice in the world.

MICHAEL ZEMAITIS,
Chairman.
JOHN PALUBICKAS,
Secretary.

Dixon-Yates Contract

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include therein an editorial from the Saturday Evening Post of March 5, 1955, which includes some observations regarding those who favor public power, as against private enterprise. Much has been said lately, and the CONGRESSIONAL RECORD contains long speeches by those who advocate public power as against the American way; namely, private enterprise. Why should Government go into competition with its own citizens? And why should Government do for the people what the people can do for themselves?

Those who favor public power are very careful not to disclose the fact that TVA would soon be here in Washington before the Committee on Appropriations, asking \$100 million of the taxpayers' money to build another steam plant. When the steam plants now authorized in the TVA have been completed, 70 percent of the power generated in TVA will be steam power, and only 30 percent will be hydroelectric power. The tail will soon be wagging the dog.

Are the American people forever committed to furnish their tax money to a favorite area like TVA because the Government provided for the initial installation of hydroelectric power? Much of the steam power generated in the TVA has no relation whatever to hydropower. The editorial from the Saturday Evening Post follows:

THE PUBLIC-POWER BLOC HAS MASTERED SOME TECHNIQUES OF TOTAL CONFUSION

The strategy and tactics of the public-power bloc in respect to the Dixon-Yates contract for construction of a plant to supply electrical power to the Atomic Energy Commission bear a certain superficial resemblance to the debating methods of the Communists over an issue like Formosa. (Hold it, readers. We're not comparing public-power advocates to Communists, merely pointing out resemblances in methods of procedure.)

The first stage after the contract was signed featured a vigorous attack on the aggressive imperialists of Wall Street, who, op-

erating through the puppet Eisenhower regime, had committed a felonious attack upon the people's government of TVA. Then followed a series of revelations by former employees of the imperialist private utilities, plus efforts to brand private-utility companies as engaged in an effort to oppress the hapless colonial peoples of the TVA region. The confusion of resolutions and press releases continues, although President Eisenhower's flat statement that the Dixon-Yates contract will stand has weakened the campaign considerably.

However, just as in the United Nations, the antics of the public-power bloc have not been without effect. Thus Atomic Energy Commissioner Thomas E. Murray, who seems to have voted for the Dixon-Yates contract when it was before the Commission, told a congressional committee later that the contract should be canceled because "something must be done to free the Commission from any connection with this cause for so much discord." Speaker SAM RAYBURN urged the Dixon-Yates group to withdraw from the contract because "this thing has created such a furor" that private-utility companies could be injured. In international disputes as conducted by the Communists, we are all too familiar with the desperation which eventually sets in, causing those who have no truck with communism to agree to almost any concessions if only the yammering will cease.

Fortunately, these tactics, like mass picketing, can produce effects quite the opposite of those intended. We appear finally to have put our back up in Asia, and, when President Eisenhower was asked at his February 2 press conference whether he had any plans to withdraw the Dixon-Yates contract, his reply was: "I do not."

Nevertheless, we can confidently expect the public-power boys to set them up in the other alley.

Ukrainian Independence

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. PRICE. Mr. Speaker, it is a privilege to pay tribute to thousands of Americans of Ukrainian descent who this year celebrated the 37th anniversary of Ukrainian independence on January 22. Their fervor for liberation of their homeland parallels the faith of all freedom-loving people in the hope that all enslaved nations under the Communist yoke will regain their self-determination.

The Ukraine enjoyed independence a short time before Communist domination placed them behind the Iron Curtain in 1920. However, their hopes for return to self-determination have not waned. It is important that our Voice of America continue to reach them to bolster that hope.

It is appropriate that we reaffirm our strong faith in the aspirations of the Ukrainian people who yearn for independence from totalitarian subjugation. On the occasion of the celebration of the anniversary of Ukrainian independence, all Americans joined in fervent prayer that the Ukraine and all other captive homelands will soon be free again.

Job Creation or Job Destruction?

EXTENSION OF REMARKS

OF

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. CEDERBERG. Mr. Speaker, in the last Congress we witnessed a political maneuver by some of our Democratic opponents to rush us into a new WPA program. This would have created a psychological effect that could have had serious consequences for our economy.

Sane judgment prevailed, and in spite of the cries of "Wolf, wolf," our factories are still humming, department-store sales continue at a high rate, and we continue to enjoy the same level of prosperity that has prevailed for several years, all without the WPA crutch.

A few days ago a new political masterpiece appeared on the scene, and without having heard witnesses present proposing and opposing arguments, the committee sent the measure to the floor of the House for action. I refer to the bill giving taxpayers a \$20 tax reduction and a similar amount for each dependent.

How they arrived at this figure as \$20, instead of \$24.50, \$29.95, \$39.98, or some other vote-getting, bargain-counter figure, is not satisfactorily explained. How is it that the Democrats, without the aid of hearings and without waiting for appropriation bills to learn what it is going to cost to run the country during the year ahead, are able to say we can give every taxpayer and every one of his dependents a \$20 tax cut, reducing Federal revenue by about \$2 billion?

We all want tax reductions. No one likes to pay taxes. But revenues are needed to keep our country strong. This administration has diligently tried to cut out waste and reduce unnecessary expenditures. It is still effecting economies wherever possible, thus seeking to reduce the need for heavy taxes.

This hastily conceived proposal has far greater involvement than affording \$20 immediate tax relief for the taxpayer. It goes beyond that, and the March 4 edition of the U. S. News & World Report contains an editorial by David Lawrence which sets forth some of the dangers of this proposal.

Mr. Lawrence's editorial follows:

JOB CREATION OR JOB DESTRUCTION?

When a political party proclaims a program of taxation based upon vote catching rather than sound economic principles, a serious question is raised as to its capacity to govern the Nation in a responsible manner if entrusted with power.

The Democratic Party in Congress came forth last week with a proposal to give every taxpayer a \$20 cut in taxes. This would cost the United States Treasury more than \$2 billion annually in tax receipts, but it could do far more damage eventually—it could start a cycle of inflation, and, as prices skyrocketed, a breakdown of confidence in the value of the dollar would ensue.

If this is a sample of what the Democratic Party has in mind in the event of victory at the polls in 1956, there will arise at once a widespread fear for the future solvency of the American Government.

It was Thomas Jefferson, founder of the Democratic Party, who enunciated the principle: "Equal rights for all, special privileges for none." The plan to give a \$20 tax cut is really a proposal to grant to certain income classes a higher percentage of tax reduction than to other groups. It is a special privilege to be bestowed upon a particular group, irrespective of the economic consequences to the Nation as a whole.

The argument made by proponents of the measure is that prosperity can best be stimulated by furnishing money subsidies to certain consumers.

This was also the philosophy behind the Work Projects Administration during the depression days of the 1930's. But that policy was a failure. Unemployment remained at an unprecedented height for peacetime, and war alone came to the rescue of the national economy. It was not until 1940, when heavy-goods industries were finally given the opportunity to expand, that the unemployment figure began to drop perceptibly.

It is contended, of course, that the money saved by tax cuts will add to purchasing power. The resultant deficit in the budget, however, would have to be met by higher taxes on other income groups or by raising business taxes which are already too high.

To increase the quantity of purchasing power is futile if prices are forced upward due to lack of confidence in the purchasing power of the dollar itself. An inequitable tax scheme means a commitment to a prolonged unbalance of the whole national economy. This can only bring inflation, with its devastating effect on persons who live on pensions and fixed incomes.

What really makes America tick is a balanced economy. This means that funds must be made constantly available for investment in the expansion of business and in the replacement of worn-out equipment. Today's climate for investment, brought about by the Eisenhower administration, is the healthiest in 30 years.

Unless saving by the individual is encouraged and the fruit of his labors invested as seed money in business, there is no chance for a system of risk capital to survive. Only the Government could then provide the necessary capital. And that's the beginning of the end of individual freedom. For little by little, as state capitalism takes hold and more and more people find themselves on the Government payroll, the incentive for management to create new enterprises vanishes. Governmental restrictions on human liberty then become necessary to maintain discipline.

Why do the patriotic leaders of a great American party permit themselves to become victims of the socialistic doctrine of job destruction?

For when taxation is inequitable and men of thrift and talent are discouraged because they are taxed virtually to the point of confiscation, business enterprise falters and unemployment is the inevitable result.

Certainly, to impose taxes only on a basis of subsidy to the maximum number—without regard for the eventual good of all—is one way to liquidate the managerial class in America and to bring economic chaos, as has been the case in Russia.

Tax rates should never be determined on the basis of money grants direct to the largest number of voters. Taxes should be imposed on the basis of incentive—by means of rates that will indirectly exert the maximum influence toward job creation. That's sound economics—it's the way to deserve the vote of all groups.

The Democratic Party of today is torn between the true Democrats who wish to conserve the American economic system, and the radicals who will, if allowed to become the majority, destroy the system which has given us the strongest industrial power and

the highest standard of living any country has ever known.

Will the Democratic Party return to the dynamic conservatism of Woodrow Wilson, who in the fiscal policies of his administration maintained the principles of Thomas Jefferson? Or will the Democratic Party surrender to the insidious forces of state capitalism which seek to break down our whole economic system?

What kind of a Democratic Party are the American people to be asked to vote for in 1956?

Young Republicans for Eisenhower and Nixon

EXTENSION OF REMARKS OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. HILLINGS. Mr. Speaker, the executive committee of the Young Republican National Federation meeting together with the Western and Midwestern Young Republican Councils has unanimously endorsed the renomination and reelection of President Eisenhower and Vice President Nixon.

Sullivan Barnes, chairman of the national Young GOP group, urged the young people of America to "spearhead a crusade dedicated to the renomination and election of Eisenhower and Nixon."

The resolution presented by the Young Republicans of California declared that "for the best interests of the United States and of our beloved party, the retention of Dwight D. Eisenhower as President of the United States and RICHARD M. NIXON as Vice President has been mandated by the people."

In discussing the resolution Chairman Barnes praised both the President and Vice President for their recognition and continued support of the Young GOP.

Over 200 Young Republicans from 35 States were in attendance at the meeting, held at the Broadmoor Hotel in Colorado Springs, Colo., on February 26, 1955.

The following resolution was unanimously adopted:

Whereas for the first time in 20 years, the United States of America has a President and Vice President that all Americans, regardless of party, can be proud of; and

Whereas the destiny of this Nation and of the free world depends largely upon the retention and rededication of this President and Vice President in public life; and

Whereas for the best interests of our United States and of our beloved party, the retention of Dwight D. Eisenhower as President of the United States and RICHARD M. NIXON as Vice President has been mandated by the people: Now, therefore, be it

Resolved, That the executive committee of the Young Republican National Federation in open session does hereby unequivocally and wholeheartedly endorse the renomination and election of Dwight D. Eisenhower for the Presidency of the United States and RICHARD M. NIXON as Vice President; and be it further

Resolved, That we hereby dedicate ourselves to the task of instigating a groundswell of public opinion for our great President and Vice President to commit themselves to this undertaking.

Beware of Strip Mining in National Forests

EXTENSION OF REMARKS OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1955

Mr. BYRD. Mr. Speaker, I recently called to the attention of the Congress a letter which I had written to the Secretary of Agriculture, Ezra Taft Benson. In that letter, I urged the Secretary to refuse permission to a Stearns, Ky., firm to strip mine in the Cumberland National Forest. I emphasized the fact that the issue is much greater than the 47,000 acres involved in the Stearns case, and that the decision by the Secretary would be far-reaching and, if favorable to the Stearns Coal & Lumber Co., the decision would ultimately lead to the destruction and devastation of national forests in West Virginia, Virginia, and other areas.

Under leave to extend my remarks, I wish to insert an editorial from the Charleston (W. Va.) Gazette. The editorial stresses that the decision will be precedent setting and of vital national interest. I hope that other Members of Congress will not be unaware of the momentous decision which is presently in the making. The editorial follows:

SHALL STRIPPERS BE ALLOWED TO DESTROY FORESTS?—THAT IS QUESTION BEING PONDERED BY BENSON

A recent hearing at Stearns, Ky., is of vital importance to the people of West Virginia. It has to do with the possibility of strip mining in national forests.

In the hearing the Stearns Coal & Lumber Co. applied for permission to strip mine some 47,000 acres in the Cumberland National Forest.

This was the climax of an action started some time ago when Stearns applied to the forest supervisor of Cumberland Forest for permission to strip the property, but was refused; the company then appealed to Regional Forester Charles L. Tebbe and was refused; then appealed to the office of the Secretary, Ezra Taft Benson. Mr. Benson appointed a board of consultants to hear the matter, and it was this board that held the hearing on January 27.

The question raised affects far more than the small part of the Cumberland National Forest involved. It affects all the national forests in the country and all the States that have national forests within their boundaries. In West Virginia it has special meaning, because West Virginia has beautiful and delightful national forests. They are among West Virginia's greatest assets.

No one knows better than West Virginians the disastrous residues of strip mining. Huge areas of the State that once added to its beauty now after being stripped present a rubble of slag and soil that is enough to sicken the heart of anyone.

The State of West Virginia has by permanent injunction stopped the strip mining of its State forests.

It is obvious that the simple act of strip mining defeats the purposes of the Weeks Act authorizing the purchase of lands for the protection of watersheds at the deep waters of important streams.

It is obvious that the only thing that may be gained is to increase the supply of coal above ground and the present situation of the coal industry would not indicate that

this would be of any benefit. In the long run it would pollute and destroy our streams, denude and destroy our forests, wash away our soil.

Mr. Secretary, the decision that you make will be of vital national interest; it will be precedent setting. Let us urge you to act to protect our watersheds, our forest lands, and our future by upholding the action of your forest supervisor and your regional forester in denying the privilege of strip mining our national forests to any and all.

Big, Phony Word

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. BARTLETT. Mr. Speaker, there has been considerable discussion of commonwealth status for Alaska as a substitute for statehood. A recent editorial which appeared in many Scripps-Howard newspapers entitled "Big, Phony Word" nails the commonwealth pelt right to the barnyard door, which is exactly where it belongs. The editorial was as follows:

BIG PHONY WORD

So far the movement to obtain a so-called commonwealth status for Alaska, as an alternative to statehood, seems to have attracted about the same number of followers as apostles of vegetarianism. The latest Gallup poll showed 82 percent of the American public for statehood, and Alaska's friends in Congress are pushing for an early vote there.

So much nonsense on the subject has been spoken and written, however, that the origin and meaning of the term "commonwealth" evidently should be understood more widely.

It was invented as a title for Puerto Rico's unusual political status, when that island sought and obtained the maximum degree of autonomy which our system permits short of independence. Only later was commonwealth seized upon by those in Congress who had long opposed statehood for Alaska, and probably found such a purely negative attitude toward statehood increasingly difficult to defend.

It is not to Puerto Rico, nor could it be to Alaska, a steppingstone to statehood. On the contrary, Alaska (like Hawaii) is an incorporated Territory, which Puerto Rico never was, and therefore legally in the status of the Western States when they were admitted to the Union. Indeed, it is highly doubtful that Congress has the power to deprive Alaska of this status by making it a commonwealth.

Even if it has, it would seem preposterous to encourage political separatism in a Territory which has demonstrated no desire for it and which is, in the present circumstances, more vital geographically to the Nation's military defense than any State.

If Congress fails to grant Alaska statehood it should, of course, give it control over its resources and help it in other ways to strengthen its economy, in preparation for statehood. But to push it further away from us politically by making it a commonwealth would be an outrage upon the Alaskan people and nothing short of stupid from the national viewpoint.

St. David's Day

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. FLOOD. Mr. Speaker, there are few honors that please me so much in the course of a year than that of rising in the Congress of the United States on March 1—St. David's Day—to pay tribute to a proud, rugged, and productive strain in the American people whose ancestors were Welsh. St. David's Day is a folk holiday that is rich in ancient lore and steeped in religious faith. It has its inner appeal to all people who love strong character and the will to independence. It deserves recognition nationally. It has earned a place for itself on the calendar of significant events worthy of observance in this House because of the contribution Americans of Welsh descent have made to America's strength through the generations. And this holiday—St. David's Day—is a fitting moment for that recognition because it has a distinctive folk origin in the best sense of the word.

It expresses the vigor, the loyalty to tradition, and the love of life that is inherent in these remarkable people. In my judgment there is not an American of Welsh extraction who does not pause on this day to pay homage to what may well be termed the "patron saint" of Wales. In fact not only Americans of Welsh extraction but millions of other Americans join with their Welsh fellow-citizens to do honor to St. David. I sincerely hope we are witnessing the beginning of a celebration that, as the years go on, will become a day of national rejoicing for all Americans of whatever racial strain everywhere, a day upon which we can all join together to wish the people of Wales the best of health and the best of luck.

St. David's Day deserves a note of tribute from us all because it symbolizes the spirit of independence which is so characteristic of America's own beginnings and rules our way of life so much today. The intrepid quality of these people and their undying devotion to independence remained steadfast through the centuries, and it is this which is emphatically remembered as the Welsh all over the world join in keeping green the basic qualities of their unique culture. When Wales resisted the rule of the Norman kings in the 12th century—500 years after the death of St. David—it was their ancient saint's spirit that fired their cause. They evoked his memory in demanding an archbishop of their own, untrammelled by the domineering interference of Canterbury.

There is a fascinating mythology that has evolved through the centuries about the life of this unquestionably extraordinary historic personage. He is mentioned first in a 10th century manuscript of the *Annales Cambriae*. This reports

his death in 601. He had been a bishop and presided over the synods in Wales in the sixth century. In 1120 Pope Callistus II canonized David, and since then he has served as a kind of deeply devout and immensely moving rallying torch for Welshmen everywhere. And the language of Wales, it should be remembered, is a Celtic tongue, Celtic at one time having been spoken from the Alps in the north, to Gaul, Iberia, northern Italy, and as far east as points in Asia Minor.

The reason this story moves me so much is because my fellow Americans in the district in Pennsylvania that elected me to this seat have impressed me with the tough and loyal qualities, the steadfastness, the hard-toiling life of usefulness and patriotism that so marks Americans of Welsh extraction. In many ways this holiday expresses the joyous strength of the Welsh. And it is this strength which has fused itself into the life of our country and contributed to its greatness. For St. David's Day brings out the vitality and the eternal youth of the Welsh on a note of triumph and in a burst of song. Wherever groups of Welshmen gather they will sing together *Hen Wlad Fy Nhadau* or *The Land of My Fathers*. And they will talk, with an eloquence that is traditional, of the glories of old Wales. Whether the American whose forebears came from Wales is a leader in industry, in business, in the church, in the professions, in politics; or whether he is one of the doughty anthracite coal miners of Pennsylvania, we are bound to find in him the best of the stuff that makes a good American.

I believe that these people are so loyal to America, so indissolubly assimilated into the life and meaning of this country, because they are basically loyal, and, cleaving forever to the ancient folklore of their own racial beginnings, we know they will always—as they have demonstrated—remain loyal to the United States of America.

It is a pleasant duty and a reverent one to speak in honor of St. David's Day.

Statehood

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I should like to bring to the attention of the Members of the House an excellent editorial which appeared in the February 18, 1955, issue of the *Washington Daily News* following approval by the House Interior and Insular Affairs Committee of the joint Hawaii-Alaska statehood bill:

THE STATEHOOD BILL

A committee of the House of Representatives has approved a bill to confer statehood on Alaska and Hawaii.

While their situations are different, Alaska being a vast and booming territory and Hawaii a small, mature one, the realities of politics dictated a single bill rather than separate ones. Unless Republican leaders are incredibly naive, they must have known when President Eisenhower first requested it that statehood for Hawaii alone will not be passed by this Congress.

The administration's feeble attempts to justify its opposition to Alaska statehood for vague reasons of national defense should impress no one. If the Defense Department needs and wants more land in Alaska it can obtain it as easily after Alaska becomes a State as now. If it can take over land in any State in the Union, and has done so many times. Its obligation to defend Alaska and the strategic importance of that Territory are precisely the same now as they would be after statehood.

We do not even see the need for the special amendment which would permit the President to set aside 40 percent of northern Alaska for military reservations, although if that is the price Alaska must pay for statehood it is willing to do so.

The most distressing aspect of the years-long controversy over statehood, in fact, is the cynical disregard by statehood opponents of the deep yearning for full citizenship on the part of the good Americans in Alaska and Hawaii and their moral right to ask for it.

We hope their long wait is nearing its end.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the official reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee)". His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, but this rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD Appendix the full report or print of any committee or subcommittee when said report or print has been previously printed.

10. *Official reporters.*—The official reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this restriction shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. The Public Printer or the official reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Illustrations.*—Pursuant to section 182b, title 44, United States Code (as shown above), requests for authority to insert an illustration in the RECORD should be submitted to the Joint Committee on Printing through the chairman of the Committee on Printing of the respective House in which the speech desired to be illustrated may be delivered. Illustrations shall not exceed in size a page of the RECORD and shall be linecuts only. Copy for illustrations must be furnished to the Public Printer not later than 12:30 o'clock p. m. of the day preceding publication.

13. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

Appendix

The Expanding Great Lakes Frontier

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2, 1955

Mr. WILEY. Mr. President, on last Saturday, February 26, it was my pleasure to address the Antigo, Wis., Chamber of Commerce on the subject of the expanding Great Lakes frontier.

I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE EXPANDING GREAT LAKES FRONTIER
(Address by Hon. ALEXANDER WILEY, of Wisconsin)

It is a privilege to address this fine chamber of commerce regarding the expanding economic frontier of America.

I want to talk to you about the future prosperity which you of Antigo and which all of us in Wisconsin will enjoy in the years and decades to come.

What we are going to do is not, however, "put on rose-colored glasses" and assume that the future will be all bright and easy.

Rather we are going to take a realistic look at the great challenge—the great opportunity which lies before us.

SEAWAY A GREAT BOOST

It is my belief that the Great Lakes-St. Lawrence seaway, now scheduled to begin operations in the 1959 shipping season, will prove to be one of the most tremendous economic boosts in United States history.

It is my belief that it will be a great spur to midwestern industry and agriculture; that it will pump economic health into communities in States all along the Lakes and adjacent to those States.

POPULATION WILL SOAR IN LAKE AREA

Right now, in the Great Lakes area, 58 million people live in the 8 States having immediate access to the Lakes.

An additional 13 million people live in the 9 States which are generally regarded as tributaries, in an economic sense, to the Lakes.

We 71 million Americans will be the ones most immediately affected by the waterway. But meanwhile America's population is zooming upward. Last year 4 million babies were born.

By the normal laws of population increase, our country as a whole is scheduled to jump from 163 million people today to around 285 million people 20 years from now—in 1975.

It is my belief that because of the seaway populations along the Lakes will increase even faster than the normal proportion of increase in other States provided—I repeat, provided—we take the necessary action to assure our progress.

NEW SEAWAY WILL BENEFIT US

Fortunately, such progress already is shaping up.

The lake area is going to benefit from seaway construction payrolls immediately, construction on harbors, construction on deepening of channels (such as are provided under the Wiley channel bill, S. 171).

Then, the lake area is going to attract many new industries, requiring direct access to the deepwater ports of the world.

It is going to attract increased tourist trade.

It is going to benefit from increased integration between America's economy and the economy of our Canadian good neighbor (which is also booming).

All this is scheduled to result, and yet I believe that it is only the beginning of the bright horizons before us.

OVERALL UNITED STATES OUTLOOK BRIGHT

If in the next decade the seaway were to come about all by itself, then the promise which the future holds would not be so completely bright.

But the fact of the matter is that the seaway is but a part of the overall expanding economic horizons affecting our country as a whole.

Right now, whole new American industries are developing.

I cite but two industries: The atomic energy industry, which will probably revolutionize electric power, medicine, and many other fields; and the industry known as automation; that is, the so-called automatic factories in which electronic machines perform operations which might otherwise be performed manually.

Now, it is a fact that all of these new industries will raise problems in turn.

They will require shifting of labor from one type of job and industry to other types, and there may be temporary labor surpluses.

But, so long as new industries are being created as fast as old industries feel the impact of sometimes adverse developments, then we can be sure there will be overall prosperity ahead for Wisconsin and America.

Now, I ask you, my friends in the Antigo area: How well are you and I planning to have this community benefit from the changing economic patterns of America—patterns involving, for example, atomic energy and automatic factories?

Can you contribute here in this area—directly or indirectly—to some of the subcontracting work involved in, say, these two enormous industries?

The fact of the matter is that each community must plan its place in the coming dynamic era.

You in this audience tonight are realists. You know that we cannot here in this area try to duplicate, even in part, the factories, the facilities, the resources, the transportation of some enormous metropolis. Even if that were possible, you wouldn't want it.

What you can and should do, however, is make Antigo's unique, specialized, tailored contribution to the coming era.

That means mobilizing the best minds in this community, the best civic organizers, and doers.

It means tapping your finest engineering, business, labor, and professional abilities so as to make Antigo's fullest contribution.

GETTING IN ON GROUND FLOOR

Most of the technical developments which I am describing are not going to happen overnight. They are going to take years and

years. But the time to get in on the ground floor is now.

Recently, I have been in correspondence with an outstanding organization known as Atomic Industrial Forum, which consists of leading Wisconsin and other businesses which are planning for their atomic future.

This is the type of self-help, forward-looking organization which will help accelerate America's economic development. It is the type which is needed as we advance boldly and in a free-enterprise fashion to America's new economic frontiers.

So, too, I am hoping that in our State of Wisconsin we can, on a statewide basis, plan to attract the most modern type of industries to our State. We want industries with tremendous growth potential, industries which will need the type of skilled workers with which we in Wisconsin are blessed, industries which will need the stable, wholesome communities which we in Wisconsin have to offer.

That is why I have been in correspondence with the Governor's office, with the University of Wisconsin, and with other leading Wisconsin enterprises—private and public.

SO-CALLED NORMAL INDUSTRIES REQUIRE ATTENTION

But we don't need miracle fields, like atomic energy or automation, to assure our prosperity.

Even and indeed, especially, in so-called normal ordinary types of enterprise—manufacturing, wholesale, distribution, agriculture, we can and should plan to benefit from the St. Lawrence seaway.

WORKING OUT PROBLEMS WITH CANADA

But I want to repeat my word of caution regarding not becoming overoptimistic or going overboard, and assuming that prosperity will automatically be ours. And let me mention now that we still have to work out some seaway matters with our Canadian friends.

I want to say very frankly that there have been some differences with regard to duplicating seaway facilities between ourselves and our friends across the border. I have hope and confidence that these differences are properly going to be worked out satisfactorily. After all, there is no finer set of neighborly relations in the world than prevails between ourselves and our Canadian friends.

America tarried too long on approving the seaway. We were long overdue in coming in on the dual-nation, dual-purpose navigation and power project.

But now that we are going in, I hope that we and Canada will proceed on a basis of complete cooperation. I hope we will definitely avoid duplicating facilities and will put our respective dollars where they can be of best possible use for the good of both nations.

MIDWEST MUST PROTECT ITSELF

And just as I want America to speak up frankly in relation to her needs and those of Canada, so I want the Midwest to speak up frankly in relation to her needs.

Frankly, the Midwest has often been woefully negligent in protecting itself in the economic race.

Time after time, the Midwest has been treated like an orphan child when Uncle Sam has built new projects and poured in new Federal funds.

Time after time, the Midwest delegations in Congress have failed to work together as a team, while, by way of contrast, New England delegations or gulf coast or Northwest delegations have far exceeded us.

I don't mean to say that I want the Midwest to come "hat-in-hand" to Uncle Sam for handouts. We of the Midwest don't believe in handouts. We don't believe in looking to Washington for things which we should do and will do for ourselves.

But neither should we fail our obligations to make sure that we receive our fair share of Federal cooperation on projects in which there is a very definite national interest.

The Great Lakes connecting channels represent one such project. But there are many others which will directly benefit us.

Now, just how will the seaway affect Wisconsin?

It is my belief that Wisconsin particularly stands most immediately to gain from the seaway. Our State has probably planned more intensively for the seaway than most other States. We have been in the forefront of the battle for the seaway, and it is we who should be in the forefront of benefiting from it.

CHANNELS MUST BE DEEPENED

Our first priority must, of course, be to secure action on the legislation to which I have already referred. It is the legislation which not only I have introduced, but which numerous other Senators and Representatives have introduced—namely, to deepen the connecting channels to 27 feet. Otherwise we will not have a 27-foot deep waterway west of Lake Erie.

We can be quite sure that these channels are going to be deepened. That does not mean, however, that we should take them for granted. Actually, some of my colleagues from the South, for example, were more interested in getting Federal funds to supplement the hundreds of millions that they have poured into the gulf coast than they are interested in approving the relatively modest \$100 millions which will be necessary for the Great Lakes connecting channels.

Now, as channel work is getting under way, it is our estimate that seaway traffic will reach 52 million tons by 1965.

This tonnage will be of great aid to all of Wisconsin, to its industries, and its farmers who will be able to ship their products inexpensively across the waters.

But, I reiterate, my friends, that each community, including Antigo, should not assume that benefits will flow automatically to us, should not assume that prosperity is going to drop into our laps.

In the first place, there is stiff competition for new business all along the lake area.

QUESTIONS ON ANTIGO'S FACILITIES

In the second place, even if there were not this competition, each community cannot prosper unless it analyzes and improves its own particular facilities and resources—soundly and carefully.

And so, we should ask ourselves, as I'm sure you of this Chamber have been asking yourselves:

What is our available industry and our available labor supply?

What are the trends affecting current Antigo business?

What can we do to hold what we have and improve what we have?

What land do we have available for expanded industries?

What housing is available for increased labor supply?

How modern is the machinery in our plants?

What is our access—today and tomorrow—to other means of transportation: railroad, road, and air?

These are but a few of the important questions which must be considered before Antigo or any other community can fully benefit from the waterway.

There is every reason for faith and confidence in the future. Wisconsin stands at the threshold of a new era. I am sure that with the leadership displayed at this meeting and meetings throughout our State, we can go forward to fully benefit from this great frontier.

CONCLUSION

I have tried during this address to comment on some of the highlights of the coming era. I have tried to paint a picture which I believe is realistic and sound, and not one based upon superoptimism or rose-colored glasses, especially in relation to so-called new miracle industries.

I believe, in summary, that the seaway is what you and I choose to make it. It is not going to drop prosperity into our laps. But it is going to make prosperity available to us if we have the brains and the initiative to realize it, as I believe we will.

Very shortly, there will be published in Washington a new St. Lawrence Seaway Manual which has been prepared at my direction. It will help answer some of the many questions which I know are in your minds about the seaway. I hope that you will write to my office for a copy of it. And I hope that on my return to Washington you will always feel free to contact me. Give me the benefit of your judgment, your constructive criticism, your advice. I will be happy to hear from you always.

Thanks again for your attention and good luck to you all.

Cutting Taxes in an Effort To Catch Votes

EXTENSION OF REMARKS

OF

HON. WALLACE F. BENNETT

OF UTAH

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2, 1955

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Cutting Taxes in an Effort To Catch Votes," which was published in the Salt Lake Tribune of February 27, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CUTTING TAXES IN AN EFFORT TO CATCH VOTES

Before House Democrats put through their plan to cut income taxes \$20 per person, President Eisenhower described the move as the height of "fiscal irresponsibility."

That's exactly what it is, for the reduction was voted after practically no study and in the face of an estimated Federal deficit of \$2,400,000,000 for the fiscal year beginning July 1. Equally as bad, it is an example of politics pure and simple, a fact only emphasized by Democratic speeches in favor of the scheme.

Speaker SAM RAYBURN argued that the plan was "simple justice for the little fellow," an obvious reference to the Republican-sponsored tax-cut bill enacted last year which the Democrats have long and loudly contended was class legislation in that the big taxpayer benefited while the little one did not. This is a hollow claim. The Republican bill cut taxes for everyone. At the time the Democrats wanted to concentrate the cut in the lower brackets, a result they are again attempting to achieve. We wonder how many of the Democrats who voted for their tax plan last week voted against the GOP's general tax reduction a year ago.

Mr. Eisenhower skillfully unmasked the Democrats' motives at his press conference last week. Any tax cut, he said, is popular.

However, when the Government is struggling to balance expenditures with income, an ill-considered tax reduction can have the worst possible results. It is true that the 1954 cut was enacted in the face of a deficit, but it must be remembered that the cut was incidental to a general, and long overdue, revision of the Federal tax system. It was carefully drafted and was based upon extensive studies—something that certainly cannot be said of the latest Democratic maneuver.

Moreover, the Democrats did not put their cut into a separate bill so it could stand or fall on its own merits, but instead tied it to legislation requested by the administration. Corporation and excise taxes will be automatically reduced this year unless extended by Congress, and the Government cannot stand the loss of revenue. By including a tax cut and a tax extension in the same package, the Democrats hope to put the President on the spot since he will have to accept or reject the whole plan. This is an old legislative trick, but it never has been one to condone.

The Democratic plan is designed to catch votes. If it becomes law, every taxpayer will have his burden lightened somewhat, while about 5 million persons with low incomes or large families will pay no Federal income tax at all. And, of course, all taxpayers are supposed to be grateful to the party which made this possible. This may be slick politics, but it could easily boomerang once the voters realize the irresponsibility of the action.

Though we are shocked by the Democrats' victory in the House we are somewhat encouraged by the narrowness of the margin, 210 votes to 205. We hope that in the Senate, where the party division is paper thin, the natural conservatism of some Democratic leaders will defeat any similar move to play politics with Federal finances.

A Woman's Advice to Congress

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2, 1955

Mr. NEUBERGER. Mr. President, on behalf of the present occupant of the Chair, the distinguished Senator from Michigan [Mr. McNAMARA], I ask unanimous consent to have printed in the Appendix of the RECORD two articles by Miss Frances Givens, of the Detroit Times, which appeared in that newspaper on February 3 and February 7, 1955. They are entitled "What I'd Tell Congress." The articles arose from the incident when a woman attempted to speak in the House of Representatives some weeks ago. They express points of view with which I am in general agreement.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Detroit Times of February 3 1955]

It took Detroit 248 years to find room for a woman in its city council but the experiment was such a success that the second time she ran Miss Mary V. Beck found herself ahead of seven councilmen and only 1,160 votes behind the council president.

She repeated this performance in a third term which she is now serving.

She has been a practicing attorney 11 years and before that enjoyed a varied

career in social work which always concerned the welfare of children and the family.

ANXIOUS FEELING

If she could address the United States Congress she would say:

"My first feeling is one of sincere appreciation for this, my only and probably never-recurring opportunity, to address this distinguished body of lawmakers. This soon gives way, however, to a feeling of anxiety, the reason for which you may well guess.

"How can I best utilize these precious 5 minutes and yet convey to you my deep concern, shared by so many, over the state of our Nation?

"From my humble position in life, I have had opportunity to observe, in the pattern of living of the average American:

"1. The ever-increasing emphasis upon the material aspects of life."

TEMPO OF LIVING

"2. The enervating acceleration of the tempo of living in the quest for those material possessions and the attendant stress and strain upon our bodies, minds, and spirits.

"3. The ever-widening acceptance of deceptive standards by which achievement and success are measured.

"4. The growing neglect of the old, but tested and true principles, which alone can serve as the guiding posts to successful living.

"5. The continuing abandonment of the irreplaceable faith in the Supreme Being in whose Divine hands rests our destiny.

"It is evident from this, to those who will really look, that the moral and spiritual fabric of our civilization is wearing thin in many spots and has actually broken through in others, leaving large gaping holes, beyond repair. Is it not time therefore, to call into action, you, ladies and gentlemen, whom I would respectfully label the Master-Weavers?"

URGES LEADERSHIP

"Yet the strong and unbreakable fibers that you should use, if you will, in this monumental task of reweaving, must be of your own making. If you will but lead along those paths, that are clearly designated by the signposts of honesty, integrity, and unselfishness and constructed from the seemingly fragile but genuinely solid components of courage, persistence, and determination, the rest of us have no choice but to follow. Thus we will all be assured of reaching the destination of all mankind, which is human welfare and human progress.

"My words do not carry the implication that you have necessarily failed in living up to those expectations in past performance, but simply the suggestion that more than ever before you must become and remain keenly aware of that part of your responsibility."

[From the Detroit Times of February 7, 1955]

Dr. Mildred Peters, of Wayne University, who is dedicating her life to education, would beg Congress to help the Nation's children. She says:

"There is no asset as valuable to any nation as its physical resources.

"If one wishes to preserve these resources, to further them, it will be necessary for duly-elected legislatures to look at two needs that will make this possible. Otherwise, we may limit the development of a large part of the Nation."

SCHOOLS CROWDED

"One of our great needs is in the area of education.

"The increase in the number of school-children has literally pushed the schools out at the seams. The census figures have shown this will continue for a long time.

"Because of this, local municipalities have been unable to meet this need from local taxation. It would seem, then, that Federal aid in building of schools would be a temporary must.

"Without this, half-day programs, increased class loads, limited seating space, curtailment of programs, will be the state of affairs in many schools throughout the Nation."

NEED HOSPITAL AID

"I also should like to make an appeal for funds for the hospital program, particularly in the field of the chronically ill.

"The medical profession has worked to extend the life span, yet doctors and hospitals have tended to use their limited facilities to care for younger patients and emergencies.

"Congress should assist in hospital construction and research.

"Another large segment of the American public deserves the benefits of group hospitalization. They are the retired men and women whose hospital bills are largest."

ASSOCIATE PROFESSOR

Dr. Mildred Peters is associate professor of guidance and counseling at Wayne University. She earned her AB and master's degree at Western Reserve University and her Ph. D. at Ohio State.

She spent her sabbatical as a research fellow in psychiatry at Western Reserve.

The Proposed \$20 Tax Cut

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Wednesday, March 2, 1955

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Twenty-dollar Handout," which appeared in the Journal-Every Evening, of Wilmington, Del., on Saturday, February 26, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TWENTY-DOLLAR HANDOUT

There are a good many ways of trying to buy the support of the voters at the expense of the Federal Treasury, but the \$20 per-person tax cut put over by the Democratic majority in the House yesterday is as crude an effort as we have ever seen. It takes millions of people off the tax rolls and gives a \$20 handout to millions more at a time when the Government is running a huge deficit. Even the 205 Democrats who voted for the cut cannot honestly contend that the Government can afford to reduce taxes at this time. At any rate, they tacked their tax reduction on to a bill to keep corporate taxes and excise taxes, which take dollars out of every man's pocket, at the same level for another year. And to make sure that it will have the maximum effort in winning votes for the Democratic ticket, they have made the cut effective next January.

This sort of tax legislation is an insult to the intelligence of the American voter. It implies that his vote is to be had for a \$20 cash handout, regardless of the fact that the inflationary forces this sets in motion may cost him even more. If the Democrats in the House had set out deliberately to prove that they are as utterly irresponsible in

financial affairs as the Republicans have charged, they could hardly have chosen a better way. The one comfort today is the probability that the Senate will have the good sense to bury the whole scheme.

Mary Lee Jurgens Runner-Up at Speech Contest

EXTENSION OF REMARKS

OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Clearbrook (Minn.) Leader of February 24, 1955:

MARY LEE JURGENS RUNNER-UP AT SPEECH CONTEST

Mary Lee Jurgens, who was given first place in the Clearwater County 4-H radio speaking contest a week ago, was awarded the runner-up prize at Crookston on Monday afternoon. The region contest was held as a part of the winter shows at Northwest School of Agriculture.

Two first-place selections were made at the contest in Crookston, with one of them going to eastern Polk County, to Pearl Pederson, of McIntosh.

Following is Mary Lee's oration on the topic: "What Are My Opportunities and Responsibilities Under Freedom?"

"We Americans live under a system of government that furnishes more personal freedom than any other system of government in the world.

"I, who am inclined to take my freedom in America for granted, must ask myself the questions. What are my opportunities under freedom? My answer, 'Why to be free, I suppose.' And my responsibilities? 'Well, to vote, I guess.'

"If these are the only answers I can give to these important questions, I do not deserve the privilege of being a citizen of the United States. The savage natives of Africa could be called free. The people of Soviet Russia can vote. If my country means no more to me than this I do not deserve my freedom.

"The early leaders of my country fought for the privilege of undertaking the responsibilities of freedom. They died to secure the opportunities that freedom offers. And I, to be frank, can't tell you offhand what these responsibilities and opportunities are.

"It's something to think about, not tomorrow when we will have more time, but now, for tomorrow we may have lost our freedom. Liberty is given to those who value and guard it.

"First, we must learn our opportunities so that we will value our freedom. Then we must learn our responsibilities so that we will be able to guard our freedom.

"Our opportunities under freedom are many. All citizens are guaranteed the right to life, liberty, and the pursuit of happiness.

The section of the Constitution called the Bill of Rights assures some of the most important rights and opportunities of American citizens. These are:

"The freedom of religion, to worship as we please, in our own way. The freedom of speech, to say what we think, to freely criticize, praise, argue, express our ideas. The freedom of the press, to print and publish what we think. The freedom to assemble.

The freedom to be secure in our homes that no one may enter or search without our permission. The freedom to petition the government for help.

"These freedoms are important but our rights and opportunities are so many that they could not be listed. The Bill of Rights also says that the government has no rights except those given to it in the Constitution. All other rights belong to the people.

"Opportunities unusual in other parts of the world and at other times, are here so common they are usually taken for granted. We have the opportunity to choose our own job or field of work, to move from place to place, to go into business for ourselves. We have the opportunity to be an individual, we are not regimented into a carbon copy of every other person.

"We, the people of the United States of America are the Government of the United States of America. Each of us has the opportunity to live his own life, to develop his own talents and give to our country that which he is perfectly suited to give, whether it be criticism, leadership, or good hard work.

"Another opportunity is the opportunity of choice. Choice in hundreds of everyday things, like, what we eat, what we wear, what we read. These things mean nothing to us now but should they be taken away, we would find that they mean everything.

"These are little things. 'Unimportant,' you may say, but just try to imagine life without them.

"These opportunities are ours with but one limitation, that we do not interfere with the life, liberty, or pursuit of happiness of any other individual.

"Along with each of these opportunities goes a responsibility. Fulfillment of our responsibilities to our Government is the only way we can hope to keep our freedom.

"Our first great responsibility is in conduct. Our conduct must be such that no one would ever have any reason to take our freedom from us.

"If we would keep our freedom of religion, we must avoid religious prejudice and discrimination. If we are to keep our freedom of speech, we must use that freedom for good, not to spread lies or false rumors.

"If we would keep our freedom of the press we must avoid printing that which is untrue or harmful. If we are to keep our freedom of assembly we must see that assemblies are not riotous and do not do damage.

"Our second great responsibility is interest. By taking an interest in government we will learn more about our Government, how it functions, its history, its founders, its place in the world today.

"Through a knowledge of America's past we gain faith in America's future. Through a knowledge of the mechanics of American freedom we can better protect American future.

"The third great responsibility is respect. Respect to our Government brings obedience to its laws, and a willingness to undertake our responsibilities. A willingness when we are of age to serve jury duty, to do military service, to pay taxes. You know even that headache is our responsibility. Without money our Government could not function as it does today.

"Finally our greatest responsibility to vote. Our vote is our voice in the Government and our voice in the future of America. We must use it and use it wisely.

"These are some of my opportunities and responsibilities under freedom.

"May the realization of them make me a better citizen. May it make me more appreciative of my opportunities, more determined to undertake my responsibilities, and if need be, in the uncertain future, to struggle and to sacrifice to keep and protect my freedom."

Democratic Republican

EXTENSION OF REMARKS

OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I wish to insert an editorial which appeared in the newspaper, Star and Herald, of Panama City, Republic of Panama, on February 25, 1955.

This editorial entitled "Democratic Republican," shows the way in which our great Vice President's visit was received in Panama, which is typical of the success he is meeting in his tour of the Central American countries:

DEMOCRATIC REPUBLICAN

Like his boss, President Dwight D. Eisenhower, Vice President RICHARD M. NIXON is as democratic as they come. Not only democratic but enthusiastically friendly. He likes people, all the people, all of his neighbors. He's just plain "campechano," as the Panamanians say, and for that they love him. As of today Vice President Nixon can have anything he wants in Panama. He's a regular guy.

And that, friends, is news.

From time immemorial United States Congressmen have been coming here, on Government business, on surveys, or just on joyrides, because the ride was for free. But Nixon is something else again. He's a real person, besides being Vice President of the United States.

He's like Ike, whom we all like down here in latitude nearly nine. Perhaps because Ike served here once. Or perhaps because we loved him when he came here fresh from the Allied victories overseas. Or because he and Mamie were so sweet to President José Antonio Remon C., when the late President of Panama and Doña Cecil were guests of the Eisenhowers in the White House. We in Panama like Ike and we also like his V. P. and are grateful to President Eisenhower for having sent Vice President Nixon as far as Panama so we can tell him so.

What a guy is Nixon. No formality; a cheery smile and handclasp for all comers. He does all the correct things, and with evident sincerity. He lays a wreath on the tomb of Panama's assassinated President Remon. He visits Panama's young President Ricardo (Dicky) Arias E. He tours Panama and the Canal Zone. He is always genial, friendly, smiling and he simply bubbles with sincerity. This is what the Panamanians call the don de gente (the good mixer, the faculty of being friendly, winning people's confidence).

In other words, Vice President Nixon is a "regular guy" in Panama. He has won all hearts. And so, apparently, has his golden-haired "señora", Mrs. Patricia (familiarily known as "Pat") Nixon.

If anything were needed to cement good relations between Panama and the United States—following the recent revision of the Panama-United States treaty—it was the friendly visit by the Nixons and their entourage. On the surface it is merely a friendly gesture to Panama among the other friendly gestures on the part of Uncle Sam to the nations of Central America.

But in Panama it is more than that. Panama and the United States are virtual partners in the Panama Canal. Panama gave her land (and receives rental thereon, it is true) but she gave it. And she is not only proud of giving it but benefits from

the world traffic it brings which, in some proportion, is reflected in her economy. She has tourists. She gains in international trade. Panama is doing all right. But she never forgets Uncle Sam's assistance. And Vice President Nixon represents that Uncle here today. He is not reminding anybody of the aid the United States has given Panama. He is here on a friendly visit.

Nor is Uncle Sam reminding any of the Latin American nations of any aid he may have given. He wants all these nations to be affluent, self-supporting, healthy—economically and ideologically. He wants them to be free, to stay free, to buck communism wherever it may appear in their midst.

Vice President Nixon is not saying these things as he extends the hand of friendship to all comers here in Panama. Nevertheless he must rejoice in the politically healthy atmosphere here. He must feel that, under this—as in former administrations—Panama is a loyal ally as she has been through two world wars. The Uncle can count on this youngest Republic of the Americas to stand by with everything she has and help guard this most necessary unit of all-American defense and commerce, the Panama Canal.

Drought-Relief Program

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. BERRY. Mr. Speaker, from time to time there has been inserted in the CONGRESSIONAL RECORD criticisms of the handling of the drought-relief program by the Department of Agriculture. Most of these criticisms have been made by those who do not have a clear understanding of the problem or the steps taken to alleviate the hardships caused by drought throughout the country. Congress has passed several acts to help meet the distressing situation caused by drought and it has been the earnest desire of those charged with the administration of the programs to so administer them within the law as to give the greatest relief possible.

I am placing at the close of my remarks a table showing the number of cases and the funds expended through the Department of Agriculture for the fiscal year 1955, and in the case of loans, feed, and hay programs and wind-erosion control, July 1, 1954, through February 4, 1955.

The charge has been made that the emergency credit made available to farmers in drought-stricken areas has been entirely inadequate. However, since emergency loans were first authorized in 1949 pursuant to Public Law 38, 81st Congress, a total of 157,940 loans amounting to \$212,274,468 have been made to enable farmers in designated areas to continue their normal operations. Since the inception of the special livestock-loan programs, which was authorized in 1953, a total of 5,649 loans amounting to \$49,702,328 have been made to livestock operators. Most of these loans, as well as a majority of the emergency loans, have been made as a result

of the drought conditions which have existed throughout much of the country. The following table reflects the activity under these programs by years for the country as a whole:

	Emergency loans		Special livestock loans	
	Number	Amount	Number	Amount
United States:				
1949	362	\$974,948		
1950	25,360	20,833,887		
1951	13,274	19,198,873		
1952	21,226	31,488,774		
1953	35,442	43,225,068		
1954	42,449	57,984,342	3,985	\$37,282,206
1955 through Feb. 4	19,827	29,568,576	1,664	12,430,122
Total	157,940	212,274,468	5,649	49,702,328

These loans have been made to farmers and stockmen who have been unable to obtain elsewhere the credit required for them to continue their normal operations and the volume of loans made is an indication that the emergency credit programs of the Department have been used fully in meeting the needs of farmers who have suffered from the drought and similar conditions.

Uniform regulations have been issued with respect to all of the emergency lending programs of the Department and these regulations apply in all of the States. The Farmers Home Administration emergency lending authorities are used in meeting the needs of small farmers as well as the needs of large operators who qualify for assistance. The refinancing of existing debts under our emergency lending authorities is prohibited. To do otherwise would not be consistent with the acts under which the various loans were authorized. Likewise Farmers Home Administration emergency lending authorities are not used to compensate applicants for the actual losses which they have suffered as a result of the drought or similar conditions. Emergency and special livestock loans were authorized for the purpose of enabling qualified applicants to continue their normal operations. Consequently, the amount advanced to each applicant is limited to what is necessary for that purpose. The amount actually advanced may or may not be in excess of the actual losses suffered by the applicant, depending upon the particular circumstances involved.

The act under which special livestock loans were authorized states specifically that such loans will be made only to those applicants "who have a good record of operations but are unable temporarily to get the credit they need from recognized lenders and have a reasonable chance of working out of their difficulties with supplementary financing." A similar restriction applies to all of the other types of emergency loans and it would not be consistent to approve a loan for any applicant in a position to obtain his credit elsewhere or to any applicant who did not have a reasonable prospect for success with the assistance of the loan. It is not intended for these loans to compete with credit extended by banks and other private lenders but

rather to supplement the credit available from those sources. When loans are made other creditors are urged to cooperate in keeping the farmer or stockman in business so that he will have an opportunity to recover from his losses and in a relatively short period return to his usual source of credit. Therefore, there is no justification or authority for making loans to applicants who are able to obtain their credit elsewhere or to applicants who do not have a reasonable prospect for success.

When loans include funds for the production of cash crops, the amounts advanced for that purpose generally are scheduled for repayment out of the income to be derived from the crops produced. Loans are scheduled for repayment in this manner as it is the generally accepted principle that creditors advancing funds for production purposes are entitled to the first claim upon the income produced. In situations in which an applicant's prospective income will be abnormally low because of the drought or other conditions or when his expenses will be abnormally high for similar reasons, provision is made for the scheduling of amounts advanced for annual recurring expenses over a period longer than 12 months.

In general, there have been two chief criticisms of the agricultural conservation program.

First. Fair prices of conservation materials were discontinued.

Second. Green manure, small grains, and so forth, were limited to land shifted from production of crops because of acreage allotments.

The determination and posting of the maximum fair price at which ACP would purchase materials—in this case seed—for conservation work was required under law until enactment of Public Law 690, 83d Congress. It then became permissive and could be used whenever and wherever it was apparent that a maximum was needed to prevent unjustifiable increases in prices of conservation materials or services. Instructions were sent to States by the Acting Secretary, September 3, 1954, canceling existing fair prices and giving instructions for their re-establishment where needed. Conditions for establishing were:

First. Supply through local sources inadequate to meet anticipated demand.

Second. Inadequate supply will result in commercial prices that are excessive in relation to such demand.

In drought areas there was a special practice (F-3). This practice permitted use of cost-sharing for cover crops without regard to the shifting of acreage from other crops. The rate of cost-sharing for this practice was determined by the State and county committees as that rate necessary to obtain adequate performance under prevailing conditions without regard to the 50 percent of cost provision.

In order to further alleviate the drought situation where 1954 funds were not adequate, authority was given to open the 1955 program in the late summer and fall of 1954 with the use of funds allocated for the 1955 program.

On January 27 and 28 a conference was held here in Washington, attended

by one representative from each of the drought States. In most cases, prior to January 27, representatives of the Federal agencies had conferred at the State level in order to enable their conferee to reflect the thinking of all agencies.

Several times during the conference here the statement was made to the effect that the emergency drought measures carried out in 1954 under the agricultural conservation program were most helpful and no doubt more productive of lasting good than any of the other emergency measures.

The statement has been made that the present emergency feed program is inadequate in that farmers, particularly the small farmers, cannot obtain sufficient relief.

The present emergency feed program was designed to utilize the regular channels of trade to the maximum extent practicable. Aside from the general policy that private channels of trade should be used insofar as practicable, there were other compelling reasons for utilizing the type of program. It was clearly the intent of Congress that feed grains should be placed in the farmers' hands as rapidly as possible. This type of program was designed to take advantage of the feed grains in dealers hands and elsewhere in the pipeline so that farmers could obtain feed without any delay.

It is probable that at least a month's time was saved on the average as compared to delivering feed direct to farmers from CCC stocks. It was also realized that to furnish feed grains to farmers in designated areas gratis would tend to greatly disturb the national price structures by offering incentives to obtain feed in large enough quantities to permit resale at a profit. It was felt that the subsidy rate when coupled with the provisions for credit and the provisions of the hay program would make it possible for farmers, both large and small, to retain their basic herds.

It has been suggested that the Department should furnish CCC stocks of feed grains or seed direct to farmers for the purpose of planting pastures. This type of program was also considered but the same delays could be expected in placing the feed grains and seed stocks in farmers hands as outlined above. Furthermore, to furnish these direct to farmers would be putting the Government in direct competition with the long-established channels of trade.

Large supplies of hairy vetch have been held by CCC and a stock of 28 million pounds remains in inventory. These seeds have been and are, at the present time, offered for sale at \$12.65 per hundred pounds. CCC sold several million pounds of hairy vetch in fall of 1954 at the above price, which is the market price in wholesale carlots.

The crimson clover seed held by CCC was mostly acquired from the 1953 crop in February and March of 1954. This seed was sold by CCC at prices that returned to CCC its total cost in the seed and this action kept the price of the seed to the consuming farmer much lower than would have been the case had CCC not owned the seed.

The alfalfa seed owned by CCC amounted to 37 million in January 1954. This seed had been offered at \$37.50 and \$43, which is more than CCC costs for nearly a year with few sales. It was reduced \$35 and \$40, which is the support price at which it was acquired. These prices are market prices for carlots in producing areas as is evidenced by the fact that CCC has at present 7,700,000 pounds and sales are not active.

Mr. Speaker, I believe you will agree with me that Congress has wisely provided ways to alleviate a serious drought situation that has extended all the way from the Rocky Mountains to the Atlantic Ocean. It is my belief and I think will be concurred in by most Members of Congress, that the hardships of drought have been very grave and that they continue to be a threat to a great many com-

munities throughout the Nation. It may be that additional legislation will be required. However up to the present I think you and Members of Congress from these States will agree that the drought relief program as authorized by Congress and administered by the Department of Agriculture has been of untold help in relieving a most distressing situation.

United States Department of Agriculture drought program (fiscal year 1955)¹—Loans, feed, and hay programs, and wind erosion control (July 1, 1954, through Feb. 4, 1955)

States designated under Public Law 875	Loans						Feed and hay assistance						Allocations to States for emergency wind erosion control measures under the 1954 agricultural conservation program ⁴

¹ This report covers the States in which counties are currently designated as drought disaster areas for emergency feed and hay assistance. A separate report is available, as of June 30, 1954, covering activities under the drought program in the fiscal year 1954.

² This reflects activity under the 1954 feed program. In addition, there were obligations of \$79,500 for Colorado and \$491,500 for New Mexico incurred in the fiscal year 1955 under the 1953 feed program which was terminated in these 2 States as of July 15, 1954. The cost of the subsidies under the 1954 program is being borne by Com-

modity Credit Corporation pursuant to sec. 301 of Agricultural Trade Development and Assistance Act of 1954 (Public Law 480, 83d Cong.); the administrative costs are being borne under Public Law 175 funds.

³ Charged to the balance of \$15,257,747 of the \$50 million appropriated to carry out sec. 2 (d) of Public Law 38, as amended by Public Law 115, 83d Cong.

⁴ Represents allocations made from the \$15 million provided by the Third Supplemental Appropriation Act, 1954. An allocation of \$180,000 from these funds was also made to Nebraska.

The Alabama Coosa River Basin

EXTENSION OF REMARKS OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. ROBERTS. Mr. Speaker, during the 83d Congress legislation was authorized to permit the building of five hydroelectric dams on the Coosa-Alabama Rivers system, and it has long been evident that a 9-foot channel should be constructed from Rome, Ga., to Mobile, Ala. This improvement is in great demand and should be done at the time the dams are being constructed, by providing for locks on the dams and by dredging these rivers while the hydroelectric dams are being constructed. This would result in great savings to the Federal Government. In order for this work to proceed in an orderly, economical, and efficient way, a new survey of the river should be made by the Corps of Engineers, and I am especially grateful that a public meeting has been called under

the sponsorship of Mayor W. A. Gayle, of the city of Montgomery, the chamber of commerce of the capital city, and the Coosa River Improvement Association.

On Saturday, March 5, 1955, public officials, businessmen, industrial leaders, and others of the cities and towns which will be affected by this improvement will meet in the city of Montgomery for the purpose of organizing a movement to begin work on this important development. An outstanding engineer, Lieutenant General Pick, United States Army (retired), will address the group at its luncheon meeting.

I have prepared a statement on this important development which gives the background and history of the improvements that have been made, and of the efforts that have been put forth in the past to bring about the realization of this highly important development. The statement is as follows:

THE ALABAMA-COOSA RIVER BASIN

THE RIVER

The Alabama-Coosa River is one of the principal rivers of the Southeast extending from the Blue Ridge Mountains of northwest Georgia and southeast Tennessee southwestly across the Piedmont Plateau to the low-

lands of the gulf coastal plain in Alabama and draining an area of 22,800 square miles.

The river basin has all the natural and climatic resources essential for economic progress. It has a moderate climate with an abundant but well distributed rainfall. It has fertile soil. It has many of the basic raw materials within its soil, so essential for future industrial progress. The human resource—an adequate supply of labor—is also available for industrial progress.

The potential hydroelectric development of the river basin is great. At the present time, there is an installed capacity of 564,000 kilowatts of hydropower in the 6 plants owned by the Alabama Power Co. together with the Allatoona plant built by the Corps of Engineers. This past session of Congress (83d) Public Law 436 was enacted which will permit the Alabama Power Co. to construct an additional 5 dams on the Coosa River and which is expected will add 360,000 kilowatts to the Alabama Power Co.'s capacity; these dams are to be constructed within 10 years from the date of the commencement of construction of the first dam.

At the present time there are frequent floods in the river basin and though they are not severe, they cannot help but retard the economic growth of the basin. About 526,000 of the acres are subject to overflow which could be avoided by the construction of certain flood projects in connection with the development of the dredging of the river

and the construction of the proposed dams and hydroelectric plants.

HISTORY

The development of the Coosa River has been the subject of study by the Corps of Engineers for the past 80 years. The Corps of Engineers of the Army first began investigating and reporting on the practicability of improving the Coosa River for navigation in 1870. The Corps of Engineers made a study of the Alabama River in 1875. The first improvement was a series of locks and dams in the Coosa River to enable shallow-draft navigation to reach Rome, Ga. The first really significant step toward overall basin development in the Alabama-Coosa River system was the 308 report made in 1934. This report recommended a system of locks and dams on the Alabama River and on the Coosa River above the existing power dams, and locks in the power dams. It also recommended a 9-foot deep channel for navigation upstream to Rome, Ga., 650 miles above Mobile, and additional power.

The feasibility of several dams for power on the tributaries was also investigated. A system of levees was built at Rome to control floods, and another flood-control project has been built at Prattville, Ala. Great progress was made when the Allatoona Dam and Reservoir was built on the Etowah River, 48 miles above Rome.

In 1941 the Corps of Engineers submitted a report recommending the adoption of a comprehensive program of development of the basin's water resources in accordance with plans being prepared by the Chief of Engineers with such modifications thereon from time to time as seemed advisable. This was adopted by Congress and approved by the President in 1945 and is the present authorization for the Corps of Engineers' program.

The 83d Congress enacted Public Law 436 to permit the Alabama Power Co. to construct five dams along the river.

OUTLINE OF LEGISLATIVE ACTION

The Corps of Engineers 308 report was made in 1934. It presented a long-range plan for development of the river. (H. Doc. No. 66, 74th Cong.)

House Document No. 414, 77th Congress recommended a comprehensive project including a deeper channel for navigation.

Hearings held on Alabama-Coosa River in the 77th Congress before the House Committee on Rivers and Harbors. (November 5 and 6, 1941.)

Hearings held in 78th Congress:

1. Before House Committee on Rivers and Harbors, October 19-20, 1943.

2. Before Senate Committee on Commerce, April and May 1944. (Held on H. R. 3961.)

The Rivers and Harbors Act of 1945: It authorized appropriations for the implementation of the plans as set forth in House Document No. 414, 77th Congress.

Public Law 436, 83d Congress authorized the Alabama Power Co. to build a series of dams on the river.

THE FUTURE OF ALABAMA LIES IN THE DEVELOPMENT OF THE ALABAMA-COOSA RIVER

One of the firmest cornerstones of Alabama's future lies in the development of the great resources of the Alabama-Coosa River Basin. This promising future can be attained only by the eventual development of the Alabama and Coosa Rivers and the long hoped for and dreamed of 9-foot deep-water channel from Rome, Ga., to Mobile.

The fulfillment of the dreams Alabamians have had for this magnificent river basin for these many years would provide a significant contribution to the defense bulwark of our Nation—allowing for the fast, safe, yet inexpensive movement of vital defense elements such as petroleum, chemicals, pulp, ore, and building materials; it would provide economic advantages to the industries already in the area through lowering their

operating costs; and it would attract new commerce and industries to develop the abundant natural resources within the river basin.

The present shallow depths of the Alabama River generally limit commerce to small movements of gravel, sand, logs, and pulpwood. The Alabama and Coosa Rivers must be channeled because of the advantages which will accrue to Alabama and its people, the Nation, and its citizens.

RESOURCES OF THE RIVER BASIN

Industry

Textiles: Cotton processing is important; silk and rayon knitting are prominent. There are approximately 130 textile mills employing about 43,000 workers.

Steel and iron: There are steel and iron mills in the river basin towns of Gadsden, Anniston, and Rome which use coal and iron ore mined in the surrounding area. This industry employs about 10,000 men in 33 plants.

The vast Cahaba coalfield of St. Clair, Bibb, and Tuscaloosa Counties which produce great amounts of coal would be made available if the coal had the advantage of reduced transportation rates afforded by river transportation. The same situation would be true of the great Warrior coalfield lying in the counties of Walker, Blount, Cullman, Winston, Marion, Fayette, and Tuscaloosa.

The steel mills would use Venezuelan iron ore and ore from other foreign countries coming into Alabama through the port of Mobile, thereby giving the counties served by the Alabama-Coosa, an equal and fair chance with the counties served by the Tombigbee and Warrior system which is now being made navigable.

Paper: Paper manufacture consumes vast quantities of water, involves a difficult waste problem, and requires low-cost, dependable, bulk transportation to and from the mill. The waters of the Coosa River plus the nearby supply of pulp has aided in the success of the Coosa River Newsprint Co.

Chemical: In the river basin there are approximately 64 establishments engaged in the manufacture of chemical products, including fertilizer plants, the Childersburg powder works, and cottonseed-oil mills.

General: There are about 70 concerns of the glass, clay, and stone group of industry which are engaged in the manufacture of cut stone, marble, building brick, and tile.

Agriculture

The abundant rainfall and fertile soil make farming desirable in this area. About 40 percent of the population is engaged in agricultural pursuits. Cotton, corn, peanuts, potatoes, velvet beans, and cattle raising are the most important.

Mineral resources

The Alabama-Coosa River Basin acreage contains many valuable minerals; bauxite, Selma chalk (for cement), clays, coal, arsenic ores, fluxing materials, fuller's earth, gold, lead graphite, granite, marble, slate, mica, ochre, lime, manganese ore, iron ore (both brown and gray), gravel, sand, silica sand, and asbestos.

At the present time because of the high transportation costs, only clay, coal, marble, lime, iron, gravel, and sand are being produced. Decreased water transportation costs would undoubtedly make it more profitable to mine bauxite, cement, coal, iron ore, fluxing materials, fuller's earth, graphite, and manganese.

Human resources

There is an adequate labor supply in the river basin—much of it due to the influx of war workers, many of whom stayed on. The number of workers has also increased due to the movement of new industries into the area.

It is interesting to note that populations demonstrate a tendency to follow water. In

northern New York State where water transportation on the New York State barge canal system parallels the railroad, the population is $5\frac{1}{2}$ times greater than the population in southern New York which has only railway service. Almost three-fourths of the 100 largest American cities are either sea, Great Lakes, or river ports with rail connections. Take the case of Houston, Tex., 50 miles from deep water in the Gulf of Mexico. In 1910 Houston's population was 78,000. Today it is 600,000. The city is next to the largest port in the Nation, second only to New York, and this is due to the dredged ship channel from the gulf to Houston.

THE ADVANTAGES OF WATER TRANSPORTATION

In recent years, freight business on the Nation's waterways has been increasing between 10 to 15 percent a year; in 1953 the waterways, excluding Great Lakes, transported 6 percent of the total ton-mileage. Traffic on the inland waterways has nearly tripled since 1946. Over the past 20 years, ton-miles have increased on the inland waterways at the average rate of 3.25 billion a year. On the Mississippi, traffic rose from 36 million tons in 1942 to 80 million tons in 1953.

The greatest advantage water freight has over other methods of transportation is cost. The average cost of railroad equipment to move 15,000 tons of freight would be \$3,220,551. The average cost of equipment to move 15,000 tons of freight on the inland waterways would be \$930,000. In the 22-year period ending June 30, 1948, the transportation savings on the 15 largest and most active waterways, as computed by the Army engineers, totaled over 2.5 billion dollars.

As another example, take the shipment of a ton of wheat from Minneapolis to Knoxville. By rail it costs \$17.69 but by water costs only \$5.55.

This is why new industries moving south every day would prefer to settle along the banks of a river where it can take advantage of the low costs of water transportation rates. In the first 3 months of 1954, 85 waterside development projects—all costing over \$100,000 and some well into the millions—were announced. Within the last 2 years over \$3 billion in new plant investments has been made along the banks of the Ohio River and its tributaries.

In 1952 the midcontinent of the United States surpassed the industrial East as a producing area—and why? Because industries have been leaving the East and settling along the inland waterways. It should be remembered that the railroads serving the river-port cities have also benefited by thousands of additional car loadings from industry and by greatly increased movement of in- and out-bound consumer goods and passengers.

ALABAMA'S FUTURE LIES IN THE DEVELOPMENT OF THE ALABAMA-COOSA RIVER

Full development of the Alabama-Coosa River would bring the river-basin area adequate hydroelectric power for industrial purposes; employment for its people; cheap water-rate transportation; freedom from floods; and would provide wonderful recreational areas for its people to enjoy. The river and its basin possess all the natural resources of people, water, and minerals, and all it needs is the direction of man in order that this area can make a significant contribution to the national defense and general economic progress of the State of Alabama and the entire Nation. Every dollar spent will bring more than its own value in return. It is estimated that the river and harbor and flood-control program accomplished to date by the Corps of Engineers has returned to the Nation more than \$2 in value for every dollar expended.

I would like to urge that the State of Alabama and the Federal Government jointly pursue the full development of the Alabama-

Coosa River, including a 9-foot channel from Rome, Ga., to Mobile, Ala. Such an undertaking would be beneficial not only to the immediate people and industries within the river basin but to Georgia, Alabama, and to the Nation.

I would like to encourage the State of Alabama and the Federal Government to undertake this project at the same time that the Alabama Power Co. is building five dams along the river in order that the work might be coincided and accomplished with the least amount of cost. Perhaps the State could assume the responsibility for building the docks in the various ports under the already established State Waterways Commission. The cities could also participate in the construction of such docks and warehouses. The counties and State jointly could contribute to the building of access roads to service the ports. The Federal Government would dredge the river and build the channel, and work on the flood-control installations.

Alabama should no longer ignore the bounty of this magnificent river system. Alabama must act now.

Trees and Men

EXTENSION OF REMARKS

OF

HON. GEORGE A. SHUFORD

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. SHUFORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Asheville (N. C.) Citizen of February 1, 1955:

TREES AND MEN

In the mountains it is often possible to see the forests for the trees.

The lush woods grow all around us. They are celebrated in verse, song, and book. They are the resource of a three-quarters of billion-dollar Tar Heel industry. To name the trees that grow in North Carolina from the subtropics of the southeast coastal islands to the fir-clad high mountains would take more space and breath than we have at hand. The tree is the prop and pillar of a whole scheme of civilization.

It was only 50 years ago today, however, that these truths really impressed themselves on the country at large. For it was on February 1, 1905, that President Theodore Roosevelt established the United States Forest Service.

Western North Carolina's share in these auspicious beginnings was immense. And its stake has grown. The first USFS Chief Forester, Gifford Pinchot, received much of his training on Biltmore Estate. The estate was also the site of the first formal school of forestry (then a European monopoly) in America. The Pisgah Forest Experiment Station began in a couple of tents at Bent Creek and grew at length into the Southeastern Forest Experiment Station, with eight experimental forests and a corps of researchers including men with worldwide reputations. The present Chief Forester, Richard E. McArdle, is a graduate of this renowned project, and E. L. Demmon, of Asheville, is president of the Society of American Foresters. We can indeed see the woods. And the trees. And the men.

T. R. defined forestry simply as "the preservation of forests by wise use." Today the Forest Service has grown to an organization of 6,700 permanent employees administering 115 national forests which yield each year

5 billion board-feet of lumber grown under scientific management plus research of immeasurable value to American industry.

The beginnings were small, like the seedling, and now the harvest is prodigious. In half a century the slashing, criminal waste of forest exploitation has been turned back into channels of wise use. America is the richer for it. And it is eternally in debt to the Forest Service and its band of dedicated men, conspicuous for their humility and a distinctive character (if you know your forester) that seems somehow aged in the woods. A happy birthday all around.

Dixon-Yates Versus the Taxpayers

EXTENSION OF REMARKS

OF

HON. ROBERT E. JONES, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. JONES of Alabama. Mr. Speaker, under leave to extend my remarks I wish to include the following editorial from a recent issue of the Florence Herald, Florence, Ala.:

DIXON-YATES VERSUS THE TAXPAYERS

One argument against the proposed Dixon-Yates power contract that seems to stand out above all others is the gross injustice to the taxpayers.

When the TVA was established some 22 years ago it offered the people of the Tennessee Valley an economical supply of power on a partnership basis, that is, the Government to produce it at wholesale rates, the people to buy and distribute it. It has proven to be an amazingly efficient and business-like arrangement that has been mutually acceptable to the TVA and the people. The Government is being paid back for its investment which it will still own after it is entirely amortized.

Dixon-Yates is the reverse of this. It would make the TVA dependent upon surrounding private utilities and would tax the people to pay for some of these private utilities (as in the case of Dixon-Yates). The people would pay for the facilities which Dixon-Yates would own after 30 years, and they would pay twice as much for these facilities as compared with the same amount of power furnished by TVA.

Just what Mr. Eisenhower hopes to gain by the Dixon-Yates deal is hard to see. It appears that in view of Russia's progress with atomic weapons we have lost much valuable time in settling the issue of who is to furnish the power for this vitally important plant. To brush aside the largest and most successful power-producing agency in the world in favor of a newly formed and untried private concern cannot be a course charted by other than political reasons.

Just why the Government's Atomic Energy Commission should have been placed in a position where it would have to bargain for power is a mystery. Oak Ridge was adequately served by TVA and so were hundreds of other large industries in the valley during the critical war period. There have been no complaints about the TVA's ability to deliver power.

The fact that Uncle Sam's atomic-energy plant would require some 600,000 kilowatts that TVA could not spare was known in 1953. It was then that the Bureau of the Budget and the AEC made the acquaintance of Messrs. Dixon and Yates and began negotiating for some sort of a power deal that would leave TVA out.

That this secret courtship succeeded is evidenced by the fact that TVA's proposal

to build the Fulton steam plant was quickly nipped in the bud.

Despite the President's order that the Bureau of the Budget and the AEC make a full disclosure of the Dixon-Yates deal the people are still unaware of all the facts in the story back of the proposal.

It should be told.

Veterans' Legislation

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution adopted by Post No. 290, Veterans of Foreign Wars of the United States, Nanticoke, Pa., and a resolution adopted by the 12th District of the American Legion. These refer to an identical bill introduced by Congressman TEAGUE, of Texas, the distinguished chairman of the Veterans' Affairs Committee of the House, which I hope will receive the attention of the committee. Following this resolution, I include two other resolutions adopted by Post No. 290 concerning World War I veteran pensions and an auditorium for the Veterans' Administration hospital at Wilkes-Barre:

Whereas the American Legion is a leader in the field of unselfish service closely akin to rehabilitation; and

Whereas this field is child welfare; and

Whereas the American Legion has achieved universally recognized leadership in this field of service to children of deceased veterans; and

Whereas the American Legion sponsored legislation on child welfare has sought the cooperation in their passage through the friendship of members serving the Congress of the United States; and

Whereas Legionnaires of the 12th district, Luzerne County of Pennsylvania, maintain its courtesy toward and appreciation toward the action of their Congressman in the 11th Congressional District for his introduction of a bill granting educational benefits to children of deceased veterans as outlined in such bill: Therefore be it

Resolved, That district 12, the American Legion, Luzerne County, Department of Pennsylvania, comprising 40 American Legion posts and representing more than 13,000 veteran Legionnaires of the Great Wars, commends the splendid efforts of Hon. DANIEL J. FLOOD, 11th Congressional District, United States House of Representatives, for his introduction of a bill in the House of Representatives establishing an educational-assistance program for children of servicemen who died as a result of a disability incurred in line of duty during World War II or the Korean service period in combat or from an instrumentality of war.

NANTICOKE POST, No. 290,

VETERANS OF FOREIGN WARS

OF THE UNITED STATES,

Nanticoke, Pa., February 15, 1955.

Subject: H. R. 3589, sponsored by Representative FLOOD.

Whereas it has come to the attention of Nanticoke Post, 290, VFW, that H. R. 3589 is to be considered by the 84th Congress of the United States; and

Whereas the provisions of H. R. 3589 are extremely salutary for the benefits of orphan children of deceased veterans: Therefore be it

Resolved, That Nanticoke Post, 290, of the Veterans of Foreign Wars go on record to urge Congressman DANIEL J. FLOOD to press with all his vigor and exceptional ability for the passage of said resolution at the 84th Congress; be it further

Resolved, That a copy of this resolution be forwarded to the House of Representatives of the United States and to Congressman DANIEL J. FLOOD.

A. SAVUKINAS, Commander.
LEONARD E. GAWFOURLIS,
Adjutant.

NANTICOKE POST, No. 290,
VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Nanticoke, Pa.

Subject: World War I veteran pensions.

Whereas a man's service to his country in the Armed Forces can never be measured in dollars and cents; and

Whereas those veterans who served in World War I have now passed the age where they are desirable as new employees; and

Whereas we feel that no one who has served his country valiantly in the Armed Forces should be left to the relief agencies for care in their old age: Be it hereby

Resolved, That you, Congressman DANIEL J. FLOOD, join forces with those who desire to aid in providing a suitable pension for those of World War I to aid in the final days of their lives.

A. SAVUKINAS, Commander.
LEONARD E. GAWFOURLIS,
Adjutant.

NANTICOKE POST, No. 290,
VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Nanticoke, Pa., February 14, 1955.
Congressman DANIEL J. FLOOD,
House of Representatives,
Washington, D. C.

DEAR SIR: At a regular meeting of the post on January 23, 1955, it was expressed that the facilities of an auditorium were badly needed at the VA hospital to provide recreation for those who are being treated there. Adequate entertainment is always necessary for adequate mental and physical rehabilitation. So, therefore, we are taking this opportunity to inform you that we would like to have your support in trying to see that such facilities should be provided for our sick comrades while they are being rehabilitated. Any other help that we might give you in bringing this matter to the proper authorities will be dispatched to you immediately at your request.

Sincerely,

LEONARD E. PAWLOWSKI,
Adjutant.

The Congressional Salary Issue

SPEECH
OF

HON. JAMES G. POLK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. POLK. Mr. Speaker, I am opposed to the provisions in the bill H. R. 3828 which will increase the salaries of Members of Congress by \$10,000 per year, and I shall vote "no" on this bill when it is considered in the House of Representatives.

I shall also vote "no" on any proposal to increase congressional salaries when so many of our people are overburdened by heavy taxation and so many persons are struggling to support themselves and their families on reduced incomes due to the agricultural depression and industrial unemployment.

I realize that many cogent arguments can be made in support of some salary increases for Members of the legislative branch of the Government, but the amount of salary increase specified in the bill H. R. 3828 for Members of Congress seems to me to be very extravagant.

I am well aware that the cost of living has increased substantially since 1946 when the present congressional salary schedule was established. However, the cost of living has not increased by an amount sufficient to warrant the very substantial salary increase carried in this bill.

The portion of the bill which relates to the salaries of judges of Federal courts and United States attorneys, I believe should have been considered separately and apart from congressional salaries.

From the information I have, judicial and attorneys' salaries are presently far too low and I have no objection to the parts of the bill which relate to salary increases for Federal judges and United States attorneys.

A New Voice Is Heard

EXTENSION OF REMARKS
OF

HON. WILLIAM A. DAWSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. DAWSON of Utah. Mr. Speaker, I want to draw the attention of Members of the House to an editorial that appeared February 24, 1955, in the Salt Lake Desert News and Telegram concerning the thoroughness and studiousness the freshman Congressman from Utah, HENRY ALDOUS DIXON, has brought to Washington. Too often the cost of our price-support program has been masked in a tangled maze of columned figures. Congressman DIXON is to be commended for bringing them out in the open where they can be seen by all. The editorial follows:

A NEW VOICE IS HEARD

An old tradition dictates that freshman Senators and Congressmen, like small children, should be seen and not heard. When a comparative newcomer does make his voice heard above the multitude, he had better have something to say which is well worth listening to. Otherwise he is more than likely to be acutely embarrassed.

Representative HENRY ALDOUS DIXON, Utah's brandnew Congressman, made his voice heard from coast to coast last week. Judging by the reaction—and by a close analysis of what he said—the "Freshman's" speech was well worth listening to. It is causing a lot of embarrassment, all right—but not to the man who made the speech.

Supporters of the much-debated rigid 90-percent parity agricultural price support had told a House committee that the price-

support program had cost only \$20,700,000 over the whole 22 years of its existence. They had the figures to prove it—impressive figures, taken from a statistical table presented by Secretary of Agriculture Ezra Taft Benson himself.

Dr. Dixon made a close analysis of the figures which had been offered and their source. He found the quoted figures on the official chart, all right, and sure enough they represented the total of the column entitled "Price Support Programs." But, with his educator's typical thoroughness, he didn't stop there. A little further checking showed that the column title had been rather loosely used. Actually, that column represented cost of "Nonrecourse commodity loans and purchase agreement programs," just one of the factors making up the cost of "price-support programs." When the table was correctly read, and all of the cost elements added in, the total 22-year cost of agriculture price supports added up to a staggering 5 billion dollars-plus, or just 240 times the amount that had been cited by the veteran Congressman who had been trying to win support for the rigid price-support programs.

House veterans—especially those directly embarrassed by Representative Dixon's careful analysis—may not appreciate the Utah "Freshman's" disregard for tradition. But the taxpayers—whose sensitive pockets can readily feel the difference between \$20 million and \$5 billion—definitely do.

Schools for War Babies

EXTENSION OF REMARKS
OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. BOSCH. Mr. Speaker, as a member of the Committee on Education and Labor, which now has before it consideration of the President's program for Federal aid to education, I believe the article which appeared in the February 28, 1955, issue of Newsweek and written by Raymond Moley will prove of interest to my colleagues.

Under leave to extend my remarks, I include the article:

SCHOOLS FOR WAR BABIES (By Raymond Moley)

There is grumbling among school people about the pallor of the gray in the President's school-building program. There are loud cries from politicians like Senator HILL about the lack of pork under the gray. For these reasons the President's suggestions seem modest by comparison with what might have been. Nevertheless, there is an apologetic tone in the President's explanation of the reasons why he has bypassed the constitutional principle of local responsibility to which he has so often paid fervent tribute.

There is something fearsome in the multitude of war babies grown to school age which overwhelms even the strictest constitutionalists. The late Senator Taft was once induced to sponsor a bill for Federal aid to education. His defense of the bill in the Senate was not in the best Taft tradition. When he was asked by a colleague how the Federal octopus was to be kept out of local school affairs if Federal money were given, he answered that the bill contained all the words which he could muster to prevent such an invasion.

He knew quite well that words are not enough. For lurking in the shadow of every Federal dollar, wherever it may go, is a Federal bureaucrat. If it is Federal money, the Federal Government is responsible for its use.

On this constitutional background the President's program must be evaluated. Since it represents a distinct advance of Federal authority over the already depleted powers of the States and local communities, there should be a clear answer to two questions: What and where are the needy communities? Is there any other way consistent with traditional State responsibility to get the money for the building that may be necessary?

The plan itself hardly matches the ballyhoo about a \$7 billion school plan. Maybe it will be \$7 billion, maybe not. It will be sure to cost Uncle Sam more than a billion over 3 years and maybe 2. Whether \$7 billion will be spent by everyone concerned nobody can know. The financial plan is fourfold.

1. The Federal Government would buy \$750 million over 3 years of the bonds of districts which have not reached their borrowing limit.

2. The Federal Government would match State money to pay interest on bonds issued by school-building authorities (which would be public corporations) organized for the purpose. These authorities would rent the buildings to school districts too poor to build their own schools.

3. For districts too poor to participate in either of the foregoing plans the Federal Government would provide \$200 million in grants over 3 years.

4. The Federal Government would provide \$20 million over 3 years toward administrative expenses for the foregoing.

The plan would give a great deal of discretion to the United States Commissioner of Education and if he were an economical person devoted to the principle of State responsibility he could keep Federal spending to a minimum. A provision in the bill would lift his financial transactions above review by any other government official. This is mischievous nonsense.

There is no evidence in the President's message, nor in the other documents and statements issued by the administration in support of this plan, that a truly careful appraisal of the real needs and the financial resources of the local districts has been made. To a large degree the administration seems to accept expert estimates of beneficiary States and districts. We are asked to accept a figure more or less pulled out of the air with the assurance that after it is authorized by the Congress, the administration will in its discretion spend it wisely. Nor has the administration faced the fact that by returning to the States and local government such a tax as is now levied upon amusements, school needs could be met by the States and districts without Federal help.

Also the President might have waited to hear from his own Commission on Intergovernmental Relations which has a very competent task force under the chairmanship of Dr. Adam Bennion, of Utah. It has prepared a good report on this subject.

Federal School Aid Unnecessary?

EXTENSION OF REMARKS
OF

HON. ROBERT E. JONES, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. JONES of Alabama. Mr. Speaker, I wish to direct the attention of my colleagues to the following editorial entitled

"Federal School Aid Unnecessary?" It appeared in the Huntsville Times of February 25, 1955:

FEDERAL SCHOOL AID UNNECESSARY?

Some governmental reports make sense. Others do not.

A prime example of the latter is the report made recently to President Eisenhower's Commission on Intergovernmental Relations, saying that Federal aid is not necessary for the construction of new schools. The States can afford to spend more of their own money, according to the study group which made the report.

Since the news story quoting this report made no mention of exceptions, we must presume the report meant all types of Federal aid, including aid for areas where Federal installations have caused abnormally heavy and sudden increases in school populations.

We know little about the financial conditions of other States, but we are well acquainted with Alabama.

Where would Huntsville be now, educationally speaking, without Federal aid? Huntsville High School, Terry Heights Elementary School, the new West Huntsville Elementary School were all made possible only with Federal funds. And we are still crowded, with little local or State money available.

The same conditions apparently exist all over the State. Nationally speaking, there is an estimated shortage of 300,000 classrooms, with the shortage growing more acute.

Spend more State money? What money? Strenuous efforts have been made for several years to find enough money just to raise teachers' salaries. They have been unsuccessful.

Of course, taxes could be increased. But, ask a housewife or a father, who must feed and clothe his family on an average income, how much money he has left over which might go for taxes. It's hard enough for most folks to make ends meet now.

We take no issue with the desire to be independent of Federal aid. But to say that aid is not necessary anywhere is exhibiting an amazing degree of blindness.

Thirty-seventh Anniversary of Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, we are all aware of the continuing plight of the peoples who have been enslaved by communism. One of the nations which has been so enslaved is Lithuania, a proud country which had known independence for only a short time before it again fell under the Russian yoke. I would call the attention of the Congress to the thoughtful and worthwhile resolutions which were recently passed by the Linden, N. J., branch of the Lithuanian American Council in commemoration of the 37th anniversary of the declaration of Lithuanian independence:

Whereas 37 years have passed since the Council of Lithuania, meeting at Vilnius, the historic capital of Lithuania, on February 16, 1918, proclaimed to the world the determination of the Lithuanian people to embark upon an independent life; and

Whereas for Lithuanian-Americans it was a source of pride and satisfaction to observe the progress of the independent Lithuanian Republic in managing its affairs, raising the welfare of the people and elevating their cultural and educational standards; and

Whereas intolerable conditions now prevailing in Central and Eastern Europe, including Lithuania, are of grave concern to Western democracies, including the United States of America, since peace and stability are impossible without participation of that area, comprising a population of more than 100 million inhabitants, now separated from the rest of the world by the Iron Curtain; Therefore be it

Resolved, That we, Americans of Lithuanian descent of the city of Linden, N. J., convened under the auspices of the Lithuanian American Council, Linden branch, to commemorate the 37th anniversary of Lithuanian independence, being mindful of the gravity of the present international situation and concerned over the fate of the Lithuanian nation, now pledge our loyalty and cooperation to the Government of the United States, and record our gratitude and appreciation to the President, the Secretary of State, and to the Congress of the United States for their support of the cause of a free Lithuania, and for having authorized a congressional investigation into the facts and methods of Communist aggression as experienced by Lithuania and other unfortunate nations; be it further

Resolved, That we appeal to the President, the Secretary of State, and to the Congress of the United States to (1) develop a foreign policy to defeat the forces of international Communist conspiracy, and restore sovereignty to Lithuania and other Soviet-dominated countries; (2) use all possible means to protect enslaved peoples from genocidal destruction and preserve their hope of eventual liberation; and (3) have the United States Senate promptly ratify the Genocide Convention so that Communist perpetrated crimes against humanity may be properly recorded and officially noted for prosecution; be it further

Resolved, That copies of these resolutions be forwarded to the President of the United States, His Excellency Dwight D. Eisenhower; to the Secretary of State, the Honorable John Foster Dulles; to the Senators of New Jersey, the Honorable H. ALEXANDER SMITH and the Honorable CLIFFORD P. CASE; and to the Representative from the Sixth Congressional District of New Jersey, the Honorable HARRISON A. WILLIAMS, JR.

JOHN LIUDVINAITIS,
President.

VLADAS TURSA,
Secretary.

LINDEN, N. J., February 14, 1955.

Milk a Bargain as Source of Protein

EXTENSION OF REMARKS
OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend and revise my remarks, I wish to insert in the Record an article by Mr. Herb Jacobs, farm writer for the Capital Times of Madison, Wis.

Mr. Jacobs' article summarizes very well the fact that milk—particularly nonfat dry milk—commonly known as powdered milk—is one of the best sources of protein. He further proves,

with figures, milk and dairy products are the most economical buy for budget conscious housewives.

Following is Mr. Jacobs informative article which I commend to my colleagues for their consideration:

(By Herb Jacobs)

How would you like to buy the body-building foods for your family on the basis of the cost per pound of proteins they contain? Proteins are the building blocks out of which the body is largely made, from the mighty biceps of a weight lifter to the lustrous hair and peace-bloom skin of a Hollywood starlet.

The red stuff in meat, the white stuff in milk, and the clear part of a raw egg, for instance, are all the building block proteins—but if you were buying them just for their proteins, 1 variety would cost you more than 5 times as much as another.

It's important to Wisconsin too, because the dairyman, via milk, produces about half of all the animal-origin protein in this country—and the experts say he's selling it for about half what it is worth.

For Wisconsin that could mean a \$500 million per year increase in prices received by farmers for their milk.

But the protein price chart also affects consumers. Since the animal-origin proteins all have about the same body-building value, a housewife anxious to get the most for her money could shop around among meats, dairy products, and eggs to get the best buy in proteins. For instance hamburger contains about 16 percent protein. If the hamburger sells for 41 cents a pound, the price of a pound of protein in hamburger form would be \$2.02. On the other hand, pork chops, with a protein content of 13.3 percent, run up to \$5.47 per pound of protein in pork chop form, if the pork chops are selling retail at 79 cents per pound.

By contrast, the best buy for the housewife would be nonfat dry milk powder, if she were looking for a cheap form of protein for her family. At 40 cents a pound, and with a protein content of 35.6 percent, the protein in the dried milk would be costing only 97 cents per pound.

These figures are from the January 15, 1955, retail protein price report of the Protein Economics and Research Council, W. Lincoln Way, Route 3, Ames, Iowa.

Here is part of a protein price chart which the council is seeking to have newspapers throughout the country print weekly for the shopping guidance of housewives:

Harry C. Andrews, a former atomic scientist who worked for years with the E. I. du Pont de Nemours Co., is director of the protein council. He declares that the council's studies show that about 60 percent of the housewife's food dollar goes to buy protein.

"By using the protein price chart, a family of 4 can cut from \$200 to \$300, and sometimes as much as \$400 from its yearly food budget, and eat better while doing it," Andrews insists.

Andrews has been roving the Midwest in recent months, telling his protein cost story to newspaper editors, agriculture departments, and nutritionists. He looks forward to the day when stores will advertise a "best protein buy" just as they now advertise bargains in meat, poultry or other foods. Some newspapers are now publishing the weekly protein price charts for the guidance of consumers.

"That white stuff in milk is valuable," Andrews says, thinking as much of the farmer as of the consumer. "Wisconsin milk protein production of 500 million pounds per year is actually worth from \$500 million to \$1 billion per year more than we are getting, compared to other proteins of similar quality."

"Each year the dairy industry in the United States produces at the farm level about as much protein as that consumed in the form of all beef, pork, veal, lamb, mutton, poultry, fish and eggs combined. This is a whale of a lot of protein."

"Wisconsin and Iowa together produce about a third of the high quality animal protein, with Wisconsin estimated as being the top net producer."

Andrews adds that there is a bright future for Wisconsin's dairyland in the trend toward reducing diets, "because a reducing diet is really a more adequate protein diet."

The Protein Economic and Research Council is a nonprofit organization studying production and distribution of food resources, with particular emphasis on protein. Andrews thinks more widespread information on protein costs and availability would aid in defense stockpiling.

The question of buying foods on the basis of their protein content price is a difficult field, comments Dr. C. A. Elvehjem, dean of the University of Wisconsin graduate school, who is widely known for his studies in nutrition. Listing of the protein content of foods in terms of the price of the protein has considerable value, he said, but he pointed out that other factors also enter the picture, such as taste, mineral content, and other nutritional elements.

National Better Material Handling and Packaging Week

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include herein an editorial, together with certain letters from J. Wellington Hall, national secretary of the American Material Handling Society, Inc., in support of House Joint Resolution 231, to proclaim a National Better Material Handling and Packaging Week.

AMERICAN MATERIAL HANDLING SOCIETY, INC.,

Toledo, Ohio, February 24, 1955.

HON. PETER W. RODINO, JR.,

House of Representatives,

Washington, D. C.

DEAR MR. RODINO: I am enclosing for your information an editorial which is sufficiently informative so that anything I could try to add would be superfluous.

Entitled "How Would You Answer," it is written by V. H. Laughner, editor, Modern Materials Handling Magazine.

I feel that it has a direct bearing on the effort to obtain recognition for the material handling industry and profession and would request that it be inserted into the CONGRESSIONAL RECORD as a means of aiding the establishment of a National Material Handling Week.

Very truly yours,

J. W. HALL, A. M. H. S.,

National Secretary, Westinghouse

Electric Corp., Meter Division.

NEWARK, N. J.

HOW WOULD YOU ANSWER?

If your son, about to enter college, were to ask you advice about a career in industrial engineering—and particularly in materials handling—what would you tell him?

Would you think of the many years you spent trying to sell management on the production and distribution savings possible through efficient handling, and advise him against subjecting himself to such frustration? Would you say that any engineering degree is a stigma, and that management looks on any technical man as necessary to the business but a little peculiar personally? Would you point to the 5-year-old car in the garage, the mortgage on the house, and the money you must borrow to put him through school—and tell him with some bitterness that salary scales in his contemplated profession are lower than those in many other professions?

Then, as we heard a man in the field do recently, would you cite other irritants associated with your work, like never being able to forget it after hours? Would you tell him that few engineers, particularly in the materials handling field, enjoy any professional recognition, that their next door neighbors never understand what they really do, and care even less, that the technical societies to which they belong do a wonderful job of keeping them abreast of technical progress, but nothing to improve their take-home pay and professional standing?

And after expounding on these themes for some time, would you tell him to study law, take business administration, or even be a veterinary, but to stay out of engineering?

Or would you tell him that the demands on industry for more and better products at lower cost will be greatly intensified by a growing population in the next few decades, that the men in production and distribution who were responsible for making us the most powerful Nation in history are now on the threshold of retirement, thus creating a void that he and others like him must fill, that management in the years ahead will have to depend far more on the "savvy" of the specialists not only to start but to stay in business, that with this increased dependency will come bigger salaries and greater professional recognition? Would you chart the tremendous importance of the professional societies and explain to him that they can provide the foundations for growth, but that each individual must, in the final analysis, be responsible for his own future?

Would you try to impart to your son the necessity for technical progress if we are to survive, and the great satisfactions that will be his by contributing his share?

Food	Retail price	Percent protein	Price per pound of protein paid by consumer
Beef:			
Chuck roast..... pound.....	\$0.54	16.2	\$3.07
Hamburger..... do.....	.41	16.1	2.02

If he were to ask you, how would you answer? What would you say?

V. H. LAUGHNER,
Editor.

AMERICAN MATERIAL
HANDLING SOCIETY, INC.,
Toledo, Ohio, February 25, 1955.

HON. PETER W. RODINO, Jr.,
House of Representatives,
Washington, D. C.

DEAR MR. RODINO: I am enclosing for your information some programs which will demonstrate the interest in the material-handling field.

On February 17-18, 1955, a 2-day conference on material handling was held at West Lafayette, Ind., cosponsored by Purdue University and the Indianapolis Chapter of the AMHS. This is the fifth annual Purdue material handling conference.

On March 10, 1955, an all-day material handling workshop seminar will be held at the Melbourne Hotel, sponsored by the St. Louis Chapter of the AMHS, St. Louis, Mo.

On March 16, 1955, the fifth annual material handling forum will be held at Stevens Institute of Technology, Hoboken, N. J. Cosponsored by Stevens Institute and the New Jersey Chapter of the AMHS, in cooperation with the Material Handling Institute. Attendance at the event for the 4 previous years has never been under 100 persons and has been over 150.

Dr. Jess H. Davis, president, Stevens Institute; Prof. James R. Bright, Harvard University; Mr. James M. Wallace, manager meter division, Westinghouse Electric Corp.; Mr. F. C. Wier, superintendent, material handling, Timken Roller Bearing Co., will be the principal speakers in the morning sessions. The afternoon will be devoted to 10 separate panel discussions.

The forum, seminar, or conference type of meeting is used by the material-handling profession and industry to spread the accumulated knowledge of the latest techniques and developments in the field. Meeting on the common ground of interest in the subject, the executive, the engineer, the vendor, and user of equipment, as well as the professional educator, discuss problems and solutions objectively and without restraint.

The programs listed here are only a small part of the hundreds held each year. It is significant that two are being held for the first time, proving the value and the interest in these sessions.

I would like to request of you that this information be inserted into the CONGRESSIONAL RECORD as an indication of what the colleges and the material-handling industry and profession are doing voluntarily to broaden the knowledge of those desiring information and as a part of the effort to have declared a National Material Handling Week.

Very truly yours,

J. W. HALL, AMHS,
National Secretary, Westinghouse
Electric Corp., Meter Division,
Newark, N. J.

Problems Confronting Manufacturers of Power Lawn Mowers

EXTENSION OF REMARKS OF

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 2, 1955

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Mr. Edwin F. Ringer, vice president of the Foley Man-

ufacturing Co., Inc., Minneapolis, Minn., regarding the serious problem confronting manufacturers of power lawn mowers.

I wish to call to the attention of the Members of Congress how at times—with the best of intention—impractical provisions are incorporated in the law that make it impossible for industry to meet its requirements without severe penalty. Mr. Ringer's letter follows:

FOLEY MANUFACTURING CO., INC.,
Minneapolis, Minn., February 28, 1955.
The Honorable ROY W. WIER,
Congressman from Minnesota,
House Office Building,
Washington, D. C.

DEAR MR. WIER: The purpose of this letter is respectfully to request your consideration and assistance on a general problem confronting manufacturers of power lawn mowers.

Our company is a Minnesota corporation doing business in Minneapolis, Minn., which manufactures and sells power lawn mowers.

We urge your active support of H. R. 3712 introduced into the House of Representatives by Congressman LAWRENCE H. SMITH, of Wisconsin. This bill would remedy the hardship and inequity to which many manufacturers were subjected when, last April, they were involuntarily made an agent of the Federal Government for the purpose of refunding to their dealers floor stock credits arising from the reduction in excise tax.

You will recall that in April 1954 Congress reduced the excise tax on power lawn mowers and on certain other commodities from 10 percent to 5 percent, and, by section 3416, Internal Revenue Code, provided for floor stock credits and refunds for such inventory as dealers may have had on hand for resale on April 1, 1954. Such refund was effected by provision for refund by the Federal Government to the manufacturer who had reimbursed its dealers holding unsold mowers, and who had filed a claim for credit or refund in the Internal Revenue Service no later than August 1, 1954. Since August 1, 1954 fell upon a Sunday, the claims actually had to be in the hands of the Internal Revenue Service by Friday, July 30.

While the bill reducing excise taxes was passed and became effective April 1, regulations of the Internal Revenue Service (T. D. 6072) prescribing procedure for floor stock refunds were not issued until June 3 and, because of the intervening weekend, did not reach most manufacturers until Monday, June 7. The manufacturer, therefore, had only 38 regular working days for processing the vast amount of paper work in handling the properly substantiated inventories from dealers and wholesalers and in preparing and filing the manufacturer's claim for credit or refund with the Internal Revenue Service.

The specific things which the manufacturer was compelled to attempt to accomplish within this limited 38-day period were as follows:

1. Analyze a rather complicated Internal Revenue Service regulation;
2. Prepare and have printed appropriate forms for reporting April 1 inventory of mowers;
3. Distribute the report forms to its wholesalers, and insure that such report forms were further distributed to the dealers of each of its wholesalers;
4. Each dealer and wholesaler then had to identify and also report on the forms their April 1 inventory of unsold mowers;
5. Such completed report form then had to be passed up the chain of distribution from dealer to wholesaler for appropriate endorsement and finally to the manufacturer;
6. The manufacturer at its risk had to determine the adequacy of each form, both as to the taking and reporting of inventory and

as to execution; allow valid claims of its wholesalers; and make reimbursement thereof not only by the trade practice of credit memos but also by the actual mailing of refund checks prior to July 30; and

7. The manufacturer then had to prepare his Quarterly Excise Tax Return and Claim for Refund in each case asserting claim against the Government for the total amount in which it had previously reimbursed its wholesalers. Such manufacturer's Quarterly Excise Tax Return and Claim for Refund—in order to be allowed—had to be in the hands of the appropriate Internal Revenue Service office by Friday, July 30.

The existence of several stages in the chain of distribution—from manufacturer to wholesaler to dealer—severely aggravated the burden of the inventorying, reporting, and paperwork.

Manufacturers—particularly the smaller ones—who were unable to process the paperwork in the limited time prescribed, were placed in the following dilemma:

(a) They could either not handle many thousands of dollars of valid claims from their customers; or

(b) They could attempt to handle all valid claims from their customers at the risk or late filing of the manufacturer's claim against the Government and the late mailing of refund checks to customers—either of which inadvertent delinquencies would result in the rejection of the manufacturer's claim against the Government.

Our company is a small business. We attempted to handle as many valid claims of our customers as possible, within the limited prescribed period. Our office force, however, was unsuccessful in processing the added paperwork involved.

As a result, our company inadvertently mailed certain refund checks to certain wholesalers as late as August 9 in remittance of credit balances created by the allowance of their valid claims. The examining agent from the office of the District Director of Internal Revenue has rejected our company's claims in the amount of \$1,862.50 because of our unintentional 9-day delay in mailing certain refund checks to certain wholesalers.

Our company acted in good faith in attempting to comply fully with the provisions of the statute by refunding to all of our wholesalers tax money to which they were entitled. We feel very keenly the inequity of the above penalty, which is particularly burdensome upon us as a small company.

The above situation is one in which many manufacturers of power lawn mowers now find themselves. We therefore urge your active support of H. R. 3712, which would remedy the above hardships by extending the deadline of August 1, 1954, for the filing of floor stock credit and refund claims to July 1, 1955.

Sincerely,

EDWIN F. RINGER,
Vice President,
Foley Manufacturing Co.

National Better Material Handling and Packaging Week

EXTENSION OF REMARKS OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 2, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include herein a letter from J. Wellington Hall, national secretary of the American Ma-

terial Handling Society, Inc., together with an editorial which appeared in the February issue of *Modern Material Handling*:

AMERICAN MATERIAL
HANDLING SOCIETY, INC.,

Toledo, Ohio, February 24, 1955.

HON. PETER W. RODINO, JR.,

House of Representatives,

Washington, D. C.

Subject: National Material Handling Week.

DEAR MR. RODINO: I am enclosing, as part of the program, an editorial from the February 1955 issue of *Modern Materials Handling* magazine entitled "Kudos and Bows."

Written by V. H. Laughner, editor, it is a graphic account of the phenomenal growth of the materials-handling function in the past 3 decades.

Please note the reference to the "\$2 billion" worth of equipment and component parts sold by the material-handling industry in the year of 1954. Five times that of 5 years ago. Almost double that of the machine tool builders.

That material handling is accepted as an art and sciences would seem to be an established fact based on these figures. Yet, this tremendous dollar figure is not even dignified by our own Government as a basic industry, but classified as "general industrial equipment."

There is much yet to be done, in recognition, in education, in industry and in research and development.

The advances made to date are history. It is in the advances still to be made, in safety, in economy, in the elimination of the human being as a substitute for mechanical handling, wherein lies the greatest benefits to our civilization.

I would request of you, in the furtherance of this effort, that this editorial be inserted into the *CONGRESSIONAL RECORD*, feeling that the message contained is of value to the program.

Very truly yours,

J. W. HALL,
National Secretary.

KUDOS AND BOWS

The cover on this month's issue of *Modern Materials Handling* is the first of a four-color series that will be published monthly throughout the coming year.

Actually, this cover is a symbol of progress. It symbolizes not only our progress but that of the entire industry and of every man connected with it. It furthermore is an indication of the importance that industry today places on efficient handling of materials and of in-process and finished parts.

This was not always so. Just a few years ago, the title of materials handling engineer was scarce indeed. Then, more attention was given to almost every other phase of manufacturing and distribution. At best, the development of efficient handling patterns was considered of tertiary importance and met with suspicion by many managements.

In those days, too, the companies making materials handling equipment were just on the threshold of tremendous growth. For the most part, they were small, had few design engineers and, with but some exceptions, had yet to formulate their current policy of underwriting research on a large scale. But they had faith in the future, they did not stint on their products, and they promoted materials handling with the zeal of crusaders. These companies grew and are growing as the field and the men in it grew and are growing.

In 1954, over \$2 billion worth of equipment and components were sold by the materials handling industry—five times that of just 5 years ago and almost double the dollar volume done by the machine tool builders

last year. Men who are in the field have increased in stature and are being given the recognition that has long been their due. No further proof is needed that industry now recognizes the tremendous savings that are possible through adaptation of better handling methods, or that the rate of progress will accelerate, not decelerate, in the future.

We are proud to have grown with the field. Our progress, like yours, has not been easy. Investment rather than tricks, study rather than superficiality, hard facts and not half truths have been the cornerstones on which we have built.

We will in the future, as we have in the past, publish the news, write the articles, and describe the new products that in our opinion will be of maximum benefit to you. We shall look upon this and future covers as symbols of that pledge, as well as evidence of progress.

But it's you who should take the bows, you who should accept the kudos. For ours is but the symbol, while yours has been the accomplishment.

V. H. LAUGHNER,
Editor.

Fair Prices for Agricultural Commodities

EXTENSION OF REMARKS

OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks in the *RECORD*, I include the following joint resolution of the Legislature of the State of Minnesota:

Joint resolution memorializing the President, the Secretary of Agriculture, and the Congress to support measures promoting fair prices for agricultural commodities in the national interest and recommending policies to strengthen the family farm system

Whereas an expanding economy should be the goal of the State and Nation in order to provide the best use of our total resources, and such an expanded economy is impossible because substandard farm income results in loss of income, purchasing power, property values, retail sales, employment and industrial activity, and this effect upon the general prosperity will be accentuated in 1955 and 1956 if the farm price level is lowered; and

Whereas the present farm program does not meet the needs of the Nation because it actually tends to widen the gap between farm income and farm operating costs, and because the laws do not now provide adequate price protection on dairy products, poultry and eggs, and cattle and hogs, commodities which are so vital to the economy of a diversified farming State like Minnesota; and

Whereas the continuation or worsening of present farm price levels will mean widespread and bitter economic distress for farm families of Minnesota; impair the ability of these families to stay on the land; make it increasingly difficult for young people to take up farming; have serious repercussions in our rural communities upon the trade centers, schools, churches, and REA systems built to serve the present population; and have a severe effect upon the tax base of our townships, school districts, counties, and the State and make it difficult for these units to meet the necessary costs of Government; and

Whereas below parity farm income is hindering farmers from making progress in retiring their debts, in keeping up with needed replacements and repairs on their farms, and in carrying on necessary soil conservation measures on their farms; and

Whereas it is a disservice to the people as a whole, for anyone in agriculture to confuse and divide farmers and consumers, to set one type of farmer against another, to discredit farmers and the farm program, to fail to use available funds and authority in the face of critical farm price collapses, and to risk economic havoc in the country through policies which intentionally force down the level of farm prices: Now, therefore, be it

Resolved by the Legislature of the State of Minnesota, That the President and the Congress of the United States be requested to do all in their power to enact and maintain an effective farm program by—

1. Providing mandatory price supports to assure full parity returns to producers of all major farm commodities, using whatever methods may be most practical; either direct support measures such as loan programs, production payments, purchase programs, and promotion of exports, or a combination of these methods. As far as possible, self-regulating, and self-financing support systems, using excise or processing taxes and tariff levies similar to those used to finance the sugar and wool support programs should be used. Pending the adoption of such a comprehensive farm program, the Secretary of Agriculture should be directed by Congress to effectively use his available funds and authority to prevent disastrous price breaks in the markets for commodities which do not now have mandatory supports.

2. Promoting balanced production through a balanced system of price supports. In the event of acreage controls, there should be a compensatory increase in price-support levels. Incentive payments should be made to encourage soil-conservation practices upon acres diverted from crop production in order to more effectively stabilize our visible farm reserves and build up a reserve of soil fertility and to encourage soil conservation. It should be the policy that land diverted under a production control program be planted to grasses and legumes and that no crop be harvested on these acres and that supplemental pasturage of this land not be permitted.

3. Establishing a definite national policy on the size of food reserves which should be carried in the national interest.

4. Providing for greatly expanded research programs to study the farmers, marketing and pricing problems, and to develop new uses and new markets for farm products.

5. Providing adequate funds for operation of the farm programs, including Commodity Credit Corporation, crop insurance, soil conservation, farm credit, and for the REA.

6. Continuing an integrated Federal program of soil conservation and soil-building through the Agricultural conservation program and the soil conservation service, and opposing moves to dismember the programs into separate State programs.

7. Directing the Farmers Home Administration to liberalize its lending policies to meet present-day credit needs by (a) long-term real-estate loans at a lower rate of interest, (b) production-type credit at more reasonable rates of interest and on longer repayment schedules.

8. Providing for measures to encourage greater consumption of our abundance of food and to promote the use of this food to improve the diet of America's aged, its school children, its low-income groups, and those in institutions; and be it further

Resolved, That the President, the Secretary of Agriculture and the Congress of the United States, be requested to foster the participation of individual family type farmers in the

development, administration, and conduct of farm programs by (a) safe-guarding the right of farmers to elect their own farm committees, (b) restoring the authority of these committees to manage the programs at the local level, (c) appointing typical family type farmers as a majority on all advisory groups on farm problems, (d) conducting a nationwide farm policy review through the farmers-elected committees. Within our State such a review should be conducted in cooperation with the University of Minnesota and the commissioner of agriculture, dairy and food; and be it further

Resolved, That the President of the United States set a course of farm policy in line with the above recommendations; and be it further

Resolved, That the President and the Congress of the United States be requested to take the lead in working for a full parity price support program and in placing the entire matter above partisan politics. We commend our Minnesota Senators and Representatives who have supported such a program; and be it further

Resolved, That the secretary of state of the State of Minnesota be instructed to transmit copies of this resolution to the President of the United States, the Secretary of Agriculture, to each Member of Congress from the State of Minnesota, and to each member of the Agricultural Committees of the Senate and the House of Representatives.

Girl Scouts of America

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. BERRY. Mr. Speaker, under leave to extend my remarks I include in the RECORD a statement about the Girl Scouts of the United States of America. I know that all Members of the Congress are familiar with the fine work that is being accomplished by the Girl Scout organization. However, I feel it is appropriate that we give special recognition to this worthwhile group and take note of some very interesting facts about the Girl Scouts.

During the week of March 6 to 12 the Nation will observe Girl Scout Week. As the organization of the Girl Scouts of the United States of America begin their 43d year, there are 2,350,000 girls and adults registered as members of the organization. In my own State of South Dakota there are well over 6,000 Girl Scouters.

South Dakota is known as the Land of Infinite Variety, because we are blessed with a variety of terrain and activities that are ideal for outdoor enthusiasts. Anne L. New, director of public information for national headquarters of the Girl Scouts, informs me that the State and National parks in South Dakota will no doubt be visited by many Girl Scouts during the coming camping season. I know that all of the other States will also experience considerable activity by the Girl Scouts as they develop resourcefulness through camping and outdoor living.

I like the Girl Scout theme for 1955, which is "Believe, Belong, Build."

Girl Scouts believe by knowing their country's history and traditions, by constantly renewing their promise to God and their country, by adhering to the Girl Scout laws, which emphasize the spiritual foundations underlying our society.

Girl Scouts belong by entering into scouting's free association of girls and adults, by learning through actual experience to accept people on the basis of their essential worth, by enjoying the personal satisfactions of belonging to a group with worthy objectives and a constructive program of learning by doing.

Girl Scouts build as each girl in scouting develops her own best capacities under the guidance of trained and devoted adults, as she explores her community and its resources and contributes to community welfare in line with her growing experience and ability, as she learns the duties and responsibilities of citizenship and strives to achieve the Girl Scout goal of becoming a happy, resourceful individual who is willing to share her abilities as a citizen in her home, her community, her country, and the world.

Some 10 million women have enjoyed Girl Scout experiences and certainly the training they have received through the organization has helped them to be better citizens. The Girl Scout organization is helping to build a strong America, and it is fitting that this Congress give the Girl Scouts recognition and support.

Reservists Show Their Mettle

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include an article that appeared in the Evening Tribune newspaper, of San Diego, Calif., under date of October 28, 1954:

RESERVISTS SHOW THEIR METTLE

Among San Diego's most welcome guests in many days have been the members of the Fleet Reserve Association at their convention here. More than one comment has been heard on the dignity and decorum with which the reservists conducted themselves.

Their behavior is understandable. Men freed from the curbs of Navy discipline remain a self-controlled breed, a credit to the service that trained them, to themselves, and to all of us.

And then comes a disturbing note. These men might have still been in active service, a backbone of career men keeping the Navy alert and powerful. But they are lost to Navy activity because of many ill-considered policies that have chipped away at the rewards for active duty.

Senator THOMAS H. KUCHEL, Republican, of California, told the reservists that many Members of Congress now are aware that they must set up better pay rates and provide greater benefits for members of the Armed Forces to hold capable men.

Various proposals for action to this end await consideration by the next Congress. They would stand an even better chance if all its members could have seen the Fleet Reserve Association as San Diego saw it this week.

De Valera Approves Joint Talks Proposal

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. FOGARTY. Mr. Speaker, on yesterday I was privileged to insert in the CONGRESSIONAL RECORD remarks concerning the proposal of Mr. Costello, Premier of Ireland, to engage in mutual discussion of problems between the Republic and the officials of the six-county government in Ireland. In the February 18 issue of the Irish Times appears an article giving the reaction of Mr. Eamon De Valera, former Premier of Ireland, to the proposal suggested by Mr. Costello.

The complete harmony of viewpoint of these two opposing leaders of the Irish Republic is indicative of the universal opinion held by the Irish people concerning the demand for the unification of their island country. Mr. De Valera shows a complete accord with Mr. Costello regarding the desirability of mutual talks concerning the various problems, which must, of necessity, arise between the two areas of the country. He also pointed out the impossibility of any agreements being reached on the matter of mutual defense between Great Britain and Ireland, so long as partition continued.

During the course of his address before an audience in Manchester, England, Mr. De Valera concisely set forth the difficulties underlying any consideration of the question of mutual defense between Great Britain and Ireland. He also very forcefully pointed out that the principle by which those in the six counties demanded separation from the rest of Ireland, applies equally to the majority in Tyrone, Fermanagh, Derry city, South Down, and South Armagh, where that majority desired to be separated from the six counties and reunited with the Republic. If the principle is valid in justifying the cutting off of the six counties from the rest of Ireland, then certainly that same principle is equally valid in cutting off these additional areas from the six counties and returning them to the Republic of Ireland from which they were forcibly removed.

The resolution which I have presented to this House, House Resolution 32, would aid in bringing about the mutual discussions and amicable settlement of the border problem in Ireland. The urging for such a solution, which favorable consideration of my resolution would provide, could well prove a determining factor in achieving an end to partition in Ireland.

The article reporting Mr. De Valera's reaction to Mr. Costello's proposal, as

well as the article reporting on Mr. De Valera's speech in Manchester are being made a part of my remarks, because I feel that both articles are of genuine interest to the Members of the House. They are as follows:

NORTH-SOUTH TALKS PROPOSAL ENDORSED BY MR. DE VALERA

Mr. Eamon de Valera, T. D., said in London on Wednesday that a meeting between the Governments in Dublin and Belfast was an obvious step, which should be taken. But on the question of defense talks, he said that the Irish people could be relied on to take the necessary measures. There was no possibility of discussing this subject while the country remained divided.

Mr. de Valera said this is an interview with a representative of the Yorkshire Post. He was commenting on an interview with Mr. Costello published in that newspaper, and in the Irish Times yesterday, which quoted the Taoiseach's readiness to meet Lord Brookeborough, and on a leading article in the Yorkshire Post.

The report of the interview quotes Mr. de Valera: "I am particularly glad to see a paper like the Yorkshire Post showing an interest in this question, which is of fundamental importance," and goes on: He added that the attitude of Britain and of its publicists when the question of the partition of Ireland arose and was discussed, was: "Oh, it's a matter for the Irish themselves. If only the Irish would agree among themselves."

"You seem to want to have it both ways," Mr. de Valera commented. "When there's a possibility of Irish agreement you say, 'We must have something to do with it.' If that's your attitude you must share the responsibility for the continuance of partition. Those of us who have been dealing with this matter over the past years feel that this shows a little of the old imperial approach. It is the wrong way."

"The way to get good relations between the two countries is to admit that the question of Irish policy is a matter for Ireland. There should be agreement on matters of common concern between the representatives of Ireland, on the one hand, and the representatives of Britain, on the other. That's the way to get a lasting result. When approached in that way you have the goodwill of both peoples with you."

"If there are aspects of the defense of the two countries that are of common concern, then the Irish people through their own parliament and in their own interests can be relied on to take the measures considered necessary," he said. "There is no possibility even of discussing this while our country remains divided."

"Mr. Costello has indicated the willingness of his Government to be represented at such a meeting," he said. "The question now is, what is Lord Brookeborough's attitude?"

(Mr. de Valera was in London to attend the funeral yesterday of Mr. John Dulanty, the former Ambassador to Britain.)

REPUBLIC'S ATTITUDE

Mr. Eamon de Valera, T. D., addressing the Manchester branch of the Anti-Partition League in Manchester last night, said he was glad that important papers such as the Yorkshire Post, had shown themselves interested in the question of partition and about what steps might be taken about the reunification of the country. He recalled that Mr. Costello had expressed his willingness to meet the representatives of the six-county government. What one wanted to know now was what would be Lord Brookeborough's attitude.

As far as the people of the 26 counties were concerned, their first objective must be

to secure unity with the rest of the country. Until this objective was achieved, they could not regard national independence as having been attained.

The question at the moment was to secure independence, rather than confederation or how to preserve it. If independence was secured, then the people of all Ireland would have the same anxiety to preserve the nation's independence as other nations, and would naturally be ready to consider what steps they might take, in cooperation with other countries, to make their independence secure. An All-Ireland Parliament, completely free, would be able to consider what steps it might take with Britain and other countries towards mutual defense. Defense policies could not usefully be discussed under existing circumstances. That was also the position largely during the last war. If there was to be any reconsideration of Ireland's attitude in a possible future war it could only be done by a united Ireland.

Mr. de Valera told his listeners that the Yorkshire Post had stated that certain British interests were paramount, and that the claim of Britain to use Irish ports, etc., would have to be maintained. "Britain cannot have it both ways," he asserted. "If this attitude is taken up, Britain must accept her share of the responsibility for the continuation of partition, and cannot wash her hands of it. The claim put up by the Yorkshire Post cannot be admitted. It savors of the old imperialism which we experienced in the past."

Referring to the attitude of those in the six counties who wanted to remain separated from the rest of their fellow countrymen, Mr. de Valera said that the principle on which they demanded separation would equally apply to the majority of the people, of say, Tyrone, Fermanagh, Derry city, South Down and South Armagh, who desired to be separated from the Belfast Parliament and to be attached to the 26 counties. At present the majority in those areas were being held against their will, and coerced to remain under a jurisdiction to which they would not willingly submit.

Forest Service's Role in Our Past and Future

EXTENSION OF REMARKS

OF

HON. GEORGE A. SHUFORD

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. SHUFORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Asheville (N. C.) Times of February 1, 1955:

FOREST SERVICE'S ROLE IN OUR PAST AND FUTURE

It was 50 years ago today that the Forest Service was created in its present form in the United States Department of Agriculture. The purpose of this special Federal agency was, and still is, to see to it that all land in our national forests be devoted to its most productive use for the permanent good of the whole people.

The Forest Service has had a colorful history marked by many great achievements. Justly proud of its record of significant work for the country, the Forest Service has planned an elaborate observance of its golden anniversary in order to publicize and promote its objectives. In this observance and in the Forest Service's program no part of

America could have more genuine interest than western North Carolina.

There are two vital reasons for this deep and enthusiastic local and regional concern for the welfare and work of the Forest Service. One is that an exceedingly large part of our vast mountain wonderland is made up of national forests which are major factors in the section's economy, both industrially and for recreational purposes. The other reason is that, from its earliest beginnings until now, the Asheville area has contributed mightily to forestry conservation and development by supplying trained leaders in this professional field and by serving as a key base of operations for study and experiment.

When the Forest Service came into being its first Chief Forester was Gifford Pinchot, who got much of his training and inspiration for that great post while handling forestry development problems on the Biltmore estate for George W. Vanderbilt. One of the results of Pinchot's early work here was the establishment of the Biltmore Forest Forestry School.

Later, graduates of that school contributed much to the development of enlightened forestry programs in this section and throughout America.

A National Better Material Handling and Packaging Week

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the following letter from J. Wellington Hall, national secretary of the American Material Handling Society, Inc., together with an editorial entitled "Dubious Yankee Ingenuity."

AMERICAN MATERIAL HANDLING SOCIETY, INC.,

Toledo, Ohio, February 24, 1955.

HON. PETER W. RODINO, JR.,

House of Representatives,

Washington, D. C.

DEAR MR. RODINO: I have sent to you an editorial entitled "Dubious Yankee Ingenuity."

I would, in the interest of this program, request that this be inserted into the CONGRESSIONAL RECORD as a means of bringing to light one of the reasons we have sought your aid in the establishment of a National Material Handling Week.

It graphically tells the story of a modern factory, with tremendous investments in machine tools, yet with "little red child's express wagons" used as devices for the handling of materials.

That some managements will spend thousands for machine tools to reduce by split seconds the stroke of a punch press or the cycle of a machining operation, but will blithely ignore the real savings in time, in men, and in profit dollars by using "little red wagons" or something equally inept, is a fact which cannot be ignored.

Money spent in manual handling, and the man-hours involved, are forever lost "down the rathole of shortsightedness and poor planning, and not 1 penny or 1 hour can ever be regained. The investment, however, into mechanical handling produces "profit dollars" every hour of every day after installation.

I trust you will consider this editorial as valuable to the effort, in that it cites a condition which should not be ignored.

Very truly yours,

J. W. HALL, A. M. H. S.,
National Secretary, Westinghouse
Electric Corp.

NEWARK, N. J.

DUBIOUS YANKEE INGENUITY

A couple of weeks ago, we took in a conducted tour of a few of New England's great industries. It was the 6th annual research tour, sponsored by the New England Council.

Visiting industrial plants is no novelty to us, but doing it under the precise schedules and able management of American Express was a new experience. We liked it.

We also liked most of what we saw. Being a Connecticut Yankee by birth, we were proud to see that rigor mortis had not set in as we feared it would, years ago, when we left our home site for greener pastures. In fact, from what we've seen and heard, we're fondly nurturing the belief that the Yankees are tooling and gearing up for a strong return to the industrial leadership they enjoyed in the days when father wore knee breeches.

But all is no roses. The boys up Nor'East still have a long way to go just to catch up with other industrial areas.

Their problem is not one of quality or quantity. On both of those counts they rate high. It is a problem of handling—the movement of raw, in-process, and finished goods.

In some cases, handling is primitive; 4 men slowly struggling with a load that easily and speedily could be handled with a fork-lift truck and 1 man. In other cases, handling has advanced a generation but still is makeshift. Just to prove that we're not too critical, here's just one frinstitute:

One plant visited evoked much admiration from our group about the excellent production processes, controls, and tools in use. As we approached one department, our guide pointed with great pride to a large production machine; a \$30,000 investment that promised to pay big dividends. But, as we moved on, we almost tripped over a child's metal express wagon. For a moment, we stared at this incongruous sight—fearfully suspecting, yet not believing, that this battered toy with bent axles and misaligned wheels might be used for . . . (perish the thought.)

As our group moved on, timidly and furtively we slipped the question to the guide. In a matter of fact and nonchalant manner, he replied. We were dumbfounded.

A minute later, as we moved along in a daze, another member of our tour, traveling with another group, rushed up to us. "Want to see something special in the way of materials handling equipment?"

Before we could answer, he pulled us into an adjoining bay and pointed—to another child's express wagon.

May we suggest that the New England Council tackle materials handling as its next collective research project? We can promise immediate as well as long range benefits.

A. W. GREEN.

Taxes and America's Future

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. LeCOMPTE. Mr. Speaker, Fred Maytag II, who is director and chair-

man of the taxation committee, National Association of Manufacturers, as well as president of the Maytag Co., of Newton, Iowa, spoke before the NAM at their meeting in New York in December of 1954. I have read his speech with great interest and commend it to other Members of Congress who seek the enactment of legislation to keep our Nation free and strong. Under leave to extend my remarks in the RECORD, I include Mr. Maytag's speech entitled "Taxes and America's Future." He points out that under the 5-year plan his committee recommends, bringing tax rates down to 35 percent, there would be no actual loss in revenue to the Government, because of increased yields resulting from growth in the economy. He contends that instead of whittling away at the tax base, it will strengthen it. He deplors the present high rates of individual and corporate tax, which he insists inflict penalties on initiative and success and actually threaten survival of our way of life.

The speech follows:

TAXES AND AMERICA'S FUTURE

Since I last spoke to you from this rostrum, a year ago, the Internal Revenue Code has been thoroughly revised. The enactment into law of H. R. 8300, otherwise known as the Internal Revenue Code of 1954, will stand as one of the major achievements of the 83d Congress. This new code contains many important changes of great benefit to all taxpayers. I want to pay high tribute to the leaders, both on Capitol Hill and in the Treasury, who labored so long, so diligently, and so skillfully to bring about this achievement.

But that is not the subject of my address. What is past is prologue. Instead of looking backward, I propose to look ahead to the problems and opportunities of the future.

Our association has a new tax program, developed by its taxation committee and approved by its board of directors. Within the program is an orderly 5-year plan for substantially reducing the high and discriminatory rates of Federal income tax. I believe it is one of the most important plans our association has ever developed, because its adoption would greatly lessen the tax discrimination which now impedes economic progress. Today it is my responsibility—and my great privilege—to present this plan to you and to release it publicly for the first time.

But I have another purpose in my remarks. I want to pose the basic issue of tax discrimination itself. It is time for responsible American leaders, in and out of business, to face squarely this fundamental problem which is the root of 95 percent of our tax difficulties, and join the issue with those who, for cynical political reasons, or sincere but misguided philosophical reasons, favor continued discrimination.

The hour is late.

Not just because 9 years after World War II, individual tax rates have receded little from the wartime peak, and the corporate rate has risen 12 percentage points.

Not just because the \$7 billion tax reduction this year, except for repealing the excess-profits tax, hardly touched the problem.

Not just because the great postwar inflation, which concealed the economic evils of the discriminatory rates, has run its course, and fully competitive conditions have returned to the economy.

Not just because the promise of a more abundant life for a rapidly growing population is at stake.

Not just because sound tax policy is essential to our future military security.

¹ Congress of American Industry.

The hour is late for all these reasons, but it is later still because we businessmen, individually and collectively, through our companies and firms, our trade associations and chambers of commerce, our service clubs and professional organizations, have been too complacent to join in a consistent effort to define the issue, pick a common target, and work together to achieve a fair and equitable tax structure.

No wonder, then—

That we debate phoney issues and propose tax reforms which seek to ease the effects rather than eliminate the causes.

That we elect and reelect politicians who bleed for small business but support a tax structure conceived by Karl Marx to liquidate the middle class.

That so few of us recognize that the true meaning of "ability to pay" is proportional taxation, not progressive confiscation.

No wonder, then, that we have a tax structure which destroys ambition, penalizes success, discourages investments to create new jobs, and may well turn a nation of risk-taking entrepreneurs into a nation of softies who place security above opportunity.

Too often we businessmen have been more concerned with the immediate and localized effects of our tax structure than with its basic principles. Too often we have quarreled among ourselves about who is to be taxed, and when we have agreed it has frequently been on some mitigating device or gadget to soften the harsh effects of the high rates instead of meeting the main issue. We have thus permitted the opposition to divide and rule. While they accused us of seeking tax loopholes, we have been indifferent to the devices by which they have diverted the debate from the underlying issue into one bypath after another, until the one important question has been lost in a deep thicket of socialist dialectic.

The hour is late, but not too late. There is no excuse for our hesitating any longer. With all the strength of equity and logic on our side, and with the urgent need for taking the tax shackles off economic progress, the initiative is ours if we have the courage to take it. It's time to put the opposition on the defensive. It's time to make a direct frontal assault on this tax system which was taken out of the book of Karl Marx and has no proper place in a free America.

If we fail to force this issue, we will have only ourselves to blame.

With the future welfare of all Americans so obviously linked to the growth of a healthy industrial system, who can contend that corporate rates of over 50 percent do not impede investment, discourage initiative, and retard the creation of new jobs for the million persons per year who are being added to the labor force? It should be obvious to even the simplest intelligence that a continuation of these rates will bring about economic strangulation.

Anyone who contends to the contrary is in the position of the man who fell off the roof of a 10-story building and, as he went past the third floor, shouted, "I'm doing all right so far."

The situation is even more obvious, the story more simple, with respect to the progressive individual income tax. You can tell the story as well as I. This tax strikes hardest at the small-business man, the new business, the little unincorporated enterprise which yearns for growth. You can cite the rates—not just the 91 percent top rate, but the steep progression which reaches 50 percent at \$16,000 of taxable income.

You can equip yourself with illustrations. You can get familiar with the book by Harvard's Professor Sanders called *Effects of Taxation on Executives*, which presents a moving drama of instance after instance in which high rates have frustrated human incentives.

You can appeal to common sense with such hypothetical examples as telling your sales force: "I'm going to put new commis-

sion rates into effect. The harder you work, the more sales you bring in, the lower your rate of commission is going to be." Any manager who would be so stupid ought to have his head examined; yet that is exactly what our Government for years has been saying to every taxpayer.

When you put the progressive tax structure in this perspective I think you will be surprised at the people who will hear your story through and be convinced, especially when they learn what few now realize—that the high rates produce so little revenue that the whole progressive structure could be wiped out for the same cost as raising exemptions \$200. In other words, if you were to wipe out the entire superstructure of progressive rates and leave only a 20 percent tax across the board on all taxable income—and mind you, we are not advocating this—it would raise as much revenue as if you left the rate structure exactly as it is and gave every taxpayer an additional exemption of \$200.

So much for the issue; now for the plan.

In the time available to me I can present it only in outline. To get its full flavor, to understand the underlying facts on which it is based, and to be prepared to meet the opposition, you must read the whole program.² Please do. Letting George read it won't make you a salesman, and in this campaign everyone of us must be a fully equipped salesman.

When members of your committee and your staff studied the problem of discriminatory rates we were confronted by two stubborn facts.

The first is that with the Federal budget now some \$14 billion below the last Truman budget, reductions in expenditures will not come as easily in the future.

The second is that programing for relief from the high rates on a year-to-year basis has proven to be a futile procedure.

These facts led us to one simple conclusion—that we should stake out a claim to the tax-reduction opportunities which come from the increase in the tax base and the rise in tax receipts resulting from the growth of the economy. In other words, we would recapture the revenue coming from the operation of the growth factor and use it exclusively to reduce the discriminatory rates; we would extend the plan over a period of years until moderate and bearable rate levels were reached.

We have confidence that putting this plan into effect will provide the best guaranty that the economy will continue to grow. We are convinced that an established plan—with specific goals at the end of a set period—will provide the maximum benefit, because the confirmed promise of further relief in the future will compound the stimulation provided by current reductions. We tentatively set our target date 5 years ahead and, interestingly enough, the various parts of the plan fell neatly into place within this time limit.

The plan assumes no anticipation of general increase in revenue requirements over the next 5 years. The present Federal revenue is approximately \$60 billion annually. Our basic assumption is that this can be used as the measure of maximum revenue requirements until the goals of the plan have been achieved. The question, then, is: If we hold revenues at \$60 billion, how many dollars would become available as a result of the growth factor for reducing the excessive rates?

Economic growth over the greater part of the past half century has averaged about 3 percent per year. If we project this growth into the future and apply it to the Federal tax structure, we determine how many revenue dollars are available to reduce the rates.

On this basis, we find that if the rules are not changed, total revenues will gradually increase from \$60 billion per year to about \$69 billion at the end of a 5-year period. In deciding to use this \$9 billion as the measure of potential reductions, we have two reasons for being sure of our ground. The first is that, because of the composition of the tax structure, the tax base and hence tax revenues tend to grow somewhat faster than the growth in the economy as a whole. The second is that contemporary economists are projecting a possible rate of growth of up to 4½ percent over the next decade or so.

Turning now to the rate structure, we find that both the top individual rate and the top corporate rate can be reduced to 35 percent with an apparent revenue loss of only \$8.4 billion, which is one-half billion less than the amount conservatively estimated to be available.

The reduction in the individual income tax would be the least costly. This is because, contrary to popular opinion, the progressive element of the rate structure is by far the least productive of revenue. Let me illustrate. The Government, this fiscal year, expects the individual tax to yield about \$28½ billion. Our figures show that a little more than \$24 billion, or 84 percent of this, will come from the basic rate of 20 percent which is paid by all taxpayers on the first bracket of income. Only about \$4½ billion, or 16 percent, will come from the entire progressive element of the rate structure. This is why we can achieve such a drastic reduction in progression with so little effect on revenue.

We, therefore, propose the making of five annual reductions of 16 percent each in the progressive element of each rate bracket—with each reduction computed on the original element rather than on the declining balance. This would reduce the entire progressive scale proportionately and would bring the top rate down to 35 percent at the end of the period. The eminent fairness of this approach is obvious. All income taxpayers would receive the same percentage reduction of their tax burdens which result from progression.

The relationship between rates and revenue is quite different when we come to the corporate tax. Each percentage point of the combined rate produces the same amount of revenue. But, the base of this tax, corporate profits, is relatively small, so it takes high rates to produce large revenues.

In determining the goal for corporate rate reductions, we are mindful that many problems of tax administration and corporate management would largely disappear if there were approximate equality in corporate and individual rates at moderate levels. With a plan to bring top individual rates down to 35 percent, it is apparent that we should set the same goal for corporate rate reductions.

This means cutting 17 percentage points from the present combined corporate rate of 52 percent. The first step is insistence on the reduction of 5 percentage points in the normal tax, which is scheduled for April 1, 1955. Then in each of the succeeding 4 years, there would be a further reduction of 3 percentage points bringing us to a combined rate of 35 percent.

At the end of the 5-year period the annual revenue loss from these reductions would be \$4.7 billion in the corporate tax and \$3½ billion in the individual tax. This makes a total apparent revenue loss, as I mentioned earlier, of slightly more than \$8.4 billion for the plan as a whole—a loss which would be more than offset by the increased yields resulting from growth in the economy.

The most amazing thing about this plan is that it achieves so much at so little cost. Instead of whittling away at the tax base, it will strengthen it. Instead of grasping all tax reduction opportunities, it leaves the field

wide open to apply all reductions in expenditures to reducing other taxes.

We specifically recommend that, during and after accomplishment of this plan, additional opportunities for tax reduction be largely used to bring down the first bracket rate of the individual tax—which would provide the greatest direct benefit to the greatest number of taxpayers. We are convinced that achievement of our plan would have such a buoyant effect on the economy, and so strengthen the revenue base, that over the years there would be more, rather than less, opportunity for reduction in this 20-percent base rate.

With an issue and a plan, we are ready to operate. We can hope that leaders and groups representing all segments of American life will join us in promoting this proposal. Yet, regardless of who joins us, we have the responsibility to see the issue through. As businessmen, we are custodians of an economic system which has provided more of the good things in life for more people than any other system known to man. From our own experience, we know that the high and discriminatory rates of individual and corporate tax inflict a great penalty on initiative and success; that they undermine the capacity of the Nation to provide the venture capital which is the lifeblood of a free economic system—thus we know that the survival of our very way of life is threatened.

Despite our responsibility, however, we will not avoid being accused of self-interest. Our motives will be suspected in some quarters. I truly believe, however, that our goal is attainable and that we should secure an increasing number of converts to our cause. I hope we will find that support for the present discriminatory system, and opposition to fair and reasonable rates of income tax, has been based more on cynical opportunism than on an actual desire to persecute and harass the productive forces of the Nation.

Nevertheless, the soapbox orators of the left will pull out of the bag all the old tricks—the emotional phrases designed to beguile and becloud the basic issue. We will hear much of the phrase "ability to pay" as it has been distorted and twisted by muddled thinking.

We may have thrown at us the old charge of "tax relief for the greedy but not for the needy." In all probability we will have to deal with the new and ingenious phrase "the trickle-down theory of tax relief," coined in the heat of the debate over the 1954 tax legislation.

This latest phrase is a vicious and presumably deliberate distortion of the economic process of saving and investing. The result of this process is not to trickle down, but to lift up. The saving of part of what we have produced, and its investment in tools to provide more jobs, has lifted this Nation to unparalleled heights of industrial strength. It has provided a standard of living which is the envy of the world. Should fabricators of this kind of economic libel prevail in dominating tax policy in the critical period ahead, we will indeed, have reason to fear for America's future.

The constant association of responsibility to pay taxes with economic status has set class against class. It has created gulfs of mistrust where bridges of understanding should exist. It has led to the imposition of punitive taxes on the numerically small, but economically indispensable, segments of a free capitalistic society—taxes, which if continued, could destroy the society itself, not just the capitalists. That's just what Marx intended.

We have a long way to go.

Hopefully, I say to you, the way can be shortened. It can be shortened if the leaders of both our great political parties decide there is more to be lost for the Nation, which they all love and serve, than there is to be gained for the respective parties, by

² May be obtained from National Association of Manufacturers, 2 East 48th Street, New York, N. Y.

continuing the stalemate over high and discriminatory income tax rates.

There is no partisanship in devotion to the cause of keeping our Nation free and strong.

There is no partisanship in dedication to the endless promise of our free enterprise system.

Crippling tax rates cast a long shadow over the fulfillment of that promise. The Nation is faced by a peril which transcends party lines. We need statesmanship which also transcends party lines.

Hoover Commission Latest Report a Blow to Many Existing Veterans' Laws

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. EVINS. Mr. Speaker, the new Hoover Commission report to the Congress on personnel and civil service, in effect, is a repeat of the job and the recommendations made some 4 years ago by the original Hoover Commission.

Certainly the position taken in this new report is a repeat performance so far as the basic rights of veterans are concerned, inasmuch as the recommendations propose a further whittling away of the vital veterans' preference rights under existing law.

Foremost among the recommendations again put before the Congress, is the abandonment of the rule of three, the means by which initial selection for jobs in the Federal service has traditionally been made. The substitute offered would be a rule of five, which plainly means there will be no veterans' preference of any consequence—a system of select any and pass over others. A further recommendation is made for the elimination of the numerical rating and the present register system—the substitute offered being some loose device called the category system.

The Hoover Commission would also limit veterans' special appeal rights and otherwise whittle away at the statutes.

The recommendations in this regard should again be defeated. In this connection, Mr. Speaker, I desire to have inserted in the Appendix of the RECORD, along with my remarks, an editorial entitled "Hoover Commission Latest Report a Blow to Many Existing Veterans' Laws," which appears in the current issue of the National Tribune-The Stars and Stripes, a publication of the veterans of the United States.

The article is as follows:

HOOPER COMMISSION LATEST REPORT BLOW AT MANY EXISTING VETERAN LAWS—CALLS FOR REDUCTION IN COMPENSATION FOR SOME SERVICE-CONNECTED CASES—WOULD DENY HOSPITALIZATION TO NONSERVICE GROUP AND ASKS FOR PROMISSORY NOTES FOR CARE IN CERTAIN CASES—HOSPITAL PROGRAM CUT

The Hoover Commission last Sunday night released its special study on the vastness of Federal health and medical services, and recommended radical surgery of such services.

The Commission's economy knife was directed chiefly against medical services of the

Veterans' Administration, but other medical programs such as those of the Armed Forces, Public Health Service, and other Federal arms also would be overhauled and curtailed.

The report, which deviated considerably on some major points from the recommendations of the Commission's medical task force which spearheaded the study, recommended:

That VA hospitalization and other medical services be confined only to service-connected ailments, and to those veterans with nonservice-associated illness who are truly indigent—and are proved to be so needy they can't go elsewhere.

That even needy veterans with non-service-associated illnesses be required to sign some non-interest-bearing promissory note, obligating them to pay for their hospitalization or other medical care at a future date should their financial state improve.

That the whole VA system of disability pension ratings for service-connected infirmities be made more realistic to the effect of such disabilities on earning capacity. (The Commission cited, as example, that present VA practice allows 30 percent disability, with pension of a minimum of \$50 a month, for amputation of a great toe in service-connected cases.)

That there be more cross-servicing between the military hospitals to better fill some hospitals and eliminate others now only partially filled. Thus, sailors would be admitted to Army hospitals; soldiers might go to Air Force hospitals and, in general, admissions would be made for convenience rather than according to the kind of uniform the patient wears.

That merchant seamen patients be no longer eligible for care at public expense. These seamen are now cared for at 12 Public Health Service hospitals at a cost estimated by the Commission's medical task force at about \$12 million a year.

That all plans to build any more VA general hospitals, excepting those actually under construction or contracted for construction, be withdrawn. This would forever kill the hopes of those fighting for a new VA hospital for the Washington area.

To effect many of its major recommendations, the Commission urged creation of a Federal Health Advisory Council to coordinate Government medical policies and oversee systematic cross-servicings among the 66 administrative units now having medical functions.

The Commission also asked the Government to develop a voluntary, contributory system of medical and hospital insurance for its civilian employees, rather than provide the medical services and hospitalizations in Government institutions.

The report complained that Federal agencies have assumed more and more responsibilities for complete or partial health and hospital care until they now service some 30 million Americans. The cost of such servings, the report noted, now exceeds \$4 billion, including \$2,030,000,000 for disability allowances under "a cumbersome system which breeds inefficiency and huge waste."

Unless something is done, these costs and coverages will increase, it was stated in the Commission's report.

The medical report is the latest of a series the Commission is making on Government reorganization. An earlier medical task force for the first Commission on Organization of the Executive Branch of the Government made similar findings, in March 1949, on "enormous and expanding Federal medical activities, devoid of any central plan."

The report similarly complained that in addition to the wastage, the Federal medical services also drain off physicians and dentists from private practice. In 1954, the newest medical task force estimated, more than 6 percent of the active medical per-

sonnel in this country was employed by the Government.

The Commission's report is scheduled to be presented to Congress this week and since it touches on so many controversial points it is certain to meet many objections from legislators.

One, Representative CHET HOLIFIELD, of California, a nonveteran, who also is a member of the Commission, filed the sole Commission dissent, which accompanied release of the report and recommendations.

Congressman HOLIFIELD called the report recommendations "wholly unrealistic," and said he was opposed to curtailment of any hospital and medical facilities "in the face of impending civilian defense needs."

The Commission's report differed radically from that of its own task force in the recommendations for medical care of veterans with non-service-connected ailments. In effect, the Commission recommended a form of "means test" of financial ability to pay. These veterans, in non-service-connected illnesses, who could pay for part or all of VA hospitalization costs, would have to do so. Others would have to sign obligations for future payments, if they could afford this repayment in the future.

The task force, however, had recommended a form of GI bill of health rights which would offer veterans free care for even non-service-connected illness occurring within 3 years after separation from the service. After that, except for service-associated ailments, veterans would be on their own.

As now practiced, the Commission said, veterans with non-service-connected disabilities can get VA care only if beds in VA hospitals are available, and only if they sign a statement of inability to pay for such care. However, the Commission pointed out, the Veterans' Administration is prohibited by law from challenging such can't-pay statements.

On the task force's 3-year limit on VA hospitalization rights, the Commission said it believes that "the sentiment of American people is that a sick and really indigent veteran should be provided care in a Veterans' Administration hospital." But it recommended that the can't-pay statement should be verified by VA investigators, and that VA be authorized to collect wherever such statements are not substantiated.

"It is difficult to believe," the Commission said in its report, "that all of the approximately 369,000 such veterans given care last year were actually unable to pay for at least part of their hospital and in-patient medical care."

Lincolnite Lodge, No. 567, Slovene National Benefit Society, Favors Supporting, Strengthening, and Expanding REA, TVA, and Public Power

EXTENSION OF REMARKS

OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks, I would like to have printed a letter I received from the Lincolnite Lodge, No. 567, Slovene National Benefit Society:

SPRINGFIELD, ILL., February 23, 1955.
Representative PETER F. MACK,

House Office Building,

Washington, D. C.

DEAR CONGRESSMAN MACK: The Lincolnite Lodge, No. 567, Slovene National Benefit So-

ciety, with an adult membership of 104 persons, went on record unanimously, February 20, 1955, as follows:

"We call upon our two Senators and Congressman PETER F. MACK, to support, strengthen, and expand REA, TVA, and public power."

We hope to hear from you soon, and learn where you stand on the above questions.

Sincerely,

JOE G. BRINOCAR,
President.

AUBURN, ILL.

ADAM BUNEVICH,
Secretary.

SPRINGFIELD, ILL.

Eisenhower's So-Called Power Partnership Reverses Half a Century of Public Power Policy

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. ENGLE. Mr. Speaker, the principle of low-cost public power with preference to municipalities and other public agencies has been stated at least 13 times in acts of Congress dating from 1906. In other words, for almost 50 years the Federal Government has consistently followed a policy of selling publicly produced power at the lowest possible rates, giving preference to municipalities and public agencies. Furthermore, that has been the policy of the executive agencies in the generation and sale of electric energy during all of that time, including the present administration up to and including the issuance of the power statement made by the Department of the Interior with the approval of the President in August of 1953.

The adoption of the so-called power partnership program therefore is a reversal of almost half a century of power policy in the Federal Government. It is a complete reversal of the low-cost power principle and a complete abandonment of the preference to municipalities and other public agencies. If this new policy is adopted and put into effect, there will be no more low-cost public power, and public agencies will no longer be able to secure such power on a preference basis, or at all.

The reversal of this historic policy in the Federal Government will have the effect of turning over for the exclusive benefit and profit of the private power monopoly the major yet-to-be-developed hydroelectric resources of the Nation. The huge investments of the Federal taxpayers in these great projects will be in a large measure handed over for the profitable use of the private utilities.

It gives the private utilities the benefit of the Government's low interest rate on the storage features of these projects used for power—no doubt the power companies would be glad to have the Federal Government build the storage features on all their projects on the same basis.

This would enrich the treasuries of the private utilities but it will leave the general public without the benefit of a low-cost power supply. The private power monopolies, operating with what amounts to a guaranteed profit on their investment, will be able to charge the power consumers whatever price they choose to fix or can wrangle from the various State agencies established for the purpose of regulating power rates. In my opinion, this is exactly the opposite direction to which the American people want to go.

CVP PROJECT CITED

An example of how this policy will operate can be readily seen by asking what would have happened if such a power-partnership principle had been applied in the construction of the Central Valley project. Under those circumstances, the private power company would have built the powerhouses at Shasta and Keswick, paid the Federal Government a price for storing the water in Shasta Dam, and then distributed and sold the power at its established commercial rate throughout its service area in California. There would have been no low-cost Government public power for the farmers in the irrigation districts in California, or for the Federal installations and the municipalities using that power at the present time. There would have been no low-cost public power in the market with which to compare the rates of the private utility, thus forcing a more favorable contract as has been done for the city of Redding. There would be no power to operate the pumps at the delta to lift the water of the Central Valley project to the San Joaquin Valley, unless the Federal Government turned around and bought some of its own power back from the private utility for that purpose, presumably at a much higher rate than is presently being charged the farmers of the San Joaquin Valley for the use of power. The revenues from power which presently are used to subsidize the irrigation development in the San Joaquin Valley would be nonexistent. In short, the Central Valley project would never have been built and today would not be serving the needs and growth of the State of California.

Even a more dramatic example is the possible application of this principle on the power development on the Columbia River. Great industrial development has followed the low-cost available power in the Northwest; however, had private power companies taken over the development of these powerhouses, the cash receipts they paid to the Federal Government for storing the water would be returned to the United States Treasury and the power would have been sold on the market at the going commercial rate. The great aluminum plants that contributed so much during the Second World War would not have grown up around that kind of a power market.

PUBLIC POWER AN ASSET

There is little real distinction between the taxpayers and the power consumers of an area. Everybody who turns on a light pays taxes in one form or another,

and everybody who turns on a light pays a light bill. Low-cost public power produced in this area is a rebate on taxes to every consumer who turns on a light. If that public power is turned over to a private utility, the light consumer pays the commercial rate and the private power company puts the profit in its pocket. Low-cost power is an asset in every area in which it is produced and distributed. History has shown that the volume of use of electricity and industrial growth rises in proportion to the reduction in power rates. That has been true not only in the Northwest, but in the TVA area. Turning the powerhouses on the proposed Trinity River project over to the P. O. & E. Co. is an assessment against every man who uses an electric light or electric power in his business in this whole area.

While belaboring the partnership idea at home, and calling on the local people to build their own projects, no such philosophy is being advocated or put in effect overseas. We are committed to spend nearly \$2 billion—1.7 billion—for irrigation and power developments in foreign lands. This compares with roughly two and one-half billion—\$2.4—spent in over a half century in this country. Not one penny of this foreign expenditure will be repaid, principal or interest, while here at home repayment is becoming the main test for new projects. Why has our Government agreed to give away nearly as much for irrigation and power development in 6 years of the Marshall plan as we spent in 50 years of reclamation here at home? Obviously because it is a good thing for the economies of those countries we are trying to help. I am in favor of doing a little something for America too as we go along—and without a lot of argument about partnership, and how soon the project is going to pay back to the last penny.

PROGRAM INCONSISTENT

But the inconsistency in this administration's clampdown on irrigation and power development does not end there. The projects under construction in Europe today with your money are all for power—nothing for irrigation—a million one hundred and fifty-five thousand and kilowatts—1,155,000 kilowatts. If anyone suggests that the Federal Government here build a steam plant, a howl goes up to high heaven. But in Europe most of the power being built is steam power—900,000 kilowatts of it, only 255,000 in hydroelectric power. We have had knockdown and dragout fights over the Federal Government building transmission lines, but in our foreign aid program we build not only the transmission lines but the distribution systems as well.

Is this "creeping socialism" here at home, and something good and beneficial in foreign countries? The answer is no—it is good for those countries, and it would be good for us. But here we have a well-healed power lobby that picks the pockets of the power consumers in order to poison their minds with false propaganda.

Report of Presidential Committee Regarding Supplies and Reserves of Coal, Oil, and Natural Gas for Defense and Peacetime Requirements

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. VAN ZANDT. Mr. Speaker, early in July 1954 a group of Congressmen representing the soft coalfields in eastern United States visited the White House and conferred with President Eisenhower regarding depressed conditions in the industry that were having adverse effects on the railroads and related industries.

After our conference with President Eisenhower the Chief Executive appointed an Advisory Committee on Energy Supplies and Resources Policy. The Director of the Office of Defense Mobilization, Arthur Flemming, was designated as chairman with the heads of the following agencies serving as members: Departments of State, Treasury, Defense, Justice, the Interior, Commerce, and Labor.

The White House directive respecting the committee's assignment included the following specific statements:

At the direction of the President the committee will undertake a study to evaluate all factors pertaining to the continued development of energy supplies and resources fuels in the United States, with the aim of strengthening the national defense, providing orderly industrial growth, and assuring supplies for our expanding national economy and for any future emergency.

The committee will review factors affecting the requirements and supplies of the major sources of energy including: coal (anthracite, bituminous and lignite, as well as coke, coke tars, and synthetic liquid fuels), petroleum, and natural gas.

The committee has been aided greatly by an able and representative task force appointed pursuant to the President's instructions. The committee's recommendations are set forth as follows:

THE WHITE HOUSE REPORT ON ENERGY SUPPLIES AND RESOURCES POLICIES

INTRODUCTION

The importance of energy to a strong and growing economy is clear. As conditions of supplies and reserves of coal, oil, and natural gas change and as both defense and peacetime requirements come more clearly into focus, the bearing of Government policies upon energy needs reexamination.

What degree and kind of public regulation is appropriate to the present situation and future outlook? What trade policies for energy supplies will most effectively express the overlapping national needs for adequate protectable supplies in case of war and for encouragement of economic growth of this country and friendly countries elsewhere in the world? What steps may be taken to improve the economic position of the coal industry, now seriously depressed, without penalizing competing industries, as a means of enhancing the ability of that industry to contribute to the national defense? More particularly, should specific changes be made in tax, freight rate, research, Government purchasing, or other policies in the energy field?

These and other policy questions press for careful review and decision.

On July 30, 1954, the President established an Advisory Committee on Energy Supplies and Resources Policy. The Director of the Office of Defense Mobilization was designated as chairman and the heads of the following agencies served as members: Departments of State, Treasury, Defense, Justice, the Interior, Commerce, and Labor.

The White House directive respecting the committee's assignment included the following specific statements:

"At the direction of the President, the committee will undertake a study to evaluate all factors pertaining to the continued development of energy supplies and resources fuels in the United States, with the aim of strengthening the national defense, providing orderly industrial growth, and assuring supplies for our expanding national economy and for any future emergency.

"The committee will review factors affecting the requirements and supplies of the major sources of energy including: coal (anthracite, bituminous, and lignite, as well as coke, coke tars, and synthetic liquid fuels); petroleum and natural gas."

The committee has been aided greatly by an able and representative task force appointed pursuant to the President's instructions. The committee's recommendations are set forth below.

RECOMMENDATIONS

1. Natural gas regulation

We believe the problem of natural gas regulation should be approached from the viewpoint of assuring adequate supplies and the discovery and development of additional reserves to support such supplies, in the interests of national defense, an expanding domestic economy, and reasonable prices to consumers.

To secure these objectives, it is essential to give due consideration to (1) the operations known as the production of natural gas, (2) the transportation of gas in interstate transmission lines, and (3) the distribution of gas in municipalities. Individual companies may engage in more than one of these activities. Each operation of such companies should be treated by like criteria according to its appropriate industry function.

In the production of natural gas it is important that sound conservation practices be continued. This area of conservation management is under the jurisdiction of State conservation commissioners. In the interest of a sound fuels policy and the protection of the national defense and consumer interests by assuring such a continued exploration for and development of adequate reserves as to provide an adequate supply of natural gas, we believe the Federal Government should not control the production, gathering, processing, or sale of natural gas prior to its entry into an interstate transmission line.

The interstate transmission of natural gas by the interstate transmission lines and the subsequent sale of such gas for resale is a public utility function and should be under the regulation of the Federal Power Commission. In considering the certification of new lines and applications for increased rates based on new or renegotiated purchase contracts, the Commission should consider, in order to provide protection for the consumer, not only the assurance of supply but also whether the contract prices of the natural gas which the applicant has contracted to buy are competitively arrived at and represent the reasonable market field price, giving due consideration, in the interest of competition, to the reasonableness and appropriateness of contract provisions as they relate to existing or future market field prices.

The several States or their political subdivisions should continue to provide the public utility regulation of distributing com-

panies in accordance with usual utility practices.

Thus the complete cycle of natural gas production, transmission and utilization will be appropriately regulated: the production and conservation of natural gas by the State conservation commissions; the interstate transmission of natural gas by the Federal Power Commission; and the distribution by the local public utility commissions.

2. Sales below cost by interstate pipeline companies

The basic principles regarding the regulation of natural gas and the use of alternative energy resources should be as far as possible that of free choice by the consumer and free and fair competition among suppliers. This, it is confidently thought, will provide most effectively for the assurance and flexibility of energy supply, both for economic growth and strong security readiness. But sales either for resale or direct consumption below actual cost plus a fair proportion of fixed charges which drive out competing fuels constitute unfair competition and are inimical to a sound fuels economy.

The committee recommends, therefore, that appropriate action be taken that will prohibit sales by interstate pipelines either for resale or for direct consumption, which drive out competing fuels because the charges are below actual cost plus a fair proportion of fixed charges.

3. Eminent domain for natural-gas storage

The power of eminent domain for the acquisition of surface and mineral rights for the development of underground storage reservoirs should be granted subject to appropriate safeguards to protect the public safety, including the mining industry.

4. Crude oil imports and residual fuel oil imports

An expanding domestic oil industry, plus a healthy oil industry in friendly countries which help to supply the United States market, constitute basically important elements in the kind of industrial strength which contributes most to a strong national defense. Other energy industries, especially coal, must also maintain a level of operation which will make possible rapid expansion in output should that become necessary. In this complex picture both domestic production and imports have important parts to play; neither should be sacrificed to the other.

Since World War II importation of crude oil and residual fuel oil into the United States has increased substantially, with the result that today these oils supply a significant part of the United States market for fuels.

The committee believes that if the imports of crude and residual oils should exceed significantly the respective proportions that these imports of oils bore to the production of domestic crude oil in 1954, the domestic fuels situation could be so impaired as to endanger the orderly industrial growth which assures the military and civilian supplies and reserves that are necessary to the national defense. There would be an inadequate incentive for exploration and the discovery of new sources of supply.

In view of the foregoing, the committee concludes that in the interest of national defense imports should be kept in the balance recommended above. It is highly desirable that this be done by voluntary, individual action of those who are importing or those who become importers of crude or residual oil. The committee believes that every effort should be made and will be made to avoid the necessity of governmental intervention.

The committee recommends, however, that if in the future the imports of crude oil and residual fuel oils exceed significantly the respective proportions that such imported oils bore to domestic production of

crude oil in 1954, appropriate action should be taken.

The committee recommends further that the desirable proportionate relationships between imports and domestic production be reviewed from time to time in the light of industrial expansion and changing economic and national defense requirements.

In arriving at these conclusions and recommendations, the committee has taken into consideration the importance to the economies of friendly countries of their oil exports to the United States as well as the importance to the United States of the accessibility of foreign oil supplies both in peace and war.

5. Petroleum refining capacity

The Departments of Defense and the Interior should have studies made by their staffs and expert advisers as to the adequacy of present and prospective refinery capacity, both as to amount and dispersal, as well as other factors, to determine the need for any measures to maintain refinery capacity necessary for defense purposes, particularly the capacity operated by small, independent refineries.

6. Tax incentives

(a) Present tax provisions on coal, oil, and gas production have been an important factor in encouraging development of energy sources at a pace about in keeping with demand. Further analysis and study by the appropriate branches of the Government should from time to time be made to review the amount and method of making such allowances to maintain proper relationships with continuing changes in other features of the tax law. Any changes which may be proposed in the future must be analyzed in terms of their probable effect on development of domestic resources needed for economic progress and national defense as well as the fiscal and tax policies of the Government.

(b) Retroactive tax legislation and special relief provisions should be avoided.

(c) Accelerated amortization should be used only to insure the maintenance of a sound mobilization base for energy supplies.

7. Research and development program for coal

We recognize that coal is a great national asset and endorse a cooperative study to determine what research and development could be undertaken. The coal industry and both Federal and State Governments should participate in this study and its cost.

8. Unemployment and business distress in the coal industry

We recognize that serious unemployment and business distress exist in the coal industry and recommend that the Interdepartmental Committee on the Soft Coal Industry be continued for the purpose of developing for Cabinet consideration specific action programs to alleviate these conditions.

9. Coal freight rates

In order to maintain coal's vitality as an instrument of national defense by improving currently its ability to compete with other fuels, the railroads, by voluntary action, and, in the absence thereof, the Interstate Commerce Commission, by compulsory order, should adjust freight rates to the extent necessary to remove the excessive and disproportionate contribution that coal rates are making to meet the cost of other unprofitable services of the railroad industry. Train load rates should be established to reflect the lower costs of such service.

10. Coal exports

(a) The Government should urge foreign governments to reduce unreasonable discriminatory restrictions against imports of United States coal.

(b) The Government, when making foreign loans, should use its best efforts to ob-

tain provisions to prevent discrimination against United States coal. Discrimination would be judged to exist when United States coal imports are disallowed despite its availability at costs no higher than foreign coal.

(c) The Government should expedite efforts to establish credits through the Export-Import Bank to foreign banking institutions in countries where there is reasonable prospect of repayment so that American coal exporters can offer more competitive payment terms to foreign customers.

(d) Where United States coal can be supplied competitively with other available coal, the Government should use its best efforts to enlarge the participation of United States coal in the foreign aid program.

(e) The Government should compensate for higher shipping costs when incurred as a result of the requirement that 50 percent of all shipments be in United States ships at fair and reasonable United States market rates.

11. Mobilization requirements for coke

The Committee believes that present and prospective rates of shutdown and dismantling of slot-type coke ovens will leave inadequate coking capacity to support full mobilization production of steel and other essential wartime industry.

On the basis of national security, coke requirements can only be met if the Office of Defense Mobilization is directed to prepare plans to make the necessary arrangements and tests to expand coke production rapidly in the case of an emergency.

12. Government fuel purchasing policy

In working out a more consistent and equitable coal purchase policy, the following steps should be taken:

(a) The Secretary of Labor under the Walsh-Healey Act should pursue his present policy of making determinations of wage standards applicable in the coal-producing areas and should establish these standards at the earliest practicable date.

(b) The Government agencies should, to the extent practicable, purchase not less than 75 percent of their estimated annual coal requirements on a contract basis.

(c) All Government agencies purchasing coal should, prior to and after the award of the contract, verify the quality of the coal offered and supplied to the agencies.

(d) All Government contracts for the purchase of coal should contain appropriate escalator clauses which protect the buyer and the seller.

(e) In instances where it is not possible for a Government agency to take all the coal for which it has contracted, the deficit should be apportioned equitably among all participating contract suppliers without penalty to the Government.

(f) Coal suppliers should be required to submit, along with their bids, proof of their ability to produce the requirements at the times specified.

(g) All coal suppliers to the Government, regardless of size, should comply with the Federal Coal Mine Safety Act.

(h) All transactions with the Government relating to coal purchases and supply should be public information.

(i) The domestic fuel purchasing policies set forth above should be applied to purchases of coal by companies acting as agents for the Federal Government, as well as to purchases made direct by Government agencies.

Prior to the purchase of any fuel by a Federal Government agency having a large annual use of fuel, that agency should request advice from the Office of Defense Mobilization as to how this purchase can contribute to the maintenance of a strong mobilization base within the domestic fuels industry. The Office of Defense Mobilization should be directed by Executive order to develop a mechanism for accomplishing this objective.

Tolerant of Our Fellow Man

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following well-prepared news item from the Revere Journal, Revere, Mass., Thursday, February 24, 1955, which merits the attention of each Member of Congress and people of all nationalities and creed:

BROTHERHOOD WEEK

This week has been set aside as Brotherhood Week to foster the spirit of tolerance and good will. Thousands of words will be written, thousands more spoken on the theme that prejudice, antagonism, racial and religious hatreds cannot flourish in this country.

The week will pass. The words, spoken and written, will make little impression. Those who are prejudiced, those who practice racial and religious discrimination, will continue as they have in the past. Good will and tolerance will be nice-sounding words, nothing more.

There is no intention here to decry the efforts of the individuals and groups who are working unselfishly to bring about a better understanding between people of different races and creeds. They are to be highly commended for their work.

Brotherhood Week, however, is a mere gesture, 1 week in the long year in which people are reminded that they should be more tolerant of their fellow men. Those who believe in the equality of man do not need the yearly reminder. Those who preach and practice intolerance and prejudice are not moved by it.

Who wants to be tolerated? Tolerate means to endure, as a pain or hardship. Is that sufficient?

Jefferson declared that all men are created equal. That may be, but it is foolish to say that all men go through life equal. The accident of birthplace is considered important to many. The color of a person's skin makes a great difference. The manner in which a person worships God—the same God—often brings abuse and prejudice.

It doesn't seem possible that here in America, where a peace-loving people has been drawn into two world wars and a third combat in Korea because it couldn't remain indifferent to wanton cruelties, intolerance exists. It doesn't seem possible that prejudice and hatred are so rife that an annual publicity campaign is needed to unmask it.

Revere is so free of prejudice that those who are fortunate enough to live here find it hard to believe that it exists in a dangerous degree in a country that, for more than a century and a half, has been a refuge, a haven for the oppressed and persecuted of other lands.

There is no doubt, however, that this prejudice has assumed alarming proportions no farther away than sections in Greater Boston. It has blazed forth in Milton just as Brotherhood Week is being observed. It has come out into the open where men and women of decent and honorable principles can see it in all its hideousness and lend their efforts to crush it as they would a venomous snake.

If, because of their faith, the Jews are maligned and abused today, is it not probable that the Catholics and others of minority creeds and races may be the chosen victims tomorrow? Another Ku Klux Klan may

spring from this poisonous nucleus, unless stamped out, to burn its fiery crosses on the hills of New England. Crosses that, like the symbol of Nazism, corrupt the Cross of Christianity, deathless personality of Him who died on Calvary that the sentiment of equality, understanding, and sympathy might bind humankind together in a true brotherhood of man.

There is but one way to combat prejudice and religious hatreds and that is by education. Education taught in the homes and in the early grades of the schools when children are young and impressive. Parents have a responsibility in teaching their children that the color, race, or creed of a person is of less importance than his character.

Prejudice is the mangy whip of cowardice. Very few are they who have the courage to admit intolerance. Even though it be the blackest lie, the apostle of prejudice will loudly proclaim that he is free from racial or religious hatreds.

To preach brotherhood is not enough. It must be taught to the young. It must be practiced by men and women throughout the year. Until we accept this priceless virtue of equality we cannot truly call ourselves Americans.

Resolutions Approved by the Illinois State Legislative Committee of the Brotherhood of Railway and Steamship Clerks at Its Fifth Biennial Meeting, Held at the Hotel Sherman in Chicago

EXTENSION OF REMARKS
OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks, I would like to have printed a letter I received from the Illinois State Legislative Committee of the Brotherhood of Railway and Steamship Clerks, together with three resolutions unanimously approved by this committee at its fifth biennial meeting held at the Hotel Sherman in Chicago on January 22-23, 1955:

FEBRUARY 18, 1955.

Hon. PETER F. MACK, JR.,
United States Representative, 21st Congressional District of Illinois, House Office Building, Washington, D. C.

DEAR MR. MACK: At this committee's fifth biennial meeting, held at the Hotel Sherman in Chicago, on January 22-23, 1955, the attached three resolutions were unanimously approved by the delegates in attendance. These delegates (1 from each of the more than 200 local lodges in Illinois) represent some 50,000 members of our organization who reside in this State.

The following descriptions are quite brief as I believe you will find the resolutions self-explanatory:

Resolution No. 4, on Public Law No. 199: We oppose the repeal of this law. As you know, Representative BROVILL has already caused the introduction of H. R. 73, a bill designed to repeal Public Law No. 199. We are opposed to the passage of H. R. 73.

Resolution No. 5, on the question of a minimum wage: We favor a minimum-wage law of at least \$1.25 cents per hour.

Resolution No. 26, on the diversion of mail from railroads to trucks and planes: We oppose this diversion of mail from the railroads.

In behalf of our more than 50,000 Illinois members, I am requesting your support in carrying out the intent of these resolutions.

With appreciation for all past courtesies, and with kind personal regards, I am

Yours truly,

EARL G. QUINN,
Secretary-Treasurer.

RESOLUTION No. 4, SUBMITTED BY ARTHUR W. POST, LEGISLATIVE REPRESENTATIVE, LAKE-SIDE LODGE, No. 2219

Whereas Public Law No. 199, a law to readjust size and weight limitations on shipments entered as fourth-class parcel-post mail, went into effect January 1, 1952; and

Whereas, this law was instrumental in reducing the unfair competition which the Railway Express Agency had suffered through Government-subsidized parcel-post service; and

Whereas this has resulted in an increase in express traffic and reduced unemployment among involuntarily furloughed express members; and

Whereas, our members now employed by the Railway Express Agency have a greater feeling of security in their positions; and

Whereas, the mail-order firms and other heavy users of the subsidized parcel post service were instrumental in having legislation introduced in the 83d Congress, which if passed would have repealed Public Law No. 199; and

Whereas, these same interests will undoubtedly bring about the introduction of legislation designed to repeal or amend Public Law No. 199 in the 84th Congress: Now, therefore, be it

Resolved, That the Illinois State Legislative Committee, in regular session convened, this 22d day of January, 1955, go on record as being opposed to any legislation designed to unfavorably amend, or bring about the repeal of, Public Law No. 199; and be it further

Resolved, That a copy of this resolution be forwarded to all United States Senators and Representatives from the State of Illinois.

RESOLUTION No. 5, SUBMITTED BY ARTHUR W. POST, LEGISLATIVE REPRESENTATIVE, LAKE-SIDE LODGE, No. 2219

Whereas the cost of living has risen steadily during recent years; and

Whereas this high cost of living has reduced countless thousands of our working people to a miserable economic status; and

Whereas the present 75 cents per hour minimum wage is entirely inadequate to meet rising living costs; and

Whereas an increase of the minimum hourly wage base to at least \$1.25 is most necessary to alleviate the sufferings of these people now forced to exist on the starvation minimum wage of 75 cents per hour: Now, therefore, be it

Resolved, That the Illinois State Legislative Committee, in regular session convened, this 22d day of January 1955, go on record as supporting the policy of the American Federation of Labor in requesting the 84th Congress to adopt the base of \$1.25 per hour as the minimum wage and to extend this law to cover millions of workers now exempt; and be it further

Resolved, That a copy of this resolution be forwarded to all United States Senators and Representatives from the State of Illinois.

RESOLUTION No. 26, SUBMITTED BY EARL G. QUINN, LEGISLATIVE REPRESENTATIVE, LODGE No. 188

Whereas there is a growing tendency on the part of the Post Office Department to divert more and more mail to trucks and planes; and

Whereas the railroads have invested millions of dollars in buildings and equipment to handle the mails; and

Whereas the railroads are required to accept the mail and transport it at the direction of the Postmaster General; and

Whereas many thousands of railroad employees, coming under the class and craft of employees represented by this brotherhood are seriously affected by the diversion of the mails and are being deprived of their employment: Now, therefore, be it

Resolved, That the Illinois State Legislative Committee, in regular session convened, this 22d day of January 1955, protest this diversion where reasonable rail facilities exist for the transportation of the mails; and be it further

Resolved, That a copy of this resolution be forwarded to our grand president, George M. Harrison, and to all United States Senators and Representatives from the State of Illinois, calling their attention to this serious condition and soliciting their assistance to correct this constantly growing threat to the investment of the carriers and the jobs of the employees.

Weapons Fail To Replace the Human Factor

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include an article that appeared in the San Diego Union, San Diego, Calif., under date of February 13, 1955:

WEAPONS FAIL TO REPLACE THE HUMAN FACTOR—PROPOSED MILITARY PAY RAISE WILL HELP BOOST MORALE, ENCOURAGE REENLISTMENTS

Despite tremendous scientific advancements, the human factor still determines the success or failure of almost any military maneuver.

Our fighter planes may have the ability to run rings around the Russian MIG's. But they will be shot down if the pilot's ability does not measure up to his aircraft.

Our Navy is equipped with the latest in electronic equipment, and some ships even depend upon Buck Rogers-like rockets for firepower. But unless the fleet has trained men to maintain and operate the equipment, they will be of little more value than the cannons of John Paul Jones' day.

The human factor cannot be ignored even though the Navy, Air Force, Marine Corps, and Army thrive on a scientific age.

Thus when Congress considers the military pay-raise bill, it has under study a program essential to the security of the United States. Without a pay raise and an improvement in other benefits the human factor—the morale of our men—will suffer severely.

Insufficient pay for experienced men and the decline in military benefits since 1948 have to a large degree accounted for tremendous turnovers in the military forces. The result has been damaged morale among those men who have stayed in the service, and the costly loss of skilled military manpower.

The service must be made more attractive if it is to retain its efficiency. Those who sacrifice for their country must not be made to suffer because of a failure to consider their problems adequately.

The immediacy of the problem was reflected in the testimony of Navy Secretary Thomas before a House Armed Services Subcommittee:

"It is alarming to note that the Navy over-all reenlistment rate has fallen from 24 percent in fiscal 1954 to 9 percent in the first quarter of 1955," he commented.

The Navy case is not isolated. Only 11.6 percent of the Army personnel reenlisted in 1954 as compared with 41.2 percent in 1949.

It actually costs the Nation money to skimp on military pay and services such as adequate dependents' medical care. It costs \$3,200 for the basic training of each replacement for a man leaving the service. It costs \$2,000 to \$5,000 more for training in technical skills. And the need for these techniques increases almost daily.

A man who is worried because of uncertainty over the medical care of his family or over whether his pay will cover the essentials at home is unlikely to function at top efficiency. Off Formosa or any other area where our Armed Forces are today, this could be disastrous for both the individual and the Nation.

The Folly of Low Tariffs

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the *Chelsea Record*, Tuesday, March 1, 1955, which points out why we must maintain reasonable tariffs to protect our industries and our workers from the competition of cheap foreign labor:

TARIFFS, OPTICS, AND SECURITY

Recently, before the Ways and Means Committee of the House of Representatives in Washington, Henry S. Woodbridge, vice president of American Optical Co., spoke on pending legislation to change the Federal tariff structure. Points he raised were vital ones, particularly to people in communities where there are optical plants. Chelsea is such a community, with an American Optical Co. plant at 80 Heard Street.

Mr. Woodbridge opposed the proposed change in tariff regulations which would reduce import duties and thereby increase the flow of optical goods, particularly instruments at present, into this country from foreign sources. The proposal, basically, calls for a 3-year extension of the reciprocal agreements, with the President having the authority to reduce duties by 5 percent each year for 3 years.

Imported microscopes and other instruments already present a serious situation for American Optical Co. and all other instrument makers. West Germany, Italy, England and Japan already are sending items to this country in ever-increasing numbers. For example: In 1947, imports represented one percent of the total microscope sales in this country. In 1954 the same figure was 44 percent. Because of the far lower wage scales and living standards in those countries, these imports far undersell domestic products. This, naturally, reduces the volume of the optical business, and the number of jobs in the industry.

The question Mr. Woodbridge raised was: If the optical industry in the United States is eliminated by foreign competition, who will make the necessary instrumentation in the event of a national emergency? If overseas sources of precision optical apparatus should be cut off—as they have been twice in recent history—where would the United States find

the workers to make the lenses and prisms necessary for range-finders, bomb sights and fire-control equipment?

Skilled workers in these fields are not trained in weeks or months. It takes years. If there is no civilian industry—no place where these workers can earn a living at their trade—there will be no skills available if an emergency arises.

An amendment to the proposed bill has been submitted by the industry. It calls only for investigation by the Defense Mobilization Board of circumstances which might threaten national defense or public health with findings and recommendation to be sent to the President for suitable action.

Congress will, eventually, be influenced in this matter by the thinking of the people. Industry has expressed its opinion. People who do likewise may be helping to protect themselves—and their country.

Statehood This Year

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following editorial which appeared in the February 23, 1955, edition of the *New York Times*:

STATEHOOD THIS YEAR?

The cause of statehood for Hawaii and Alaska is not being helped by the evidently divided opinions on the subject within the administration. The State Department is in favor of the admission of both, the Secretary of Defense says Alaska should remain a Territory for the present, the Secretary of the Interior says he personally favors admission of both but with a reservation regarding Alaska, and the President has been in favor of admitting Hawaii but cool toward Alaska.

Furthermore, the congressional approach has confused the issue more than it has clarified it. During the last Congress the House approved statehood for Hawaii, but the Senate tacked Alaska onto the same measure, with the result that no bill on this subject was passed by both Houses. The explanation for this congressional maneuvering is that the Republicans want to admit Hawaii but the Democrats seem determined that neither Territory will be admitted unless both are. Now, with the new Congress, the tug-of-war has begun again, but in somewhat different form.

This time it is the House Interior Committee that has approved a joint Hawaii-Alaska bill with the novel provision that 40 percent of northwestern Alaska may be reserved by the President for military purposes. It has always been the contention of this newspaper, which favors the admission of both Hawaii and Alaska, that the two areas should be handled entirely separately. There is no logical reason why they should be linked, except from the standpoint of partisan politics. However, the prospects for both together do look brighter for this session, inasmuch as the resistance to the joint bill last year came from the House, but this year it is a House committee that has taken the initiative in offering its own joint bill.

The amendment reserving up to 40 percent of northwestern Alaska for military purposes was added to the bill in committee after it was reported that President Eisenhower would veto it without this provision. We see no reason for objection to this amend-

ment, which is reminiscent of the proposal Governor Heintzelman of Alaska made last April that statehood be granted only to the southeastern half of the Territory. There have been differing views as to the effect of statehood on Alaska's military position; but this amendment ought to set at rest all serious doubts on that score.

Prepare To Begin Work on Beardstown's New Seawall

EXTENSION OF REMARKS OF

HON. SID SIMPSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. SIMPSON of Illinois. Mr. Speaker, the Illinois State Journal, of Springfield, Ill., under date of February 27, carried an article dated at Beardstown, Ill., February 26, to this effect, and I quote:

Prepare To Begin Work on the Beardstown's New Seawall.

Beardstown, Mr. Speaker, is in Cass County, Ill., and in the 20th Illinois District. Representing that area, it was my privilege to introduce a bill for the original authorization for this work which is just starting as outlined in the Illinois State Journal.

Many years ago at the expense of the city of Beardstown and the State of Illinois, a so-called seawall was constructed. It is my understanding that at that time, the engineers stated this wall was constructed 28 feet and would be high enough to hold back any flood water of the Illinois River that might come in the future. This did not prove to be correct. In 1943, when the Illinois River was at flood stage this same seawall had to be sandbagged to a height of over 32 feet. Even then, their situation was so precarious that older people and children were evacuated from the city.

Last year, the Civil Functions Subcommittee of the Appropriations Committee included funds to start this project which is just now beginning to take shape. The budget this year has additional funds recommended to be allotted for further construction. The total cost of this project, Mr. Speaker, is estimated at \$3 million. This is to protect a city of over 6,000 people, factories, flour mills, railroad shops, churches, schools, and homes. It is justified in every way.

I simply wish to take a few moments before the Congress to personally thank the United States Army engineers in Washington, in Peoria, and in the Chicago office for their help and cooperation. I wish to thank the Civil Functions Subcommittee for their fine cooperation as well as the full Appropriations Committee. I wish to thank the entire membership of the House for agreeing to the authorization and the first appropriation.

I am doing this, Mr. Speaker, knowing full well that the citizens of Beardstown agree with my statements here today in thanking the House in their behalf for what they have done.

PREPARE TO BEGIN WORK ON BEARDSTOWN'S NEW SEAWALL

BEARDSTOWN, February 26.—Work of driving the sheet piling, which is a preliminary to the beginning of construction of the new seawall here, will start Monday. Several men started unloading the several large loads of piling Wednesday and 10 men will be on hand Monday.

The Peoria Barge Terminal Co. has the subcontract for putting down the piling. The Myers Construction Co., which has established offices at Main and Jackson Streets, has the contract for building the \$3 million wall.

House Democrats Put Politics First

EXTENSION OF REMARKS OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose the following editorial taken from the Des Moines Register of February 23, 1955:

HOUSE DEMOCRATS PUT POLITICS FIRST

Now that the House has passed the indefensible \$20-a-person tax-cut bill, it's up to the Democrats in the United States Senate to demonstrate that the party isn't completely irresponsible with respect to the Nation's fiscal and tax policies.

We think they will. Democrats like Senator HARRY BYRD, of Virginia, will do their best to see that this purely political tax plan does not become effective. They must recognize that it not only would be bad for the Nation but it also would be bad for the Democratic Party.

The House vote was partly explained—but not excused—by the fact that Speaker SAM RAYBURN got mad at some of the attacks on Democrats and at some of the arguments used by Republicans. But a good record of Democratic cooperation on foreign policy and on such issues as the reciprocal trade treaties doesn't justify playing unadulterated politics on a tax plan of this kind.

This tax proposal isn't designed to correct any inequities in the tax structure, nor is it designed to stimulate business. It is inconsistent with demands of many Democrats for increased defense spending. It has no relationship to revenue needs and expenditures. It would increase deficit spending and invite inflation.

If the \$20-tax-cut plan were standing alone—and on its merits—there wouldn't be so much reason to worry about it. The President could kill it with a veto in the event both the House and Senate approved it.

But the plan isn't standing alone or on its merits. It is attached to an important revenue-producing proposal. The \$20 cut wouldn't go into effect until January 1, 1956. The tax bill, however, must be passed by March 31 or lower corporation and excise taxes automatically go into effect. The purpose of the tax bill is to see that the Government doesn't lose some \$2 billion revenue. That purpose would be defeated by including the \$20-tax-cut plan in the bill—and it also would be defeated by a veto of the bill.

So it is very important for Senators to recognize that the responsibility of trying to keep the Nation's economy sound is, like the Nation's foreign policy, a nonpartisan objective. It shouldn't be endangered by trying to win some votes with a \$20 handout.

H. R. 1

EXTENSION OF REMARKS OF

HON. VICTOR A. KNOX

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. KNOX. Mr. Speaker, on February 18 the House passed the Reciprocal Trade Agreements Act to which I was opposed and voted against because of the domestic market being faced with cheap foreign articles that are imported into this country in direct competition with our industries. Our industries are suffering from the lack of markets, and this ultimately produces unemployment.

My position is well fortified through a news article from the Escanaba Daily Press, a daily newspaper published in my congressional district. The article sets forth conditions that exist in a small industry of the 11th District of Michigan.

Under permission granted, I include the article entitled "Cheap Foreign Plywood Is Threat to United States Industry," and that it become a part of the RECORD so my colleagues may be informed as to how cheap foreign products are threatening small industries in the United States of America:

CHEAP FOREIGN PLYWOOD IS THREAT TO UNITED STATES INDUSTRY

The American hardwood plywood industry, taking an alarmed look at the rising tide of unfair import competition, is asking that tariff concessions be modified and quotas imposed on imports of hardwood plywood.

The story of the import plywood problem and its effect upon the industry in Escanaba, Gladstone, and throughout the Nation was told recently in Escanaba by R. D. Behm, Chicago, director of the trade-promotion program for the Hardwood Plywood Institute. Behm talked to the Escanaba Rotary Club, where he was introduced by Russell Lee, Birds Eye Veneer Co. official.

Behm reported that the domestic industry is being seriously injured by tariff reductions that have resulted in a sharp rise in imports.

LOST 300 JOBS

"The imported plywoods are being sold in America at unfair prices much below those required by domestic producers to remain in business," Behm noted. He said the Hardwood Plywood Institute cited these facts in an application for an investigation by the United States Tariff Commission.

The application to the Tariff Commission to modify tariff concessions on cheaply produced foreign plywood and impose quotas on imports will be heard in Washington on March 22.

Birds Eye Veneer Co. and Northwestern Plywood and Veneer will be among members of the Hardwood Plywood Association represented at the hearing. These 2 local industries, together with related woods and sawmill operations, have lost an estimated 300 jobs to the community because of the cheap foreign imports.

The mounting volume of imports, according to the application, has decreased domestic producers' share of the American market, depressed domestic prices, and caused substantial unemployment and wage losses among American plywood workers.

IMPORTS CLIMBING

Tariff concessions were made in 1936, 1949, and 1950, the application pointed out. The

last revision provided for reductions of up to 50 percent from the rates prevailing in 1949.

Detailing the results of the lowered duties, the application asserted that—

Imports rose from 63,362,000 square feet in 1950 to 220,424,000 square feet in 1953, an increase of 348 percent. They have continued to climb in 1954, amounting to 133,750,000 square feet in the first half of the year, compared with 98,831,000 square feet in the corresponding period of 1953. This represented a gain of 35.3 percent. Third quarter totals recently released show imported plywood amounting to 124 million square feet against domestic production of 177 million square feet.

Japan, which accounts for 57.4 percent of the imports, boosted its shipments to this country by 506 percent last year, as compared with 1952. Finland, the second-largest exporter, registered a gain of 583 percent.

FLOODING THE MARKET

Shipments of domestic producers, on the other hand, dropped from 451,663,000 square feet in the first 6 months of 1953 to 337,043,000 square feet in the first half of this year.

In 1951 the ratio of domestic hardwood plywood on the domestic market was 12 square feet to each square foot of imported plywood. By the first half of this year the ratio had shrunk to 2.5 square feet to one. Currently, the rate is closer to 1.4 square feet to one.

The Bureau of Labor Statistics shows that the price index for hardwood plywood declined from 108.4 in 1953 to 101.9 for January and February 1954. The price index for all commodities, however rose from 110.1 in 1953 to 110.8 for January of this year.

HUGE WAGE LOSS

A survey of 43 domestic plywood plants, among the industry's total of 142, revealed that employment was 19.3 percent lower in the first quarter of 1954 than in the similar period of 1953. The reduction in hours worked amounted to 26.8 percent.

Estimated wage losses to American workers as a result of this curtailed output was \$2 million. Extension of the same rate of reduction to the entire industry would indicate a total wage loss of \$5 million to \$3 million for that period.

The Institute's membership accounts for about 60 percent of the total domestic production of market hardwood plywood, according to the application.

While Canada is among the larger plywood exporting countries, the application said, production costs of Canadian manufacturers do not permit them to sell at prices comparable to the unfair prices charged by Japanese and Finnish producers.

Eleven-Year-Old Girl Gains Recognition for Work in Scientific Research

EXTENSION OF REMARKS OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. KLEIN. Mr. Speaker, Miss Lucy Ehrlich, of 100 Thayer Street, New York City, an 11-year-old girl, has recently been notified that her work in scientific research is worthy of recognition and accordingly she received a plaque for her remarkable collection of insects.

Lucy is the granddaughter of Mr. and Mrs. Leo Ehrlich, old and dear friends of mine, and both they and I are very proud of her.

I took it upon myself to write to this gifted youngster in congratulations and good wishes for her achievement, and in encouragement of her continued interest in science. I wrote to her as an indication of the recognition that I think is due to those young Americans who, by their devotion to science, are strengthening our country and contributing to a more informed world.

Letter to a Pro-Communist

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. MULTER. Mr. Speaker, the following article written by Stewart Alsop appeared in his column Matter of Fact in the New York Herald Tribune of February 27, 1955. I direct it to the attention of our colleagues:

MATTER OF FACT

(By Stewart Alsop)

LETTER TO A PRO-COMMUNIST

Was the recantation of self-confessed liar Harvey Matusow carefully stage managed by the Communists? There are signs that it was. For example, as noted in a previous report on the Matusow turnabout, Cameron & Kahn, the publishing firm which is sponsoring the Matusow confession, has a decidedly pro-Communist coloration. And because it bears on this point, it may be worth reproducing, slightly shortened, a letter from this reporter to Publisher Albert Kahn, written after a telephone conversation some 10 days ago:

"DEAR KAHN: When I talked to you on the telephone the other day, you declined to say whether you were a Communist. You said you would take the fifth amendment if asked this question by a congressional committee. And you indicated your true political position in other ways. Accordingly, I think I ought to make my own position clear in the matter of Harvey Matusow's self-exposure, and the issues which it involves.

"It is fashionable nowadays to say that McCarthyism is the greatest threat to American freedom. This may be so, but the fact remains that McCarthyism owes its existence to American communism. Communism, moreover, presents a most serious issue to those who respect our liberties, however much this issue, to the delight of the Communists, has been distorted by McCarthy and those who ape him.

"The issue is this: Should we grant full political rights to those who owe their first allegiance to a potential enemy? On the telephone, you denied that your first allegiance was to the Soviet Union. Maybe so. But as I said on the telephone, only a fool could doubt that the first allegiance of the disciplined, hard-core Communist belongs to Russia, and not to his own country. Therefore, the issue posed above is a real one which needs to be answered. To anyone sensible of the American traditions it is as prickly and difficult an issue as there is.

"Anyone so sensible, for example, will defend against all comers your right, or anyone else's right, to take the fifth amendment. McCarthy's public contempt for this con-

stitutional safeguard is subversive, in the real sense of that word. But this does not mean that it is necessary to admire the motives of those who take the fifth amendment.

"When I made this point to you on the telephone, you complained that people who are not Communists, and so swear under oath, are likely to be jailed for perjury. Asked to name one such, you cited your friend Clinton Jencks, of the Mine, Mill, and Smelter Workers. Now it may be that Jencks was not a formal member of the Communist Party when he swore that he was not a Communist, to comply with the Taft-Hartley law. And there is also no doubt that Matusow lied about Jencks on the witness stand. But this is no sort of evidence that Jencks has actually changed his true political allegiance.

"And there is a most real and present danger in the control of labor unions by those who owe their allegiance to another country. The danger was greater, to be sure, when the Communists, in 1947 and 1948, almost succeeded in seizing control of the CIO—and I am proud that my brother and I played a part in exposing that effort. But the danger is still real.

"This leaves unanswered the question of how to deal with this danger of communism in a free society without creating a greater danger. But one thing I am sure of. Nothing plays more into Communist hands than for the Government to accept the word of any ex-Communist like Matusow who happens along. In taking at face value the testimony of such a man—and he is not alone—without a serious attempt to examine his credibility, the Justice Department and the congressional committee were inexcusably at fault.

"Your taking the fifth amendment will not excuse the fault. Nor, indeed, will the fault be excused if it turns out that the whole Matusow turnabout was carefully planned by the Communists, as I am rather beginning to believe it was. Your Communist friends may think that they have brought off a major coup. But they will be wrong.

For—if only the Congress and the Justice Department have the courage to undertake a serious examination of the new profession of the ex-Communist political informer—Matusow's self-exposure will in the end be good for the political health of the United States. And anything that is good for the political health of the United States is hardly in the long run to the advantage of communism.

"Yours sincerely."

Perhaps two footnotes to this letter need to be added. First, in all fairness it should be said that Kahn vehemently denies that there was any Communist plot to exploit Matusow. Second, a few days after this letter was written, Kahn did take the fifth amendment.

School Lunch Program

EXTENSION OF REMARKS

OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks, I would like to have printed a letter I received from Mr. Charles Romani, assistant superintendent of schools, Bond County Community, Unit No. 2, Greenville, Ill.:

BOND COUNTY COMMUNITY,

UNIT NO. 2,

Greenville, Ill., February 28, 1955.

HON. PETER F. MACK,

Congressman, 21st Congressional District, State of Illinois.

DEAR SIR: This letter is in protest of the proposed \$16-million cut in Federal school-lunch appropriations for the next school year. As school-lunch sponsor of our school unit I am definitely interested in improving child health by means of the school-lunch program. This cannot be done if funds are cut eliminating section 6 commodities. Commodities such as canned fruits, canned vegetables, citrus products, and peanut butter are necessary in preparing attractive and well-balanced meals for schoolchildren.

The justification offered for this cut by the Secretary of Agriculture is unrealistic and misleading. There will not be enough surplus commodities distributed next year to offset the loss of section 6 commodities. We can't operate the program on promises. Distribution this year is running behind that of last year and there is no reason to believe that it will be increased next school term. More than likely it will be reduced because the only surplus commodities that the Department of Agriculture has on hand and can count on for next year are dairy products and fats and oils.

The Department of Agriculture's estimate of the value of surplus commodities to be distributed for the past 2 years has been too high. During the school term 1954-55 their estimate was at least 60 percent too high.

The program cannot stand a cut. I would appreciate any help that you may give in seeing to it that there is no Federal reduction in the school-lunch program.

Very truly yours,

CHARLES ROMANI,
Assistant Superintendent.

Ernest Hemingway

EXTENSION OF REMARKS

OF

HON. RICHARD W. HOFFMAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. HOFFMAN of Illinois. Mr. Speaker, in 1954, a coveted honor was awarded to a distinguished native of Oak Park, Ill., when Mr. Ernest Hemingway received the Nobel prize for literature. Another tribute, which I am sure was warmly appreciated by Mr. Hemingway, was occasioned by the announcement of this award.

This tribute came from a group of outstanding Pan-American scholars and educators, assembled at the bicentennial conference of Columbia University on Responsible Freedom in the Americas, and was the result of the only resolution approved by the conference. Six former presidents of Latin American Republics were participants in the conference, Dr. Alberto Lleras Camargo, of Colombia; Dr. Eduardo Santos, of Colombia; Dr. Galo Plaza, of Ecuador; Dr. Ricardo Alfaro, of Panama; Dr. Otilio Ulate, of Costa Rica; and Dr. Carlos Davila, of Chile, who is now secretary general of the Organization of American States.

The conference approved a resolution submitted by Dr. Jorge Manach, of Cuba, which called for a commendatory message to be sent to Mr. Hemingway, and

the following message was sent in behalf of the conference:

By awarding Ernest Hemingway the literature prize for 1954, the Nobel Prize Committee has rendered a well-deserved tribute to a great novelist whose works have reflected with virile energy a passion for liberty and justice, a love of the heroic in man, and a generous concern for human suffering. Assembled on the occasion of the bicentennial conference of Columbia University on Responsible Freedom in the Americas, writers and teachers of both Americas send their congratulations to the great author of *The Old Man and the Sea*. In their behalf this message is sent.

The Economic Position of the Americas

EXTENSION OF REMARKS

OF

HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. HERLONG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the *Diario Las Americas*, a bilingual newspaper published in Miami and which covers all of Latin-America, under the date of Saturday, February 19, 1955:

THE ECONOMIC POSITION OF THE AMERICAS
Amidst the fluctuations of hemispheric politics which seem to be reaching a climax of anxiety, we have to note an ever more pressing problem: The true situation of the economy of the Americas following the conference at Rio de Janeiro.

On many occasions we have referred to the urgency of raising to the point of efficient and rapid labor, the cooperation of the United States in Latin America. At no time have we insinuated gifts which the majority repudiates, but rather we have referred to loans made through the Export and Import Bank. In the past, we have said that this institution has an enormous responsibility in its hands, the importance of which will have repercussions in the whole future of the Americas. Many times we have pointed out, that the operations of the Export and Import Bank up to the present, have represented profits for the United States in all sectors. Profits derived from the interest in its money, profits for United States citizens who carry out the projects financed by the loans, profits for the industry of this country which is assured of a Latin American market despite its high prices.

The Export-Import Bank appeared to have a great opportunity after the Conference at Rio de Janeiro. A policy of ample credit and above all, fast handling methods, seemed to be in the offering for the hemisphere. Up until now, judging by the information we receive from Latin America, such a policy does not seem to be in full swing. At least public opinion in the Americas, has not heard any reports which would change certain conclusions about the bank's operations being still restricted by underground forces governed by higher authorities.

Our editorial comment is the result of the considered opinions of distinguished Latin Americans who, in Washington and in their own countries maintain that, up until now, the small and less developed countries are still encountering serious difficulties in obtaining loans from the Export-Import Bank for essential projects, such as highways, electrification, airports, etc.

In conclusion, we want to say that the Export-Import Bank at the present time

is one of the most important agencies of the United States Government. Many millions of the citizens of this hemisphere, who need opportunities for development through loans and not gifts or gracious concessions, have placed their hopes in it.

To liberally open the reserves of the Export-Import Bank is to comply with an obligation toward a strong sector of United States taxpayers who, without the aid of that Government agency, will see themselves displaced from the large Latin American markets. It is not a case, then, of merely complying with the offer of the United States delegation in Rio de Janeiro, but rather of satisfying a pressing need of hemispheric subsistence.

Block Ike Plain Is Brainchild of Economic Planners

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. HOSMER. Mr. Speaker, there are people in this country who sincerely believe that the free enterprise economic system is no good and should be replaced either piecemeal or entirely by some form of state socialism.

Why, when all evidence points to the fact that our present system of free enterprise is the greatest system ever devised by the mind of man for his own betterment, these people persist in their beliefs is a mystery to me. They need but look at the result of state socialism wherever it has been tried to see physical evidence of its inadequacies.

An interesting article in the current issue of the U. S. News & World Report detailing the deterioration of Britain's defenses observes that the quantity and quality of that Nation's armaments went into immediate decline during her post-war flirtation with socialism. Under the socialistic scheme of things neither peacetime nor wartime items flowed into Britain's economy as they did under the free-enterprise system.

Nevertheless the economic planners in this country are determined in their efforts "to halt and reverse the Eisenhower administration's counteroffensive on behalf of private enterprise and less government dictation" as is set forth in the following column by Ray Tucker:

HALT IKE PLAN WELL DESIGNED

(By Ray Tucker)

WASHINGTON.—The most unpublicized conflict at Washington today concerns the attempt of the so-called economic planners of New Deal stamp to halt and reverse the Eisenhower administration's counteroffensive on behalf of private enterprise and less Government dictation.

Opponents of Ike's milder measures have two main objectives: They do not expect to enact their more advanced and radical proposals at this session, awaiting possible return to power in 1956 or 1960. They plan to expand or to kill off his offerings.

They do not want them to be given even a temporary trial lest the success of the measures check their movement for Government intervention and operation in almost every field of human activity.

"ECONOMIC POULTICES"

They argue, for instance, that Eisenhower proposals on Federal aid to health, education, and highways are mere economic poultices. The most spectacular example of the conflict in philosophy is illustrated by the quarrel over Washington's contribution to improvement of national health.

Ike wants the work to be done by private insurance companies with minimum financial assistance from the Government. The "planners," who resemble the British Fabians that led Britain step by step into a Labor-Socialist regime, demand compulsory health insurance. They would finance their bedside scheme along the lines of social security—namely, by direct payments from everybody's pay check.

If Ike's plan is adopted and gives promise of success in its initial stages, their alternative will lose its appeal. There is nothing so difficult to defeat as demonstrated success in politics.

Similar strategy has been applied to the farm problem. Ike believes that flexible price supports will maintain farm income, lower retail prices, dispose of surpluses. The planners still insist on the Brannan plan, with Uncle Sam paying the difference between the market price and the higher Government-financed support figures.

PRIVATE EXPANSION PLAN

Likewise with power. As in the Dixon-Yates contract, the White House seeks to limit the Government's investments and operations in this field, as well as in atomic developments. President Eisenhower advocates private expansion to a maximum degree under a partnership of local, private, and Federal interests.

His enemies demand continued Government production of power, although Uncle Sam and local political units now generate about 20 percent of the Nation's electricity.

The planners want Washington aid in obtaining contracts for a guaranteed annual wage. They demand higher minimum-wage levels, to be policed and enforced by NLRB and the Labor Department. They insist upon greater control of credit by Treasury and the Federal Reserve System.

They urge a vast public-works building blueprint after the pattern of Roosevelt-Ickes-Hopkins programs in the depression. They shout for far larger foreign-aid funds, with the United States economic reforms aboard.

AIM TO DEFEAT IKE'S COMPROMISES

Although recognizing that fulfillment of their dreams and ambitions under Republican rule is impossible, the liberals' main aim is to keep alive agitation for their schemes. When they recapture the White House and Congress, they hope to transform them into reality. Meanwhile, they must defeat Ike's milder compromises.

Ironically, they may get help from GOP conservatives on Capitol Hill, who think that Ike is too radical. They refuse to recognize his program as a holding action.

Expulsion of Russia From the United Nations

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 10, 1955

Mr. BROOKS of Louisiana. Mr. Speaker, I am presenting to the House of Representatives an editorial entitled

"Why Russia Should Be Expelled From the U. N." by David Lawrence, editor of the U. S. News & World Report. This editorial strikes me with peculiar force and the thoughts contained therein should receive our most careful attention. It seems to me that the Communists have abused the privilege of being members of the United Nations to the point that we can serve the free world best by expulsion. I, therefore, find myself in hearty agreement with the thoughts in this editorial.

WHY RUSSIA SHOULD BE EXPELLED FROM THE U. N.

(By David Lawrence)

Much of the trouble in which the free governments of the world find themselves today is due to a failure to steer by the compass of moral principle.

Governments that appease the aggressor go from the frying pan into the fire as they build up complications for themselves by their successive retreats.

The indictment was summed up succinctly last week by Secretary of State Dulles when he said:

"The United Nations Charter of 1945 binds 60 nations to refrain in their international relations from the threat or use of force. But there has been armed aggression in Korea which was promoted by Soviet Russia, and later Communist China was found guilty of armed aggression there."

The world for some time has known about the repeated violations of the U. N. Charter by the Soviet Union. The principal evidence was furnished by its own representative, who publicly boasted to the U. N. in March 1953 that the Soviet Union had supplied armaments to the Red China government throughout the Korean war. In that war more than 33,500 American boys were killed and 103,000 wounded.

The Soviet Union, moreover, gave military assistance to Red China notwithstanding the fact that in February 1951 the Peiping government was formally declared by resolution of the U. N. to be an aggressor. The Moscow Government ignored the U. N. warning that all members should refrain from rendering assistance to the aggressor.

The act of aggression is even more flagrant because it has been directed against the armed forces of the United Nations itself.

The United Nations is still in a state of war with both the Communist Chinese and the Communist government of North Korea. An armistice has been signed, but no treaty of peace has been consummated. Nevertheless military aid to the aggressors from Soviet Russia continues. Russian-built MIG's are commonplace in the skies of Korea.

This is in the face of the plain language of article 2 of the Charter, which provides: "All members shall give the United Nations every assistance in any action it takes in accordance with the present charter, and shall refrain from giving assistance to any state against which the United Nations is taking preventive or enforcement action."

The United Nations Charter specifies exactly how offenses of a traitorous member shall be dealt with by the other members. Article 6 reads as follows:

"A member of the United Nations which has persistently violated the principles contained in the present charter may be expelled from the organization by the General Assembly upon the recommendation of the Security Council."

It will be argued, of course, that the Security Council would not so recommend because the Soviet Union could block such a step by exercising her veto in the council. The fact is, however, that the Soviet Union, being a party to the dispute, would have no right to vote at all. Article 27 of the charter

covers that point by declaring that decisions of the Security Council shall be made by an affirmative vote of 7 members, including the concurring votes of the permanent members, provided, however, that "a party to a dispute shall abstain from voting."

It has been contended that the Soviet Union had obligations under a treaty with China to come to the assistance of that country on the basis of an offensive and defensive alliance. But article 103 says:

"In the event of a conflict between the obligations of the members of the United Nations under the present charter and their obligations under any other international agreement, their obligations under the present charter shall prevail."

The charter declares that membership in the United Nations shall be open to "peace-loving States" willing to accept the obligations of membership. The Soviet Union, however, has disregarded its obligations to the U. N.

By aiding Red China and North Korea, which are at war with the United Nations, the Soviet Government has forfeited its seat in the U. N. That seat should be declared vacant by a formal resolution. It would constitute notification to the people of Soviet Russia that their government had demonstrated its incapacity to fulfill international obligations, and had become a menace to peace-loving nations. The kind of government a nation chooses is its own affair, but only up to the point where such a government does not become a threat to world peace.

Some day, when a free government arises in Russia, the seat in the U. N. declared vacant could be awarded to such a new government. But today the Moscow regime must be expelled if the United Nations is to retain the respect of the world as an organization obedient to law—the words of its own charter.

**American Good Government Society
Honors Hon. Howard W. Smith, of
Virginia**

**EXTENSION OF REMARKS
OF**

HON. WATKINS M. ABBITT

OF VIRGINIA

**IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 2, 1955**

Mr. ABBITT. Mr. Speaker, it was my privilege to attend, on Tuesday evening, February 22, 1955, the third annual George Washington awards dinner of the American Good Government Society.

The American Good Government Society was formed in 1942 for the purpose of fostering good government in America and to reinspire a wide and deeper appreciation of the American political system, through a clearer understanding of it.

This organization is endeavoring to bring to our citizens the realization of the importance of maintaining our Government as it was founded and set up under the Constitution. It is rendering a real and important service to the country.

In 1952 the society established the George Washington awards that it presents to outstanding citizens who have rendered distinguished service beyond the call of duty to good government in America.

It has presented two awards for each of the past 3 years. In 1953 the society honored Senator HARRY F. BYRD and the late Senator Robert A. Taft. In 1954 the recipients were the Honorable Herbert Hoover and Gov. Allan Shivers, of Texas. This year, the society honored the Honorable HOWARD W. SMITH, Member of the House of Representatives from Virginia, and Gen. Robert E. Wood.

I am most pleased that the outstanding services that Representative SMITH has rendered our Nation are being recognized by the presentation of this award.

"Judge" SMITH, as he is affectionately called by his colleagues and many friends, is one of the outstanding statesmen of America today. He stands for and represents the highest ideals in public life. He is one of the most beloved as well as one of the most influential Members of the House of Representatives. He is admired for his keen intellect, his ability to grasp a situation quickly and for his determination to do what he thinks is right and best for his country regardless of the political consequences. All of us love and admire him for the statesmanship he has exhibited down through the years and join with the society in its description of his virtues set out in the award which is as follows:

HOWARD WORTH SMITH, statesman, lawyer, farmer and banker, has served the public well for more than 30 years—as judge and as Representative in Congress, becoming chairman of the Committee on Rules in the 84th Congress.

Among his notable achievements are the Smith Act of 1940, which declared the law under which Communist leaders have been convicted, and the constructive investigation of the National Labor Relations Board which led to the Taft-Hartley Act of 1947.

Law is the eternal sense of justice of the community. Law is because law was, unwritten, unfolding and growing as man moves slowly toward civilization. Spurious edicts, pretending to be law but not law at all, are struck down when the law is restored.

In any early restoration of law the wisdom of Judge SMITH will be a vital influence. We can rejoice in numbering this Virginia gentleman among the Nation's most illustrious sons.

Mr. Speaker, under leave to extend my remarks I herewith include the address delivered by the Honorable HOWARD W. SMITH on the night of February 22, 1955, when the American Good Government Society bestowed upon him its George Washington good government award:

The basic ground rules of good government upon which our Republic was founded was the principle that matters of controversy between the States and relations with foreign governments should be delegated to the Federal Government, while the solution of all domestic and local problems should be reserved to the respective States.

It was the guiding principle of the framers of our Constitution.

It was the very heart of the contract between the Thirteen Original Colonies as expressed in the Constitution and the Bill of Rights. It was implicit throughout every word, every sentence, and every paragraph.

It was summed up so that "he who runs might read," in the brief words of the 10th amendment: "The powers not delegated to the United States by the Constitution, nor

prohibited by it to the States, are reserved to the States respectively or to the people."

When that amendment was adopted, as the last and final clause in the Bill of Rights, the American people meant it. The great bulk of the American people, regardless of party affiliation, mean it just as earnestly today.

The difference is that the framers of the Constitution were painfully aware of their recent wrongs that required remedy. As the country grew and prospered, the people became neglectful and indifferent to the basic principles of government that brought about that growth and prosperity.

A spirit of slothful indifference replaced alert determination. Today we have reached a point of centralized government that has swallowed up the reserve states rights. We have transferred the administration of justice away from home into the strange and far away hands of the Federal Courts.

The legislative department has usurped the power to deal with a multitude of local problems reserved by the Constitution to the States and in doing so has delegated to the executive department the power to fill in the details of administration by regulations having the force and effect of law. While the Chief Executive confronted with a huge and overwhelming mass of administrative detail has, in turn, delegated the power to make regulations to sundry minor executives not elected by or responsible to the people.

Each such departure from constitutional standards has directly or indirectly deprived the citizen of some constitutional liberty until today the individual American citizen is gradually being placed under compulsion and his daily life and activities controlled by the judgment of the Federal courts, the acts of Congress, and the edicts of the executive department to an extent never remotely conceived by the authors of the Constitution.

Today we have what might be called government by delegation of authority.

Local communities have delegated to State legislatures local problems that could best be solved at home, in return for a mess of financial pottage from the State legislatures.

The State governments have delegated to the Congress problems that could be best solved at home by the States, in return for handouts from the Federal Treasury of their own money. Congress, in turn, catching the spirit of the times, has passed out the appropriations from money derived from taxes imposed upon the citizens of the States and exported to Washington to be, in turn, doled back to the States after deduction of an appropriate but substantial toll. Along with the appropriations and as a condition, go laws curtailing the freedom of the citizen, and then the whole impossible mess is turned over to the Executive to administer, abdicating to him the legislative power to make regulations having the effect of law, a violation of which subjects the citizen to criminal penalties in the Federal courts. But the end of delegation is not yet. The President delegates the authority given him by Congress to the heads of departments and agencies. They, in turn, delegate it to the heads of bureaus; and to whom the bureaus delegate the actual writing of these regulations or laws, only God knows.

Congress finally found it necessary to provide for a daily publication known as the Federal Register, in which the executive departments are required to publish each day all new regulations which now control the lives and activities of our citizens.

I mention this for the information of the unwary citizen, who may prefer what freedom he still enjoys to a Federal jail house, with the advice that he peruse the Federal Register along with his daily paper.

On top of this whole mess of delegation, administration and confusion sits the judicial department, the ultimate and final arbiter of our constitutional rights.

So when the Supreme Court speaks the final word we all, including the present spaker, relieve our blood pressure by exercising our remaining constitutional prerogative of abusing the court.

What is the remedy?

There is only one.

Congress reflects the will of the people. The will of the people is transmitted to Congress by those who make the loudest noise, and the most convincing threats of political reprisal.

Until and unless the great mass and majority of our thinking people awaken to their responsibility and assert their demands for sound and constitutional government and a return to the constitutional limits upon the functions of the Federal Government, we shall continue the present policy until some time, some sad day, we find that we have gone too far to retrace our steps.

In a democracy a people get the kind of government they deserve.

If they think little, they deserve little. If they do little about it, they get little results.

If the present trend of government away from the sovereignty and the reserved rights of the States is wrong, as I believe it is tragically wrong, it will continue wrong as long as a slothful and indifferent people remain impervious to, and neglectful of, the danger signals flying all about them.

Misquoting Washington

EXTENSION OF REMARKS OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. MADDEN. Mr. Speaker, the following editorial from the Gary (Ind.) Post-Tribune should enlighten some of our oratorical statesmen who quote our first president so frequently on American foreign policy:

WASHINGTON'S FAREWELL

Washington's warning in his Farewell Address against "permanent alliances" (Jefferson later used the term "entangling alliances") is often stressed in February 22 orations by the isolationist group. A conservative Republican rally in Chicago on Lincoln's Birthday this year brought forth attacks on the United Nations and a charge that American foreign policy is no longer American.

Actually, the isolationists take Washington's phrase out of context in order to fit their purposes. In averring that "Europe has a set of primary interests which to us have none or a very remote relation," Washington was warning at the time against a specific danger, not setting a future policy for the Nation. His concern was over the wedge driven between Americans by the French Revolution.

All Americans had hailed the Revolution with joy at first. Washington had accepted the key of the Bastille, the police fortress stormed by the French populace, as a "token of the victory gained by liberty." But as the French revolt developed excess after excess, conservative Americans turned sharply against it.

Most Jeffersonians managed to keep some sympathy with it, however. They denounced the Jay treaty with England as taking sides against the ally which had aided us in our own rebellion against England. And Washington, appalled at the invective poured on his aged head, saw the house of America divided against itself.

That was the setting for the Farewell Address. It was written, further, in consultation with Alexander Hamilton. Washington sent him a rough draft of his proposed speech. Hamilton returned a completely new draft, later added some further suggestions from Mt. Vernon. And though the manuscript Washington finally sent to the printer was in his own handwriting, the style was Hamilton's and there's no way of telling which of its ideas were Washington's and which were Hamiltonian.

Washington of course knew the value of foreign alliances. He knew the value of French aid to the Colonies during the American Revolution. It does discredit to his stature as Chief Executive to use his own words as argument against America taking its place in the family of nations.

Brotherhood Week

EXTENSION OF REMARKS OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial on Brotherhood Week published in the East Side News on Saturday, February 26, 1955:

BROTHERHOOD WEEK

(By Harry H. Schlacht)

This is Brotherhood Week. It is sponsored by the National Conference of Christians and Jews. It is dedicated to the ideals of the fatherhood of God and the brotherhood of man. It is seeking to exemplify these ideals in our daily lives.

Brotherhood is the crying need of our day. It was the question which Malachi asked his people 2,500 years ago: "Have we not all one Father? Hath not one God created us all? Why do we deal treacherously every man against his brother, profaning the covenant of God?"

Whether we are protestants, Catholics, or Jews, whether we are black or white, or whether we came from the first or sixth generation, we are all members of the brotherhood of free Americans.

Tolerance thrives in the sunlight. It is a word of healing. It is the finest fruit of man's struggle to grasp the torch of liberty. It believes in the humaneness of our humanity. It marks the elimination of class distinction. It symbolizes the freedom of the soul.

Here is a story of the glory of American brotherhood at its best. It is the grandest story of heroic sacrifice. It is the saga of the transport Dorchester, which appeared in the American Weekly.

There were four chaplains on board: A rabbi, Lt. Alex Goode; two parsons, Lt. George L. Fox, and Lt. Clark V. Poling; a priest, Lt. John P. Washington.

They handed out the lifebelts to keep the bodies of the men afloat. They spoke words of cheer to keep up their courage. They saw the lifebelts run out. They gave away their own. They were last seen kneeling together on the sinking ship.

They were praying in three language. They were praying to the same God. In English—"Our Father, who are in heaven, hallowed by Thy name." In Hebrew "Schma Yisroel Adonay elehenu Adonay echod" (hear, O Israel, the Lord is thy God, the Lord is one). In Latin, "Miserere mei Deus, secundum magnam misericordiam Tuam" (have mercy on me, O Lord, according to Thy mercy).

Four God-loving souls who preached the glory of God and the brotherhood of man in their simple lives and humbly testified to their convictions by their undying deaths. "Greater love hath no man."

Travel where you may on a thousand battlefields. Travel where the delicate poppies carpet the earth with rich, red blossoms. Travel where the glistening white stones rise above the flower-strewn mounds. There you will see, side by side, one beneath the star of David, one beneath the cross of Christianity.

They have fought together. They have bled together. They have worshiped together. They have died together, so that we may live together.

Let no racial or creedal fissure undermine our American foundations. Let us hold fast to the faith of the Founding Fathers. Let us hold fast to the ideals of our origin. Let us hold fast to the moral values which are the fiber of our national character.

Let us cherish the thought that we are Americans. Let us keep the light burning that made our country great. Let us have a unified feeling of one flag and one nation. Let us remember that in God's rainbow there is no favored tint. Let race lines and creed lines and all lines vanish. Let America march forward as one great brotherhood with undivided ranks toward the dawn.

If we build in clay, it will be subject to the storm of time and the wind of the ages. If we build in brick, it is destined to crumble under the atmospheric pressure of the heavens. If we build in iron and steel, it is destined to flow as water before the smelting processes of the universe. If we build in marble, it will not last forever. But if we build in the humane spirit of common brotherhood we build for eternity.

Nomination of Lt. Gen. Alexander R. Bolling, United States Army, for the South's Hall of Fame for the Living

EXTENSION OF REMARKS

OF

HON. JOHN J. FLYNT, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. FLYNT. Mr. Speaker, under leave to extend my remarks in the Record, I include the nominating remarks made by Lt. Gen. Alvan C. Gillem, Jr., United States Army, retired, when he nominated Lt. Gen. Alexander R. Bolling, United States Army, commanding general of the Third Army, for a place in the South's Hall of Fame for the Living.

Both General Gillem and General Bolling are distinguished Americans and rank among the great military leaders of our time. General Bolling presently commands the United States Third Army and General Gillem commanded the Third United States Army prior to and at the time of his retirement:

NOMINATION OF LT. GEN. ALEXANDER R. BOLLING, UNITED STATES ARMY, FOR THE SOUTH'S HALL OF FAME FOR THE LIVING

(By Lt. Gen. Alvan C. Gillem, Jr., United States Army, Retired)

With reference to nominations for the South's Hall of Fame for the Living, I would like to place in nomination the name of an outstanding American soldier and citizen: Lt. Gen. Alexander R. Bolling, United States

Army, commanding general, Third Army, Headquarters, Third Army, Fort McPherson, Ga.

In presenting the name of this distinguished officer, I have taken under consideration the factors which are set as criteria for selection in this group. It is my considered opinion that the man whose name I am presenting for this recognition meets in every way the requirements for the honor.

It has been my privilege to know personally the candidate and to have had his invaluable assistance and professional advice during the European campaign of World War II.

General Bolling served under my command throughout the battles incident to the defeat of the German Army. During these campaigns he was commanding general of the gallant 84th Infantry Division, which was an important element of my XIII Corps in Belgium, Holland, and Germany.

I found him to be possessed of all the characteristics of a real leader in war and peace. Recently I have enjoyed his friendship in the twilight years of the so-called peace, which we have been experiencing since the defeat of Germany and Japan.

He has, during the past 2 years, served as commanding general of the famous Third Army, with headquarters at Fort McPherson, Ga.

As commanding general, he has had the responsibility of directing the induction, training, and administration of thousands of young American men and women, for the area of his command encompasses the seven Southeastern States of the Nation.

His human qualities have gained for him and the Third Army a host of friends not only in Atlanta but throughout the South.

He has made an outstanding contribution to the progress of this critical area by his understanding of, and solution of, problems involving the military and civilian.

I have been informed that after his retirement later on in the current year, he is contemplating the establishment of a permanent home in the city of Atlanta.

It is my belief that Lt. Gen. Alexander R. Bolling, United States Army, is eminently fitted for inclusion in this category of Famed Americans, and I so recommend his nomination for this honor.

Nebraska's Birthday

SPEECH

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. MILLER of Nebraska. Mr. Speaker, yesterday was Nebraska's birthday. Eighty-eight years ago, on March 1, 1867, President Andrew Johnson signed a proclamation making the State of Nebraska one of the United States, the 37th State in the Union. It is interesting to note that the Nebraska statehood bill is one of the few statehood bills vetoed by a President.

On March 21, 1864, the Congress passed a law defining the boundaries of the Nebraska Territory and setting up the machinery for creating the State of Nebraska, which was subsequently approved by the President on April 19, 1864. The people of the proposed State called a constitutional convention, adopted a constitution and a formal government and transmitted these items to the Congress.

The Statehood Act was passed by the Senate and the House of Representatives, but was vetoed by the President because he felt that a provision in the act might be construed as infringing upon the right of the new State to regulate the voting and other fundamental rights of its citizens. The Congress then reconsidered the act, and overrode his veto and Nebraska was admitted on the condition that the embryonic State assure the Congress and the President that there should be no denial of the elective franchise and all other fundamental rights of persons within the State by reason of race or color. The territorial legislature was called into session and on the 20th of February 1867, enacted its assurance accordingly. President Andrew Johnson then, on the 1st of March 1867, issued his proclamation declaring Nebraska a State. Thus, in the strife-torn years immediately following the Civil War, we find the formal beginning of the State of Nebraska.

There are many factors that have contributed to the greatness of our State, but the two most important are its land and its people. From 1867 until 1950 our population has grown from 50,000 to 1,325,510; and our land has been developed from the native unbroken prairies, even then rich with life-giving grasses, to the highly cultivated irrigated farm grounds that lie in the valleys of the many Nebraska rivers.

The exploration and settlement of Nebraska is one of the striking chapters in the history of American expansion, one without parallel. It is a story written in adventure, in toil, in tragedy, and reward. Archeological expeditions have uncovered considerable evidence of the presence of prehistoric man in the State, indicating that man existed in this area from ten to twenty thousand years ago. The deep soil deposits have preserved some of the finest prehistoric animal and reptile specimens yet found on the North American continent.

At the time of the coming of the first white men, the Nebraska territory was inhabited by the Indian tribes, who moved across the Great Plains as the food supply shifted from place to place. The first white men to visit this region were 30 Spaniards under the leadership of Francisco Vazquez Coronado, who came into the territory on a foray from the Rio Grande in 1541. French fur traders began to venture up the Missouri River about 1700, and in 1739 the Mallet brothers, with a party of eight Frenchmen, named the Platte River and traveled nearly the entire length of the State on a journey from the Missouri River to Santa Fe.

During these years, ownership of this little-explored and richly abundant territory was a source of struggle between France, England, and Spain. The reports of the early French explorers, glowing with praises of this wonderful new empire, awakened the imagination of the French as to the possibilities of this "most marvelous region upon the face of the earth." France moved upon the Nebraska region from two directions—from the North, following the founding of Quebec in 1609, and from the South with the founding of Biloxi on

the Gulf of Mexico in 1700. By the year 1720, Spain and France had become rivals for possession of this vast region west of the Mississippi River; the Spanish had settlements in the Rio Grande Valley and in Texas; the French in the Mississippi Valley. At the close of the Seven Years' War, France ceded all her claims east of the Mississippi River to England, and all claims west to Spain. Nebraska was thus a part of the Spanish province of Louisiana from 1763 until 1801, when Napoleon bought it back from Spain. Even before the new provisional governor could arrive to take up control of his domain, war broke out between France and England. In financial desperation, Napoleon changed his plan and sold the entire province to the new American Republic for \$15,500,000; and at an imposing ceremony in the Great Square on the river front in New Orleans on November 30, 1803, the Nebraska region became American territory with Thomas Jefferson as her president.

Almost before the ink was dry on the purchase agreement, an American expedition started to explore the area of the Louisiana Purchase. Lewis and Clark were the commanders of this initial exploratory adventure, and in the 2 years of their expedition, 1804-06, skirted the Nebraska territorial boundaries. Five years later, the Hunt party of Astorians touched Nebraska on their way to Oregon, and in 1813 seven of the party crossed the mountains and followed the North Platte to its junction with the South Platte, and thence along the Platte to the Missouri River. Manuel Lisa, who built a permanent fort in 1812 about 10 miles north of the present Omaha post Office, was probably the first white settler and the first to engage in farming in Nebraska. In September 1819 Major Long established Fort Atkinson upon the site of the present village of Fort Calhoun in Washington County, and the 1,000 people who came to live there built the first school library, brickyard, sawmill, and grist mill in the State.

The missionary period followed the establishment of a permanent fort in Nebraska. While the missionary work among the Indians of the State did not generally convert the tribes to Christianity, still the story of missionary work among the Indians filled the space of 40 years in the history of Nebraska with a heroic record and with more valuable information upon the elements of life in this territory at this time than is derived from any other single source.

With the settlement and beginning of development of Nebraska, the pioneers again looked to the westward toward the lands that lay beyond the Continental Divide. Nebraska was the avenue for the crossing. The rich grasslands provided the food to sustain the animals, and the abundant water supply and wild game provided the means of survival for these hardy adventurers. To Nebraska belongs the honor of first pointing out to the American Nation a natural, practicable roadway across the mountains, binding the western shores of this great country to the rest of the Nation.

Several trails were developed. Of all the old overland trails crossing Nebraska,

each with its story written deep into the lives of the men and women in the record of the westward march of the American people, the Oregon Trail was the first and the most famous. The Trail began its career in 1832, and by 1840 had become a well-traveled road, a great traveling city flowing 2,000 miles from the Mississippi River to the Pacific Ocean.

The migration of the Mormons from Florence, now a suburb of Omaha, in the spring of 1847, brought into existence the great Mormon Trail, which traversed Nebraska and merged at Fort Laramie with the established Oregon Trail.

An increased interest in quicker, more adequate transportation naturally followed after the establishment of these wagon routes to the West. The Nation was divided by the extreme pressure of commercial interests of the North and the South, each pushing to construct the first Pacific railroad. Farsighted leaders of both areas grasped the strategic position of the Nebraska Territory as the natural route for the railroad to the west coast, and voices in many quarters became loud in a demand for the organization and recognition of the Nebraska Territory. In his annual report, dated November 30, 1844, Secretary of War William Wilkins recommended the formation of a territorial government, but it was not until May 30, 1854, after several bills had been introduced and nearly all the controversial issues of the day were debated, that President Franklin Pierce signed the Kansas-Nebraska bill into law.

In only a few years the movement for statehood was started, and on April 19, 1864, the Nebraska enabling act was passed and approved. Nebraska's statehood, as had her Territorial establishment, was to be delayed and greatly influenced by the stark national issues facing the Congress and the people during those times. Local factions were divided over the slave-free question, and controversy developed over the problems of governmental expense which would be created if Nebraska was to become an independent State, so it was not until 1866 that a constitution and a form of State government were framed. The statehood bill finally passed after long and bitter debate, over Presidential veto, when the Nebraska Legislature adopted laws repudiating slavery in the new State.

Settlement and growth of this new Territory had been slow during the Civil War period and years before, although the foundation for growth had been laid by the Congress when it enacted the free-homestead law in 1862. On the date this law became effective, January 1, 1863, Daniel Freeman took out the first homestead in the United States, on Cub Creek, in Gage County, Nebraska. Since that time, over 1 million homesteaders over the United States have received more than 120 million acres of land from our Government, and more than 100,000 homesteaded and lived in Nebraska. These settlers came from New England and New York, Michigan and Illinois, and from the war-torn States of the South. More and more settlers came from many countries across the seas.

The Irish settled in Holt County in 1874 and Greeley County in 1877. Germans settled Madison, Stanton, and Thayer Counties between 1867-70. Swedes settled in Polk and Saunders Counties about 1870 and Phelps and Burt Counties about 1880. Bohemians founded communities in Knox, Colfax, Saunders, and Saline Counties about 1870. A group of Hollanders settled in the southern part of Lancaster County about 1875 and extended their settlements into Clay and Hamilton Counties. Danish, Swedish, Bohemian, and Polish communities were founded in Howard and Valley Counties. French settlements were made in Richardson, Nemaha, Antelope, and other counties. The seeds of greatness of Nebraska's people were brought in from a score of different States and from a dozen different foreign countries; but, once these seeds took root in Nebraska soil, the product which grew from them became Nebraska's most valuable asset—courageous, hard-working and sincere American citizens.

The several homestead laws, the free homestead law of 1863, the Timber Culture Act, and the Kinkaid law, have been instrumental in opening the lands of Nebraska to the agricultural development and cultivation now so prevalent in our great State, and the railroad brought great progress by transporting settlers into the State and farm commodities from Nebraska to the other States of the Union.

Over the many years, one of the significant achievements in the State's history has been the development of irrigation in the North Platte Valley. Local individual initiative and the Federal Reclamation Act of 1902 helped these farmers turn much of the dry land into a true Garden of Eden, the Quivera for which Coronado searched when he and his small band of explorers first entered this territory. Scottsbluff, one of the most important and fast-growing cities in Nebraska, owes much of its expansion to the development of irrigation from the North Platte River and its feeder streams. The sandhills area grazes most of the State's 5 million beef cattle, and we look with pride on the industry that provides much of the world's beef supply and foundation stock for cattle herds in all quarters of the agricultural world.

Nebraskans are justly proud of the progressive, efficient, and economical record of their State government. The State constitution, adopted in 1920, contains a provision prohibiting the State to contract any indebtedness in excess of \$100,000. The State has no income tax and no sales tax, and in 1934 the people adopted an initiative proposal to create the unicameral legislature, a novel experiment in the field of lawmaking bodies.

Many Nebraskans have brought credit to the State and the Nation with their contributions to literature, art, and music; and to the military and political science of the world. Writers such as Willa Cather, Bess Streeter Aldrich, Mignon Eberhart, Louise Pound, Hartley Burr Alexander, Keene Abbott, and Mari Sandoz; poets such as the beloved John G. Neihardt, poet laureate; musical composers such as Thurlow Lieurance and

Howard Hanson; great military leaders such as John J. Pershing; artists such as J. Laurier Wallace, Elizabeth Dolan, Kady Faulkner, Robert Gilder, Dwight Kirsch, and Dale Nichols; and political giants of their time such as William Jennings Bryan, J. Sterling Morton, Charles G. Dawes, and George W. Norris, have helped bring fame and recognition to the State, and have left their works as a heritage to the people of our time. Our State Capitol, the creation of Bertram Goodhue, stands as one of the outstanding architectural achievements of the age, a fitting monument to the men and women whose courage and vision built a prairie land.

No tribute to the great State of Nebraska would be complete without pause to pay homage to the 47,801 sons who served, and the 1,000 who died, in World War I; and the 128,000 men and women who served, and the 3,655 who died, in World War II.

One of the most able portrayals of Nebraska is contained in a description of the great seal of Nebraska, adopted by the legislature in 1867:

The eastern part of the circle to be represented by a steamboat ascending the Missouri River; the mechanic arts to be represented by a smith with hammer and anvil; in the foreground, agriculture to be represented by a settler's cabin, sheaves of wheat, and stalks of growing corn; in the background a train of cars heading toward the Rocky Mountains, and on the extreme west, the Rocky Mountains to be plainly in view; around the top of this circle, to be in capital letters, the motto, "Equality before the law," and the circle to be surrounded by the words, "Great seal of the State of Nebraska."

"Equality before the law," "Honesty before men," "Reverence before God"—these are the precepts that have made Nebraska great during her 88 years as a State; these are the precepts that will keep Nebraska great as long as our free Nation endures.

Peaceful Coexistence With Soviet Russia?

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following very interesting address by Mr. George Brady, chief editorial writer for the Boston American-Record, Boston, Mass., on the subject of communism, which he delivered at the fourth annual spiritual Sunday observance of the greater Lawrence postal employees on Sunday, February 27, 1955, at the Central Junior High School, Methuen, Mass.

Mr. Brady, a well-known journalist, has been connected with several large newspapers in the Commonwealth of Massachusetts. He is a student of international affairs and has specialized in the work of educating his readers and listeners to the danger of communism

and its effects on the United States. I know that all Members of Congress are aware of the spread of the communistic doctrine, and know that they will appreciate the expression of Mr. Brady on this most important of all subject matters at the present time.

We hear a lot of talk nowadays about peaceful coexistence with Soviet Russia. The slogan hits me every time I turn on my radio or television or open the pages of my daily newspaper. It is supposed to be a new version, a modern adaptation of the old aphorism, "Live and let's live." But is it?

I don't know who devises or dreams up these slimy slogans, as the late William Cardinal O'Connell used to call them, but I am sure that the inspiration for them does not come from angels and saints or from living persons destined to be angels and saints.

How can an honest, decent, God-fearing, God-loving American coexist in peace with murderers, assassins, blasphemers, torturers, and individuals who boast about their total denial of individual human dignity.

He can't, of course.

If he could achieve such a peaceful coexistence, his heart would be as black as the murderers, his soul as damned as the blasphemers, and his hands as bloody as the torturers.

Such an American would be no better morally than the debased people of the Middle Ages who went into the Black Forest of Germany to perform indecent rites at midnight and to offer their souls to Satan. Those self-damned individuals sought material gain on earth and for that they were willing to barter away all eternity. They were apostles of expediency. They cared only for the present and were not concerned with the morrow. So do the people who preach and practice peaceful coexistence with Russia in this supposedly enlightened year of 1954.

The slogan of peaceful coexistence is fastening on the public mind in a drum-beat sort of way, beginning softly, slowly, subtly, and increasing in tempo and force.

We shall hear a great deal more of these tom-toms of peace in the immediate future, for this is the new turn in the Communist propaganda line, but it is new only in the sense that it is being used again.

Actually, it is an old and highly effective trick out of the Kremlin's book of tactics. It is employed whenever time is needed—time to consolidate gains after a period of conquest, time to appease the long-suffering slaves of the Moscow tyranny, time to subdue the captive nations and wring out of their inhabitants, with force and violence, the last sparks of patriotism and revolt.

Twice in the memory of every person in this room, the trick has been employed by Moscow with spectacular results. We swooned to the siren song of peaceful coexistence in 1933 when we granted recognition to the minority government of Russia and thus saved that government from being overthrown and destroyed.

We closed our official eyes to the fact that priests and nuns, peasants and kulaks had been murdered by the millions for the crime of believing in God, to the evidence that churches and synagogues had been perverted into museums for the godless, to the knowledge that every Christian and Judiac ideal and principle had been ridiculed and reviled.

We protested but feebly when the men in the Kremlin, in brazen violation of their own written pledges, deluged our country with malicious and lying propaganda, infiltrated our schools, colleges, and labor unions, and did their utmost to foment a revolution.

We chose to look the other way when the Soviet Embassy in Washington became the center of a spy ring, frequently by traitorous and treasonable Americans whose names and

identities are too well known to all of you to warrant a recital by me.

We lulled ourselves into believing or hoping that trade with the murderers and blasphemers of Russia would fatten our pocketbooks and bring on an era of enduring prosperity after the long depression. Of course, the Red currency might be gory with the blood of the innocent, but that did not matter to us, not much anyway.

We wanted business. We wanted trade. We wanted what we called normalcy. We wanted early riches. So did the self-damned men and women of the Middle Ages who surrendered their ideals and compromised with the Devil in Germany's Black Forest. Let's not add hypocrisy to our sins by saying that we were different.

A dozen years later the ruse worked again by wheedling from the United States and the Western World the fateful concessions of World War II that made Soviet Russia the only real victor of that conflict.

We had seen Josef Stalin enter into a treaty with Adolf Hitler—a treaty that was to produce the most horrible, most costly and most needless war that mankind had known.

We deluded ourselves into believing that the men in the Kremlin were democratic peace-lovers, and there are people in journalism, in radio and even in the United States Senate today who went so far as to liken Stalin and his murderous clique to Washington, Jefferson, and Abraham Lincoln. And the great tragedy of our country is that those very people are controlling our national destinies at the present moment.

We sent Soviet Russia \$13 billion in materials and supplies through lend-lease and other slick and sly political arrangements.

We mortgaged our economy to transfer Russia from one of the most backward agrarian nations in the world to one of the most highly industrialized.

We opened our homes, our schools, our factories, our laboratories and our hearts to military observers who flocked to our shores from Russia with espionage and destruction in their hearts.

We did not have to open our churches to them, because they were not interested in God or His goodness or greatness.

And when the war was over, including that part of the war in the Pacific which Russia had shunned until 5 days before its termination, we sat down at the peaceful coexistence table with Stalin and surrendered to him, millions of God-fearing, God-loving men, women, and children in Poland, Czechoslovakia and other unhappy lands.

There were 180,000,000 persons behind the Iron Curtain up to that time.

Now, due to the pacts of Yalta, Potsdam, and the Korean and Indochinese surrenders, there are 800 million.

Never before in all human history was there such a giveaway of human lives, or human souls, or such a betrayal of all that is decent and divine.

The great danger of our era is not the atomic bomb or the hydrogen bomb, although I would be the last person in the world to disparage or minimize the potentialities of the split atom. It is well within the realm of possibility, and even of probability, that a minor conflict such as the Formosa dispute may touch off an atomic war that will utterly destroy nations and turn back the clock of human progress a thousand years.

But I do not anticipate quick devastation of this type. The results are too obvious, too apparent to all governments, and no government provokes or promotes a war unless that government believes it has a reasonable chance to emerge victoriously.

Rather I look for wider, greater, and more frequent use by Russia of the provenly successful weapon of peaceful coexistence. Why worry about an enemy's body if you can capture his soul? Why resort to armed

force if mental ingenuity will accomplish much more?

Who then are the dangerous people in America? Who is most likely to succumb to the Communist propaganda of "you live your way and worship God while we go our way and do our utmost to destroy God"?

The most dangerous people in America are those who have no real belief in God and who are concerned only with pleasure, wealth, power, and pride. When you go to your church on Sunday morning and see an empty seat and tell yourself that the person who should be in that seat is negotiating a business deal, or playing golf or making political hay in the hope of getting a position of power and prestige, beware. The person who puts his own ambitions above his obligations to God is the kind of person who will turn a ready and willing ear to the music of peaceful coexistence with tyranny, brutality, and blasphemy.

And let us not forget that no less an authority than the Federal Council of Protestant Churches has stated that 60 million Americans never attend a church, never say a prayer, never read the Bible. If so many people can dismiss God so conveniently in normal times, it is illogical and inconsistent to assume that they will have much moral resistance when the choice is between standing up for God and sitting down and allowing God's sworn enemies to expand and grow stronger.

If we are going to win this cold war, if we are going to preserve and perpetuate our democratic institutions, if we are going to retain our freedom and liberty, we must place less emphasis on materialism and expediency and more emphasis on God and His Divine Word. Our churches, not our atomic bomb stockpiles, are our real arsenals; and those college professors, smart-aleck businessmen and pompous writers and editors who speak disparagingly of our churches are our real enemies.

These people are doing exactly what the Russians did a quarter of a century ago. Give them enough encouragement and they will be with the Russians, body and soul, a quarter of a century from now.

God is indeed a mighty fortress in these atheistic times; and if we are to survive, the hymn that wells in our hearts must be—

"Onward Christian soldiers, marching as to war
With the Cross of Jesus going on before."

What Is Freedom?

EXTENSION OF REMARKS

OF

HON. JOHN J. FLYNT, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. FLYNT. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial published February 23, 1954, for which Freedoms Foundation at Valley Forge, Pa., awarded Griffin Daily News Editor Quimby Melton, Jr., its George Washington Honor Medal. It was the second medal the foundation has awarded Editor Melton. He won the first for a similar editorial published in 1951.

In this connection it is interesting to note that Mr. Melton is a distinguished veteran of combat service in World War II. He participated in practically all of the battle engagements in the southwest

Pacific area from New Guinea through the recapture of the Philippines, and was awarded the Silver Star for gallantry in action. While he was serving in the southwest Pacific area his only brother, Lt. Fred Melton was killed in Europe. He, therefore, knows the cost and the price that must be paid for freedom. He believes in it and is not paying mere lip service to its principles. It is, therefore, with especial pleasure and pride that I include his prize-winning editorial in this issue of the CONGRESSIONAL RECORD.

WHAT IS FREEDOM?

(By Quimby Melton, Jr.)

In the world fight of the free against the slave, America is attempting to tell what freedom is, and it is a difficult task.

How can you describe vision to a person blind from birth? How describe a symphony to one who has never heard? How describe God to an atheist?

Words are feeble when applied to a thing as glorious and as basic to Americans as our freedoms. We sense them, we realize them, we know they are ours. It is impossible for us to imagine life without them, because they have been our since birth, our priceless heritage since the 18th century when Americans declared themselves to be free men whose freedom stemmed from the Lord God Almighty who created them and whose freedom could not be abridged by mere man though he called himself emperor, potentate of king.

This belief that man was created free by the Almighty God is the basic foundation of all American's freedoms and from this belief stems all the other beliefs which by right are ours.

Since God created man and endowed him with freedom, it follows without question that man has the right to worship his Creator as he pleases, a basic right of all Americans. Here in Spalding County, for example, there are dozens of denominations and religious sects, all seeking to persuade people to worship God as they are convinced He should be worshiped. But note that they seek to persuade, not to force, because no denomination regardless of its zeal can force anyone to follow its beliefs. Nor can any individual or group prevent any person from worshipping as he pleases, be it in the church, the synagogue, the cathedral or in the stillness of his heart in his own home or in a field.

Pursuing the basic principle of freedom further, it is apparent that since God created man and endowed him with freedom, and man and not God created government, a government exists solely to serve the people under its jurisdiction. It was created by them and for them and they were not created by or for it. Thus it is their servant and not their master. Furthermore, since God created all men and men created governments no man has the right to set himself above his fellowmen and to proclaim himself their master. Hence the theory of dictator nations is incorrect at the very beginning and dictatorships are built upon a theory as flimsy as a bubble of soap.

The fact that government is a servant of the people makes it obvious that the people by right should choose those who govern them and that the twin rights of free elections and secret ballots are theirs. And since a people cannot choose wisely unless they are informed, the rights of a free press and speech, the right to assemble, the right to petition for a redress of grievances are theirs.

Again since the government is a servant and not a master, the people are entitled to the services of the government as a protector against infringement of our individual rights, protection against nations and indi-

viduals which would take them from us. This, of course, entails responsibility as well as privilege because the protection can come only from collective action and requires such things as military service.

In communistic nations, the people serve the state instead of the state serving the people. So there is no right to own private property which is basic with us. There is no right to move about freely at home and abroad as we do. There are none of the legal protections which are ours such as the right to prompt trial by jury, habeas corpus, freedom from arbitrary government regulation and control and the right to contract about our affairs. There are none of the personal rights and privileges such as privacy of homes and person, choosing our own callings and the places we wish to follow them, bargaining with employers and employees, engaging in business, competing for a profit and bargaining for goods and services in a free market.

These things are so fundamentally ours that we think of them little more than we think of the air we breathe. But to Americans, life is just as inconceivable without freedom as it is without air.

What, then, is freedom? It is a fundamental part of people who realize that God created them and that they in turn created government as their servant, not as their master. It is as much a part of us and just as intangible as the souls which set us apart from the mechanical men and women with lusterless eyes and no hope in their hearts and whose sole purpose in a mechanical sort of life is to serve the state which is their master and which owns them body and soul.

Thirty-seventh Anniversary of Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. CRETELLA. Mr. Speaker, it is a pleasure to include in the Record a resolution unanimously voted by the Lithuanian Americans of the city of New Haven. The commemoration of Lithuanian Independence Day offers not only a display of the fearlessness, courage, spirit, and perseverance of this fine nation, but also it is a tragic reminder to us of the free world that the Soviet tyrants will stop at nothing in their fanatic obsession to annex the entire globe. The resolution follows:

RESOLUTION UNANIMOUSLY VOTED BY THE LITHUANIAN AMERICANS OF THE CITY OF NEW HAVEN, CONN., AT THE OBSERVANCE OF THE 37TH ANNIVERSARY OF THE DECLARATION OF INDEPENDENCE BY THE PEOPLE OF LITHUANIA, HELD UNDER THE AUSPICES OF THE AMERICAN-LITHUANIAN COUNCIL, AT THE ST. CASTOR HALL, ON THE 27TH DAY OF FEBRUARY 1955

Whereas in 1940 Soviet Russia, in vicious conspiracy with Hitlerite Germany and in brutal violation of all the treaties and obligations solemnly underwritten by her, invaded Lithuania with armed forces and, against the will of the people, annexed her to the Soviet Union, and, in 1944, following the defeat of the German armies on the eastern front, again took over that country in complete disregard of the wartime policies and obligations to which the Soviet

Union was cognatory with the United States and other allies of World War II;

Whereas for almost 15 years Lithuania, one of the Baltic nations, has borne the yoke of slavery, as a result of the brutal and unprovoked aggression by the Soviet Union;

Whereas the Kremlin conspirators are constantly trying to seduce the free nations to enter into agreements with the Soviet Union in hope of splitting their common defense efforts and gaining their tacit consent to the status quo of enslavement of millions of people under the heel of international communism: Therefore be it

Resolved, That this gathering of American citizens of Lithuanian descent of the city of New Haven pledge their wholehearted support of this great country's efforts to achieve lasting peace and justice in the world, and urge the Federal Government of the United States to respond to the demands of this crucial time in initiating a positive and dynamic political program against the international Communist conspiracy; be it finally

Resolved, That the Lithuanian Americans of New Haven, once again reaffirming their loyalty to the principles of American democracy, pledge their wholehearted support of the administration and Congress of the United States in their efforts to bring about a lasting peace, freedom, and justice in the world.

MATHEW VOHETARTIS,
President.
MARY JOKUPAITIS,
Secretary.

NEW HAVEN, CONN.

The Booker T. Washington Memorial

EXTENSION OF REMARKS OF

HON. HUGH Q. ALEXANDER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 2, 1955

Mr. ALEXANDER. Mr. Speaker, under leave to extend my remarks, I wish to include a statement by Rev. S. R. Johnson, Jr., of Salisbury, N. C., which appeared in the *Journal and Guide* of Norfolk, Va., on February 6, 1955, and also the *Carolina Times*, of Durham, N. C., on February 19, 1955:

THE BOOKER T. WASHINGTON MEMORIAL

It has been reported to me through the columns of several newspapers that the B. T. Washington Memorial Birthplace Foundation, Rocky Mount, Va., has folded its arms and the founder now seeks to blame failure for this proposed project on the noncooperation of Negroes.

Nothing that begins wrong will end up right. From the very beginning as one who has followed this project it got off on the wrong foot. Some few years ago while working as a reporter for the *Journal and Guide*, a Negro weekly newspaper at Norfolk, Va., I was assigned to the coverage of the auction sale of the now reported defunct site of the Booker Washington birthplace.

On that dreary afternoon all kinds of mystery surrounded the purchaser of the site who outbid the late Thomas C. Walker, noted Negro lawyer, of Gloucester, Va., who along with Lee Wald, retired businessman of Rocky Mount, Va., and Conrad Martin, a banker of Danville, Va., and several others who were interested in the sale hoping that the Negro Organization Society of Virginia might develop the site not for commercial purposes,

but to develop it as a shrine to the noted educator.

It was the thinking of Mr. Walker, Lee Wald, and others that the State of Virginia along with the society would contribute to the development of this shrine.

This dream was shattered by Mr. Phillips and several other mystery figures who were unknown in Franklin County. During the auction the Phillips' interest offered a skyrocket bid that was almost unreasonable considering the land. All who were present were amazed and wondered as to what was taking place but no one could get any information. At the close of the sale Mr. Phillips presented a check drawn on a bottling company for the amount of \$500 as a downpayment. When asked what was to be done, those who inquired were told they would be surprised. No, they weren't surprised, but by now it seems as though Mr. Phillips is.

Mr. Walker left the sale brokenhearted and went back home outdone. For it was his conviction that outside interests had come in to exploit the name of Booker Washington to ride to national fame.

While in the capacity of a reporter, I was assigned to the dedication of the site that was later to be used as a memorial. On that day noted statesmen from Virginia came to hear a race orator who stood on the Franklin County Courthouse grounds in Rocky Mount, Va., telling of the life of Booker T. Washington.

It always seemed strange to me how people would be allowed to roam the streets peddling the United States silver for a profit that bore the image and name of Booker Washington. I was living in a big Virginia city (Norfolk) and saw peddlers going from place to place selling half-dollars for a dollar. What became of this profit?

On a recent visit to the memorial site one would not be too impressed to see incomplete buildings, rundown grounds, and a dull post office that had received so much publicity. What became of the profit? Was this a stab in the back at those who are doing a good job at Tuskegee? There ought to be a lot of explaining. The Negro race must not be blamed because one man made a failure and now seeks a way out.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily Record, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the Record at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Record.

Appendix

Testimonial to Hon. Warren R. Austin

EXTENSION OF REMARKS

OF

HON. WINSTON L. PROUTY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. PROUTY. Mr. Speaker, recently the Vermont Jewish Communities staged a testimonial to Ambassador Warren R. Austin in recognition of his historic contributions to the cause of world peace and to the establishment of Israel.

The occasion was highlighted by the presentation of a scroll marking the establishment of the Warren R. Austin Forest.

Ambassador Austin long championed the State of Israel and the Vermont Jewish Communities have most fittingly commemorated his labors by the planting of a forest in the soil of this land.

Mr. Speaker, in times of international crisis when others stood confused, alarmed, and vacillating, Ambassador Austin was a tower of strength confidently facing each challenge with firmness and resolution. His calm courage stilled the feeble voices of fear and pessimism and his unceasing devotion to the ideal of world peace will be remembered as long as history is recorded.

Some time ago it was my pleasure to visit Israel as a member of a study mission of the Committee on Foreign Affairs. The achievements which the Israelis have made during the brief period of their independence are most impressive. I had the feeling while there that I was observing a vigor characteristic of people who enjoy the blessings of liberty and freedom.

Mr. Speaker, under leave to revise and extend my remarks, I place in the Appendix of the RECORD the addresses which were given during the testimonial to the Honorable Warren R. Austin. These are as follows: Address by Rabbi Max B. Wall, address by His Excellency Ambassador Abba Eban, presentation of scroll to Warren R. Austin, and address by Warren R. Austin.

ADDRESS BY RABBI MAX B. WALL, OHAVI ZODEK SYNAGOGUE, BURLINGTON, VT., JANUARY 30, 1955

Reverend colleagues, distinguished guests, and friends, I deem it a great privilege to be able to serve as chairman for this afternoon's testimonial activities. My good friend, Saul S. Spiro, chairman of the Warren Austin Forest Committee, should have been the chairman this afternoon and I wish to thank him for his remarkable efforts in helping to make this meeting a reality.

We are gathered here to pay homage to a dear and beloved neighbor who is one of the most distinguished statesmen of our generation.

I wish to talk of a man and of a forest. The man is well known to us as a neighbor who takes pride in his family, his

friends, his record of service, and his apple orchard. How do we measure the stature of a man or of a people; surely not with a ruler by inches or feet.

The stature of Warren R. Austin dwarfs the Green Mountains from which he went forth into the world. He is tall because he has the far look—the vision—the inextinguishable confidence that holds forth the promise of peace and justice, freedom and rebirth for all men.

In the Senate and in the United Nations, he served the best interests and high purposes of our Nation and of the peoples of the world. He was always the symbol of that unswerving undiscourageable granite type Vermonter who makes no compromise with injustice, who is the upholder of the weak and the protector of the helpless.

It was in 1938 that Senator Austin went to the Holy Land for a tour—to see for himself what was going on in Palestine; and when he returned, his admiration and respect for the people and the land was not kept secret. In newspaper articles and in public statements as well as in private correspondence, he described with enthusiasm the effort of a small people that was trying to rebuild its ancient homeland and rebuild itself in the process.

No doubt he must have felt a certain kinship with the pioneers in Palestine; for he was an American—he knew from his history, as he knew from his very being, what it means to be able to live in peace and freedom enjoying the fruit of one's own hard toil. His Christian upbringing and faith supplied him with the memory of ancient promises to a people too long tempest-tossed and friendless, promises of a return and rebuilding. He recalled with profound gratitude the blessings of heart and mind that resulted once when people and land were united. I am sure he prayed that the builders would rebuild and that the homeless would return and that children would once again play on the long neglected and sorely abused soil of Eretz Israel.

How fortunate for us who dreamed of Israel reborn that this devout spirit and courageous statesman represented our Nation in the United Nations during those hectic days of 1947 and 1948. How happy he must have been to speak forth along the lines which were to lead to the establishment of the State of Israel. The role that our Nation played in the establishment and recognition of the State of Israel was in the words of the Herald Tribune, Saturday, May 15, 1948, "the only one which was consonant with American traditions." The voice that spoke our country's mind came forth with confidence and power because the man who spoke did not merely fulfill orders. He was realizing a dream.

To this man, undeterred by threats of reprisal and boycott, we owe a debt of gratitude which can merely be expressed but not paid.

Therefore have we joined together and dedicated a living testimonial, a forest, to this man. It will grip the soil of Israel and hold it firm. It will fight the ravages of 2,000 years of heartless destruction and will remind people of an American whose heart was big enough to reach around the world.

This forest will remind us of the many bonds and invaluable links between our country and Israel. For our country borrowed from ancient Israel's quarry of faith—the Bible—the stones upon which to build its future. "Thou shalt proclaim liberty throughout the land, to all the inhabit-

ants thereof." And Israel of today took from our political heritage the essence of our great Declaration of Independence. We who are conscious of the shared spiritual heritage between our country and Israel are confident that the hand that built so well will continue to be the hand that upholds and supports.

We hope that the efforts of our own beloved friend to bring peace to the Middle East will meet with continued support from those who guide the destiny of our country. May we exert our influence to bring a real peace and with it an opportunity for both Arabs and Jews to live in brotherhood, each one enjoying freedom, prosperity, and peace.

We dedicate this forest planted in far-away Israel in loving and heart-felt tribute to a man—may it bring with it the blessings of old to a land and an area of the world in need of peace and plenty. May he, whose name it will bear, live to see the fruits of his efforts to bring about a better world. May he be as the psalmist of old described, "And he shall be like a tree planted by streams of water that bringeth forth its fruit in its season, and whose leaf does not wither, and in whatsoever he doeth he shall prosper."

The man and the forest—long may they live and blessed may they be.

ADDRESS BY HIS EXCELLENCY AMBASSADOR ABBA EBAN, BURLINGTON, VT., JANUARY 30, 1955

Rabbi Wall, Your Excellency Governor Johnson, Ambassador and Mrs. Austin, distinguished guests, ladies and gentlemen, a generous and graceful impulse has arisen in the Jewish communities of this mountain State. You have gathered here in tribute to a fellow citizen whose voice has carried the name of Vermont in accents of dignity and peace across the continents and oceans of the world.

There is a good foundation for your pride, and a fine sense of propriety in your method of attesting it. It has occurred to you in a flash of brilliant intuition that after many years of unlimited debate in the Senate of the United States and in the United Nations, your honored guest could not be granted anything more enjoyable or original than the opportunity to come here and listen to a lot of speeches. This reminds us of the new spirit of diplomatic life. Diplomacy was traditionally associated with qualities of reticence. Behind a silent exterior our predecessors in the diplomatic craft were assumed to harbor an invisible abundance of wisdom and knowledge. In this age of television and of diplomacy by conference all that is changed. An ambassador today might well be described as a man who can approach any international question with an open mouth.

But if our voices must be heard, they could not be uplifted in a higher cause than that which brings us here together in affection and fraternity around Warren R. Austin, Senator and Ambassador of the United States. At the end of the Second World War his statesmanship and eloquence, which had until then been in the service of his State and country, became a potent weapon in a universal cause. We all remember the poignant hopes with which our suffering generation accompanied the establishment of a universal forum dedicated to international peace. The world has risen battered from the ravages and anguish of the war. Millions of human beings had been its vic-

times. Vast areas had been devastated. But the worst terrors of the recent conflict were obscured by the fearful vision revealed by the blinding explosion of Hiroshima. Man, by his conquest of nature, had made warfare a transgression which this planet could no longer afford.

This new dread reinforced the passion with which we began to dream of a world society in which sovereign states would be bound by the restraints and sanctions that guard us against indignity, dispossession, and assault.

Amidst these high hopes and grim anxieties there gathered in San Francisco the representatives of the world's sovereign states who founded the United Nations as the bulwark of man's eternal hope of peace.

It is customary in some circles to describe these high hopes of 1945 against the disillusionment and disappointment of the succeeding years. It has become a fashion to describe the achievements of the United Nations in terms of failure and frustration. I would address to you a warning against such an erroneous judgment. True, the great alliance upon which the United Nations was established soon fell apart. The intrinsic conflict between the doctrines of freedom and the theories of totalitarianism reflected itself in the field of international relations. Thus there grew up this widening chasm which has divided the free world from the world of totalitarianism in the arena of international politics. As a result the organs of the United Nations were paralyzed and frustrated. Their beneficial interventions in the cause of peace were obstructed by disagreements and vetoes.

Yet it would be an error to generalize this failure into a basic disillusionment. Anyone who imagined that world society could spring into existence overnight in a single spasm of history was seriously misguided. Surely a cause so vital as this deserved the opportunity of trial and error, of victory and defeat. All expansions in the sense of community have been difficult and slow. First, the family alone recognized mutual obligations toward its members. Later the sense of community spread from family to tribe, from tribe to village, from village to city, from city to state, from sovereign State to the great systems of federal government such as that which is so inspiringly expressed in your own Constitution. The last and most crucial victory for the expanding sense of community has still to be achieved. This is all that the United Nations means—that there should exist between sovereign states the same kind of relationships of law and of mutual respect that exist amongst citizens and groups within the framework of our individual States. So long as we can see a progress, and evolution toward that goal, the United Nations is no failure, and its record should not be written in terms of despair.

Even against the background of global conflict the United Nations has many glittering inscriptions upon its banner. In 1948 and 1949, during which our guest of honor led the deliberations of the Security Council and of the General Assembly, international conciliation brought an end of warfare to three parts of the world, in Indonesia, Kashmir, and in the Holy Land. Then in 1950 there came the most vital and significant step of all. For the first time collective resistance to aggression was organized in Korea beneath the banner of a universal organization. If there ever comes a time when the habits and restraints of law prevail in international relations, men will look back upon the United Nations action against aggression in Korea as one of the authentic points of climax in the history of civilization.

The United Nations has also enriched and broadened the concepts of economic and social cooperation. Its efforts have been illu-

minated by sudden flashes of inspiration, such as that which enabled us a few months ago to adopt a unanimous program in the General Assembly for harnessing atomic energy to peaceful ends.

In all the achievement of the United Nations for many years Ambassador Austin was America's voice, and, therefore, the voice of greater stature and influence. And amongst these achievements one stands out with special radiance. This was the sudden emergence of the Jewish people to sovereignty upon its ancestral native soil. The Jewish people had been the greatest victim of the Nazi holocaust. Six million of our people had perished in Europe. Out of the darkest depths of man's divided nature there had sprung at the throat of the Jewish people the most violent hatred which had ever distorted the spirit of man. This was the lowest ebb in the fortunes of our people in the 4,000 years of continuous history. Yet as the nations of the world gathered in San Francisco, they faced a deep moral danger—that all peoples would be established in freedom—except the people which needed it most. Every country would be given its area of sovereignty and liberty, except the people which had been the chief target of totalitarian fury. If the world society had been built on this discrimination its moral character would have been indelibly stained. From this reproach the world purged itself by the great process which began in 1947 and carried itself forward in the ensuing years. The world, represented in the United Nations said, "Just as it is right for the Arab States to possess and enjoy their unlimited resources of political and natural power, their multiple influence in international councils, just as it is right that Arab emancipation should be carried out in such lavish measure, so it cannot be wrong for the Jewish people to enjoy the peaceful possession of its small but cherished home." There was to be freedom and sovereignty for both the peoples of our ancient region, for Arab peoples within the shelter of their vast domain, and for Israel in the land which it had immortalized in ancient times. This was the mature judgment of international equity.

So many unique circumstances came together here to mark the establishment of our State as an event conceived in the highest dimensions of human history. First it was a victory of faith against all the calculations of chance. There were no conditions which would lead a rational man to believe that the reestablishment of the Jewish homeland was still possible. Yet in a moment we passed from a world in which the establishment of a free Israel seemed inconceivable to a world which seemed inconceivable without its existence. This event is a crushing argument in the great discussion between the sovereignty of faith, the belief in the human will as an active agent of history, against the fatalistic deterministic doctrines of history which see the human being as the passive and helpless object of historic processes.

It was also a rescue of a people at the lowest ebb of its fortunes; an opportunity to restore to our land its ancient fertility as described in our Hebrew literature "the perfection of beauty, the joy of the entire earth."

It was an exercise in democracy; we have planted in the continent of Asia, dominated by dictatorships and tyranny, a sanctuary for the democratic way of life based upon the principle that government derives its just power from the consent of the governed. Finally, Israel's rebirth gave a new dimension of completeness to the international community. I often reflect that the family of sovereign nations is also the family of the human cultures and civilizations. There are some 30 states in our midst which, whatever their attitude toward formal religion, symbolize the Christian ethic and ideal.

Fifteen countries are dominated by the heritage of Islam; 3 or 4 new sovereignties in Asia uphold the Buddhist system of thought and life. There is no lack of states which adhere to the materialistic doctrines. But until 1949, 1 voice alone was missing, 1 voice did not have expression, could not respond to the challenge of statehood, society, and international relations. This was the original Hebrew voice. When we reflect upon the influence which the Hebrew mind has exerted on the course of human history its absence from the family of nations was surely an intolerable paradox.

Thus by our admission to the United Nations proposed and sponsored by Warren R. Austin on behalf of the United States, a new dimension was given to the world community. A new voice—the oldest voice—was added to the symphony of freedom.

Here I have briefly recounted the events which gave to Israel's rise a stature beyond our physical limitations. The Security Council, despite its limitations in other areas, powerfully influenced the new pattern of international relations in the Middle East.

First it localized and curtailed hostilities in 1949 and confirmed the armistice agreements which govern the rights of Israel and the Arab States. Second it initiated Israel's membership, thus completing the structure of our international status. Third, in 1951 it established, in the case of the Suez Canal, the principle of nonbelligerency and discredited the theory of a continuing state of war.

By these acts the Security Council laid the foundations for normal political relations in the Middle East.

It was my privilege to work with Mr. Austin in each of these discussions. His statesmanship was pervaded by deep stirrup of conscience. How could any American who drew his roots from this green soil fail to be inspired by the memories which Israel evoked? Israel, like America, was a land of immigrants opening its doors to the dispossessed. Israel, like America, was a land of pioneers. Israel, like America, was a country of tolerance and diversity, united so many creeds and backgrounds into the unifying discipline of a new nation. Israel, like America, was devoted to democracy, with its conception of personal and social freedom. America, like Israel, acknowledges allegiance to the laws of individual rectitude, social justice, and universal peace, first proclaimed by immortal voices in the hills and valleys of Israel, and later to become the heritage and consolation of all mankind.

Is it not natural, therefore, that our two countries have trod so many roads together and that many of the chapters of American-Israel relations have been written in the United Nations?

These thoughts, these memories of many advance and some setbacks crowd in upon me at this moment as I come to bring the gratitude of my government to one who helped to strengthen our country's early steps upon the universal stage. The State of Israel is now nearly 7 years old. It is a full member of the world community. Year by year it strengthens its foundations, increases its economic strength, intensifies its industrial activity, reinvigorates its undying devotion to the achievements of mind and spirit, sets an example of dynamic progress to its region and its continent. It has become recognized and befriended by many countries and people. We are grateful to them all. But we would be less than human if we did not have a special place in our hearts for those who befriended us when we were alone, those who went with us in the wilderness, in a land that was not sown. Such a friendship, deep and enduring, belongs from us toward your honored citizen and guest. Ambassador Austin was the father and pioneer of the American tradition in the work of the United Nations. He moved with strength

and dignity in high issues of conflict and conciliation. He has written his name on many great debates of this generation. Yet, I believe that as he looks back, he will find no greater spiritual satisfaction than that belonging to his role in assisting this small but venerable people to reassume its place of freedom in the family of nations after the torments and anguish of 2,000 bitter years.

We are a small people, we have no decorations or orders of chivalry: We can therefore bestow upon your guest the only honor that is in our power; we have written his name in green words of trees upon the landscape of our country. Perhaps in so doing we have endowed him with a precious immortality. This is a people which writes its history with an eternal pen. Nothing that ever happened to our country and our people have ever been forgotten. Therefore, as this forest casts its shade over our hallowed land, may Ambassador and Mrs. Austin derive the deep proud satisfaction of knowing that their names are established with honor upon a grateful and incomparable soil.

**PRESENTATION OF SCROLL TO WARREN R. AUSTIN
BY DR. ARTHUR GLADSTONE**

As president of the Vermont Jewish Council, I am indeed grateful to Mr. Saul S. Spiro, the chairman of the testimonial, for having given me the honor of making this presentation. Dr. Weizmann, a world-renowned Zionist and the first president of the State of Israel, once said that it is characteristic of the Jewish people to forgive and forget its enemies but to remember its friends.

So, today, Vermont Jewry is acting in the tradition of the Jewish people in honoring a friend; and we are indeed honored to play this part in the drama of perpetuating the name of Warren R. Austin in the Holy Land. I, therefore, wish, on behalf of the Jewish communities in Vermont, to present this scroll to Ambassador Austin, which reads:

**"JEWISH NATIONAL FUND FOREST IN TRIBUTE TO
WARREN R. AUSTIN**

"For his manifold, invaluable services to mankind, his outstanding contribution to the cause of freedom and democracy.

"In everlasting gratitude for his glorious part in the historic drama of the restoration of Israel, when, as United States Ambassador to the United Nations, he threw the power and influence of America on the side of the creation of the State of Israel, thus aiding in the fulfillment of the prayerful hopes and aspirations of countless Jewish generations.

"This scroll is presented marking the establishment of the Warren R. Austin Forest which the grateful Jewish community of the State of Vermont is planting in his honor, forever linking his name with the soil of Israel.

"In witness whereof we have subscribed our names and affixed our seal on the 30th day of January 1955 (the 7th day of Shvat 5715).

**"JEWISH NATIONAL FUND OF AMERICA,
"MENDEL N. FISHER, Executive Director.
"HARRIS J. LEVINE, President.
"SAUL S. SPIRO,
"Chairman, Jewish Communities,
State of Vermont."**

ADDRESS BY HON. WARREN R. AUSTIN

Dr. Gladstone, very distinguished and esteemed gentlemen and ladies, I wish that the time could be given to us to eulogize the names of all of you. I feel that I have not in many years seen such a galaxy of distinguished people as I face today in this audience, and on this stage. Thank you all who are here in this magnificent synagogue center, and thank you the Vermont Jewish communities and the Jewish national fund. Your noble award of a Warren R. Austin Forest planted in the soil of Israel will pro-

mote peace through the United Nations among all people. My gratitude is too great for adequate expression, but if there is not time for more than this, I am determined to tell you the experience that Mrs. Austin and I had in seeing and understanding that faith is the real power in Christendom and in the whole world. For countless centuries there has been a covenant with God that there shall be a promised land for the chosen people. In the 20th century before Christ, "By faith Abraham sojourned in the land of promise, as in a strange country, dwelling in tabernacles with Isaac and Jacob, the heirs with him of the same promise" (Hebrews, 11:9). Though constantly repeated covenants and promises were declared in sacred testaments, yet the fulfillment had not arrived until after a tremendous concentration of the faith of the Jews effected it, and brought it on—almost like a miracle—in a moment—as it were.

Now I lack the time to tell the full story, but this I must do. I must repeat these thoughts which Mrs. Austin and I inscribed while we were touring the Holy Land. We were studying Palestine under extremely difficult conditions, for a terror existed in that part of the world. Then and there we felt these conditions which are, I believe, the proof of the faith which was strong enough to achieve an independent state based on the venerable prophecy. This was after a great world war, when thought of the promise was cherished by the Jews. Already Jews and Zion began to aspire for a political state; not merely a national home for Jews—not merely a center of spiritual and cultural achievement. Dr. Weizmann, at Paris in 1919, at the Conference for Peace, spoke of the home that was considered at that time under the proposed mandate should be a state which is Jewish, wholly Jewish, as Jewish as America is American, or England is English. Later, in 1922, the point was made again by a great historian, a great statesman, Hughes, the Secretary of State of the United States, in a letter to Lord Balfour. He called the "home" the Jewish state. So, through modern times, we find the ideal of the fulfillment of the faith in a state, not merely a home in somebody else's state, but a state, an independent state.

We wrote down the following as we were traveling home:

"It is undeniable the vigor and self-discipline on the part of the Jewish immigrants and a determination to redeem the land of their forefathers and to erect a home for their race in the promised land have achieved miraculous transformations. Deserts have become forests, swamps have become orchards and vineyards. 'Milk and honey' has become again descriptive of that part of the land cultivated by the Jews. Health for Jews and Arabs alike has been promoted by the purification of the water and amplification of its supply. Drainage, sewage, and other hygienic works, especially the health centers and the excellent hospitals and dispensaries operated by the Haddassah, have materially improved the lives of the inhabitants. The infant mortality rates have dropped sharply. Educational facilities are widely developed, culminating in excellent universities, both Jewish and Arab. Palestine boasts a high per capita school budget in the Near East.

"The political and economic issues involved in the reconstruction of the Holy Land under the mandate compelled the attention of American public opinion (1936). In addition, the monumental example set by the Jews of Palestine of obedience to constituted authority and exercise of self-restraint under terrific provocations during the prevailing terrorism justifies a sympathetic interest in the promotion of a national home for the Jews by all friends of humanity and peace."

Much more I would like to add to this, but I must shorten what I have to say.

The ambition for a state was the perfectly natural irresistible effect of that dynamic power which the Jewish pioneer brought to Palestine. It cannot be measured by yardsticks of economics though they were very important. Four hundred and fifty million dollars of capital had been brought in through Zionist people, and others, to Palestine at that time, in 1936, and constructive use made of it in agriculture and industry, and public works and services, and the budget showed adequate surplus. I don't know how much more since then. It had tremendous implications to the welfare and the power of the Jewish people. Now then, under the mandate, it was impossible to create a political state. Nevertheless, as soon as the mandate was terminated, immediately, on May 14, 1948, when the Jews were relieved from the limitations of trusteeship, a political State of Israel was declared, and almost forthwith the Government of the United States recognized that political State of Israel.

Thereupon commenced that period of conflict and debate which followed in the Security Council. And there we found indeed a great champion of freedom, of righteousness, of execution of the Security Council, which has been maintained and glorified since that time, Ambassador Abba Eban. Within 2 years after the problem was presented to the United Nations, the State of Israel was born, without a major war; fighting had been stopped, and the way paved for lasting peace, in an area where all previous efforts at peaceful settlement had failed during 30 years and bloodshed.

I must close by saying that it was a great honor to me to be associated with such a wonderful statesman and cultured gentleman as Ambassador Eban. I sat near him throughout the great debate in the Security Council which resulted during the period of 2 years, ending in 1949, with the adoption of four armistice agreements signed between the new State of Israel and its Arab neighbors. Simultaneously, a United Nations Conciliation Commission began mediation for a settlement in the Holy Land.

And now while the world still remains in a problem of how it is to maintain peace all over the world, how we may promote it, I must say that I am still of the opinion that faith is the only real way of arriving at that goal. I want to announce publicly that I have that faith myself, that is so beautifully expressed in these words by Samuel Longfellow:

"Thy hand in all things I behold,
And all things in Thy hand."

The Leading Question

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following broadcast: CBS RADIO PRESENTS THE LEADING QUESTION, FEBRUARY 27, 1955

Participants: HON. FRANCIS E. WALTER, chairman, House Un-American Activities Committee, and Hon. William F. Tompkins, Assistant Attorney General in charge of Internal Security Division.

They will give their answers to the lead-question: "How effective are former Communists as witnesses?"

Moderator: Dwight Cooke.

Producer: Nancy Hanschman.

Mr. COOKE. How effective are former Communists as witnesses?

Well, gentleman, recent events have raised this whole question of how effective former Communists are as witnesses, and for that matter, how useful they are and how desirable they are.

Of course, I suppose the item of news which has spurred interest in this overall subject has been the recent testimony of one Harvey Matusow, who has now, before the Senate Internal Security Subcommittee, testified that he has been a perpetual and habitual liar, and I believe he was involved in testifying against some 160 persons by name.

Other witnesses also have changed their minds, or decided what they said was not so.

Does this mean, Congressman WALTER, that most former Communists should not be depended on as witnesses?

Mr. WALTER. Of course it does not. To my mind it indicates that the anti-anti-Communist drive is succeeding.

Mr. COOKE. Wait a minute, a double negative is takable, but the pro-Communist drive then—

Mr. WALTER. That's it exactly. It's technically called the anti-anti-Communist drive, Mr. Cooke, but I certainly feel that the American people are quite fortunate in having people who are willing to make the sacrifices that they do make, in order to learn about the machinations of this conspiracy, willing to come forward and assist the agencies of Government in exposing this international conspiracy.

Mr. COOKE. Well now, Congressman Walter, are we not talking simultaneously about two different groups of people involved here now? First, the former Communist, like Harvey Matusow; and, second, the Americans who never were Communists, but who infiltrated into the Communist movement so that they would help the United States against it.

Mr. WALTER. That is correct.

Mr. COOKE. Do you also have praise for the first group, the former Communists themselves?

Mr. WALTER. I find it very difficult to bring myself around to praising anybody who, at any time, was a member of an organization that had as its purpose the overthrow of this Republic. However, they have apparently seen the light and are willing to atone for the dreadful mistakes that they made.

Mr. COOKE. So far we have only heard from the legislative branch of the Government.

Mr. TOMPKINS, how about the executive branch?

Mr. TOMPKINS. Mr. Cooke, I'd like to say this: first of all you must remember that former Communists have given very valuable testimony concerning the revolutionary principles of the Communist Party; and you should also bear in mind that their testimony has been subjected, in each instance, to extended and intensive cross-examination by highly competent counsel.

Some of their cross-examination has lasted for several weeks. Now, the testimony of these witnesses, furthermore, has been weighed by numerous American juries, and it has been found credible.

Now, so far the 85 defendants that we have tried for conspiring to violate the Smith Act, and for, and in one membership case which recently terminated here in Chicago, 82 have been convicted.

Now, I can't give you a more convincing yardstick of these witnesses.

Mr. COOKE. These witnesses being carefully tested before you present them all, as part of the case?

Mr. TOMPKINS. Very definitely so. In a preparation for a case, a host of reports have to be digested, a lot of material has to be correlated, the witnesses have to be interviewed, and you must remember that in many of these cases the witnesses are

going back many years, searching their recollection.

Now, some of them may have notes from the time that they were members of this Communist conspiracy, but others are searching back maybe 10 or 12 years.

Mr. COOKE. And yet, gentlemen, I can hear some of your listeners say, "I have been reading about a character called Harvey Matusow. He says he was a liar when he testified to the things which helped cause court decisions and jury decisions to be made in one way or another. What kind of a witness was he then, or what kind of a witness was he now?"

Mr. WALTER. Well, maybe I could answer that best, Mr. Tompkins, because I heard Matusow testify before the Committee on Un-American Activities, and it seems to me that before I mentioned his testimony, it might be well for me to point out what that committee does in order to attempt to establish the credibility and honesty of the witness before its called.

In the first place, and, General, may I say that we call on the Department of Justice for information? Is that revealing any secrets?

Well, we obtain a report from the FBI, and its judgment as to whether or not a witness is responsible and trustworthy, reliable, and honest.

Then we turn to the other agencies of Government concerned with people of this sort, and direct the same inquiry to them. Then the witness is interrogated in executive session by an investigator or counsel for the committee.

Then a report is made to the committee, as to whether or not in the judgment of the person who was charged with the responsibility of making this preliminary inquiry, this person is trustworthy.

The committee then acts, usually on the recommendation of the investigator or the attorney.

Now, that's exactly what happened with Matusow. We were of the opinion that the man was trustworthy and reliable. His story to the committee was absolutely straightforward. I saw nothing in it to indicate that it was colored, and having had the experience of trying literally hundreds of cases in the courts, and knowing something about witnesses, I felt positive that this man was telling the truth.

And, let me tell you, Mr. Cooke, I am convinced that he did tell the truth when he testified before our committee.

Subsequently, we heard stories about his recanting, we called Mr. Matusow a second time, took his original testimony and asked him questions on the original testimony, and he reaffirmed everything that he had said originally.

Now, and that is why I am thoroughly convinced that the fellow is now an emissary of the anti-anti-Communist movement, because when he said that he didn't tell the truth before our committee, then I say it was then that he lied.

Mr. COOKE. So in other words you believe now that Matusow is lying in order to help the Communist Party by impugning witnesses who've testified against people they claimed were Communists.

Mr. WALTER. Mr. Cooke, not only to aid the Communist Party, but in order to try to prevent justice from being done in the cases of those conspirators who were convicted and are faced with the serving of terms in the penitentiary.

Mr. TOMPKINS. Mr. Cooke, and Congressman WALTER, I'd like to point out one very fundamental fact: People say why do you have to use these witnesses, and I'd like to quote a very famous jurist, American jurist, Judge Learned Hand, speaking for the court of appeals in the famous Dennis case, wherein the judge said:

"Courts have countenanced the use of informers from time immemorial in cases of

conspiracy or in other cases when the crime consists of preparing for another crime. It is usually necessary to rely upon informers or accomplices because the criminals will almost certainly proceed covertly."

Now, the Communists and some of the Soviet apologists and some of the left-wingers have attempted to connote something evil in the term "informer."

In other words, they have tried to cast a shadow over every one of these witnesses who will come forward and testify for the Government.

Now, a second thing that I think you should be mindful of, in the country today, there is an article that appeared in the January 30 issue of the Denver Post, and it was a very blunt announcement that the International Union of Mine, Mill and Smelter Workers, and I think all of us know what kind of an organization that is, and that it was expelled from the CIO—

Mr. WALTER. May I interrupt, Mr. Tompkins, for the benefit of those people who don't know what it is, let me say categorically that it is a Communist-dominated union.

Mr. TOMPKINS. Thank you, Congressman.

The International Union, at any rate, announced publicly that they were going to start a drive to discredit Government witnesses who were appearing against Maurice Travis, the union secretary-treasurer, who is awaiting trial in Denver's Federal District Court.

They have made no bones about it, that they are going to use every means to discredit the Government witnesses.

Mr. COOKE. In your statement—

Mr. WALTER. Well now, may I interrupt at that point?

Mr. COOKE. Go ahead.

Mr. WALTER. And isn't it a fact that this same union has purchased 6,000 copies of Matusow's book, which is now on the presses?

Mr. TOMPKINS. Congressman, if you will accept that amendment, it's gone up. I think it's closer to 10,000 right today.

Mr. WALTER. Well, of course it will go up, as is necessary to maintain this man.

Mr. COOKE. Well now, a minute ago Mr. Tompkins used a phrase I would like to have him expand a little bit.

You have been stressing how you believe people like Matusow are an attempt to impugn witnesses which help you convict Communists.

You used the phrase, Mr. Tompkins, "Communists," and I don't remember it specifically, it doesn't matter, and left-wingers, something to that effect.

Would you like to expand that last part of that phrase a bit, because—

Mr. TOMPKINS. Well, the only way I can expand it is this: We expect to see the Daily Worker come out and denounce these witnesses, but we are very, very much mystified at some apparently respectable writers who have been carrying on a consistent campaign to discredit; and I might say some of these writers had an advance copy of Mr. Matusow's book.

Mr. COOKE. Are you thinking of a certain columnist specifically who said he'd read it, and every page had been signed by Mr. Matusow?

Mr. TOMPKINS. That's correct.

Mr. WALTER. Well, I might inform you gentlemen that I have a copy of the book here, with me, and I brought it over just because I thought that at some time or other in this discussion with the distinguished Assistant to the Attorney General of the United States somebody might raise the question about the loyalty of this man at any time.

And I think that right at the very beginning he makes it very apparent that he has always been a Communist, in addition to his testimony before the Senate the other day, when he questioned whether or not there

was any international conspiracy; but here is what he says in his book:

"My second act of political agitation was a violent one. I threw a rock through the window of the Young Communist League headquarters in my neighborhood. I knew nothing about communism, and cared less, because communism was bad and I feared and hated it.

"I lost my fear while in Europe when I met my first Communists face to face, two members of my infantry company were party members and, to my great surprise, I liked them.

"On occasion I went to Paris and there I met a number of French Communists. I found I respected them. They had all been active in the underground movement, fighting on the same side, in the same war, and for the same cause that brought me to Europe."

Now, gentlemen, I submit that as exhibit A of my charge that this man has always been a Communist, because if that isn't the Communist Party line, then I don't know what the Communist Party line is.

Mr. TOMPKINS. Well, I think the Congressman and I have very, very strong suspicions that Mr. Matusow had no such book in mind until he fell afoul of the Communists. I think that one of the publishers of his book pleaded the fifth amendment when questioned before a Senate committee last year in Boston.

Mr. COOKE. Not about this book, though?

Mr. TOMPKINS. Not about this book, no; the book was not in being then, I don't believe.

I think it's also interesting to note, in connection with Mr. Matusow's testimony now, in which he repudiates his testimony concerned with Clinton Jencks, an official of the Mine, Mill, and Smelter Union. It's interesting to note that Mr. Matusow now has retracted his testimony, and I'd like to cite this as an example of whether his present retraction is in good faith.

When a Senate committee had a hearing, I believe it was out in Salt Lake, Mr. Matusow testified that Mr. Jencks, I believe, was a member of the party.

When Mr. Jencks was confronted by Matusow, put under oath and asked whether he was a member of the party, he pleaded the fifth amendment.

Now, I don't think it takes much reasoning to come to the conclusion as to why he pleaded the fifth amendment, and as to whether or not Mr. Matusow was then telling the truth.

Mr. WALTER. Now, General, right at that point, may I ask you this: A number of people have minimized the importance of pleading the fifth amendment. Of course, I recognize the fact that there are some people who have firm convictions about testifying; but don't you—hasn't it been your experience in checking over the people who have used the fifth amendment, that they are Communists and have a Communist background, and are using the fifth amendment instead of admitting that they are Communists?

Mr. TOMPKINS. Oh, I think that's absolutely correct, Congressman WALTER.

Mr. WALTER. Well, it's very interesting to me, in examining Matusow's testimony before the Committee on Un-American Activities with respect to a youth organization. He named a number of people, and I say to you quite frankly that we have subpoenaed these people, not for the purpose of corroborating Matusow's testimony but for the purpose of establishing by other means the fact that these youth organizations against which he testified are, in fact, Communist organizations.

And it would be interesting to me to see how many of the people we've subpoenaed will plead the fifth amendment.

Mr. TOMPKINS. I think you will have quite a large group of them, Congressman.

Mr. WALTER. I am sure we will.

Mr. COOKE. There is one point I wanted to clear up, Congressman WALTER:

Are you suggesting that anyone who pleads the fifth amendment, namely, that says "I will not answer the question, because it would in some way criminally involve me," is, therefore, necessarily assumed to be a Communist?

Mr. WALTER. No, sir; nothing further from the truth. However, it's important, insofar as the Committee on Un-American Activities is concerned, to bear this in mind: That the people who have advanced the fifth amendment, have pleaded the fifth amendment, to use the vernacular, are people that we know are Communists.

Mr. TOMPKINS. Well, let me clear up one point, Mr. Cooke, in view of the question you just asked Congressman WALTER: Just remember this, you cannot plead the fifth amendment unless you have a reasonable apprehension that a truthful answer will incriminate you or expose you to a criminal charge.

Mr. COOKE. You can't plead it on matters of, so to speak, faith and conviction, that you don't believe that a committee has any right to ask you the question, and therefore you are not going—

Mr. TOMPKINS. I don't think you have any legal ground, so to plead it.

Mr. WALTER. That's right.

Mr. TOMPKINS. And these people are well advised by counsel, they have them outside grand-jury rooms, and next to them at hearings, and next to them at trials.

Mr. COOKE. So that a counsel says, "You can't—look here no matter what your conviction is here, you cannot plead the fifth amendment unless you have something to hide."

Mr. TOMPKINS. That's correct.

Mr. COOKE. Now, let me say—

Mr. WALTER. Wait a minute; I want to interrupt you at that point.

Mr. COOKE. We have two lawyers, and here we go.

Mr. WALTER. No, it isn't "here we go"; but you are overlooking this, Mr. Tompkins: Some of the members of the legal profession—I don't call them lawyers—you know there is a distinction between a member of the bar and being a lawyer—

Mr. TOMPKINS. That's right.

Mr. WALTER (continuing). But some of these members of the profession that you and I are members of, and are proud of, are the kind of characters who would attempt to prevent congressional inquiries from taking their full course, and would impede their work by advising their clients to hide behind the fifth amendment for no reason at all except that they, the lawyers, were desirous of preventing the truth from being known.

Mr. TOMPKINS. Congressman, you are absolutely right. I intended to bring out that point, sir. It's been my experience, in many cases, that you can pick any name out of the air; I've picked famous ballplayers, prizefighters, and people sitting next to me in grand-jury rooms, and the Communists have taken the fifth amendment.

Now, in other words, let me make this clear, and the Congressman, I think, has already made it clear—they don't plead the fifth amendment in good faith.

Mr. COOKE. All right; thank you—

Mr. WALTER. Well, I think the most dramatic instance of that comes from my own community, where a man came down here to testify—came to Washington to testify before a Senate committee—and he was approached in the Senate by a member of the bar who has appeared in a great many of these cases, who offered him his services. This man said he didn't have a lawyer, didn't want a lawyer, because he was going to tes-

tify, and this member of the Washington bar advised the man to plead the fifth amendment, which he did; he went back home to Easton, Pa., and lost his job as a steelworker.

Mr. COOKE. Mentioning Pennsylvania brings up another case, Mr. WALTER.

So far, the only witness we've mentioned by name here has been Harvey Matusow. There was a woman who testified in a hearing before the FCC, I believe, she testified first linking the owner of this television station with Communist activities, and then later retestified and said all that was false.

Where does she fall into the general picture here?

Mr. WALTER. Well, I'm afraid that the FCC has gotten around to the point where a general investigation of its activities is indicated. I couldn't imagine anybody calling the kind of a witness this woman apparently is, and giving credence to her testimony.

Mr. TOMPKINS. You want to—you brought in the name of another witness now, Mr. Cooke, and I want to bring in the name of still another one that I know the Congressman is familiar with.

Mr. COOKE. I didn't name her, but I referred to her.

Mr. TOMPKINS. Well, I will mention one right now that some of those who seek to undermine the Government's program have attacked—Paul Crouch. They attacked Paul Crouch for his testimony in the Philadelphia Smith Act case which was concluded here last summer. They claimed it was at variance with the testimony that he gave in the Harry Bridges case on the west coast, when he was asked did he know 98 different names, in rapid succession.

Now, let me say this: The Government could have corroborated Mr. Crouch's testimony in Philadelphia with another witness, but for reasons of security we can't, you know, always use all witnesses at a given time, for reasons of security that witness was not used; but I want to make this very clear, that Mr. Crouch's testimony in Philadelphia could be corroborated.

Mr. WALTER. Why was it necessary? One of those witnesses up there, one of the defendants up there, admitted that he was a Communist, but he said it wasn't a crime.

Mr. TOMPKINS. That's exactly right—

Mr. WALTER. Now, they are going to try to impeach Crouch's testimony because he testified against a man who admitted he was guilty.

Mr. TOMPKINS. Well, of course, as you know, Congressman, the Communists and their supporters want to confuse and mislead the American people.

Mr. COOKE. There's one area you gentlemen, I know, are interested in, we haven't had a chance to focus on.

Mr. WALTER mentioned it for a minute, and that's the area of witnesses who have gone into the Communist Party for you, or gone into other organizations to infiltrate and then report back. There are people who have accused them of being tattlers, spies, un-American, all kinds of things.

Mr. WALTER. Yes, that term "tattlers" reminds me of my own hometown newspaper where the editor describes a great patriotic American's testimony as tattling.

I want to tell you that it takes a great deal of courage to do what these people have done, to go into the Communist Party, lead the kind of lives that they lead when they are in it, only in order to make a contribution to the preservation of our institutions; and I think that they are deserving of a great deal of credit.

They are really the unsung heroes of this cold war.

Mr. TOMPKINS. Well, that's exactly right. I want to reiterate what the Congressman has said about these citizens who—he and I, I know, feel very strongly—are patriotic citi-

zens. For example, one of these informants had to discontinue attending his church functions because of the antagonism shown toward what were believed to be his Communist activities. The children of his neighbors were not permitted to play with his boys and girls because their father was considered a Communist.

Now, when they come and testify, editorials—they have gotten editorial support and help in everything. Now, why is it that certain people now see fit to call them "stool pigeons"?

I disagree.

Mr. COOKE. All right, gentlemen; thank you for being with me today and giving us the benefit of your knowledge and your experience in this very tricky subject of former Communists as witnesses for the Government of the United States.

A New Field of Federal Regulation

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following from the March 1955 issue of the Guaranty Survey, published monthly by the Guaranty Trust Co., of New York, entitled "A New Field of Federal Regulation":

A NEW FIELD OF FEDERAL REGULATION

A question of prime importance with which Congress will be called upon to deal at this session is the economic status of one of the country's major industries—the production of natural gas. Shall the competitive and hazardous business of natural-gas production be regulated as a public utility, or shall it be allowed to operate under the rules of private competitive enterprise? The continued vitality and growth of this dynamic industry, and of others as well, may hinge upon the answer.

The question arose suddenly last June as the result of a Supreme Court decision. By a vote of 5 to 3, the Court ruled that the Natural Gas Act of 1938, which gives the Federal Power Commission authority to regulate sales of gas for resale in interstate commerce, applies to sales by independent producers to interstate pipeline companies. Section 1 (b) of the act reads: "The provisions of this act . . . shall not apply . . . to the production or gathering of natural gas." For 16 years it had been generally supposed, and the Commission itself had repeatedly ruled, that this exemption covered sales by independent producers and gatherers—that is, producers and gatherers not affiliated with the interstate pipeline companies. The Court's decision, which reversed one of the Commission's rulings, upset this established belief and the practices based upon it.

STRUCTURE OF THE NATURAL-GAS INDUSTRY

The natural-gas industry is divided into three parts. Gas is sold to consumers by local utility companies, which are regulated by local commissions. The utilities in turn buy the gas from the interstate pipeline companies, which are regulated by the Federal Power Commission. Both of these divisions of the industry are recognized as public utilities—natural monopolies—and there is no serious question as to the propriety of regulating them as such.

The third division of the industry is the discovery, extraction, purification, and gathering

of natural gas for sale to the interstate pipelines and other buyers. This business is radically different in its nature from the transportation and distribution divisions. It is done by thousands of vigorously competing companies, large and small, most of them independent of the pipeline companies. These producers operate under a wide variety of conditions. Their costs are highly variable and often cannot be determined, since natural gas is commonly found with oil and a single set of costs applies to both. The business is exceptionally hazardous, because it involves costly drilling operations, most of which produce no gas or oil. The drilling of a well often costs \$100,000 and may cost up to \$1 million, and 8 out of 9 wells, on the average, prove to be dry holes.

Large amounts of natural gas are sold locally by producers, and the abundant supply of cheap, efficient, and convenient fuel has greatly stimulated industrial development in and around the gas-producing areas. The rest of the gas is delivered to the interstate pipelines for distribution throughout the country. Some of these pipelines are more than a thousand miles long, and their aggregate mileage far exceeds that of the railroads. All but four States are now served by natural gas, and the fuel now provides nearly a quarter of the country's total energy supply. About 21 million homes use straight natural gas, and another 4 million use a mixture of natural and manufactured gas. About 15 million homes are heated by gas, and the number is increasing by about 1 million a year.

PROTECTING THE CONSUMER

The production of natural gas has been regulated by the States for many years with a view to conserving a valuable and limited natural resource. Federal regulation, on the other hand, is designed to protect consumers against exploitation. This was the primary aim of the Natural Gas Act of 1938, which placed interstate pipelines under the regulatory authority of the Federal Power Commission. The specific exemption granted by the act to the production or gathering of natural gas was in line with the basic premise underlying a private-enterprise economy, namely, that effective competition is the best protector of consumers' interests, and that governmental regulation is necessary and proper only in cases where effective competition is impossible or impracticable. Public utilities in general operate under exclusive monopolistic privileges granted by governmental charters, and in return for these privileges they must submit to dictation of rates and, in effect, limitation of earnings by governmental commissions.

The production of natural gas, however, is as far from monopolistic as an industry could well be. If gas production is a proper object of regulation in the consumer's interest, what industry is not?

The case for regulation to protect the consumer becomes even weaker when it is considered that the price received by the producer is, in most cases, a small part of the price paid by the user. The ratio varies with distance and other factors, but on the average it is estimated that 90 cents or more of the consumer's dollar pays for transmission and distribution, and only 10 cents goes to the producer. This striking disparity is, of course, no reflection upon transmitters and distributors, whose costs are heavy and whose rates are regulated. It means, however, that even if producers should give away their gas the saving to most consumers would be relatively small.

THREATENED DAMAGE

The strength of the opposition to Federal regulation of natural-gas production is based upon the belief that it is not only unnecessary but positively detrimental. Gas men are convinced that their industry cannot thrive in a public-utility environment. The

cost of drilling dry holes cannot be capitalized and hence cannot be made the basis for rate regulation by conventional methods. Exceptional risks can be taken only when there is a reasonable prospect of corresponding rewards to the successful. Unless these risks are taken, new natural-gas reserves in sufficient amounts cannot be found. Proved reserves are even now at an all-time low in relation to the rate of current use. The effort to give the consumer protection he does not need could have the effect of gradually diminishing his future supply.

The threat to the consumer is further increased by the fact that producers now have a strong incentive to escape Federal regulation by selling natural gas locally. Already consumers in areas adjacent to natural-gas fields are using four times as much gas in relation to their total power needs as are consumers elsewhere. Federal regulation may be expected to widen this disparity and, at the same time, promote the industrial development of these local areas at the expense of the rest of the country.

As for producers, they will be caught between two types of regulation aimed at two different objectives. There may well be a clash of jurisdictions, placing the producer in a position where he cannot comply with one without violating the other. Moreover, artificially low prices are undesirable from the viewpoint of conservation, for they encourage the use of an exhaustible natural resource for purposes in which other fuels can be used and might be more economical in a regime of free markets.

If the threat of dwindling interstate supply is borne out by experience, the unit costs of transmitters and distributors would seem almost certain to rise, necessitating higher rather than lower prices to the consumer. If the effect upon supply is sufficiently serious, local utilities throughout the country will have no alternative but to resort to manufactured gas, with further increases in costs and prices.

Some of the steps taken by the Federal Power Commission under its new authority have been drastic. Prices to the pipelines have been "frozen" as of June 7, the date of the Court decision, and producers have been forbidden to discontinue service without the Commission's approval. Both of these orders run contrary to the terms of many existing contracts. It has long been customary to sell natural gas under "escalator" clauses providing for regular schedules of price increases. Many contracts also contain "escape" clauses voiding the agreement in case of Federal regulation. The Commission's orders, therefore, in effect constitute a seizure of property and a denial of the right to withdraw from a type of business that may have become undesirable. They invalidate the terms of long-standing contracts upon which untold millions of dollars have been invested. It would be difficult to dispute the contention of spokesmen for the industry, who declare that no more sweeping invasion of private rights by political authority has ever been attempted in the United States except in time of war or national emergency.

The industry has reacted vigorously. The Supreme Court has been petitioned to review its decision. The Commission has been requested to reconsider the validity, necessity, and practicality of its orders. Congress is being asked to amend the Natural Gas Act so as to establish beyond doubt the exemption of independent producers and gatherers from its provisions. (Such an amendment was passed in 1950, but was vetoed by President Truman.)

The immediate loss and injustice to natural-gas producers are serious enough, but the questions involved in Federal regulation strike even deeper. An increasingly vital industry is threatened with creeping paralysis. A precious natural resource is exposed to the risk of artificially induced wast-

age. Consumers face the prospect of effects on price and supply exactly the opposite of those intended. Worst of all, the whole concept of free competitive markets is under attack. If natural-gas production is subject to Federal regulation, no segment of industry entering into interstate commerce is logically exempt. What Congress is being asked to do is not merely to rescue an important industry and its customers from the risk of grave injury, but to reaffirm a basic principle of American politico-economic philosophy.

City of Chicago Objects to Legislation Which Would Exempt Independent Producers of Natural Gas

EXTENSION OF REMARKS

OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution of the City Council of Chicago:

CITY OF CHICAGO,
LAW DEPARTMENT,
City Hall, February 28, 1955.

HON. SIDNEY R. YATES,
Member of Congress, House Office
Building, Washington, D. C.

DEAR CONGRESSMAN: Your attention is respectfully solicited to proposed amendments of the Natural Gas Act to exclude so-called independent producers of natural gas from the category of natural gas companies subject to regulation. It was strenuously argued in the case of *Phillips Petroleum Co. v. Wisconsin* before the Supreme Court of the United States that the Natural Gas Act was not intended to apply to producers of gas who sold their product in the State in which the gas was produced even though delivery was made to a pipeline for transportation and sale in interstate commerce. The Supreme Court held that such sales by producers are sales in interstate commerce and that such producers are natural gas companies within the purview of the Natural Gas Act and subject to regulation by the Federal Power Commission.

It is now urged that natural gas when produced is a commodity similar to wheat and other produce and to timber, coal, ore, and oil which are sold in the open market free from price regulation; that natural gas in the field should likewise be free from regulation. The forests and produce of the land must be differentiated from the mineral resources which cannot be replenished or restored when consumed. These mineral reserves constitute the primary wealth of the Nation and the public has such vital interest in their products that they are inherently subject to Government regulation for conservation and necessary use. The necessity for regulation of traffic in such products depends upon the degree of freedom of the channels through which they can be brought to the market for ultimate consumption, as well as upon the balance of supply and demand.

Under our pattern of dual government jurisdiction, and in accordance with long established tradition, the States have assumed control of production of natural gas to prevent waste and rapid depletion of the resources within their respective boundaries and the local distribution of gas for con-

sumption. The United States Congress has undertaken to regulate the production and transmission of natural gas for interstate commerce to protect the ultimate consumers from economic pressure incident to virtual monopoly of the interstate channels for distribution of the gas.

The producers of gas are primarily engaged in the production of oil. They explore the country for oil and may discover gas, which, but for the demand of distant consumers developed by investors in interstate transmission facilities, would be burned up or carried away by the winds. They are not interested in the security, comfort, or convenience of posterity, or, for that matter, in the welfare of the present generation. They are bent upon immediate exploitation of all the oil and gas which they can sell in the present advantageous market with preferential taxwise consideration for depletion. Since oil and gas are competitive fuels the producers can control the price of both if the gas can be sold without regulation. Hence, they have organized an unprecedented lobby for exemption from regulation of the price of natural gas produced for sale in interstate commerce, advancing incompatible arguments, in support of their right to a free competitive market price, that it will stimulate exploration for gas to supply the demand and encourage conservation of the resources in the natural gas fields.

The corporate authorities of the city of Chicago, in behalf of its million consumers of natural gas, having evaluated the special interest of the producers, who are now subject to regulation under the Natural Gas Act, their incompatible interest in the sale of both oil and natural gas, and their spurious and inconsistent arguments against the interest of the consumers, as well as the interest of investors in other natural gas companies, which the Natural Gas Act is designed to protect, passed a resolution opposing any action of Congress to nullify the decision of the Supreme Court of the United States that independent producers of natural gas for sale in interstate commerce are subject to regulation by the Federal Power Commission.

A certified copy of the resolution of the City Council of Chicago is herewith transmitted.

Very truly yours,

JOSEPH F. GROSSMAN,
Special Assistant Corporation Counsel.
Approved:

JOHN J. MORTIMER,
Corporation Counsel.

RESOLUTION ON EXEMPTION OF INDEPENDENT PRODUCERS OF NATURAL GAS FROM REGULATION BY FEDERAL POWER COMMISSION

Whereas more than 1 million homes in Chicago are dependent upon a supply of natural gas from the Peoples Gas System for cooking, and many of them for other domestic uses, such as water heating, refrigeration, and space heating; and

Whereas the Peoples Gas System is an integrated system of interstate natural-gas companies and the Peoples Gas Light & Coke Co. the sole distributor of gas in the city of Chicago and said system is dependent in great measure upon a supply of gas purchased from so-called independent natural-gas producers who have heretofore been free to sell their gas at prices affected by competition between natural-gas pipeline companies seeking a supply of natural gas to satisfy their respective customer demands; and

Whereas the Supreme Court of the United States has recently determined in the case of *Phillips Petroleum Company v. Wisconsin*, that independent producers are natural-gas companies within the purview of the Natural Gas Act and are subject to regulation by the Federal Power Commission to prevent unjust, unreasonable, and discriminatory

prices for natural gas produced and sold in interstate commerce; and

Whereas the oil and gas interests in the United States have initiated a nationwide campaign through the press and other media for enactment of legislation by the Congress of the United States to exempt producers of natural gas from regulation by the Federal Power Commission so that they may exact from those who supply gas for ultimate consumption in the homes of Chicago and elsewhere the highest price obtainable by the incidence of competition among the pipelines for their sources of supply; and

Whereas such competition and competitive prices will rapidly increase the cost of gas for domestic uses in Chicago and elsewhere and will inevitably increase such cost as to restrict the normal use of gas necessary for the health and comfort of residents of Chicago: Therefore be it

Resolved, That the House of Representatives and the Senate of the United States be fully informed of the consequences of such legislation and that the corporation counsel be and he is hereby directed to use all proper means, and to make such representations to the Congress of the United States, to prevent the enactment of legislation exempting producers of natural gas from regulation by the Federal Power Commission.

STATE OF ILLINOIS,

County of Cook, ss:

I, Ludwig D. Schreiber, city clerk of the city of Chicago, do hereby certify that the above and foregoing is a true and correct copy of that certain resolution adopted by the City Council of the City of Chicago at a regular meeting held Wednesday, the 26th day of January A. D. 1955.

Witness my hand and the corporate seal of the said city of Chicago this 16th day of February A. D. 1955.

LUDWIG D. SCHREIBER,
Chief Clerk.

Alaska Steamship Co.

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. PELLY. Mr. Speaker, under leave to extend my remarks, I include an outline of the history of the Alaska Steamship Co. Today this fine shipping concern, whose headquarters are in Seattle, the gateway to Alaska, begins its 61st year of service to our great and growing Territory in the north.

The matter follows:

March 3 marks the completion of 60 years of Alaska Steamship Co. service to Alaska. With the sailing from Seattle of the motorship *Square Sinnet* scheduled for March 4, the Alaska line will have commenced its 61st year.

Organized in the rough and tumble nineties, Alaska Steamship Co. served Alaska through the gold-rush period. It carried cargo to Skagway before the White Pass and Yukon route was constructed, to Seward before the Alaska Railroad came into being, and into Valdez when the Richardson Highway was a trail.

Seattle was but one of a number of Puget Sound ports serving Alaska in 1895. Most of Alaska traffic was carried by vessels headquartered in San Francisco. There had been a number of gold discoveries in Alaska and the demand for shipping to the north land

was brisk. Charles E. Peabody, the father of Capt. Alex M. Peabody, the present president of Puget Sound Navigation Co., together with Capt. George Roberts, G. H. Lent, and C. E. Taylor, citizens of the Puget Sound region, figured that a Puget Sound-Alaska steamship operation should pay off and announced plans for a service to southeastern Alaska.

The immediate response was not encouraging. The Pacific Coast Steamship Co., the major carrier in the trade, slashed passenger fares to all northern points. First-class tickets were cut from \$52 to \$20, second class, from \$30 to \$10, as chronicled by the Tacoma Ledger of January 22, 1895. "The supposed objective," the story said, "is to cut out the new steamship line to Alaska."

J. A. Johnson, superintendent of the Pacific Coast Steamship Co. left no doubt. "We are going to have the travel, if we have to pay premiums to passengers to induce them to ride with us," he said.

Nevertheless on January 28, 1895 with \$30,000 capital Peabody and his associates organized the Alaska Steamship Co. at Port Townsend. They purchased the 136-foot 450-ton steamer *Willapa* and set a bimonthly schedule from Seattle with the initial sailing date of March 3.

Six days before the first scheduled departure the Pacific Coast Steamship Co. slashed freight rates from \$11 to \$3 a ton as reported by the Seattle Post-Intelligencer of February 28, 1895. But the alterations on the *Willapa* were completed and she sailed as scheduled with a full complement of 79 passengers and a capacity load of cargo. The Alaska Line was in business.

Two years later, on July 17, 1897, the steamer *Portland* of the Pacific Steam Whaling Co. arrived in Seattle with a ton of gold from the Klondike. That news, flashed around the world, sparked a stampede of thousands intent on getting to the gold fields. The demand for transportation became intense. In order to help meet it the Alaska Line purchased and placed into service the now historic steamers *Rosalie*, *Farallon*, *Dirigo*, *Dolphin*, and *Jefferson*.

While gold activity in Alaska continued at a high pitch another metal, a base metal, entered the life of the Alaska Steamship Co. The Guggenheim interests had acquired a number of copper properties in the Prince William Sound area and to insure adequate transport for their ores and concentrates they purchased the Northwestern Steamship Co., organized as a result of the Nome gold strike in 1899. This company served Prince William Sound, Seward, Cook Inlet, Alaska Peninsula, and the Nome run. Three years later, on January 1, 1908, the Northwestern Steamship Co. and Alaska Steamship Co. joined forces as the Alaska Steamship Company of Nevada under the presidency of Charles E. Peabody. This extended the service of the Alaska Line to include all Alaska routes.

The combined fleet of the enlarged company numbered 18 vessels, including the steamers *Victoria*, *Dora*, *Edith*, *Orizaba*, which later became the *Northwestern*, and the ore carrier *Seward*.

The Alaska Steamship Co. transported thousands of prospectors to and from the gold fields and millions of dollars in gold, but from 1908 until the copper mines became exhausted in 1938, copper from Kennecott and Latouche provided the only substantial year around traffic that moved from Alaska. This haul helped to sustain the Alaska line through good years and bad when other companies were bowing in and out of the trade. In all about 70 companies did, and for good reason. The Alaska trade is considered one of the most difficult. In 1947 during a discussion of the death of operators in the trade by a congressional committee investigating Alaska shipping,

George Talmadge, of the United States Maritime Commission, in response to a question from Congressman Willis W. Bradley, said:

"Sir, I personally asked at least 25 principal steamship companies if they could possibly be induced, under any circumstances, to enter the Alaska trade. Replies ranged from a horselaugh to nuts. That generally is considered as one of the least desirable trades any one would want to be in."

The trade is seasonal, emphasized by rigorous winters and characterized by a one-way haul situation. Stretching along Alaska's prodigious coast line are many ports to be served, only a fraction of which are able to offer the 500-ton-call inducement required in other United States trades. Any ship's master will tell you Alaskan waters are among the most hazardous. Disasters were frequent in the pre-radar days. While these figured strongly in the changes in the composition of the Alaska Line fleet, Alaska Line vessels also figured in some noteworthy rescues. Probably the most outstanding involved the steamer *Cordova* while under the command of Capt. Thomas Moore. She was at Nome on September 20, 1914, when a distress call came from the revenue cutter *Tahoma*, sinking off Kleka Island. She had hit an uncharted reef. The *Cordova* steamed 1,900 miles, running as far west as Attu Island to rescue 66 crew members. The 29 others were picked up by the United States Coast and Geodetic Survey ship *Patterson*.

Altogether during the Alaska Line's 60 years of service, the company has lost 18 ships through marine casualties. Three of these occurred during World War II, which otherwise proved to be a costly period for Alaskan operators.

A combined fleet of 43 ships of 83,252 tons served Alaska in 1942 when the Government War Shipping Administration took over the operation and requisitioned the vessels of the owners: Alaska Steamship Co., Alaska Transportation Co., Northland Transportation Co., Santa Ana Steamship Co., and a number of salmon packers. In most cases these ships were reassigned to the owners as agents to operate where, when, as, and how the Government directed. On this basis the Alaska Line operated their ships and about 50 additional which were assigned them for operation in supply of the military throughout the world.

Long identified with Alaska through their salmon-cannery interests the Skinner & Eddy Corp. of Seattle purchased the Alaska Steamship Co. from Kennecott Copper Corp. In 1944 and Gilbert W. Skinner became president.

Although the war in the Pacific ended in August 1945, vessel operating costs in the Alaska trade had skyrocketed to the extent that the Government found it necessary to continue this operation 3 years more. When finally returned to private account in 1948 only 6 ships of 25,000 tons remained. Forty-seven ships of 58,000 tons had been lost to the trade through war and marine casualties, requisitions for title and the sale of obsolete bottoms.

The operators now faced greatly inflated costs and the problems of vessel replacement. As a consequence by January 1, 1949, 6 months after the end of Government service, all prewar operators except Alaska Steamship Co. had pulled out of the trade.

The Alaska Line inaugurated a program of improvement. Their vessels were among the first to be outfitted with radar. They moved their headquarters to the spacious modern pier 42 terminal facility. They purchased 4 Liberty ships and 1 Knot type coastal freighter. In each of the Liberties portable 'tween decks were installed to facilitate handling the large volume of Alaskan packaged cargo. The floor of the vessels' holds were paved like a city street to permit rapid movement of fork-lift trucks employed in the company's unitized cargo program.

This program was inaugurated in 1952 with a few hundred containers used exclusively on the southeastern Alaska route. The Alaska Line now has 10,000 containers in service and more on order. They range in size from a 60 cubic foot collapsible type to refrigerated trailer vans of 2,000-cubic-foot capacity. The growth of this service, which now includes all principle areas of Alaska, is attributed to the savings to shippers in handling, packaging, and marking, and the protection against pilferage, loss, and damage.

The most advanced type of container service, a searail operation, is now receiving intensive study by the company.

In October 1953, Gilbert W. Skinner died and his son, D. E. Skinner, who had been vice president and general manager of the line since 1950, succeeded his father to the presidency. Melville McKinstry is vice president and general manager; R. C. Anderson, executive vice president; R. J. Behnke, vice president and treasurer; and Albert L. Cahill, secretary.

For many years the Alaska Line has maintained agencies throughout Alaska to assist Alaskans in meeting their transportation problems and to handle essential ship's business. These agencies are located at Ketchikan, Wrangell, Petersburg, Juneau, Haines, Skagway, Sitka, Cordova, Valdez, Seward, Anchorage, Fairbanks, Homer, Seldovia, Kodiak, and Nome.

One of the early carriers in the coastwise passenger service, the Alaska Line was the last American line to withdraw from this business. Mounting costs and other problems that had kept passenger service deep in red ink since the end of World War II led to its suspension in October 1954. Now Alaska Steamship Co. completes its 60th year of Alaskan operations and begins its 61st specializing in cargo transportation, which has been the backbone of its activity from the start.

Officials of the company point with pride to the extra years of passenger service they were able to provide to Alaska beyond the time when all other American coastwise passenger operations had been suspended. They also add up their record of cargo-handling improvements since the war and say that Alaska can expect more of this in the future.

Package Freight Service on Great Lakes

EXTENSION OF REMARKS OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Concurrent resolution memorializing the President of the United States, the Federal Maritime Board, and the Congress of the United States to support measures to restore package freight service on the Great Lakes

Whereas the Congress of the United States under Public Law 856 enacted by the 81st Congress, provided that certain surplus vessels could be reconverted for use as package freighters on the Great Lakes; and

Whereas the vessels which were so reconverted were not used for the purpose intended because of the outbreak of the Korean war, but were assigned to the carrying of iron ore; and

Whereas prior to World War II package freight was a major Minnesota industry. In excess of 700,000 tons of freight were

shipped to and from the port of Duluth during the last year that package freighters operated on the Great Lakes. Included in said shipments from the State of Minnesota were approximately 64,000 tons of butter; 6,000 tons of buttermilk; 12,000 tons of cheese; 28,000 tons of cream; 6,000 tons of eggs; 45,000 tons of dressed poultry; 170,000 tons of flour; 107,000 tons of mill products; in excess of 18,000 tons of wool; 19,000 tons of lumber; 3,000 tons of paper products and in excess of 40,000 tons of manufactured metal products; and

Whereas this trade benefited every segment of the Minnesota economy including the great agriculture and manufacturing industries; and

Whereas the discontinuance of this trade not only has adversely affected our agriculture and manufacturing industries, but has caused substantial unemployment in the maritime industries at the head of the Great Lakes; and

Whereas the restoration of package freight service on the Great Lakes not only will substantially contribute to the well-being and growth of Minnesota industry, provide a market for products grown and manufactured in Minnesota, both at home and abroad, but will also help reduce unemployment and more importantly will provide a stepping stone to the maximum use of the facilities of the port of Duluth for international trade when the St. Lawrence seaway has been completed; Now, therefore, be it

Resolved by the house of representatives, the senate concurring. That the President of the United States, the Federal Maritime Board, and the Congress of the United States be memorialized to effect the restoration of package-freight service on the Great Lakes; be it further

Resolved, That the Secretary of State be instructed to transmit copies of this resolution to the President of the United States, to the Chairman of the Federal Maritime Board, and to each Member of Congress from the State of Minnesota.

Adopted by the house of representatives, the 1st day of February 1955.

ALFRED F. JOHNSON,
Speaker of the House of Representatives.
G. H. LEAHY,

Chief Clerk, House of Representatives.
Adopted by the senate, the 11th day of February 1955.

KARL F. ROLVAAG,
President of the Senate.
HY TORREY,
Secretary of the Senate.
Approved February 18, 1955.

ORVILLE L. FREEMAN,
Governor of the State of Minnesota.

Indefinite Status

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. PELLY. Mr. Speaker, under leave to extend my remarks, I call to the attention of the House a very disturbing situation which has arisen in my district in connection with the new civil-service appointment system, referred to, I believe, as the career conditional appointment system, which went into effect in January.

On the surface the technical features of this program point to a definite im-

provement of the system. However, as is so often the case, when put into practical operation many grave inequities immediately become apparent. I am referring in particular to the unfortunate position in which over 1,000 employees of the Puget Sound Naval Shipyard have been placed through no fault of their own. Many of these employees, having a record of from 3 to 8 years' continuous employment in the yard and with excellent performance records, now find themselves with an indefinite classification, and as such will fall victim to the first reduction in force that comes along, simply because at the time of employment the civil-service register had either been exhausted or was not established. Conversely many other employees with much less length of service and perhaps a lower efficiency rating have been classified as career conditional or in some cases given career status, with all the benefits and protection attendant to these categories.

I have received scores of letters protesting the arbitrary enactment of this new system. Many of the authors of these protests are known to me personally as fine craftsmen and would represent a serious loss to the defense effort should they fall victim to this ill-conceived order. I am asking the Civil Service Commission to review this program to the end that these glaring inequities be corrected.

As further proof of the disturbed condition of the Puget Sound Naval Shipyard, I offer by way of explanation an editorial entitled "Indefinite Status," which appeared on Friday, February 25, 1955, in the Salute, a weekly publication of the Puget Sound Naval Shipyard:

INDEFINITE STATUS DISCUSSED

The retention of PSNS employees junior in length of service to shopmates who recently received reduction-in-force notices has given rise to questions about the regulations that authorize this apparent inequity.

In January the Civil Service Commission directed the Navy to replace the indefinite system of appointment with the career system. Under the new regulations indefinite employees who had been hired from the civil-service register were automatically converted to a career or career-conditional status. Other indefinites who may have been hired for similar work but were hired instead by recruiting (off the street), remained in an indefinite status and with lower retention rights. Because indefinite employees are in the lowest retention status they are usually the first to be affected by a reduction in force.

Prior to the adoption of new regulations the Civil Service Commission made no distinction between persons hired off the register and those hired by recruiting. During the Korean buildup registers were exhausted and many employees were hired off the street.

When notice of the new regulations was received the shipyard took every step possible to convert indefinite employees to career or career-conditional status. The conversion procedure requires that the indefinite employee who did not receive appointment from the register must now file and be within reach for appointment before he can be changed to retention group II.

The shipyard is doing little hiring at present and as current registers have many outside applicants it is not expected that conversion of all indefinite employees will be accomplished in the near future.

Los Angeles County School Shortage Expected To Grow

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. DOYLE. Mr. Speaker, in the Los Angeles Times for Monday, February 28, is set forth an article on the important shortage of schools in southern California. I was very sure its contents would be of great interest and information for all of us in this great legislative body, who are naturally and properly concerned about the subject of education in our great Nation and the shortage of schools and consequently the shortage of the full educational opportunities for the American children in our Nation.

The article follows:

SCHOOL SHORTAGE EXPECTED TO GROW—BUILDING CZAR PREDICTS THAT BY 1957 50,000 MORE WILL GO HALF-TIME

(By James Hubbart)

Nowhere in the country is the problem of classroom shortages more acute than it is in the sprawling Los Angeles school system, where about 38,000 youngsters at present are attending school part time.

And in the words of Virgil M. Volla, the district's new building czar: "If you think we've had it up to now, just wait another 5 years."

Volla estimates that an additional 50,000 pupils will have been affected by half-day sessions by 1957 at the present rate of expansion.

NEED 3,400 MORE ROOMS

The projected enrollment for the city schools in 1960 is 523,151 children—an increase of about 144,000 over this year. Volla says it will take 3,400 new classrooms to house all these youngsters.

To finance this construction the voters will be asked to approve a \$133 million bond issue in April—the third such measure since the stork sweepstakes started in 1946.

With all its woes, however, the future for Los Angeles is considerably brighter than it is for the neighboring smaller districts.

RED TAPE BLAMED

"Money has never been our chief worry," says Volla. "The voters of the district have always responded to the need and we have no reason to believe they won't do it again."

"There are three other reasons why our building program has lagged behind the enrollment—red tape, educators themselves, and our failure to tool up for the job."

Volla, an outspoken realist who has some resolute ideas on how schools should be built, now has command of the entire operation. What he says goes.

But this was not always so. For 9 years the process functioned with divided responsibility and little in the way of a clear-cut policy. Everybody had a piece of the action.

PLANS OFTEN REVISED

"We had to get our preliminary plans okayed by supervisors and assistant superintendents, all of whom had different ideas," Volla relates.

"Teachers and administrators would be forever coming in with last-minute changes—an extra door here, more shelves there—until it got so the architects were drawing the plans over and over, trying to please everyone."

"Educators, by and large, are not very good business people. They're always changing

the curriculum and teaching methods to keep up with the latest trends. So when they hear of an innovation in classroom design they want to try it out right away. Thus we haven't been able to get uniformity."

Dr. Alexander J. Stoddard, superintendent of schools during all this indecision, was every inch an educator and a confirmed idealist.

Stoddard was proud of standing up at school-board meetings and saying, "Nothing is too good for our youngsters. They deserve the best, so let's see that they get it."

Stoddard demanded bigger and better classrooms with all the newest instructional improvements. With him the best possible educational opportunity for the child was the primary consideration.

He was a devout champion of the junior college system, and the idea of erecting an \$800,000 football stadium and auditorium at East Los Angeles Junior College was attributed to him.

VETOED BY VOTERS

The reasoning behind this was that starting with the stadium would naturally inspire the people to build a fine school around it.

But the voters crossed Stoddard up in the 1952 election by rejecting the junior college bond issue. The result: ELAJC students are still studying in war-surplus shanties in the shadow of one of the prettiest stadiums in town.

"High ideals are the life blood of education," Volla agrees, "but in these abnormal times, ideals have to be compromised. To build schools in a hurry, you have to cut corners."

Besides the time-consuming deference to the wants of educational theorists, Los Angeles must join with 2,000 other California districts in having its plans and specifications approved by the State division of architecture, an agency which is hard pressed to handle the crush of business.

CITY O. K. NEEDED

On top of that, city and county planning commissions must pass on the plans, and building permits must be issued. More months drift by.

"We start out with a school designed to house 900 pupils," says Volla, "but by the time it's finally completed, there are 1,200 kids knocking on the door."

Buying land for a new school also takes up valuable time. It has to be surveyed and it must go through escrow. If a condemnation proceeding is necessary, it takes even longer.

Perhaps the most classic example on record is the school system's purchase of the Watts Junior High School site. They've been buying up the land—lot by lot—for more than 2 years. And the chore isn't finished yet. Owners of some of the parcels can't be located.

Despite the obstacles, Los Angeles has accomplished what is nationally recognized as a remarkable job in keeping up with the expanding pupil population. Approximately 55,000 children have been taken off half-day sessions since 1948.

Volla believes that with a better coordinated program he can do even better. The board of education had enough confidence in him to promote him to assistant superintendent at \$16,000 a year.

"We're aiming for more standardization of classrooms, and whole schools where possible—at least everything above the foundations," he reports.

"Portable buildings which can be moved from place to place can be used more advantageously. And the possibility of building schools with prefabricated sections has barely been touched.

"Simplification of the rules and regulations would help us more than anything. We still

have to submit for State approval a separate set of plans for each school. That the plans may be identical doesn't matter. And even if we reuse our plans, the law says we must have supervision of an architect each time. All that wastes time and money.

"And why can't we have a uniform building code for schools instead of a different set of ground rules in every community?"

Volla's formula is to streamline everything, eliminate the frills and approach schoolhouse construction on a mass production basis.

It remains to be seen whether this view can be reconciled with the almost traditional opposition by teachers and their organizations, and even by whole communities, to austere, look-alike schoolhouses.

"We're asking teachers and principals to help us by getting along with the bare essentials," Volla says. "The classrooms they'll have to work in won't be educational showplaces, but they'll do.

"Remember, the more refinements you put into a school, the longer it takes to plan and build it."

Volla figures he'll have to make some iron-handed decisions in the task ahead and say "no" to a lot of people. He doesn't expect to win any popularity contests.

Says he:

"Maybe that seems hardballed, but I happen to believe that even a tent on full-day session is better than an ideal classroom on a half-time basis."

Voice of Democracy

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. JUDD. Mr. Speaker, the other day it was my privilege to include in the RECORD the speech of one of the four national co-winners of the Voice of Democracy contest sponsored by the Junior Chamber of Commerce and the National Association of Broadcasters. The young lady who was among the top winners of the contest, in which over a million young Americans participated, is Miss Catherine Styles, an exchange student from New Zealand, who is making her home this year in Minneapolis.

It is unfortunate that more of these essays are not available to the public. It must have been a hard job for the judge to select only four out of the thousands of splendid statements revealing so thrillingly the thoughts and aspirations of young Americans today.

Under leave to extend my remarks, I include the contribution to this contest by Ralph Marlatt given as a speech in the District of Columbia contest in which he received honorable mention. He is a senior at St. John's College High School here in the District.

The speech follows:

I SPEAK FOR DEMOCRACY

(By Ralph J. Marlatt)

I speak for democracy as Americans have always spoken for democracy. Our land and our people have a rich heritage in democracy. The basic principle was written into the first American declaration that "all men are created equal." Americans believed it then, Americans believe it now. It is this belief and our constant endeavor to follow the pre-

cepts of liberty, equality, and justice which have made it possible for us to grow into a great and powerful nation.

Democracy was not presented to us by our founding fathers already shaped and fashioned. True, they did guarantee that men should enjoy the "certain unalienable rights."

However, the first step in securing these rights meant that Americans were willing to go to war, to fight and die to preserve those rights for themselves and their posterity.

It is significant that all America's wars have been fought, not for conquest, not for gain, nor for the purpose of enslaving other peoples, nor adding new territory, but to preserve democracy and to guarantee the freedom of men everywhere.

In the day of our fathers, Americans fought and died in three wars, not on our soil, but in far-distant lands and they, too, fought and died for democracy. And wherever men have challenged tyranny and injustice and the threat of enslavement, Americans have fought alongside them. For Americans believe that all men in all lands are created equal and are endowed by their Creator with the right to be free.

As we have been willing to fight for democracy in war, so we have been willing to live for democracy in peace. America has welcomed men of all faiths, all religions, all creeds, and we have said to them, "here you may seek a haven, here you may worship according to your mind and heart."

Because we spoke for democracy we wanted all men to be equally prepared to make for themselves a better life and so we established a great school system. And from our schools, public and private, have come capable scholars, learned scientists, great industrialists, men of business, poets, singers, writers, and inspirational leaders in all fields of endeavor. We speak for democracy in our schools.

When we provided for freedom of worship and freedom to learn, we then gave man another freedom, freedom of opportunity. Into our vast industrial system went the heart, the mind and the sinew of democracy, and our factories were developed, our great cities came into being, and our productive farms stretched across 3,000 miles of rich and fertile land. It is not mere poetry when we sing of our shining seas and towering mountains; these are songs of democracy and they speak for democracy by which free men have conquered the seas and the mountains and the great plains and have drawn from the bounties of nature food and fiber for a land which now boasts of more than 160 million free men.

So from our Founding Fathers dream of democracy we fashioned this structure we know today as America. But the job is not yet complete, nor can it ever be complete so long as there is one man on earth who is not free. Democracy offers us a daily challenge, the challenge to keep it alive. For democracy is a living principle and must grow and expand or it dies. We have not yet created a perfect land, but the essence of democracy is that we have the opportunity to keep striving for perfection.

In speaking for democracy today I speak not only for Americans, but for the millions of human beings who are enslaved. Our democracy can never be secure, nor can we ever truly enjoy the blessings of liberty while millions are behind an iron curtain. Speak up, then, you who claim to believe in democracy, speak up on your streets, in your community, in your State, and in your Nation. Speak up by accepting the responsibilities of citizenship and demanding that all men are given freedom of opportunity in this land of ours and throughout the world. The ultimate victory of democracy will be when each man stands up and declares without fear and without qualification, "I speak for democracy."

Burley-Type Tobacco**EXTENSION OF REMARKS**

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. ABBITT. Mr. Speaker, as chairman of the Subcommittee on Tobacco of the Committee on Agriculture of the House of Representatives, it has come to my attention that the burley-type tobacco program is not operating as it should or as the Congress had contemplated it would under the present program.

As a result of this, the representatives of burley-tobacco growers from the several States involved recently held a meeting and have made a number of recommendations to strengthen and improve the tobacco program.

In addition to this, our subcommittee held a joint meeting today with the Tobacco Subcommittee of the Senate Agriculture and Forestry Committee. Representatives of the Department of Agriculture testified before us and made certain recommendations of proposed changes in the law so as to improve the present tobacco program.

The recommendations were as follows:

The Department recommends five changes in legislation:

1. The act be amended to permit re-determination of the 1955 national marketing quota and State and farm acreage allotments for burley tobacco on the basis of data now available.

2. The rate of penalty on the marketing of excess tobacco be increased from 50 percent to 75 percent of the average market price during the previous year.

3. Amend the act to provide that any acreage of tobacco harvested in excess of the allotted acreage for any farm for any year shall not be considered in the establishment of the allotment for the farm in succeeding years.

4. Amend the act to require a reduction in the acreage allotment next established for a farm if any person connected with the farm causes, aids, or acquiesces in filing or causing to be filed any report with respect to the acreage of tobacco grown on the farm which the county committee determines to be false.

We wish to direct the committee's attention to another serious problem which applies only to burley tobacco. That relates to minimum allotments. We estimate that about 64 percent of the 320,000 farms having burley allotments have allotments of seven-tenths of an acre or less. If this minimum is maintained, it will necessitate drastic reductions in the allotments above the minimum. It is suggested that the committee may want to give careful consideration to the many problems relating to minimum farm acreage allotments.

5. There is one other suggestion we have, which does not apply to burley tobacco since growers have consistently approved quotas for 3-year periods. However, on some other kinds of tobacco, quotas have been approved 1 year and then disapproved for the next year. We recommend that the act be amended to eliminate the provision whereby growers may vote for quotas either for 3 years or 1 year and provide for voting only on the question of quotas for 3 years. This proposal does not apply to burley tobacco where growers always approve quotas for

3-year periods. This would eliminate the expense of establishing allotments and conducting referenda in areas where growers are opposed to marketing quotas. Further, it would prevent losses to Commodity, since a sound price-support program cannot be operated on an in-1-year and out-the-next basis.

Let Us Fight Against Multiple Sclerosis**EXTENSION OF REMARKS**

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. RODINO. Mr. Speaker, for all of us concerned with the health of the Nation, there is a problem of vital urgency—and that is to control the disastrous effects of the crippling disease, multiple sclerosis.

In thousands of households there are young mothers and young fathers stricken with disabling multiple sclerosis. This means that there are mothers who cannot take care of their homes—guide their children—play with their children. That there are fathers who must cease being breadwinners; who are unable to assume their role as the head of the family unit. This also means that there are young men and women throughout the land—some in college, who are forced to give up their education; some just starting on careers they are unable to pursue; because they have been afflicted with MS, which is the popular abbreviation for multiple sclerosis.

Multiple sclerosis is indeed a matter of pressing import to the Nation for, at this time, the cause and cure of this insidious disease are unknown. It attacks mostly young adults in the prime of youth—those between the ages of 20 and 40—the very best, the most productive years, of any person's life, and it strikes at the very heart of the basic foundations of our society—the home and the family.

Let me try to explain for a moment, for those of you who may not understand the nature of this mysterious illness, just what this is all about. I have tried to find out for myself and I will speak in terms which I have understood, as a layman, from my discussions with doctors who have specialized in this field.

Multiple sclerosis is a disease of the central nervous system. It gets its name from the fact that multiple, or "many," sclerosis, or "scars," form in certain areas of the brain and spinal cord. This results in what may be likened to a short circuit, nerve impulses which usually pass through the central nervous system are blocked by scar tissue which has formed on nerve covering. Then we have the usual symptoms of the disease which may be: paralysis in hands, arms, and legs; blurred or double vision; staggering gait; garbled speech; loss of personal functions. A victim of MS may have one or all of these distressing symptoms. The ordinary dignities with which most of us are privileged—such as washing ourselves, dressing ourselves, taking a walk around the block, reading

or watching television—all these private necessities, pleasures, and privileges are often denied sufferers of multiple sclerosis. Some victims are ambulatory; some are on crutches or in wheelchairs; most severe cases are bedridden. There are about one quarter of a million victims of MS in the country.

Because MS is usually progressive, and thus far incurable, it presents a problem of care and financial stress which always goes with chronic long-term illness.

I am glad to say that all is not black in this picture. Something is being done across the Nation to help the victims of multiple sclerosis. In 1946, with the founding of the National Multiple Sclerosis Society, an intensive program of research and patient-care service for MS sufferers was begun. Today the society is a vast organization with some 65 chapters throughout the United States, all supported by public funds. The society is a clearing houses in MS for all up-to-date scientific and self-help information for patients and physicians.

Mrs. Dwight D. Eisenhower, this year, as in the previous year, is honorary chairman of the campaign to raise funds for this very important and worthy organization. In this respect, Mrs. Eisenhower is a real helpmate to her husband, for our own Mr. President has been a staunch ally in helping Congress to appropriate funds for continued and expanded aid in the fight against chronic neurological, crippling illness. President Eisenhower has made magnificent strides throughout the country in the field of rehabilitation of the disabled. The President's Committee on Employment of the Physically Handicapped has worked with nonprofit health organizations, such as the National Multiple Sclerosis Society, in spurring the public's support and industry's support in the help to our disabled.

There is much reason for hope in the multiple-sclerosis problem. Leading scientists in universities and laboratories throughout the land and beyond its borders are engaged in intensive research—about 45 projects in all—to find the answers to the cause and cure of multiple sclerosis. Clinics for the rehabilitation of multiple-sclerosis victims are in operation, teaching independence and self-reliance to the severely handicapped. All this heartening work is being done under the guidance and support of the National Multiple Sclerosis Society, which in turn is dependent upon public funds and governmental appropriations in order to sustain and expand its promising work.

Each year the Government appropriates funds to the National Institute of Neurological Diseases and Blindness. This vast Institute, which is conducted by our foremost research scientists, is at present investigating the causes and treatment of multiple sclerosis. It is one more example of hope in dealing with this problem.

I urge all of my fellow Congressmen to give serious thought to the ways in which each of us, in our own way, may help in the fight against crippling multiple sclerosis. Perhaps we may serve on special committees, perhaps we may be

able to fight for bigger and better appropriations in the war against crippling neurological diseases. To be sure, it is, as they say, "all for the good of the country."

Former Diplomat From Country Now Behind Iron Curtain Says Exiles Rejoice in United States Stand on Formosa

EXTENSION OF REMARKS OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include the following article by the eminent columnist, Mr. Edgar Ansel Mowrer:

SEES CAUSE FOR REJOICING IN UNITED STATES STAND ON FORMOSA

(By Edgar Ansel Mowrer)

Much to my surprise, the foreign ex-diplomat welcomed me with a broad smile.

"Sit down. What shall it be—a cup of tea, whiskey, vodka, slivovitsa."

E. A. M. Has somebody back home left you a fortune?

F. E. D. If he had, the Communists would have been in possession of it long since.

E. A. M. Other good news, perhaps?

F. E. D. Good news from Formosa.

E. A. M. What's happened?

F. E. D. Can't you see—the American Government is standing up to the Communists in the matter of those off-shore islands.

E. A. M. What's so startling about that? Did you think we were going to invite them to take the whole Far East?

ANOTHER MUNICH

F. E. D. No; but I expected another Munich—a sellout.

E. A. M. Now, come. We stood up well enough in Greece, at Berlin, and in Korea, though we ought to have united that country by force. We have strengthened the Middle East and gained ground in Iran.

F. E. D. Yes, but you let the Communists keep half of Indochina, and you yourself think they may get the rest.

E. A. M. The Communists got north Vietnam all right. But we made the concession not to them but to our European allies.

F. E. D. Precisely. But at Formosa, your administration is standing up both to the Communists and to your allies. Believe me, that is good news for all of us exiles.

E. A. M. I fail to see how disputes among allies can help you much.

F. E. D. In the short run they do not help us. Especially not when, as usual, you Americans give in. But in the long run, there will be no peace for the world and no liberation for captive countries until the American administration does what is right, regardless of war-shot and trembling allies in Europe.

E. A. M. Come now. They aren't that bad.

DEPTH OF FEAR

F. E. D. They are worse. What you do not realize—you Americans—is the depth of fear and cynicism to which the West European countries have sunk. You talk of stopping communism, and perhaps one day you will. Your allies talk only of preventing war.

To prevent another war they are ready—indeed, eager—to feed other countries and peoples piecemeal to the Communist wolves.

Of course, they do not like to see communism grow. But if the choice is between handing over another five, ten, or 50 million foreigners as slaves to communism and having a war, they will gladly hand over the foreigners.

Some of us exiles believe they will not even fight to defend themselves. I do not go so far. But I can tell you, they will continue throwing victims to the Soviet wolves until you stop them.

Now it is the Chinese offshore islands you must make Chiang give up. Tomorrow, if you yield the islands, it will be Formosa itself. Next time, what remains free of Indochina—South Vietnam, Laos, and Cambodia. Then—why not?—Thailand and Burma. And so on, right back to their own countries.

E. A. M. You exaggerate.

BLACKMAIL

F. E. D. Not a bit. See how they are trying to blackmail you into surrendering the islands. A great English newspaper has the nerve to write that Americans must choose between keeping those islands and having West Europe as an ally.

Ignominy could go no lower. During the last war you saved West Europe. You might have simply defeated Japan and let Hitler conquer Russia. Where would West Europe be?

And now because you are drawing a line in Asia, they have the nerve to blackmail you with loss of their precious support. Tell them to go jump and see how quickly they will change their tune. For, without you, they are goners, lacking both the power and the will to resist.

E. A. M. I understand the feeling of you exiles whose countries were seized by the Soviets. But do you think your peoples are willing to pay for their liberation by another world conflict worse than any ever seen?

F. E. D. Willing? They are eager. Here—see these letters. What is more, if you make communism stronger, you will have a war as sure as tomorrow—unless your allies can induce you to surrender.

No; you have been losing—on balance. But now in Formosa you are standing up against both enemies and allies. We exiles do not know if it will last, but while it does, it looks wonderful.

Here, have a slivovitsa. To freedom.

A Prayer for Our President

EXTENSION OF REMARKS OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. HOSMER. Mr. Speaker, it is not often that a piece of mail comes to our desks that is worthy of general attention. Today such a rare thing occurred to me and I want to share with you a prayer that is being said for President Eisenhower by a worthy lady from my home city of Long Beach, Calif.

The lady is Mrs. Lillian Marshall. I know of no one who has a greater love for our country than Mrs. Marshall, nor do I know of anyone who holds her public officials more strictly accountable for their responsibility to govern wisely.

To the best of my knowledge, Mrs. Marshall is a member of the Democratic Party.

This is her prayer:

A PRAYER FOR OUR PRESIDENT TO THE CONGRESS OF THE UNITED STATES

Dear Heavenly Father, I am not asking anything for myself, but I wish You would help our President. He is so kind and good—and tries not to hurt anyone. You know he always thinks of his country before his party.

I get so tired of these selfish politicians who want to harm him in the public mind.

He depends so much on You for guidance, won't You please, dear Lord, give him some extra help.

Often the lawmakers' hearts who think first of themselves or their party. Put into their hearts more tolerance and love for their country.

We did not elect them just because they were Republicans or Democrats. We elected them because we thought they would do the right thing. But now some are acting very badly.

Thank You for all Your goodness to me. Amen.

Focus on Older People

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following editorial which appeared in the New York Times of February 25, 1955. I am very proud of the work being done by New York City and State in assisting the aged.

FOCUS ON OLDER PEOPLE

The number of older people in our midst and the proportion of the population they represent have grown with such sensational rapidity in the last decade that a social crisis of extreme urgency has now developed, with far too little action being taken to cope with it. The articles by Edith Evans Asbury, ending in this issue, have documented this beyond a doubt. They have also focused public attention on what is being—and should be—done to meet the situation.

At the core of the problem is a central fact, recognition of which is essential to the success of all remedial effort. The most effective preventive—and often cure—for all old age is activity. And the more useful it is the better it is. Employers have a special, and growing, obligation to keep older workers employed as long as they are able to do some useful job. Also the age barrier to finding new employment needs breaching.

The elderly whose health limits their activities present other problems which urgently call for action. Experience has proved that many in this group can do much more than they—and those who care for them—think they can. And doing more has often great therapeutic value. But for those who find it impossible much more can and must be done—and far less expensively than now. Home care seems by far the best. Where this isn't feasible care as much like home as possible is needed. Boarding and nursing homes, public and private, increasingly serve the elderly who must have continuous supervision; but more are urgently called for and the shortcomings of many of the commercial type need stricter regulation.

Old people now in hospitals, and those who must be sent there in the future, present still more problems to be met. Apparently a large percentage of them are there without

any valid medical excuse and often only because there has been no other place to send them.

Fortunately, both New York State and city authorities are well aware of all these problems and are working valiantly to meet them. Examples are the day centers of the welfare department and the adult counseling centers of the health and welfare departments in Kips Bay and East Harlem. Bills are in the Albany hopper to stimulate golden-age clubs, remove antiage legislation and promote jobs for workers over 45. All such efforts deserve public recognition and support, for the age of the more aged is upon us.

Final Determination of Partition Is Termination

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. FOGARTY. Mr. Speaker, on yesterday and the day previous I inserted with my remarks in the CONGRESSIONAL RECORD some articles which had appeared in the Irish Times on February 17 and 18. I was not surprised to find that the statements by Mr. Costello and by Mr. De Valera, leader of the opposition to Mr. Costello in the Irish Republic, did not meet with approval in the government of the Six Counties. The absolute refusal to discuss the matter of partition is typical of the attitude of the leaders of government in the northeast section of Ireland.

In the absence of Viscount Brookeborough, Six County Premier, who is now visiting at government expense in Australia, the Acting Prime Minister, Mr. Brian Maginness, Q. C., who is the minister of finance for the Six Counties, replied to Mr. Costello's proposal. Mr. Maginness asserts that his government is not prepared to discuss partition since he considers it a fait accompli and thus finally determined.

I can readily appreciate why the leaders of government in the Six Counties are not prepared to discuss partition, inferring that it has been finally determined. They well realize that from the very beginning the idea of partition was that it should be put a temporary expedient, that it would not be possible for the Six Counties to hold themselves aloof from the rest of Ireland and that ultimately they would of necessity be re-joined to the other counties of the country. They would like to think that the matter has been finally determined because they know that the final determination of partition can only be the termination of partition.

In order that my colleagues may have the complete picture in this discussion I am including in these remarks the statement by Mr. Maginness, acting premier, which I have taken from the Irish Times. In answer to this statement I am also including the reply of Mr. Costello, Prime Minister of the Republic of Ireland, which appears in the Irish In-

dependent for February 19. These two articles are as follows:

[From the Irish Times]

STATEMENT BY NORTHERN IRELAND ACTING PREMIER

The Acting Prime Minister of Northern Ireland and Minister of Finance, Mr. Brian Maginness, Q. C., made the following statement last night in Belfast:

"In the temporary absence of Viscount Brookeborough my attention has been called to a statement made to a Yorkshire newspaper by Mr. Costello, who is reported to have said that he is prepared to meet the Prime Minister of Northern Ireland to discuss matters of common concern. Mr. Costello further stated that this could 'create greater good will and prepare for a saner view that might ultimately lead to a climate of opinion in which the end of partition could be discussed.'

"The Government of Northern Ireland has repeatedly expressed its desire to maintain friendly relations with the Government of Eire, and demonstrated its readiness to meet representatives of that government on matters of mutual benefit to the inhabitants of the two areas.

"But the Government of Northern Ireland is not prepared to discuss partition, a matter which has been finally determined.

"So long as the Eire Government is prepared to accept this position, there is no reason why the two governments should not discuss matters of common concern at any time.

"The Northern Ireland Government would never regard partition as an obstacle to co-operation in any work which is for the good of the people of north and south.

"It must be clearly understood, however, that this would not imply any change in Northern Ireland's constitutional position as part of the United Kingdom.

"This has been made clear by Lord Brookeborough on many occasions.

"The acceptance of this principle by the government and people of the republic would help to generate and develop a better feeling between the two areas.

"At the same time, it must be strongly emphasized that the harboring in Eire of persons who have carried out armed raids in Northern Ireland largely prevents the attainment of this desirable end."

[From the Irish Independent]

TAOISEACH REPLIES TO MR. MAGINNESS—GOOD WILL THE AIM IN ENDING PARTITION

"The only way by which the partition of Ireland can be finally determined will be by its ending," said the Taoiseach, Mr. Costello, commenting on the statement published yesterday by Mr. W. B. Maginness, Acting Prime Minister of Northern Ireland. "Our aim is to insure that such an ending will be achieved with mutual good will," he added.

"If," said Mr. Costello, "a literal interpretation were to be given to last night's statement by Mr. Brian Maginness it would mean that no arrangements of mutual benefit or concern could be entered into between ourselves and our fellow countrymen in the north unless we had previously accepted the position suggested by him that partition was a matter which had been finally determined.

"Such an alleged principle or condition was not implicit or recognized in the discussions or agreements ultimately reached concerning the River Erne, the Great Northern Railway or the Foyle Fisheries. Such a position would be impossible of acceptance by an Irish government. I hesitate to think that Mr. Maginness realized the full implications of his statements.

"If he really intended so to define the attitude of himself and his colleagues, informed and detached public opinion would pass a severe judgment on those responsible for such an unreasonable attitude. If such an approach were to be tolerated in connection with the many tense and dangerous international problems which afflict nations and peoples today nothing but disorder and possibly ultimate chaos could be expected to result. Mr. Maginness and his colleagues would do well to ponder on the great contribution which a united Ireland might give to the solution of some of those problems.

"The only way by which the partition of Ireland can be finally determined will be by its ending. The forces tending to break this unnatural barrier, though they may appear to be slow moving, are nevertheless, inexorably at work. Our aim is to secure that such an ending will be achieved with mutual good will, so as to bring peace and harmony between and benefit for all classes and creeds, north and south."

Integration in the District of Columbia Fire Department

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. AUCHINCLOSS. Mr. Speaker, I think we can all agree that the District enjoys as fine a Fire Department as any city in the country and this is due in no small measure to the inspirational and intelligent leadership of Fire Chief Millard H. Sutton. Chief Sutton is not only a man who knows all about the business of firefighting but he enjoys a rare intelligence and a devotion to duty which is extraordinary. He is a born leader, commanding the respect of the men under him, and a man of superb courage as his record fully testifies. Therefore, I am glad to insert in the RECORD a statement—in which I fully concur—he made before the Subcommittee on Police, Firemen, Streets, and Traffic of the House Committee on the District of Columbia during hearings held on H. R. 3573, relating to integration of personnel in the Fire Department.

STATEMENT OF FIRE CHIEF M. H. SUTTON, MARCH 2, 1955

Mr. Chairman, it is my opinion that the integration of personnel in the Fire Fighting Division of this Department is in the best interests of both the Department and the taxpayer.

Immediately prior to the integration order of September 18, 1954, there was a surplus of 14 colored firemen assigned to the 5 colored units. Since we operate on an overall authorized quota of personnel, we had a corresponding shortage of 14 men in white units. The salaries involved amount to \$61,341 and will increase eventually by the additional cost of automatic and longevity increases provided by statute. The services of these colored men were not actually needed in the colored units and they were not available for service in other units due to the policy of segregation. Under the present integrated policy their services are being utilized to the maximum degree, thereby making possible a better distribution of available manpower to meet the needs of the service. From

a fiscal standpoint, no other policy can be justified.

Under a segregated policy, members assigned to colored units do not receive the diversity of experience that is available to members assigned to white units. There is only one colored truck company, no colored rescue squads or fireboat. Consequently, members assigned to colored engine companies, with the exception of those assigned to the one housed with the colored truck company, have a very limited practical knowledge of fire-fighting evolutions and techniques associated with truck companies. None of the colored firemen have an opportunity to gain experience in duties incident to evolutions or techniques employed by rescue squad or fireboat units.

A fireman's efficiency is measured by his ability. This ability is developed by the practical knowledge and confidence he acquires in the day-by-day performance of duties incident to the protection of life and property. Members denied this all-round experience can never achieve a degree of efficiency approaching the maximum.

As head of this Department, I consider it my duty to afford equal training facilities to all members so that when emergencies arise on the fire ground there will be no unnecessary loss of life or property resulting from inexperience.

I am aware that at this time the policy of integration is not popular with some members of the Department and that its adoption created opposition. However, I feel that this opposition must be subordinated to what I consider to be the best interests of the Department from both fiscal and efficiency viewpoints.

I am opposed to the provisions of H. R. 3573.

High Priority for Water

EXTENSION OF REMARKS OF

HON. MYRON V. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 3, 1955

Mr. GEORGE. Mr. Speaker, under leave to extend my remarks in the Record, I wish to insert an editorial from the Kansas City Star of January 17, entitled "High Priority for Water":

HIGH PRIORITY FOR WATER

Beyond any doubt the greatest problem facing Kansas since the white man ebowed out the Indians is more efficient use of its water. The driest 3 years on record dramatize the need. Scores of Kansas cities are showing deep concern over whether, a few years hence, present facilities will provide enough water for general use and growing industrial expansion. Some cities, notably Topeka, already have been notified that they can expect no more large industries until they can guarantee a greater permanent supply of water. The problem is national in scope.

It is time for straight thinking. Stripped of all emotionalism, the quandary simply is for an intelligent people to provide means for retaining more of the rainfall in Kansas rather than permit it to run off in flood waters to the sea.

All the other phases—flood control, watershed treatment, soil conservation, and soil rebuilding—are only parts of a huge basic program.

This realization slowly is dawning on the State. A fact-finding committee has just completed an inventory of the State's water supplies as far as present information goes.

It has recommended to the legislature the creation of a permanent State agency to coordinate the work of four existing agencies and plan a program for land and water use.

That Gov. Fred Hall is acutely aware of the critical nature of the problem was pinpointed in his message to the legislature. He spoke of the future development of the State "threatened by drought and the lack of water" * * * and "such a program should have the highest priority" * * * "no time to waste."

The Governor called on the legislature to create a State agency which would report its recommendations to the session next January. He expressed his belief that the State has full responsibility in cooperation with the Federal Government, for establishing a sound policy for the use of land and water resources.

As he outlined the policy, it includes research, soil conservation, protection measures, and "small dams and large dams where economically sound to the economy of the State."

While the State is making its studies, the Federal programs for flood control and irrigation should go right ahead. All are needed.

The people of Kansas will support any reasonable program to conserve water. This is the stage of research and appraisal of the facts. The sooner the State can get a plan of action the better for its long-range welfare.

Presidents' Day

EXTENSION OF REMARKS OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1955

Mr. DOYLE. Mr. Speaker, unanimous consent having been granted me heretofore so to do, I am pleased to present for your information, and that of all the Members of this great legislative body, further information about Presidents' Day, which is March 4, 1955.

The text of the letter hereinafter set forth to me from Mr. Hal Fischer of Compton, Calif., in the great 23d District, he being the director of the Committee for Presidents' Day, I am sure you will find interesting and informative.

Also, I am pleased to include in these remarks from the Committee for Presidents' Day, so ably headed by Mr. Fischer, two further documents.

Likewise, I am pleased to express my appreciation to our distinguished Chaplain, Bernard Braskamp, who on Friday, March 4, 1955, will again graciously offer special prayer for Presidents' Day:

COMMITTEE FOR PRESIDENTS' DAY,
Compton, Calif., January 22, 1955.

Hon. CLYDE DOYLE,
Member of Congress,
Washington, D. C.

DEAR CONGRESSMAN: As you know, Presidents' Day was supported by 41 Governors of States in 1954. This year, through the guidance of Secretary Oveta Culp Hobby and Dr. Little, of the Department of Health, Education, and Welfare, we now have the vigorous support of most of the chief State education officers. They are advising their schools, via their State education publications, of the activities of Presidents' Day. A moderate estimate of the national picture indicates that Presidents' Day will be observed on March 4,

1955, in at least 100,000 schools over the Nation. They will participate in many activities, such as on the enclosed suggested-activities sheet, and hundreds of original ones as well.

On Washington's Birthday, February 22, some of the children from the great 23d Congressional District will appear on the Art Linkletter House Party, coast-to-coast TV and radio on the Columbia Broadcasting System. These children will be students of the George Washington Elementary School of Lynwood, and they will be dressed as Presidents and their wives. They will be questioned on various presidential facts about the Presidents they represent.

We would greatly appreciate if it could be arranged again this year for prayers for the President of these United States be offered on the opening of the House on March 4, 1955. It would be appreciated also, if the prayers might be prefaced with "On this day in honor of all our Presidents, as the youth of our Nation searches back into the lives and deeds of our Presidents." Our reason for this to pinpoint the especial reason for the prayer, and also to help the day. I am going to write to our Members of the Senate to see if the same may be done in the Senate on this day.

Presidents' Day is now listed in the Special Days, Weeks, and Months pamphlet of the Chamber of Commerce of the United States. Many chambers of commerce in the country have written to the Compton Chamber of Commerce for more information to help the day. We have received many inquiries from research organizations and calendar companies asking for more details.

You know, Congressman DOYLE, we hear a lot about juvenile delinquency these days, and sometimes I wonder if we should not properly label it "adult delinquency," which it most properly is. If we adults do not properly instill the ideals of our great democracy into the seedlings and show them the beautiful road of the American way of life, how can we expect other than the wanderings of youth because of boredom? Many of our very young children do not know that the America of yesterday was not, television, radio, railroads, pictorial newspapers and magazines, telephones, etc. Questions on Presidents' Day are, "How did Washington look on television?" and "Did Jackson fly to Washington in a jet for his inauguration?" Children are amazed that some of our Chief Executives were once schoolteachers, tailors, country lawyers, etc. And this revelation shows the promise and the opportunity of America. The ancestral backgrounds of the Presidents show that an American can work from the wrong side of the tracks to our highest office of service to the Nation. Many teachers and parents have told me that their students have continued studies of a special President or Presidents for the rest of the year, and not just for Presidents' Day. We need more planting of ideals in children's minds and less curing of rotten apples.

You will receive shortly one of our Presidents' Day awards, which we hope you will like. It is a small token of our appreciation for your great assistance with the day.

Mrs. Fischer joins me in offering our very best wishes to you and Mrs. Doyle for an abundance of health and happiness.

Cordially yours,

HAL FISCHER,
Director, Committee for Presidents' Day.

SUGGESTED ACTIVITIES FOR PRESIDENTS' DAY STUDENT BODY ACTIVITIES

Poster displays; events in the lives of Presidents; assemblies to hear speakers with an emphasis on character development and qualities needed to be an Executive; musical programs with songs popular during the terms of the Presidents; games, such as

Guess the President, with classes guessing from facts or costumes; short talks by students on "The President I Would Like To Have Been," giving the reasons; class discussions on the changes in our Nation between our first and our present President, such as transportation, communication, mode of living, etc.

CLASSROOM ACTIVITIES

Art work on bulletin boards; costumes of the periods of the Presidents; making of a Book of Presidents by each class or entire school, with pictures, poems, cartoons, stories, etc.; English biographies of Presidents; schoolpaper coverage of the day; write notices for school bulletin; class or assembly skits; debates; discuss desirable personality traits for leaders; games; write and mail letters to the President (they are answered by the White House and possibly the President); ancestral backgrounds of Presidents, showing America as the great melting pot; discover contributions of other nations to American culture and tradition.

SOCIAL STUDIES

Study the Constitution, with emphasis on the executive branch; growth of influence of the executive branch; collect pictures of Presidents; list our Presidents and accomplishments of their times; study attitudes toward our Presidents from the cartoons and editorials of their times.

Awards will be made for best entries received by the committee by May 1 each year.

PROCLAMATION

Whereas the office of the President of the United States of America is the highest and most important that a citizen may attain, and it is the living and working symbol of the American flag and our Constitution; and

Whereas free peoples everywhere today face their greatest trials for the survival of their democratic way of life, which makes it incumbent upon citizens of this Nation to accept their just responsibilities in preserving the general welfare of this land; and

Whereas religion is our most vital asset, as it was with our Founding Fathers, and it is essential to remember and reaffirm our faith in God and our system of delegated authority under him:

Now, therefore, as Governor of the State of —, I do hereby proclaim March 4 as Presidents' Day in and for this State, and urge that prayers be said in all churches and places of worship for the President of the United States of America, and urge that the opportunity be given our schoolchildren to acquire a better understanding of the American way of life by studying the lives of our Presidents and their wives and presenting special programs appropriate to the observance in the schools of this State on this date.

Graham Dad's Day Operation Big Hit

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. SIKES. Mr. Speaker, a new and most encouraging note was injected into military life last Saturday, February 26, when the Graham Air Base at Marianna, Fla., held open house for the parents and wives of air cadets who are undergoing flight training at that excellent Air Force contract school. While attention is called to this particular function which was an outstanding success, it is only one of many innovations intro-

duced into the cadet-training program by W. H. Graham, president of Graham Aviation, the contractor. He has made Graham Air Base a model activity of its kind in the country. Letting the parents see firsthand how their sons live and train is a fine thing and brings about a better understanding and appreciation of the objective. Our own Rev. Dr. Braskamp, beloved Chaplain of the House, was among those privileged to attend, with Mrs. Braskamp, and to observe their own son in training.

A report of the event by Al Thomasson, staff writer for the Florida Times-Union, is completely explanatory and most worthy of reading. It is reproduced herewith:

GRAHAM DAD'S DAY OPERATION BIG HIT (By Al Thomasson)

GRAHAM AIR BASE, MARIANNA, February 26.—An air of expectancy pervaded the campus at this air pilot training mill Thursday afternoon, while activity geared itself to an upcoming event which included the awaited arrival—unusual as it may seem—of an airplane.

Some special cargo—fathers.

They were coming in from all over. The expected chartered airliner was bringing in parents of enrolled cadets from the New York, New Jersey, and Pennsylvania area.

Others were driving in from other States—one from as far away as Idaho. He had heard about the program and notified authorities he would be here.

Many of them came only from surrounding States, to see this new and exciting environment which had captured the time and fancy of their sons.

WIVES, CHILDREN ALSO PRESENT

Wives of married cadets also came, some leading or cuddling wide-eyed youngsters.

But primarily the dads showed up. Among those from nearby: A. E. Crowley, Sarasota; J. Roy Summers, Bristol; George F. Schofield, Miami Springs; A. E. Markette, Sr., Douglas, Ga.; and Gaspar Bua, Tampa.

About 60 came for the weekend program arranged by W. G. Graham, president of Graham Aviation Division of Pittsburgh Institute of Aeronautics.

Graham runs the civilian operated school which trains pilots for Uncle Sam's Air Force on a contractual, cost-plus fee basis. "We are in the pilot-training business professionally," general manager Martin Gracey pointed out. He explained how this saves the Government money, while at the same time offers a stable, efficient cadet training program.

And this modern cadet training life has something over the World War II stuff. That is possibly one thing which attracted some of the dads here this week. They probably couldn't believe the tales about the nice apartment-type living quarters, the food, recreation facilities, climate, and—most of all—that a course in aviation could take a man through so many sciences, both in the classroom and in the air.

Graham thought the dads were long overdue such a visit. He arranged for them to get a good cross-section of a day or two in the life of the modern pilot training course.

STUDENTS FOR A DAY

He made it so they could actually join in and become student pilot themselves, at least for 1 day.

On the agenda: greetings from Gov. LeRoy Collins. The Governor met the group in one of the academic rooms where he insisted they all keep their seats while he made the rounds, making the acquaintance of each personally.

Operating on a tight schedule, the alarm wristwatch on Governor Collins arm went off as he shook the hand of J. D. Anthony, of Dahlgren, Ga. Anthony's consternation was

quickly smoothed as the Governor explained what had happened, relating how a similar incident had halted a basketball game a few nights before when the players mistook the noise for a time-out buzzer.

Next the guests were saluted by the Drum and Bugle Corps, witnessed formal retreat and attended a dinner with sons. Later they were welcomed by top Air Force officers.

Next morning: proud fathers posed with swelled-up cadets near a T6 trainer plane stationed in front of flight operations. Dads followed flyer-to-be sons right to flight lines. After sons took off for scheduled flight instructions, fathers were toured over base facilities.

A formal parade honored the fathers today and tomorrow a highlight will be at the base chapel with the Reverend Bernard Braskamp, Washington, D. C., delivering the sermon. The Reverend Mr. Braskamp is Chaplain of the United States House of Representatives, but he had something in common with all the visiting dads. His son is 2d Lt. Bernard Braskamp, Jr., stationed at Graham with the 3300th Pilot Training Squadron.

Shortly after the services will come the flight line send-off by Marianna citizens and officialdom, and the guests will be on their ways home.

While here each father has acquired a better picture of "Graham." Each has found his son in good hands and undergoing the finest in Air Force pilot training.

Operation Dad's Day can be termed a popping success.

National Material Handling Week

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include the following communication which I have received from J. Wellington Hall, national secretary, American Material Handling Society, Inc.:

AMERICAN MATERIAL HANDLING
SOCIETY, INC.,

Toledo, Ohio, February 28, 1955.

Hon. PETER W. RODINO, JR.,

Member of Congress, House of Representatives, Washington, D. C.

DEAR Mr. RODINO: It is with the deepest sense of appreciation of your efforts in behalf of the material handling industry and profession, that I note your resolution, House Joint Resolution 131, introduced in the House of Representatives, requesting a National Material Handling Week.

I would like to inform you of the reaction to your effort.

I have before me a letter, written by C. W. Henkle, president, Industrial Truck Association, who says in part: "Mr. Van Brandt, managing director, has forwarded your letter and I want you to know I feel sure that the Industrial Truck Association would heartily endorse this movement." He further states, "Anything of this kind, which is for the good of the entire industry, would unquestionably receive our wholehearted support."

The Industrial Truck Association is an organization of manufacturers of material handling equipment, specializing in gas and electric powered industrial trucks. The objectives of the associations are to advance the material handling profession and industry, to cooperate with other societies for the dissemination of technical and statis-

tical information in the field of material handling and to maintain a high standard of performance and quality from the manufacturers within their organization.

Mr. William C. Farley, president, the Association of American Railroads, states in his letter, "The railroads are one of the largest material handling organizations and, of course, are intensely interested in any methods or means that will tend to improve this important phase of their activities. The Association of American Railroads is glad to endorse a National Material Handling Week."

This organization, composed of class I railroads of the United States, maintains divisions for operations, maintenance, terminal switching lines, statistics, advertising freight and passenger traffic rates, telephone and telegraph, construction, signals, motor transport, containers, public relations, legislative research, car-exchange rules, accounting procedures, etc. Maintains the Bureau of Railway Economics and the Bureau of Explosives. Cooperates with National Association of Shippers and Transportation Association of America.

Herbert H. Hall, chairman, material handling division, American Society of Mechanical Engineers, states, in his letter: "The Material Handling Division of ASME was formed in 1920 and since that time has been active in furthering the application and disseminating of information regarding material handling. You can count on the support of ASME."

The American Society of Mechanical Engineers is this year celebrating the 75th year of its founding. Its membership now consists of some 40,000 members, approximately 90 sections, and 125 student chapters. There are 23 professional divisions.

L. West Shea, secretary, the Material Handling Institute, writes, "We shall be glad to cooperate in this program and will be interested in hearing of the progress being made."

The Material Handling Institute is an association of manufacturers composed of several sections which include gas and electric powered industrial trucks, hand trucks, wheels and casters, conveyors, hoists, monorails, pallets, and industrial metal containers, each of which is represented on the board of directors. This organization, being aware of the need for material handling engineers, was the guiding force behind the formation of the American Material Handling Society.

In order to make industry and Government aware of the benefits to be derived from material handling, MHI maintains a traveling clinic for panel type forum sessions. It has to date published four articles in a series called the "Material Handling Library of Know-How." These, plus films and other educational aids are available without charge to students and teachers. It supports a college industry committee on material handling education.

Its objectives are:

1. To promote the use of material handling equipment and standards.
2. To compile, distribute, and exchange helpful information and simplify material handling information.
3. To improve safety methods.
4. To provide special services to members.
5. To emphasize advantages gained through integrated material handling.

R. C. Sollenberger, executive vice president, Conveyor Equipment Manufacturers Association, has written: "The correspondence to and from Congressman Robinson is most interesting and we hope it will result in the declaration of a National Material Handling Week. Heretofore, material handling equipment has always been thrown into a basket called 'general industrial equipment,' to the effect that we are eternally telling people that such equipment is basic to industry and that you can't have

anything without such equipment coming first."

The CEMA is an organization of manufacturers of conveyor equipment which has presented many programs for the education of materials handling engineers. Mr. Sollenberger is a nationally known figure in material handling and his articles on the conveyor industry are nationally recognized and quoted.

Glenn Mather, secretary, Fibre Drum Manufacturers Association, writes, "You may count this organization among your sponsors—I believe the proposal is excellent and should be a very effective means of educating the general public on modern methods of material handling."

The Fibre Drum Manufacturers Association is an organization of manufacturers which has contributed much to the material handling and packaging field. During the late war, the developments of the member companies of this organization, in the moisture-proof, corrosion-proof packaging drum, and in the packaging of foods, chemicals, and other items necessary to the effort, did much to keep the masses of materials moving overseas and insuring the good condition of the contents on arrival. This organization lists as these objectives:

To collect and disseminate information and to promote the growth of the industry through expansion of markets. To establish and maintain contacts with Federal agencies regarding specification and related problems, and with rail, motor, air, and water transportation authorities. To foster equitable business practices. To promote friendly relationships among its members and to cooperate with other industries and organizations.

If you will note the type of organization which has endorsed this effort, it can be seen that these are the organizations of men first called in national emergencies: The railroad in war, fire, flood, or famine or disaster, this tremendous farflung, nationwide network of supply lines; the industrial powered trucks, the hand trucks, the conveyor lines which move the material into receiving, through manufacturing into warehouse area, to be shipped via the over-the-road carriers; the Fibre Drum Manufacturers, with their shipping containers. The Nation thrilled with pride in the know-how when they read of armies being supplied by dumping the cargoes over the side of the supply boats to float to shore. These, then, are the men who did it. These may be the men called on to do it again, though we pray it may never be necessary.

Research, development, know-how, education, training: these are things that we must continue in order to stay ahead in our methods of supply. It is for these things that we ask that recognition be given for past accomplishments, that the future may bring all the benefits to our civilization that these men are capable of providing, the engineers who develop the methods.

May I request that this be entered into the CONGRESSIONAL RECORD as a part of the program—A National Material Handling Week.

Very truly yours,

J. W. HALL,
National Secretary.

Fallout

EXTENSION OF REMARKS OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include an editorial entitled "Fallout," by Leo A. Lerner, which appeared in a recent issue of the Lincoln-Belmont Booster, of Chicago, Ill. The editorial follows:

THE FIRST COLUMN
(By Leo A. Lerner)

FALLOUT

It used to be that the word "fallout" meant that we could break ranks and go home.

But now the term "fallout" means that we should form ranks and get away from home, especially if we get any warning.

I have been reading an article about radioactive fallout in the Bulletin of Atomic Scientists. The article is illustrated by a man sitting in an atomic foxhole shelter.

An atomic foxhole, according to the article, is a special hole that every well-equipped family should have. We have had a mistaken notion, up to now, that every family should have an automobile, or a television set, or a combination washer and laundry drier. This is wrong. What every family needs is an atomic foxhole, and the best families will have one for each member of the family.

The foxhole has to be at least 3 feet wide, and 5 feet deep. There should be a chair or a box in it, so that its occupant can remain seated in it for at least 2 days.

If there is a warning when a bomb falls, each member of the family goes to his atomic foxhole, or, to say it another way, he falls out to avoid the fallout.

The top of the open hole should be covered with a loose board and on top of that there should be a thick newspaper or some articles of old clothing, since the wind is more likely to blow fallout into the foxhole if it is open to the sky. Nevertheless, even in an open foxhole the radiation exposure is less than 5 percent compared with standing in the open.

I like the calm and perfectly matter-of-fact way that the scientist who writes the article tells his story. He doesn't turn a hair, as if he were telling us how to go down to the drug store for an ice cream soda.

After we have been in the foxhole for about 2 days after a hydrogen bomb has fallen (it is a good idea to keep a bit of food and clean water in the bottom of the foxhole for emergency), you should get out and put on some uncontaminated clothes.

I fear the scientist made an error at this point in his advice. He doesn't say where to find any uncontaminated clothes. I am guessing that it would also be an idea, therefore to keep an extra set of coveralls and shoes in a tin box in the bottom of the foxhole in order to have some clothes when they are needed. You also should have a battery-powered radio in the hole to get instructions from the authorities.

And now comes the big task. If the all-clear has sounded and the wind has blown most of the contaminated air away, you are to crawl out of the foxhole, find a broom and sweep the roof.

Yes, you heard me right. Your first and most important job is to sweep the roof of your house. And mere sweeping isn't enough. The article speaks of "a good stiff sweepdown." I suppose with an uncontaminated broom.

After that, you are to sweep down the walks, the street, and stairways around your house. This is a more normal procedure, until we think about the sweepings. The sweepings are full of fallout. You can't therefore, sweep like most clumsy men sweep when their wives are in the country, by raising clouds of dust.

Radioactive dust is worse for the lungs than that cancerous cigarette smoke. You sweep so as not to raise the dust, and you keep all the particles together. Also, you wear a mask, if you have one left over from last Halloween.

The next big job is to dispose of this practically invisible dustpile.

The scientist says to bury it in the lawn, or sweep it into the sewer.

As for the lawn, it should be immediately turned over with a spade.

At this point, I must admit, I rebelled.

What, I asked myself, is the matter with those guys?

Don't they know I spent 17 years trying to raise a good lawn? I should spade it up, just like that?

I was reading some of this aloud to the family, and I became quite belligerent when I came to that part about spading up the lawn. My son calmed me down.

"Listen, Dad," he said. "You mustn't forget that would be after a superbomb had fallen. Don't think about your lawn as it is now, but how you would feel about it then. What's a lawn compared to all our lives?"

He had me there. It is very hard to think about how it will be after. Ordinary things certainly won't matter.

But to get back to the foxhole, if you can't dig them in the open, you may dig them in a corner of the basement. The main thing is to have underground shelter of a type that reduces the intensity of radiation.

The article stresses that all this preparation and all these activities are temporary. It has been discovered that extensive dispersal from a big city is unwise (and also impossible), so the best thing to do at the beginning is to get out of the atomic rays and wait a while. After that, you decontaminate as much as possible.

And then, within a few days, and before you have taken in too many roentgens (pronounced rent-jens), you clear out, preferably to a decontaminated area, being careful on the way not to go through any districts that are sprinkled with particles.

If you think I am dreaming all this, or imagining it, I assure you that I am not. Most of the technical material in this column comes from an article in the Bulletin of Atomic Scientists for February 1955. You can get a copy of the magazine for 50 cents and find there a picture of the foxhole, with dimensions. This is the age of "do-it-yourself," a part of the thermonuclear era, and it is appropriate to look over the blueprint with an eye to building one.

As to my purpose in telling you all this, it is the same old purpose. It is to talk with you about the kind of age we are now living in, and to ask, without having an answer, whether we can grow up in time to deal with it and save the things we think are worth-while.

To Amend the Agricultural Adjustment Act of 1938

SPEECH
OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. BERRY. Mr. Chairman, I wish to emphasize my strong support for the provisions of H. R. 1573, which would repeal section 348 of the Agricultural Adjustment Act of 1938. Sometime ago I introduced a bill identical in purpose to H. R. 1573.

Section 348 under existing law is to take effect this year and will deprive farmers of agricultural-conservation program payments if they knowingly exceed acreage allotments for any of the crops under control by the ASC.

For example: In my own State of South Dakota, during 1954, 60 percent of the farmers in the commercial-corn area overplanted their allotment. These same farmers, if they continue their present operation in 1955, will lose their AC payments under the provisions of section 348.

Many South Dakota farmers have contacted me about this matter, and I share their belief that the agricultural-conservation program should not be tied in with the acreage-allotment law. No one would suggest that the original ACP program was inaugurated in order to exercise an unfair control over the farmers of this Nation. It was to the contrary a program aimed at inducing farmers to enrich the fertility of the soil by building up soil resources through engaging in good farming practices.

I do not have to outline for you the significant accomplishments of the ACP program, as we are all familiar with the great value of soil-conservation practices. It is enough to say that the AC program has given our farmers increased incentives to practice soil-conservation methods, and the program has thereby played an important role in maintaining our Nation's economic strength.

It is grossly unfair to deny our American farmers partial reimbursement for cost of their conservation programs because they have not complied with acreage allotments.

The agricultural conservation program should not be used to compel compliance with the programs for price support. If a farmer does not choose to comply with acreage allotments and thereby lose his right to participate in the price-support program, it is not necessary to impose an additional penalty in the form of depriving the farm operator of soil conservation payments.

I know there are many Members of the House who agree with my contention that the provisions of section 348 of the Agricultural Adjustment Act of 1938 would prove to be very detrimental to the American farmer and thereby of great harm to the entire Nation.

I hope that the Congress will recognize the great benefit to be derived from repealing section 348 and making it possible for the farmers of this country to receive Federal cost-sharing payments under the agricultural conservation program even though the operator plants in excess of acreage allotments.

Stop the Smuggling of Narcotics

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. ANFUSO. Mr. Speaker, since the end of World War II there has been a sharp increase in the crime rate throughout the country, due in large measure to the social upheavals during and after the war, the lack of discipline, and the

breakup of many family units. Most deplorable is the growth of juvenile delinquency, particularly the large number of youthful drug addicts.

In recent years narcotic addiction among teen-agers has reached alarming proportions in many of our major cities. These young addicts are often driven to commit serious crimes in order to obtain the necessary funds to purchase drugs. Unfortunately, the American public is not sufficiently aware of the problem and the menace it constitutes to our youth. Our laws are too lax in meting out punishment to those who peddle drugs among teen-agers, and the hand of our Federal Government must be strengthened if we desire to gain control of the situation.

Above all, it is absolutely necessary that we locate the origin and roots of the narcotics trade and expose the evil men who bring this poison into our country for illicit purposes and force it into the hands of inexperienced and thrill-seeking youth. Most narcotics are imported from the Far East, the Middle East, and Africa. They are smuggled into this country by ship and plane as well as across our borders, and then distributed to the dope traffic to continue its deadly work, whose only harvest consists of broken and agonized lives.

If we can succeed in plugging up this evil trade and corrosion of human lives, we will have solved much of the problem. About 2 or 3 years ago, Harry M. Durning, the collector of customs for the port of New York, stated that only 1 of every 5 ships entering the port of New York can be searched for smuggled narcotics because of the lack of sufficient personnel in the customs service. I do not know to what extent this situation has been remedied since then, but the problem is still very much with us.

Congress must take effective action to suppress this vile trade by giving the Bureau of Customs the means and the men with which to operate in the proper enforcement of our antismuggling laws.

For this reason, I have introduced today a bill in Congress which provides for the establishment of a United States customs port patrol and a United States customs border patrol in the Treasury Department's Bureau of Customs in order to increase the effectiveness of this agency in dealing with the smuggling of narcotics into this country. These are to be law-enforcement bodies with adequate personnel and equipment for use in patrol work in our harbors, airports, along the coasts and borders. Officers of these patrol services shall be empowered to enforce the antismuggling laws of the United States, to make searches of all vessels, as well as seizures and arrests in accordance with our laws.

Mr. Speaker, the customs patrol officer is our best and most effective obstacle to the constant flow of illegal narcotics from our docks, airports, and borders. He is the only law-enforcement officer regularly assigned on a 24-hour basis to apprehend and arrest the dope smugglers. By increasing the ranks of these men and giving them the necessary authority to pursue their antismuggling

assignments, we shall be able to root out this evil.

Parents, teachers, welfare agencies, civic organizations, church groups, and most of all, our young people themselves, whose health, morale, and careers are at stake, will heartily endorse this action by Congress. I urge all of my colleagues to support my bill and I call for its speedy enactment. Remember that each day's delay means the additional sacrifice of young American lives.

Eisenhower Security Program Pays Dividends—Routine Check Caught Petersen

EXTENSION OF REMARKS OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 28, 1955

Mr. HOSMER. Mr. Speaker, on January 10, at page 170 of this RECORD, our colleague from New York, Mr. KEATING, revealed that a man named Joseph Petersen, Jr., a former code expert in the National Security Agency, had just confessed and been sentenced to 7 years in prison for espionage. The point of Mr. KEATING's remarks was that Petersen was caught by means of a routine check under the new security program instituted by President Eisenhower. He pointed out that but for this program, Petersen would still be on the Government payroll today, undetected and unapprehended, and continuing to turn over the Nation's secrets to our enemies.

Now it has been revealed by Columnist David Lawrence that Petersen himself was one of those who attacked as un-American even the loose 1950 security measures that failed to turn him up.

There are bound to be mistakes in administering any security program. We should seek constantly to improve our program and avoid any injury to the innocent. President Eisenhower commendably suggested recently that procedures be established to permit persons labeled as security risks to establish, if they can, the error of such classification. But let us not forget the Petersen case when evaluating the efficacy of our present program.

The David Lawrence article referred to above is as follows:

ATTACKS ON SECURITY SETUP—PETERSEN, NOW IN JAIL FOR STEALING NSA SECRETS, IN 1950 DENOUNCED UNITED STATES SPY-DETECTION SYSTEM

(By David Lawrence)

Who is attacking the security system of the Government today and attempting to discredit it? Many well-meaning persons, thoroughly patriotic, are doing some of it, but it so happens coincidentally that this form of attack has for some time been engineered also by persons who themselves turn out later to be involved in violations of the security system.

Thus this correspondent has just received a clipping from the August 29, 1950, issue of the Washington Post, which, in its "letters to the editor" column, innocently printed a communication from Joseph S. Petersen,

Jr., who now is in jail. He pleaded guilty in December 1954, to the theft of secrets from the National Security Agency but in 1950 appeared to be just an indignant letter-writer. Yet from March 1948, through December 1952, according to the evidence at his trial, Petersen was giving to a representative of a European government messages and documents which he was not authorized to transmit and the foreign government was not authorized to receive.

So vital was the secret material that the Department of Justice, for security reasons, did not disclose at the trial all the coded documents that were stolen by Petersen.

How did Petersen escape detection for nearly 5 years? Evidently the security system was not strong enough. But Petersen himself boldly wrote to a Washington newspaper vigorously condemning the very system he was violating. Here is the full text of his letter:

"Under the guise of security, numerous sins are being committed. The welfare of the Nation is of supreme importance, but the right of an individual to life, liberty, and the pursuit of happiness, is one of supreme importance, too. The Constitution does not allow one to be condemned without trial; it does not permit one to be judged guilty of charges of which he has no knowledge. But that is happening in our Government at this time.

"Today our Government agencies are accused of everything short of treason by irresponsible persons. The faith of the American people in the Government is being undermined by villifiers seeking self-aggrandizement. In order to restore this waning faith of the people, agencies are forced to sacrifice all upon whom the breath of suspicion falls.

"How this must give aid and comfort to our enemies. Those enemies in our midst are united on a definite plan of action and are slowly but inevitably putting it into force. The ghosts of Marx and Lenin must be chuckling over the distrust and disunity that decadent capitalists are causing among themselves—preparing the way for communism.

"Now is the time to cease seeing enemies on all sides, to stop this persecution of innocent people under the label of security of the Nation. The American way is to let a man know what charges have been brought against him and give him a chance to defend himself. Otherwise, what we condemn in others we shall find being used by ourselves.

"JOSEPH S. PETERSEN, Jr.

"WASHINGTON."

It would be a mistake for anyone to generalize about all those who write letters to newspapers just because the Petersen letter reveals insincerity and duplicity. But some of the people who are attacking the security system are exultantly talking about Harvey Matusow's lies as proving that all ex-Communists are liars. Such generalizations are ill-founded, and the case of the Petersen letter underlines how important it is to take every incident separately and weigh the factors in the light of the circumstances in each case.

There are some letter writers who are guilty of writing lies to newspapers, even including their own names and addresses. Again and again, as some of these persons are addressed, the post office returns the letters with a notation that the individuals are unknown at the address given. It is a Communist trick to use phony names, and some day it may prove advisable to print names and addresses so that the neighbors can check as to whether anyone of that name lives at the address given. Many letters come from Communists, but there is no way for a newspaper to know who they are, though sometimes the argument or the language parallels exactly the articles in Communist newspapers.

The art of propaganda is well known to the Communists in this country, and the device of letters to the editor has in the last few years become a powerful means of creating confusion and of attacking the security measures being taken by the national Government.

Heart and Spirit Have Been Reorganized Out of FPC

EXTENSION OF REMARKS OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the article by Tom Stokes which appeared in the San Francisco News of February 8, 1955, entitled "Heart and Spirit Have Been Reorganized Out of FPC." The article follows:

HEART AND SPIRIT HAVE BEEN REORGANIZED OUT OF FPC

(By Thomas L. Stokes)

WASHINGTON, February 8.—Something has been said here recently about the way Federal regulatory commissions have come under the dominant influence of business and financial interests—which the commissions are supposed to regulate—and how their function, ordained by Congress, to protect the public interest has been submerged.

A revealing case study is offered in the Federal Power Commission, which was created as an independent Commission by Congress in 1930 during the Herbert Hoover administration to have jurisdiction over hydroelectric power development and to which subsequently was assigned authority over natural gas in the 1938 Natural Gas Act.

The FPC emerged finally from a reorganization instituted by the Eisenhower administration. The result is that the guts, heart, and spirit once possessed by this agency in behalf of protecting public and consumer interest have been nearly reorganized out of it.

OLD STORY

It's the old story. Things were made uncomfortable for key members of the expert staff whose conception of regulation does not coincide with that of the now prevailing business-minded element on the FPC. Some have been demoted and shunted aside to make way for more amenable personnel. Some have quit, including a number of lawyers on the staff as well as technical experts.

Morale is low. Apathy has supplanted a once-high esprit de corps.

The expert staff now finds itself frequently without support from the Commission, its recommendations and findings disregarded in vital issues with utilities, gas and electric.

TWO STEPS

Instead, there is developing a situation where the top officers of powerful utilities deal directly with the front offices of the FPC to negotiate for what they want.

Two steps achieved the transformation of the Commission, both familiar to anyone who has watched the same thing happen before.

First was a change in the commission itself, which consists of five members. That began even before this administration. The offensive opened during the Truman administration, when the Senate under pressure from powerful oil and gas interests that were influential with leaders of both the Demo-

cratic and Republican Parties in Congress, defeated confirmation for another term of Leland Olds, for 10 years a stalwart defender of the public interest.

INDUSTRY VIEWPOINT

That started a shift in the very delicate balance on the FPC until, with three appointments during the Eisenhower administration, it now is weighted definitely toward what might be called the industry viewpoint.

But something more is required. That is the second step. That is to carry the treatment down below the Commissioners themselves and intimidate or weed out in one way or another those on the permanent civil service expert staff whom the utilities, electric and gas, consider troublemakers because they seek to carry out the law in their recommendations without fear or favor.

Several months ago, as reported here at the time, the new Chairman, Jerome K. Kuykendall, ordered a reorganization of the Commission, which he announced at a staff meeting. Called in to make a survey was a New York management-engineering firm employed by the Budget Bureau, Cresap, McCormick & Paget, which had no previous experience with regulatory agencies.

TOP EXECUTIVES

It called in the top executives of natural gas and electric utilities at the suggestion of Chairman Kuykendall, but seemed to pay much less attention to the consumer so directly affected by everything the Commission does.

Though not adopting all of the firm's recommendations, the FPC has followed them fairly closely. It has abolished some bureaus, consolidated others, created some new ones—a technical process which it is not the intention to explore here except for the effect.

The heart of the FPC was its Bureau of Accounts, Finances, and Rates, which passed on matters so vital to the public. Its head since 1936 has been Charles W. Smith, who has won a national reputation among men in his field for his knowledge of ratemaking. He was relied upon heavily by the Commission because of his experience and his fairness of judgment. His judgments were often counter to those of powerful utility interests naturally.

DIVISION ABOLISHED

In the reorganization his division has been abolished and replaced with a new Bureau of Rates and Gas Certificates and a new Office of Chief Accountant. Mr. Smith was fully aware of the purpose of the reorganization, opposed that aim, but knew he could not stop it. He has now been relegated to the newly created post of Chief Accountant, a position which his friends say he has taken until eligible for retirement a few months hence.

Thus a valuable public servant has been sidetracked. Everyone who has worked with him and under his direction is fully conscious of the meaning of his shelving, and knows that it puts an end to the kind of regulation in the public interest for which Charlie Smith always stood.

There's another clue to what is happening in the case of another veteran who has been with the FPC since 1933. This is Edgar S. Coffman, Chief since 1945 of the Division of Rates which was under Mr. Smith.

NEW BUREAU

This, too, was abolished. Its functions are being taken over by the new Bureau of Rates and Gas Certificates, of which not Mr. Coffman, but another man, Carl T. Kallina, formerly head of the Gas Certificates Division, was made Chief.

The purpose of this was clear enough to Mr. Coffman. He asked for another assignment and chose to leave here and become regional engineer of the Fort Worth, Tex., regional office.

That tells more of the story. Another clue, too, may be found in the single dissent to the whole shakeup in these various key divisions. It came from the one member of the FPC today who has been on it since its creation in 1930, Claude T. Draper, a Republican, who from his long experience can see just what is going on today. It does not fool him.

But his was a voice in the wilderness.

Congressional Resolution to Abolish War

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mr. ANFUSO. Mr. Speaker, in the RECORD of February 17, 1955, I inserted an exchange of letters which I have recently had with Gen. Douglas MacArthur regarding the latter's proposal for the abolition of war.

The St. Petersburg (Fla.) Times has published a most interesting and thought-provoking editorial, in its issue of February 28, dealing with General MacArthur's views in the matter and my offer to him to introduce a congressional resolution declaring that it is the will of the American people to abolish war as a means of settling international differences.

Mr. Speaker, I am happy to insert this editorial in the RECORD and call it to the attention of all my colleagues:

A TOKEN OF FAITH WHEN HOPE SPRINGS ETERNAL

The Lenten season brings a lull in the world's turmoil and hope enough to some men to at least discuss the possibilities of permanent peace.

The awesome reports on atomic and hydrogen tests commands men of good will to reconsider and reappraise possible means of abolishing war.

After other wars men have dared to hope for permanent peace. In 1929 the Kellogg-Briand antiwar treaty was signed by 62 nations pledged to renounce war as an instrument of national policy. President Hoover and the free world proclaimed this pact.

And now another disarmament conference meets in London. President Eisenhower acknowledges that history does not reassure us in our eternal hope that mankind will not continue to crucify itself on the cross of war.

But a Congressman writes to another protagonist of three world wars in the last half century—Gen. Douglas MacArthur—and wants to know whether a simple congressional resolution—speaking for all the American people—might make it clear to the world that we abhor war and devoutly hope to abolish it as an instrument of national policy—if other leading peoples will join us. In a remarkable letter, the general replied, and said:

"It has always been my opinion that war's abolition can only come about through the emergence of a leadership in world affairs with the strength and vision and moral courage to proclaim a readiness in concert with other major powers, to enforce it as a matter of constitutional doctrine by specific constitutional prescription. There is no doubt in my mind but that the great masses of every nation in the world, whether on this side of the Iron Curtain or on the other, would, as

a matter of self-interest and protection, fully support such a constitutional limitation upon political power and zealously guard it against any despot's violation or abuse."

We need, the general says, "aggressive action to implement the basic concept" as well as great world leadership. And with that we would all agree. Do we have the concept? Do we have the leader? MacArthur, like the rest of us, hopes and says:

"To trigger a worldwide movement for the abolition of war . . . it would take a ringing affirmation of a dedicated leader commanding universal respect, capable of arousing the conscience of mankind into a crusade against lagging leaders who in the mad lust for ever-increased political power willfully ignore the realism that war as an instrument of political power has been outmoded by the advance of science. I do not know when this Nation will be blessed by such a leadership but I pray that it will be before it has been drawn through the tragedy of another and infinitely worse cataclysmic conflict."

The general's efforts to arouse the United States and the world to the basic concept of outlawing war, can be doubly effective, because he has fought in all the modern wars. But the general's thinking and planning are hampered because he can conceive of action only in terms of the leadership of one man.

MacArthur was replying to Congressman Victor Anfuso, of New York, who is groping for the answer on just how America can convince and reassure the world that we are devoted to the idea that war can be abolished—despite the record of history. Somehow we have lost the initiative and even our friends fear that we are trigger-happy and irresponsible—that the Nation which made the first atomic bomb cannot comprehend the madness of a hydrogen war.

A congressional resolution, backed by numerous other State resolutions throughout the land, can prove that our leaders will be supported in any truly practical disarmament plan. President Eisenhower rightly says:

"We must have ways and means of determining that each principal nation . . . is acting in good faith."

But a congressional resolution subscribed to by the whole country and by the President's own party leaders, such as Senator WILLIAM KNOWLAND, can be the token of faith America offers at this time of year when hope springs eternal in the breast of all mankind.

It Must Be Conclusive

EXTENSION OF REMARKS

OF

HON. MYRON V. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. GEORGE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial by F. W. Brinkerhoff, editor of the Pittsburg (Kans.) Headlight of January 26, entitled "It Must Be Conclusive":

IT MUST BE CONCLUSIVE

The Asiatic situation now is undoubtedly far more serious than the country realizes. The defense of Formosa with arms by this country may quickly require war. What else than war can such a defense by force be?

The President made it perfectly clear in his message to Congress that aggressive mil-

itary operations may come when he asked congressional approval to "engage in whatever operations may be required," to keep Formosa out of the hands of the Reds. It was indicated that the defense may mean aggressive action as a proper military measure when the President made it clear that the defense of Formosa may require attacking the Red Chinese before they leave their own ports. If it is deemed necessary that such an attack be made, and the highest military judgment undoubtedly would approve, the attack must be a major one. Certainly it should be designed not merely to warn the Reds or to discourage them but to destroy their military effectiveness before they can use it. If this move must be made, and certainly now it must, it should mean business. The quicker and more powerful the American move, the better it will be.

America's experience in Asia in these recent years gives support to the idea that this movement must be conclusive.

It was Gen. Douglas MacArthur who said, it will be recalled, that "in war there is no substitute for victory."

President Eisenhower moved with wisdom as well as in obedience to his promise to the American people in submitting to Congress for its approval his proposal for the defense of Formosa. His proposal was clearly and fully stated. He has pursued the constitutional course. The decision of Congress on the President's recommendations, whatever results, will produce a policy that will be a national one, not an administration one.

The Poor Man's Bank

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following article written by Bernard Simon which appeared in the February 1955 edition of the National Jewish Monthly.

Mr. Simon is on the public relations staff of the Antidefamation League of B'nai B'rith. The director of the bank is my very dear friend Abraham Gribetz.

THE POOR MAN'S BANK

(By Bernard Simon)

Abraham Gribetz fingered the morning mail that lay unopened on his desk. We sat in his small private office at the far end of the shabby, weather-worn building on New York's Second Avenue. In the large front room that faced the street entrance were the customary wickets behind which tellers did their work. It looked like a run-down bank.

Gribetz nodded at the calendar on the wall. "This is the day," he said. He is a white-haired, quiet-spoken man who has worked 30 years behind the same desk. He chose one envelope from the pile, tore it open. Without examining the contents he handed it to me.

I unfolded a check for \$500. There was also a small note that said simply: "Lucky money."

"They haven't missed this day in 12 years," said Gribetz. He told me the story—without names.

It began on this anniversary morning, 19 years before. A middle-aged man and his wife entered the offices of the Hebrew Free

Loan Society and asked for the director. The man had the mark of a business executive, the woman wore an expensive fur coat that was now somewhat threadbare. Not an uncommon sight in those depression days.

The man told his story frankly. His once thriving business had succumbed to hard times. Rather than seek escape by bankruptcy, he and his wife had sold almost everything they owned, their furnishings and personal belongings, to pay off creditors.

But the man was cheerful. He wanted a fresh start, he said, another business. He needed capital. Would the Hebrew Free Loan Society give him a free loan of \$500?

"I handed them the check myself," Gribetz remembers. "Under our rules they were supposed to repay the loan in 6 months. They tried, but couldn't meet their payments promptly. We gave them extensions, and finally, after 15 months, they both arrived one day with the final installment and many words of gratitude."

"I learned later that after several years of struggle the new business prospered."

And every year, on that same day, there's another \$500 check and the same note: "Lucky money!"

Philanthropy, along with steel, oil, and automobiles, is one of the 10 biggest industries in the United States. It is a three-billion-dollar-a-year business. By these standards the work of the little-known social service group called the Hebrew Free Loan Society might be dismissed as inconsequential. In fact, its annual overhead, less than \$50,000 a year, marks it as a small-time operation.

What makes the society unexampled in the ranks of philanthropy is that it doesn't give anything away. Whatever it gives—it wants back. It started in business 62 years ago with \$95. It still has the same \$95, and some six hundred thousand more.

The purpose of the society is exceedingly simple. It will lend you from \$5 to \$500, for as long as 6 months. You pay no interest or other charges. Your credit rating doesn't matter. And although this is a Jewish-sponsored institution, your race or religion doesn't matter, either. No one asks why you need the money or how you intend spending it. It calls itself "the poor man's bank."

To research this article I walked into their bank and approached a teller's window. "I want to borrow \$100," I said.

The young lady in the cage answered matter-of-factly. "Of course." She motioned me to a large, glass-enclosed conference room.

I had brought with me some canceled checks to identify two business acquaintances who had agreed to act as endorsers to my loan. This is the society's only safeguard for its funds.

"Only one endorser is needed on loans of \$100 or less," the girl explained. Then she got down to my personal history. She asked exactly three questions: My name, my address, my occupation. I said I was an unemployed poet.

With that, the interview was over.

I couldn't resist interrogating the clerk.

"You people don't seem to care what happens to your money," I said.

"Oh, but we do!" She was dead serious.

"You are obligated to repay it promptly, you know."

"But you don't know anything about me," I protested. "How can you possibly check on me without any information?"

"We don't," she said. "We have never investigated a borrower. We lend him money on his good faith. It's always paid back."

I discovered later that this is true. The society's yearly losses on free loans are between one-tenth and one-half of 1 percent, a record better than that of most commercial banks.

Next day, when I returned, she handed me a check drawn for \$100 which had no identification on it except a number. This, I learned, was to help preserve the anonymity of my loan. When I cashed the check no one could tell where I had gotten it. This, I thought, is strictly business—I'm no charity case. Which is precisely the way the society wanted me to feel.

The poor man's bank has been operating in this fashion for six decades. Some 800,000 persons have entered its doors to borrow, without interest, a collective total of \$40,000,000. During periods of economic stress, as in pre-World War I days, when waves of immigrants landed in New York, most of them impoverished, and in the depression of the 1930's, when native and immigrant both hit bottom, as many as 20,000 persons hunted up the society each year and the annual volume of loans exceeded \$1,250,000. There were times when the society's perpetual loan fund was completely exhausted. When that happened the directors went to commercial banks and borrowed at normal interest rates in order to keep making free loans. In that way they preserved the society's most unique boast: It has never turned away a single legitimate borrower.

On the morning that I returned my loan and revealed my identity and purpose to Abe Gribetz, he invited me into his office to examine some of the society's files and learn the character of its borrowers. Few of them, I quickly learned, are the kind of credit risk welcomed at ordinary banks. Many are in desperate straits—an operation to be paid for, a new baby in the family, an empty pay envelope because of a seasonal lay-off. But these are people who scrupulously reject charity, and it is to sustain their spirit of independence and self-reliance that the Hebrew Free Loan Society provides its unusual services—in a manner that, as its founders decreed, violates the dignity of no man. To many, it has meant freedom from the pawnshop and the loan shark.

The society's attitude is that if a financially responsible person has enough faith in the borrower to endorse his loan, why should they have less? The need for endorsers keeps out the chiselers and petty swindlers. The sincerity of the borrowers is evident in the fact that in less than 2 percent of its cases is the society forced to apply to endorsers to make good.

Free loans have started many young people in their own business. They helped to establish a doctor in his new office; bought tools for a refugee carpenter; financed the car that embarked another eager lad on a salesman's career. They have paid for births, for weddings, and funerals; for a poor youngster's graduation dress and a GI's down payment on a home. One free loan bought a new suit—and a chance for rehabilitation—for an ex-convict.

How good is an ex-con's credit? This one had just finished a stretch for—embezzlement. When the society loaned him \$100, with no questions asked, he called it holy money. He was as prompt with his weekly installments as was the Brooklyn minister who borrowed for a new set of dentures.

Their secret is safe. The society will not, for any reason, reveal the identity of a borrower.

In Gribetz' office hangs a little tablet on which is inscribed in Hebrew, gemilath chasodim (acts of loving kindness). It is one of the great Jewish precepts and it was imbedded in the hearts of the 11 men who met in an East Side synagogue one evening in 1892 and there organized the Hebrew Free Loan Society.

It was strange, indeed, that these 11 worshippers should have become organized philanthropists. They were hard-working tenement dwellers, none of whom could boast even modest resources. Yet, they reasoned, there were others in greater need than them-

selves. How best to help them was found in the Biblical quotation of Exodus XXII, 24: "If thou lend money to any of My people, even to the poor with Thee, thou shalt not . . . lay upon him interest."

The 11 founders contributed a total of \$95 to start a perpetual loan fund. By making free loans of \$5 and \$10—\$10 in those days could buy stock and a pushcart for an immigrant, or tools to ply his trade—they assisted 227 borrowers in that first year.

The fund has since grown to more than \$600,000—although the society has never made any public appeal for funds. Instead, many of its grateful clients have become its financial supporters, and philanthropists like Jacob H. Schiff and Adolph Lewisohn also came to its support. It was Schiff who coined the name "poor man's bank."

As the fund increased, the maximum loan was proportionately increased until, by 1929, the present \$500 figure was set. The fund is used for no purpose but capital for free loans. The society's operating expenses are borne by the Federation of Jewish Philanthropies.

Last year the society inaugurated another fund provided by a donor who prefers anonymity. It serves refugees who have escaped from behind the Iron Curtain. "Most of them," said Gribetz, "are Russian intellectuals, capable, freedom-loving people whose abilities find them jobs in this country quickly. But they arrive here penniless and need a little help to get started."

The Hebrew Free Loan Society takes pardonable pride in its "acts of kindness" and its philosophy of accepting without question any man's good faith. "But we're proudest of the integrity of the clients who come to the poor man's bank," says Director Gribetz. "You don't find a really bad risk among them."

National Material Handling Week

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include a communication which I have received from J. Wellington Hall, national secretary, American Material Handling Society, Inc.:

AMERICAN MATERIAL
HANDLING SOCIETY, INC.,
Toledo, Ohio, March 1, 1955.

Hon. P. M. RODINO, Jr.,
Member of Congress,
House of Representatives,
Washington, D. C.

DEAR MR. RODINO: Since writing to you advising of the spontaneous response to your speech by various organizations engaged in or interested in material handling, I have received some letters from other organizations endorsing your effort to establish a National Material Handling Week.

Mr. Roy H. Stewart, operations engineer, American Trucking Association, Inc., has written stating, "I personally feel that the effort to secure designation by President Eisenhower of a National Material Handling Week is a worthy one. We at American Trucking Association stand ready to lend assistance wherever possible in publicizing the efforts of the various participating organizations."

The American Trucking Association, Inc., is an organization composed of almost 400 member organizations of trucking associations. It's worth is attested to by its phenomenal growth from 202 member organiza-

tions to its present size in the 12 months of 1954. They maintain training programs for the membership, educational program, scholarships are given, reprints of articles of interest are mailed to their members and educational institutions. A monthly newsletter keeps their members advised of conditions within their industry.

Chester C. Thompson, president, the American Waterways Operators, Inc., has written, stating, "I wish to acknowledge—reprint of speech by the Honorable PETER W. RODINO, Jr., urging the adoption of a resolution proclaiming a National Material Handling Week, and you are assured that this National Association of the Barge and Towing Vessel Industry will do everything it can to further the adoption of Mr. RODINO's resolution."

The American Waterways Operators, Inc., is an organization of domestic water carriers engaged in the transportation of freight cargo, chiefly in the Mississippi River and Gulf coast areas.

Mr. Kenneth E. Knowles, vice president, Clapp & Pollak, Inc., producers of industrial shows, writes, stating, "We believe the idea has very fine possibilities and will add impetus to a better understanding of the tremendous importance of material handling as a technique which vitally concerns not only industry, but, in the end, our personal life. I hope that you will keep in touch with us so that we may best see how we may participate."

This organization will produce the Materials Handling Exposition in Chicago's amphitheater in May of 1955.

John Bright, chairman, the Institute of Material Handling, London, England, writes, and in his letter he states, "This organization seeks to join in an all-out drive during an International Material Handling Week. He further states, and I quote, 'This institute would act as the responsible coordinating body this side of the globe.'"

The Institute of Material Handling is an organization of men engaged in the material-handling field who have joined together to preach the gospel of material handling on the other side of the ocean. Though separated by many miles of water its aims and purposes are essentially the same as those of ASME, SAM, SIPMHE, AMHS. Truly, the science of materials handling knows no boundaries.

Donald W. Pennock, vice president, Material Handling Division, Society for the Advancement of Management, writes, stating, "On February 12, 1955, the SAM executive committee and society officers approved of a National Material Handling Week."

This is an organization of more than 50 chapters in the United States and Canada. It has 95 student chapters in leading universities. An organization of some 60,000 members, drawn from the top levels of management, they have contributed much to community and industrial development by undertaking specific projects for labor-management cooperation, worker incentives, and advanced management techniques for government.

SAM was formed in 1936 by merging the Taylor Society, organized since 1912, and the Society of Industrial Engineers, formed in 1917. In 1946, the Industrial Methods Society merged with SAM.

They participate yearly in hundreds of clinics, seminars, and round-table discussions on all phases of industry and community management. Their annual time study and methods conference is one of the most outstanding each year, averaging an astounding 2,000 registration per session in the last two sessions.

The organizations listed here, the trucking industry with its 10,000 trucks on the road, the barge and towing-vessel industry, the management organizations, the engineers, these are the people who have solved this Nation's problems of supply and distribution. It is material handling that stocks

the floor of the automobile showroom, the shelves of the supermarket, the vegetable store, the department store, the coal bin or oil tank in the cellar. Yes, even the water, electricity, or gas flowing into the home must be moved in some fashion and in any movement of material there must be a means provided for the movement, be it a piece of wire or a piece of pipe, a ship, a truck, or an airplane or conveyer.

The general public, however, accepting all these things as part of our civilization without ever asking how, is not fully aware of the tremendous scope of these functions. It is for this reason I would ask you, as part of the effort to establish a National Material Handling Week, that this letter be entered into the CONGRESSIONAL RECORD.

Very truly yours,

J. W. HALL,
AMHS National Secretary, Westinghouse Electric Corp., Meter Division, Newark, N. J.

Pity the Poor Democrats

EXTENSION OF REMARKS

OF

HON. ROBERT HALE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Stewart Alsop:

MATTER OF FACT

(By Stewart Alsop)

PITY THE POOR DEMOCRATS

The hassle over taxes neatly illustrates the hideous dilemma confronting the Democrats. The dilemma is so seemingly insoluble that it has the Democratic leaders of the House and Senate, who are about the shrewdest politicians in the United States, baffled, irritated, and divided.

The dilemma can be defined in a couple of questions: How are the Democrats to win back the White House when it is seemingly political poison even to criticize the well-liked President? And what issues are Democratic congressional candidates to run on when the administration keeps snatching all the best issues out from under their noses?

There are two theoretical solutions to these conundrums. One is to use every means to present the Eisenhower administration as the friend of the rich, casting the Democratic Party in the role of the defender of the little guy. Meanwhile, the Democrats should be ready to stand up and slug it out with the President when the need arises. Chief proponents of this strategy are Paul Butler, chairman of the Democratic National Committee, and his assistants. With modifications, the Butler view is shared by House Speaker SAM RAYBURN and the other House leaders.

Solution No. 2 is to avoid direct conflict with the President, concentrating instead on building up the Democratic Party as unified and responsible and the Republican Party as irresponsible and divided. As for defeating Eisenhower (everybody assumes he will run again) that is a nasty little problem for the Democratic candidate, whoever he may be.

Chief proponents of this view are Senate Majority Leader LYNDON JOHNSON and most of the senior Democratic Senators. This is not to say that there is any row brewing between JOHNSON (whose illness has complicated matters) and his fellow-Texan RAYBURN. But there is a distinct and important

difference of approach. There are good reasons for this difference.

For one thing, only a comparative handful of Democratic Senators need to worry seriously about the next election. Moreover, the Senate leaders are by no means starry-eyed about Adlai Stevenson, most probable Democratic presidential candidate. This gives them a rather relaxed attitude toward 1956.

By contrast, Butler and the national committee officials are Stevenson men, and they are quite aware that Stevenson can hardly hope to win if Eisenhower is considered above criticism. The House Democrats, what is more, feel the breath of 1956 already hot on their necks.

In fact, many House Democrats are worried sick at the prospect of running in 1956, with the popular Eisenhower heading the Republican ticket and with no "gut issue"—no issue that really excites the voters—to use against the Republicans. State delegations have repeatedly passed the word to RAYBURN: "We've got to have an issue."

This is one reason why RAYBURN and Butler are natural allies in the Democratic war council. It is also one reason why RAYBURN and company decided to spring the \$20-for-everybody tax surprise.

The surprise was most unwelcome to the Senate leaders. As they saw it, instead of giving the Democrats the needed issue, the move unified the Republicans and hung the irresponsible label on the Democrats, all at one stroke. As this is written an effort is being made to patch up some sort of compromise which will save face for the House leaders without giving the administration a political bonanza.

This will be a neat trick if it can be done, but it will not begin to solve the Democratic problem. The Democrats thought they might have the essential "gut issue" in aid for education. But Senators Ives, of New York, and SMITH of New Jersey needed the administration to jump in with an education bill of its own. Democrats angrily denounced the administration bill as a phony. But the bill has, nevertheless, robbed them of the clear-cut issue to use against the administration which they are seeking. And the same thing is true all the way down the line.

Perhaps events may solve the Democrats' problem. An ugly little war in Asia, for example, might change the political climate. Former President Harry Truman has reportedly written Senator WAYNE MORSE, congratulating him for his antiadministration stand in the Formosa crisis, and accusing the President of abdicating his responsibilities. The time might come when some such line would be politically effective.

Or a worsening economic situation might do the trick for the Democrats. But House Minority Leader JOE MARTIN often remarks to friends: "Give us peace and prosperity in 1956, with Ike heading the ticket, and nothing can beat us." And many Democrats privately agree—at least as regards the White House.

Smaller Business Association of New England, Inc.

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. McCORMACK. Mr. Speaker, on February 24, 1955, representatives of the Smaller Business Association of New

England, Inc., presented their views in Washington on the problems and plight of small-business men to the Members of the Massachusetts delegation. Each and every one of those who addressed the meeting of the delegation—A. L. Lawrence, president; Ralph A. Fletcher; Howard D. Williams; A. Dudley Bach; and S. Abbot Smith—made concise and constructive recommendations. What they had to say, as well as their recommendations, is a matter of interest to all small and independent businessmen throughout the United States. I am pleased to include in my extension of remarks the statements made by the above gentlemen on the occasion of the meeting of the Massachusetts delegation on February 24, 1955, in the Capitol in Washington:

INTRODUCTORY REMARKS OF A. L. LAWRENCE, PRESIDENT, SMALLER BUSINESS ASSOCIATION OF NEW ENGLAND, INC.

Honorable chairman and Members of the Senate and Congress from New England, it is nice to be with so many friends. My name is A. L. Lawrence. I am treasurer of the H. B. Smith Co., Inc., of Westfield, Mass., manufacturing boilers for 102 years. I have the honor this year to be president of the Smaller Business Association of New England, Inc.

We very much appreciate the time and interest you are giving to us today on the problems of smaller business. These problems are many but they are still basic. They have, however, been multiplied over the years.

The small-business man is a truly optimistic and independent American, who has faith in his country, in its future, and in himself. If he didn't, he would never have had the courage to start his own business. What he really wants are the rights he should have inherited, has fought for, and is still fighting for under our free-enterprise system, primarily his rights to live as a free man, to worship as he pleases, to work in his chosen field, to grow and prosper thereby to better his standard of living, and to obtain thereby some measure of earned security for himself, his family, and his fellow employees. These rights certainly are in the American tradition and must be preserved. That is why we are here today.

It is a fact that this is the only country in the world where these basic rights are still even recognized and we are thankful, but let us be fully aware that these rights are being constantly impaired, so that the objectives are getting harder and harder to attain.

The American rights to live as freemen, to worship and to work have been virtually preserved.

Our chief concern today is for our right to grow and prosper as a result of our good hard work. This right has become an obstacle course, full of legislation, taxes, red tape, and not always helpful administration.

The tax situation we believe is the greatest deterrent to the growth of small business, as what is left after today's multiple taxes does not leave enough to the small-business man to reinvest in the business for reasonable growth and progress. Couple this with a lock of equity capital, rampant business mergers, Government competition in business, some poor administration, and red tape, with the prospect of lower or no tariff, and the obvious advantages of big business to mention only a few reasons, and we have some very real causes for concern.

The Smaller Business Association of New England has fought for many years for relief from this eventually ruinous situation. We fight in the American way with a program of education and understanding, for corrective legislation and better administration of the

laws. We are this year reorganizing our association on a regional basis with membership committees in every New England State and are at this time planning an extensive radio program. Our bulletin entitled the Voice of New England has this year been streamlined and is now widely circulated and read.

It is obvious that there is not time to cover today all of the things which bother small business, so we have picked out some of the most important. The gentlemen who you will hear on specific matters of great concern to us are all directors of our association and have made this trip at their own expense.

Again may I thank you all for our association for your kind interest and we hope for your continued cooperation on behalf of smaller business, the backbone of our economy.

STATEMENT OF RALPH A. FLETCHER, BEFORE NEW ENGLAND SENATORS AND CONGRESSMEN, WASHINGTON, D. C., FEBRUARY 24, 1955

Honorable chairman and members of the New England congressional delegation, I appreciate your extending to me the privilege of appearing again before this group on behalf of the Smaller Business Association of New England.

We have always been accorded an attentive and understanding reception not only by our representatives from New England but as well by the Senate and House committees before whom I and my associates have from time to time appeared.

I shall first explain the reasons for my interest in the problems of small business. I am a small-business man. As an engineer by education and training and a quarryman and manufacturer by experience, I have long been concerned with the difficulties which confront every small-business man. These have resulted in part from an expanding economy, our Federal tax structure and the disproportionate advantages that accrue to the large business corporations under our current system.

For these reasons, some 10 years ago I became associated with the Smaller Business Association of New England as a director, and had the honor to serve as its president during this past year.

Among the many problems which have beset the small-business man under our present tax system is that of depreciation including obsolescence, and that is the problem to which I wish to direct my remarks. We do not need to expand on the fact that this problem of a more flexible depreciation is accepted by you and our other representatives in Washington.

The Select Committee on Small Business of the Senate in a considered report issued in June 1953, recorded themselves in favor of more liberal depreciation policies: "We do not wish to recommend a reproduction cost basis for calculating depreciation, but we do believe that management should have a greater latitude for judgment and should tie depreciation charges to its own policies as they relate to machinery replacement and the recognition of obsolescence." (83d Cong., S. Rept. No. 442).

Not only in 1953, but in 1954, when the new code was under legislative consideration, the Senate Finance Committee in its report recognized the impact of depreciation policies on the small-business man: "Small business and farmers particularly have a vital stake in a more liberal and constructive depreciation policy. They are especially dependent on their current earnings or short-term loans to obtain funds for expansion. The faster recovery of capital investment provided by this bill will permit them to secure short-term loans which would otherwise not be available."

In these reports the problem is recognized. I could continue at length in an attempt to

convince this group of a need which is conceded to exist. I do not intend to waste your time. I expressed these same views on April 6, 1950, at a similar meeting of this delegation. These comments were published in the CONGRESSIONAL RECORD. I am having copies of these remarks distributed.

The question is what do I suggest should be done to solve this problem.

In the first place, I know that we all appreciate the time and study the Senate Finance and the House Ways and Means Committees have devoted to the depreciation problem. And I think that the requirements as expressed in section 167 of the new code present a liberalization of the old rules which could have resulted only from serious study of the problem. However, the declining balance method and the sum of the digits formula do not as a practical matter solve the depreciation problems of the small-business man.

Frankly, the problem is as simple as this. A Government agent or agency sets a period of time which is presumed to represent the useful life of a depreciable asset. This may be an arbitrary standard, as for example Bulletin F, and which in many instances fails to give due consideration to the factor of obsolescence. This under present retooling and replacement demands greatly shortens the period which would reasonably be considered the useful life of a piece of machinery or other property subject to depreciation.

Therefore I believe and, with the support of my codirectors, recommend to the serious consideration of our New England Representatives, and to the congressional committees charged generally with the interests of small business, that two changes in section 167 should be made.

The first one has to do with the burden of proof. This is important. I am not a lawyer, but it has been my experience in ordinary business transactions that the person claiming money is due him must prove his case (by competent evidence). He has the burden, the responsibility, of establishing his claim.

In the case of depreciation allowances, however, the burden is on the taxpayer to prove that the Government in establishing the depreciation rate (based on useful life) is wrong.

Our association believes that the independent small-business man who knows his own business and has his own capital at stake and who is faced with rapidity of change in technique and style is better qualified to fix the depreciation period.

Our second recommendation is that the individual or concern who proposes to take depreciation be free to a limited extent to set his own life estimate, especially since obsolescence may quickly destroy the useful life of a property. In our tax structure, we have many specific exemptions granted, for instance for each dependent, \$600; from estate taxes, \$60,000; from gift taxes, \$30,000. We think that a reasonable amount should be established, in the nature of a specific exemption, as an annual depreciation allowance. This should not be subject to question but, of course, could not be taken in excess of the available undepreciated asset values. This should eliminate most of the controversy with Federal tax authorities and also quiet most of the complaints from small business relating to depreciation and obsolescence allowances.

In order to accomplish both of the purposes which we have in mind, we recommend that section 167 of the 1954 code read as follows:

The law as proposed:

"Sec. 167. Depreciation.

"(a) General rule: There shall be allowed as a depreciation deduction a reasonable allowance, as determined by the taxpayer, for the exhaustion, wear and tear (including

a reasonable allowance for obsolescence) (1) of property used in the trade or business, or (2) of property held for the production of income. The Secretary or his delegate shall have the burden of proving that the allowance as determined by the taxpayer is not reasonable and in determining such question of reasonableness annual depreciation deductions in an amount not exceeding \$50,000 may be taken by the taxpayer which amount shall not be subject to attack by the Secretary or his delegate: *Provided, however, That adequate depreciable assets exist.*"

And again I thank you for the opportunity of appearing before this group among whom I recognize so many friends of long years standing.

STATEMENT BY HOWARD D. WILLIAMS, CHAIRMAN, COMMITTEE FOR THE ADEQUATE FINANCING OF SMALL BUSINESS; PRESIDENT, WASHINGTON MILLS ABRASIVE CO., NORTH GRAFTON, MASS.

To the Honorable Delegates to Congress from New England, at Washington, D. C., February 24, 1955:

The level of high taxation, both corporate and personal, continues severely to discourage the financing of small-business enterprises. Individual savings continue to be channelled largely into savings banks and insurance companies whose funds are not generally available to small-business enterprises; and taxation does not leave enough working capital in small businesses to enable their reasonable growth, nor indeed to build up those resources desired to safeguard workers' security in adverse business cycles.

The short-term cash requirements of small businesses are in general being well met by commercial banks in our area, however commercial banks do not generally undertake the long-term needs, by which I mean loan terms of 1 year and upwards.

It is for the long term capital needs of small business that a vacuum exists. Smaller business of New England does not prefer direct financing by Government agencies, but until some adequate source for these long term capital needs is established we firmly recommend the continuance of loaning authority in the Small Business Administration.

To enable Small Business Administration effectively to function we recommend its continuance as an independent Government agency, reporting directly to the President and to Congress, and another of our speakers makes a recommendation to you as to its life span. We recommend to you that SBA be authorized to make individual advances up to \$150,000, but that this amount be increased to \$300,000 in the case of advances for the fulfillment of Government contracts, prime or sub. We point out that the fulfillment of Government contracts in many cases imposes a very heavy drain on the contractor's finances, and believe that an increase in SBA's loaning limit for this purpose is necessary and realistic. We point out that without this increase an obstacle is being created which would prevent many smaller businesses from obtaining Government contracts and this would not be to the advantage of the Government. In this general connection we could stress the desirability of authorizing progress payments to the contractors and subcontractors. This does not eliminate the need for financing on Government contracts, but does reduce it.

We would like to mention to you that in each New England State there is now in operation some form either of credit or business development corporation, working under State charters. These bear some close resemblances to the capital bank for the long-term credit needs of small business which our association has been urging for some years. It is evident that a State credit corporation will not be able to obtain the

broad averaging of risks which would be possible to a federally chartered and operating capital bank, but our association will watch and if you will allow us will report to you as to the ability of these State development and credit corporations to raise the working funds they need, and as to the extent to which they may be able to meet the long-term financing needs of small business.

We are of the opinion that a federally chartered capital bank for the purposes of making secured or unsecured advances to small businesses is needed and will prove to be one of the most effective and satisfactory ways of meeting this unmet need. Quite recently three Senate bills introduced by Senator SPARKMAN have been brought to our notice, S. 381, S. 382, S. 383, all of which have been referred to Committee on Banking and Currency.

At this time we ask your interest particularly in S. 382. Section 2 (a) would regulate the interest chargeable by Small Business Administration in participation loans, and we recommend this to you. Section 2 (b) would increase SBA's loaning authority to \$500,000 and we have made a different recommendation to you. Section 3 would extend the life of SBA to 1957; we have recommended SBA as a permanent agency.

S. 381 would authorize the formation of national investment companies; S. 383 would provide for the insurance of credit risks, on advances to small business, by the Federal Reserve System. With regard to S. 381, we approve the principle of this bill but are giving it further study. With regard to S. 383, it is our belief that such powers if given to the Federal Reserve System would not be used more extensively than were the powers given to the Federal Reserve System to make direct loans to small businesses.

STATEMENT BY A. DUDLEY BACH, PRESIDENT OF THE NEW ENGLAND METALLURGICAL CORP., BOSTON, MASS.; PAST PRESIDENT, SMALL BUSINESS ASSOCIATION OF NEW ENGLAND; MEMBER, NATIONAL COUNCIL OF CONSULTANTS OF THE SMALL BUSINESS ADMINISTRATION

To the Honorable Delegates to Congress from New England, at Washington, D. C., February 24, 1955:

The New England Smaller Business Association has asked me to appear before you today on their behalf and express their views on what we believe should be incorporated in any legislation sponsoring the continuance of the Small Business Administration.

Our association does not at this time wish to go on record as being in favor of any one of the many bills that have been presented, but wish to point to the important items that should be incorporated in such a bill.

We firmly believe the Small Business Administration should be extended as a permanent, independent agency; whose Director shall be responsible only to the President and Congress. We wish to emphasize the words "independent agency" because there is a tendency by some to recommend that the Small Business Administration be absorbed by the Department of Commerce. This has been tried on two different occasions with no success. We feel that while the Department of Commerce furnishes data to all business, it is particularly geared to the problems of big industries and, therefore, we believe that small business with its problems should have the benefit of a completely independent agency such as the Small Business Administration.

One of the important functions of the Small Business Administration is the loaning of money to those small businesses who cannot obtain it from other sources, and we believe that the limit of \$150,000 is normally adequate. That amount, however, is not sufficient in our opinion to finance Government prime or subcontracts because of the

great amount of money involved, and we suggest, therefore, that the bill be amended so that the maximum be increased when the borrowed money is to be used to finance Government contracts or subcontracts to be \$300,000. This limit might be adequate providing progress payments against Government contracts would still be available to the small contractor against any Government prime or subcontract.

We do not believe that municipalities should be eligible for loans under the Small Business Administration, and we also feel that the Small Business Administration should not be privileged to make loans for recreation or amusement facilities of any kind.

The bills that have been presented thus far in most cases stress the loan features of the Small Business Administration. But we would like to point to the many other functions of the Small Business Administration that we think are equally important and should be given consideration.

The Small Business Administration, for example, has been cooperating in establishing the many State development corporations which are being set up to furnish equity capital to small business. These are operating very successfully in some cases, but we still feel that a Federal capital bank of some type is necessary, and our Mr. Howard Williams will comment on that.

Any new bill should strengthen the hand of the Administrator of the Small Business Administration by giving him more authority in the matter of procurement. The greatest part of dollar volume of all Government contracts is still going to big business, and the inability of the small contractor to get a portion of these contracts is working a severe hardship on all small industries throughout the country. Our Mr. S. Abbot Smith, who is with us today, has some very definite recommendations upon that problem.

There are other features of the Small Business Administration such as technical aids and marketing aids that have been more than helpful to small business and should be continued. Again, the college-management courses which are being sponsored at 51 universities throughout the country, for which the individual attending has to pay as much as \$50 tuition, are meeting with tremendous success, and in many cases repeat courses are already underway.

Because of the success of these many programs, it is important that adequate funds will be appropriated so that the Small Business Administration can broaden its service to small businesses of America.

In closing we again wish to stress the most important point made in my opening remarks to the effect that the Administrator be responsible only to the President and Congress, and further that the bill setting up the Small Business Administration as a permanent, independent agency give the Administrator of the Small Business Administration sufficient authority so he can make it a strong, constructive agency and help small business to become once again the strong, vital force that it at one time was in our American economy.

Respectfully submitted,

A. DUDLEY BACH.

STATEMENT OF S. ABBOT SMITH, SMALLER BUSINESS ASSOCIATION OF NEW ENGLAND, INC., BEFORE NEW ENGLAND SENATORS AND CONGRESSMEN, WASHINGTON, D. C., FEBRUARY 24, 1955

Chairmen and honorable Members of the Congress, may I add my thanks to those of our President to you all for taking the time out of your busy day to meet with us here this morning. It is especially pleasing to me because so many of you are old friends

of years' standing. We have fought the battles of small business and New England together since those days in 1942 when I first came to Washington as a Director of the Smaller War Plants Corporation.

As I believe you all know, ever since its inception the officers and directors of the Smaller Business Association of New England have always tried to present only well-considered programs. We try at all times to be sound and constructive.

In line with that objective, I should like to present for your consideration a recommendation which we made to Mr. Wilson, Secretary of the Department of Defense.

We have been disturbed because the SBA has apparently not been able to obtain for the small businesses of the country as large a proportion of Government contracts—both prime and sub—as we believe they should, and as we believe the Congress intended when it created SBA.

A while ago we were told an Executive order was under consideration to try to improve this situation by transferring the small-business specialists of the services to the SBA. While this might help, it did not seem to us this went to the root of the matter.

The basic problem, we believe, is that many of those specialists and the procurement officers do not thoroughly know the already existing directives of their respective services with regard to small business and many pay little or no attention to them. Furthermore, there seems to be a very considerable difference in the extent and efficacy of these programs as between the services as well as between contracting officers.

Quite obviously no program will work unless it is given wholehearted backing at the top and unless it is followed through at each level of command right down to the individual contracting officer.

So after considerable study we wrote Mr. Wilson a letter, a copy of which is attached to my statement which you have. In brief, our suggestion is that he should appoint as an Assistant Secretary of Defense for Small Business a high caliber, competent man sympathetic to small business who would report directly to him and whose sole job would be directing the coordination and implementation of the small-business programs throughout the armed services—Army, Navy, Air Force, and Marine Corps; who would study the programs now in effect with a view to improving them and who would utilize in all the best features of each.

Then in each of the services, starting in the Secretary's office and right down through the chain of command there would be one individual charged with this same responsibility for his part of the small-business program and who would devote his entire time to this job.

By focusing responsibility in this way on one individual at each level, we believe better coordination, integration, and implementation could be obtained. Every contracting officer and every small-business specialist would know exactly what he has to do under the program.

If you, for instance, wanted to know just what the program is you would contact one man who would have the whole thing in his hands.

When the Administrator of SBA felt changes were desirable, he would go directly to this Assistant Secretary of Defense, i. e., the top, to discuss them. In short, this Assistant Secretary would be charged with seeing that the intent of Congress when it created SBA is carried out as regards the Armed Services and procurement.

It seemed to us this might eliminate to a large extent what so many people, especially small-business men, complain about when dealing with the armed services, the run-around.

In our opinion, this would be a more efficient plan than the recent arrangement SBA has just made whereby one of their men has a desk in the office of the Assistant Secretary of Defense for Supply and Logistics. In this way it is hoped to have closer liaison between the two offices. Also, the men in charge of the small-business programs in each of the services are being upgraded. This surely is better than it has been but still the liaison man is an SBA man on the outside looking in while under our plan he would be on the inside. Furthermore, it is our understanding that most of the men in the services who now are supposed to take care of the small-business programs have other duties as well. Under our plan, their whole time and attention would be devoted solely to the small-business programs.

Although we are somewhat skeptical, nevertheless it is undoubtedly best to try out the new arrangement for awhile anyway. We hope it will produce the desired results.

However, the trial period must not be too long for already small businesses are in trouble and failing all over the country due to the cutting off of subcontracts by large primes. So if good results are not forthcoming soon, then it might be worthwhile to take out our suggestion and dust it off again for further consideration. The titles suggested may not be correct but we believe the basic idea of pinpointing responsibility is good.

Furthermore, we fully realize that the suggestion we make is one which requires executive not legislative action. On the other hand, the Congress expressed its intent to help small business when it created the Small Business Administration. We do not feel that intent is being realized to the greatest extent possible and so are calling this suggestion to your attention.

We hope you will keep close watch of how things go because whether or not they get a suitable proportion of prime and subcontracts will make a tremendous difference to our small businesses and the whole economy of New England.

JANUARY 7, 1955.

HON. CHARLES E. WILSON,
Secretary, Department of Defense,
Washington, D. C.

DEAR MR. SECRETARY: We smaller businessmen of New England were very much disturbed at the reports published some months ago that you favored the services placing most contracts with a few large suppliers, and then were much pleased to read in the Wall Street Journal early in December that actually you favored spreading contracts widely and wished to encourage multiple sources of supply, which would obviously mean keeping many competent small concerns with their great geographical dispersion in the picture.

This is of vital interest to many of our members who built up organizations to produce essential, frequently highly classified items, during World War II. If they cannot continue to obtain contracts now, much of this skill and know-how accumulated by years of effort will be dissipated. That kind of organization and know-how takes even longer to build up again than the big long-lead-time machines and so should be held together as part of our defense mobilization policy.

The officers and directors of the Smaller Business Association of New England have watched with the keenest interest the efforts of the Congress and the armed services to utilize to the greatest extent possible the facilities and know-how of the small businesses of the country, both during the war and since. Sometimes the results have seemed to be pretty good and sometimes

rather poor, depending usually upon the attitudes of individual procurement officers, their superiors and their departments or bureaus. Directives which looked good in writing at the higher levels seem to lose efficacy as they go down through channels until when they finally reach the man in the field they have become so weak and diluted the procurement officer usually seems to think he had better follow the old easiest, and safest procedure of giving the contract to the big well-known company whenever he can, pretty much without regard to other considerations.

The Congress has for many years and in various acts expressed its intent that small business should get a fair share of defense business. We know that you, as Secretary of Defense, would like to see that mandate satisfactorily carried out. The \$64 question is how can it be done and yet not weaken the responsibility of the procurement officers for obtaining the right items, at the right time, at the right place, and at the right price.

The officers and directors of the Smaller Business Association of New England after long study and consideration recommend that you appoint a top-grade, high-caliber man, sympathetic to the cause of small business, as an Assistant Secretary of Defense who shall report directly to the Secretary of Defense and who shall be directly responsible for the coordination and implementation of the small-business programs throughout the armed services—Army, Navy, Air Force, and Marine Corps. He shall study the programs now in operation in each of the services with a view to constantly improving them in every way possible by adopting and adapting to each, to the greatest extent feasible, the best features of the others as they now operate. Working down through the chain of command in each service, there shall be a specific individual assigned to see that the directives of the small-business program are fully carried out both as to letter and spirit so that the intentions of the Executive and the Congress may be realized that the facilities, manpower and know-how of the small businesses of the country shall be utilized to the greatest extent possible to broaden our mobilization base and keep multiple sources available in case of emergency.

We realize this setup will mean the addition of some personnel but the added cost will be small compared to the tremendous increase in the efficiency of the program and will probably actually save the services money by bringing into the procurement program highly competent smaller companies who will in many cases furnish as good or better items for less money.

We believe it will be a relief for you to have an Under Secretary who will be in charge of and responsible for the whole small-business program and to whom all inquiries on the subject would be directed, including congressional committees. He in turn would have an under secretary in each service who would be responsible for the program in that service and so there will be one man in each echelon conversant with what is being done and seeing that directives are being carried out satisfactorily.

Thus the whole would be thoroughly integrated and coordinated to the advantage of all concerned. The intent of the Congress will be carried out, the services will get what they need, more small businesses will get more contracts and to that extent life will be easier for you.

Sincerely yours,

SMALLER BUSINESS ASSOCIATION
OF NEW ENGLAND, INC.,
S. ABBOTT SMITH,
Chairman, Legislative Committee.

More on the Northwest Airlines Case

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. REUSS. Mr. Speaker, for those who are in doubt as to what happened at the White House that caused President Eisenhower to reverse a unanimous decision by the Civil Aeronautics Board in the West Coast-Hawaii case, docket No. 5589, I recommend the reading of the following article which appeared in the February 28 issue of *American Aviation*:

"SINNY" WEEKS' BOBBLE

Put aside for the moment the particular airlines and the particular route involved, but focus attention on the procedural steps in the controversial transpacific route case just recently resolved, and you come up with a shocker of the first order.

We refer to President Eisenhower's reversal of the CAB decision and his subsequent public admission of error and supplementary instructions to the CAB in the transpacific case and specifically his partial reversal of his original reversal of the Board on the Seattle-Portland-Honolulu segment. Here was an extraordinary case of mishandling involving the mysterious role of Secretary of Commerce Sinclair "Sinny" Weeks.

When Congress created the CAB it gave this independent agency full and final authority over the air transport system of the United States. But for all routes outside the continental United States, i. e., to foreign countries or to Territories and possessions, the CAB decisions "shall be subject to the approval of the President." Through the years since 1938 the White House has taken an increasing interest in and responsibility for all such international cases until now, it seems, just about everybody can get into the act.

The shocker in the transpacific case comes in two parts. One is the knowledge that the President of the United States didn't even know (and wasn't told) what the CAB decision was. The second is why "Sinny" Weeks accompanied Presidential Assistant Sherman Adams to the President's office to obtain his signature on a letter of instructions to the CAB which only vaguely resembled the Board's own recommendations. There can even be a third question asked, and that is why Mr. Adams didn't take Acting CAB Chairman Chan Gurney with him to the President for the deciding action.

It seems fair to ask whether "Sinny" Weeks, a Boston blueblood possessing only a remote idea of how the rest of the world lives, did not subvert the intent, the language, the purport, and the spirit of the Civil Aeronautics Act by injecting himself actively and directly into procedural steps in which he has no part by statute, morals, ethics, or direct concern.

In short, "Sinny" threw a curve to the President which resulted in considerable embarrassment to the White House. To the full credit of Mr. Eisenhower, the President had the good grace to admit he hadn't been informed of the Board's decision. As for Mr. Adams, if he is fulfilling the job of chief of staff for the President, he couldn't have fumbled worse.

Congress has shown signs of dissatisfaction over the way CAB matters are handled in the White House. Well it might. We hope it digs deeply into the interventions

and pressures of the Department of Commerce in the affairs of an agency which Congress intended to be independent. It might well inquire also why Under Secretary of Commerce Robert Blaine Murray, Jr., who resigned effective January 21, accompanied "Sinny" Weeks to the White House February 5 and took a leading part in the hastily called conference on the transpacific case. The whole situation has a mighty foul odor.

A Sound Warning to the Free World

EXTENSION OF REMARKS

OF

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. MACHROWICZ. Mr. Speaker, because of its keen analysis of the present world situation and the sound message which it contains for this country and for the entire world, I include, under leave to extend my remarks, excerpts from an address delivered in Detroit, Mich., on January 30, 1955, by Gen. Kazimierz Sosnkowski, on the occasion of the anniversary of the Polish insurrection against Russia in 1863.

Gen. Kazimierz Sosnkowski is generally conceded to be the elderly statesman, reflecting the consensus of opinion of Poles in exile. He has a distinguished career as a military leader, having been the inspector general of the Polish Army at the outbreak of World War II. He served as Minister of War in 12 Polish prewar cabinets. During the war, he served in the cabinet of General Sikorski's government-in-exile, as minister in charge of organization of the Polish underground forces. After General Sikorski's death, he was commander in chief of the Polish forces.

The remarks of the general follow:

Polish soldiers fought in the last two wars for Poland and for the freedom of other nations. These Polish soldiers fully realized that in the 20th century and in the present conditions freedom as such had become indivisible and that the times when it could be cut and fashioned according to specific tastes were gone forever. A clear understanding of this obvious truth which, I am sorry to say, is so often forgotten by the West, is a consolation for our hearts in the difficult times in which we live. Most difficult times, I should say, because once more the Polish nation is obliged to drink the bitter cup of disappointment prepared by Allied statesmen, erring so tragically at the crossways of Teheran and Yalta.

With the development of the present world crisis, the democracies of the West, and among them the great American democracy, will have to realize that they will have to fight for their own survival. They will have to think again and this time in all earnestness about the fate of Poland and the other nations behind the Iron Curtain. They will have to prove this positive way of thinking not by words but by deeds. I use the term "have to" because otherwise either the successful outcome of the coming unavoidable world struggle will be endangered, or the final victory will be achieved only under the most difficult conditions at the cost of

additional but unnecessary sacrifices. Therefore, you, Americans of Polish descent, must demand justice for Poland, that is, freedom within her rightful frontiers. By doing this, you are supporting the truest interests of your new homeland, America, sparing your country unnecessary holocaust, if and when it comes to the worst.

After the fateful Yalta agreements and even after the end of World War II, unceasing convulsions have harassed humanity because Soviet Russia keeps the world in turmoil by modern methods of Red strategy. She uses infiltration, penetration, and the stirring up of social friction and internal unrest; she provokes the armaments race and economic difficulties; she organizes civil wars under the pretext of fighting colonialism or supporting liberalism everywhere—except in her own territories and those of captive countries. At the same time, Soviet Russia supports local wars. For these local wars which have been and are taking place near the frontiers of the huge Red empire, the world of the west has invented a whole collection of shy and modest labels which make it easier to avoid facing the dangerous truth. Terms such as cold war, police action, war by proxy, peripheral war, pocket war, and so on, have been coined. However, if we choose to remind ourselves of the classical definition of Clausewitz, that war is a continuation of policies by other means, then we arrive at the inevitable conclusion that Soviet Russia, after the defeat of Hitler's Germany, strengthened by gaining all the key territories of central eastern Europe, has turned against the western democracies, waging a peculiar war which, although not openly declared and hidden behind the smokescreen of peace offensives, is creating an extremely dangerous world situation.

After all, in every struggle, and especially in great historic struggles, it is the final result that counts and not the means used—the strength of the forces employed, the types and amount of weapons, or the type of combat used. The battle at Yorktown finally decided the fate of American independence; in other words, it has changed the course of history and has had a strong, even if indirect, influence on our present epoch, for the United States of America has now assumed the main burden of responsibility for the future of the world and of the civilization known to us.

And yet the battle of Yorktown was fought on a rather limited space within the sight of commanders. Only a few thousand soldiers and only a few hundred bronze guns of limited range and fire power were involved in this epic battle. How then can we describe the continuing military-political struggle which has been going on for 10 years extending the frontiers of militant communism over Czechoslovakia, the whole Chinese continent, half of Korea and Indochina, increasing the Red empire's reservoir of fighting forces to 800 million people? This question constitutes the crux of the whole problem: the free world has to realize that the war is already being waged, at least in its initial preparatory phases; only on the recognition of this fact will the West become immune to the insidious peace declarations coming from Moscow. The West may then abandon its defensive attitude and the initiative in the struggle pass from the Reds to the defenders of Christian civilization.

In the realm of strategy one should not separate political from military problems; they permeate each other and must be considered as one. Soviet strategy has always adhered firmly to this principle which in a large measure explains her successes. On the Western side, the separation of military from political problems has occurred many times and that is why the Soviet Union has reaped such a political harvest from World War II. The Western cession of Central Eastern Europe to Russia has protected her

on the west, allowing her ample opportunity to begin the big gamble for the Asiatic continent which up to now has been very successful.

To understand clearly what is happening in our world today we must first realize that the principal traits of Soviet strategy are consistent planning and immutable aims. It is only the tactics of the Red satraps which are flexible and subject to frequent changes depending on the necessity of a given moment or situation. It is well known that strategy has to answer the questions of where, when, and why to fight, whereas tactics—how to conduct the struggle.

The answer to the question of what are the aims of Soviet strategy has been given long ago in such reliable sources as the words of Lenin himself and I quote:

"The existence of the Soviet republics and the imperialistic states side by side is, in the long run, inconceivable. One side or the other has to triumph in the end. However, before this occurs, it will be impossible to avoid terrible collisions between the Soviet republics and the bourgeois states. . . .

" . . . We will first conquer central eastern Europe, then we will take the Asian masses. Later on, we will complete the encircling of the United States, which will be the last bastion of capitalism . . . and then it will fall into our hands like an over-ripe fruit."

My final quotation from Lenin is the most concise and timely statement of Soviet strategy: "The road to Paris leads through Peking."

Before our own eyes the second act of the great drama is already being played on the world stage—the mastering of the Asiatic Continent. The tentacles which are to encircle the United States are already being stretched toward Africa with her airbases and her western shores. The Soviet effort to penetrate the South American Republics, though so far not very successful, is certainly continuing.

As we see, facts are confirming Lenin's statements with an iron logic. In this context it becomes clear that the recurring peace offensives of the Soviets are only a very cunning trap ventured against a background of the postwar weariness and the known, sincere love of peace of the Western democracies. The secondary objectives of these smokescreens are to confound and mislead public opinion as to the real Soviet aims and, if possible, create disagreements among the Western nations. The main objective, strategic in nature, is to gain time for the reorganization and rearming of Red China's Army and for consolidating and extending the Communist empire in Asia.

Thus, the deeper insight into the true meaning of Soviet maneuvers is truly revealing. We note, on the one side, the siren voices offering peaceful coexistence with the West and, on the other, the activities the ultimate aim of which is the conquest of the Far East. The conquest of all of Indochina with Laos and Cambodia will encompass Thailand and Burma and will eventually constitute a menace to India. The real objective of the loudly heralded attack on Formosa, supported by dubious arguments based on international law and on claims of unifying all Chinese territory, is to outflank Japan and the Philippines as well as drive a huge wedge pointed at the American bases in the Pacific. Finally, the aim of the so-called psychological warfare being waged by the Communists in the Far East is to cause the United States to lose face. All these elements together fit exactly into the strategic pattern outlined in Lenin's thesis of conquering the masses of Asia and encircling the United States.

That is why no Poles, and especially those who have had the opportunity of getting well acquainted with Russia and the ways of thinking of the Kremlin masters, can dis-

cern even a shred of political realism in the fashionable ideas of peaceful coexistence with her. Sooner or later these theories will share the fate of similar dreams which, under the pressure of hard facts, have turned to ashes. Here I have in mind the well known attempts at coming to terms with the red world by means of the so-called policy of containment. All efforts to appease the red moloch were, are, and will remain vain; he understands only the language of strength. Stalin did not hesitate to ask with irony, "How many divisions does the Pope command?" You can only vanquish the plague, you cannot coexist with it.

To the Poles and I presume to all other enslaved nations, the terms "appeasement," "policy of containment," or finally "peaceful coexistence" have one and only one meaning: a tighter closing of the Iron Curtain and leaving their countries, surrendered against their will to the rule of the despots, under the Soviet heel. The Poles simply cannot realize that the United States have actually abandoned their traditional ideals on which their greatness has developed—human right, self-determination of nations, freedom and justice for all.

When I spoke here in Detroit a few years ago, I stressed that in the gigantic struggle which sooner or later threatens the world, the West will need not only material but, above all, moral and spiritual values. I think this truth still remains incontestable. How then today, and I repeat, today, when the material strength of the West has been so eminently increased, thanks to the efforts of the United States, how then today could the free world renounce its conscience? The last three words are an expression used 2 years ago in one of the speeches of the President of your great country. In another speech that same year he said, "The conscience of America cannot find its peace until the enslaved nations again become the masters of their own fate."

I consider it simply my duty to state publicly that the Polish people in Poland and the free Poles scattered all over the world are deeply concerned and saddened by the lack of even a mention of the enslaved nations in the last state of the Union message. What a difference between it and the one in 1953 in which we were told of the need for revoking the secret agreements concluded in the past which allowed the enslavement of free nations.

The Poles are by no means a nation of war mongers as hostile propaganda tries to represent them to the West. The Polish nation suffered too much in the last war and sustained too many losses to welcome a new universal catastrophe. Still war came usually against the will of the people. I remember too well how in the critical summer months of 1939 most of the information from Hitler's Germany and Mussolini's Italy stressed that in all probability war would not occur because of the people's great resistance to war and their desire for peace. But the longings of a nation mean nothing when we have to deal with the uncontrolled will of one madman or of a few madmen who will not hesitate to set fire to the whole world and sacrifice millions of human lives, if they are convinced that for this price they will be able to gain mastery of the world and realize their insane dreams.

For this reason the free world must take into account that, in spite of all the efforts of people of goodwill and in spite of the West's great love for peace, a universal catastrophe is possible. In case this happens, the hearts and souls of the enslaved nations will become most valuable, they might even play a decisive role in the balance of strengths. It would be most painful if, in the general conflict between Red imperialism and the West, the enslaved nations' confidence and trust in the West were diminished

or lost because of indifference or neglect on the part of the free world.

In European affairs, the problem of re-arming Germany has reached a critical and maybe final stage. In several public speeches which have been published in London 3 years ago, I voiced my opinions on the German problem; I also called attention to the dangers for the Polish cause in the rearmament of Germany. I do not have time today to repeat all my considerations but will summarize them briefly.

In the present situation with the ratification of the Paris agreements possibly taking place within the next few months, the free Poles, deprived of course of the possibility of taking any active part in these momentous decisions, can only express their regret that as usual their warnings have been made in vain. Today the climax has been reached of what I called years ago, "the haggling for the German soul and the bones of the German grenadiers." Both sides, the East and the West, are eagerly promising the Germans: the end of the state of war, the end of occupation, the regaining of full sovereignty, and the unification of their country. At least there are the promises made publicly; we do not know, of course, whether there are also secret clauses whose meaning is tantamount to yielding some territory to the Germans at the expense of Poland and some other enslaved nations.

The Polish Nation is the natural ally of the free world in its fight against Red imperialism, even though today Poland can reveal only a small fraction of her true conviction. Therefore, it is the moral obligations of Free Poles and Americans of Polish descent to warn persistently whomever it may concern that such a rearming of Germany cannot include the promoting of German revisionism. Promoting German revisionism would be a fatal step threatening the security of Europe. It would be a great asset for Red propaganda and would further the aims of Moscow. Remembering the bitter experience of the past, we are obliged to cry out incessantly that our country cannot bear again a bargain at the expense of our national territories, and that no honest Pole in the whole world can ever abandon the defense of the Polish Oder-Neisse frontiers.

Twenty-fifth Anniversary of Minnesota Future Farmers of America

EXTENSION OF REMARKS

OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1955

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Frazee (Minn.) Times of February 21, 1955:

FFA CHAPTER SETS OBSERVANCE

Future Farmers of America members throughout the State are scheduling special activities to focus public attention on the work of their organization during FFA Week, February 19-26. This year, 1955, marks the 25th anniversary of the Minnesota Future Farmers of America. The silver anniversary State FFA convention will be held at University Farm, St. Paul, May 9-11.

Locally, members of the Frazee FFA chapter plan a main hallway display at the high school.

Membership in the FFA is made up of farm boys who are students of vocational agriculture in high school. The organization's activities are designed primarily to help develop rural leadership and good citizenship, and to stimulate the boys to better achievement in their study and work toward successful establishment in farming.

The Frazee FFA chapter has 101 members. It is the seventh largest chapter in the State. Lambert Schilling, vocational agriculture instructor in Frazee High School, serves as adviser of the FFA chapter.

The national Future Farmer organization has more than 370,000 members in the 48 States, Hawaii, and Puerto Rico. Membership in Minnesota totals 10,500. There are 240 Future Farmer chapters in Minnesota.

A story of Minnesota FFA in commemoration of its 25th anniversary year is being prepared and will be released on April 1. Highlights of 25 years of activity, personal anecdotes, and items of local interest will be included in the 200-page publication. The local chapter at Frazee will be in charge of sale and distribution of the publication. A film depicting FFA activities during the silver anniversary year is also being planned. The film will be financed jointly by the Minnesota FFA association and the newly organized State FFA foundation. The film will be available for showing after July 1.

Twenty-Dollar-a-Head Gimmick

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. FORD. Mr. Speaker, under permission to extend my remarks, I include the following editorial entitled "Twenty-Dollar-a-Head Gimmick," which appeared in the Detroit Times for Monday, February 28, 1955:

TWENTY-DOLLAR-A-HEAD GIMMICK

Democrats have a lulu of a gimmick riding on the tax bill.

We hasten to add that the Democrats referred to are the Democratic politicians in Congress, of whom there are many, as opposed to the Democratic statesmen, of whom thank heaven, there also are many.

The gimmick is to tack a \$20-a-person (or dependent) income-tax reduction as a rider onto the administration tax bill.

President Eisenhower describes it as reaching the heights in fiscal irresponsibility.

This being a period when we are fighting for the very life of our Nation, we agree.

We hate high taxes. We hate them only less than we hate the kind of money-destroying inflation that is brought about by deficit financing, and the reduction in all fixed values—pensions, savings, defense bonds, insurance—which follows.

We can't escape a suspicion that there is an element of vote buying in this unfortunate device.

Once upon a time the big city machines bought votes for drinks at the corner saloon. Then, for a time, \$5 was the going price of voting right.

But that was before inflation.

If vote cadging is in the minds of the politicians, we don't think \$20 a head will do the trick. Certainly not when the price would include weakening all the Nation's defenses.

The U. N. and American Oil Industry

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks, I include a most interesting and significant editorial by Mr. Raymond Moley which speaks for itself both as to content and the background of Gunnar Myrdal:

THE U. N. AND AMERICAN OIL INDUSTRY

(By Raymond Moley)

Through a fine example of newspaper enterprise the Wall Street Journal has published the details of what was intended to be a secret report by the Secretariat of the United Nations Economic Commission for Europe. It proposes that governmental machinery, which probably would be implemented by an international agreement, to fix right prices for crude oil produced in the Middle East. This would affect 5 American and 3 European companies. European newspapers are full of the subject at the moment and are interpreting the U. N. proposal as an attack upon monopoly. It is in fact an effort to substitute a socialistic government system of control of which American companies would feel the brunt.

I shall give some attention to the economic aspects of this proposal at a future time but at the moment confine my attention to the interesting person who seems to be masterminding this scheme.

That person is one Gunnar Myrdal, a Swedish Socialist. He is the head of the Secretariat which has gotten up this scheme. Myrdal is not unknown in the United States. He was brought over here by the Carnegie Foundation to make a study of the status of the Negro in the United States. The appropriation by the foundation for that purpose was \$250,000 and the results published under the title "An American Dilemma," in 1944. Why there should be no person or persons in the United States fit to make such a study is not clear. Perhaps the Carnegie people felt geographic detachment would be a virtue even though that detachment had been so absolute as to deny the student of this problem an opportunity to have lived with the vexing problems of race in the South.

At any rate the Carnegie Corp. got exactly what it might have anticipated which was a severe indictment of the United States. The Myrdal rancor toward the American Constitution can be illustrated by some of his comments. He designates the American respect for the fundamental law as "a nearly fantastic cult." He says that our Constitution "is in many respects impractical and ill-suited for modern conditions," that its adoption was "nearly a plot against the common people," and that "until recently, the Constitution has been used to block the popular will." His contempt for our culture is equal to his contempt for our Constitution. One of our cultural traits is, he says, "a relatively low degree of respect for law and order."

Our legal culture is anarchistic but we have a tendency to regulate human behavior tyrannically.

Myrdal's qualifications were apparently highly satisfactory to some Americans for 5 years after these animadversions the Rockefeller Foundation gave a grant of \$12,000 to the United Nations Economic Commission for Europe. Gunnar Myrdal was

then as now the Executive Secretary of that outfit. The grant was to provide social-science scholarships for selected European students. The cream of the jest is that according to tradition the Rockefeller money was made in the oil business. Now the UNECE is cracking down on American oil companies including the Standard of New Jersey, the Socony-Vacuum, and the Standard of California.

Still earlier than his Carnegie grant was a turn as a Rockefeller fellow at the School of International Studies at Geneva.

At the commencement of Columbia University in 1954 there was a great celebration of the bicentennial of that institution. Among those honored with the degree of doctor of humane letters was Gunnar Myrdal who was hailed as the "distinguished son of a distinguished kingdom . . . a man of gifted energies . . . at home on two continents . . . making the world his classroom."

At the moment he seems to be making the Rockefeller oil companies his footstools.

Grain Storage at Cathlamet Basin, Oreg.

EXTENSION OF REMARKS OF

HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mrs. GREEN of Oregon. Mr. Speaker, under permission to extend my remarks, I include a resolution favoring storage of grain at Cathlamet Basin, in the area known as Tongue Point near Astoria, Oreg. Also, I include a telegram received by me on this date from the mayor of Portland, Oreg., and representative of the extreme concern held by the people in my State over consideration by the Board of the Commercial Credit Corporation in this matter. At present there are approximately 80 empty Liberty ships of the reserve fleet berthed at the Cathlamet Basin to be used for surplus-wheat storage. It has been proposed that 75 of these ships be removed from their present moorage and towed up the coast to the Puget Sound area near Olympia, Wash. This proposal is most regrettable because there exists most conclusive evidence that maintaining the ships at their present moorage is overwhelmingly preferable to the proposed transfer.

RESOLUTION FAVORING STORAGE OF GRAIN AT CATHLAMET BASIN

Whereas the Department of Agriculture's latest plan to use 75 Liberty vessels from the Astoria reserve fleet for surplus wheat loading and storage in the Columbia River area is in danger of being diverted to Olympia, Wash., because of outside opposition; and

Whereas the State of Washington's congressional delegation in Washington, D. C., has been successful in holding up definite action because of their contention that the storing of wheat at Astoria would require expensive dredging operations at Cathlamet Basin, while there is already sufficient room for mooring the ships at Olympia, Wash.; and

Whereas the Commodity Credit Corporation of the Department of Agriculture, although favoring a strictly Columbia River operation, has agreed to hold up further ac-

tion pending receipt of additional information which would clarify the dispute; and

Whereas the Portland Branch of the Masters, Mates, and Pilots, Local No. 90, is vitally concerned in keeping this operation in the Columbia River because of the critical unemployment and economic conditions existing in the maritime industry: Now, therefore, be it

Resolved, That the Portland Branch of the Masters, Mates, and Pilots, Local No. 90, advise the Commodity Credit Corporation in Washington, D. C., that they feel that the loading and storing operation should be a strictly Columbia River project because—

1. The freight differentials on grain shipments to the Northwest makes it cheaper to load the vessels in the Columbia River, and that the cost of towing a loaded vessel to Olympia, Wash., would be more expensive than a strictly Columbia River towing operation;

2. It is also in the national interest to maintain shipyards, loading facilities, and labor forces at a reasonable and continuous level in all communities in the Northwest instead of concentrating them in one area such as Puget Sound;

3. The dredging operation at Cathlamet Basin, which is considered expensive by opponents of the Columbia River plan, will also be of great strategic value as well as a mooring from the grain vessels because another potential naval base and anchorage will be made available for the west coast, and which could be rapidly expanded in case of an emergency and all-out war; and be it further

Resolved, That copies of this resolution be mailed to the Members of Congress from Oregon, the Oregonian, the Oregon Journal, chamber of commerce, and other interested parties for their information of our efforts to keep this operation in the Columbia River area.

WILLIAM M. CALDWELL,
International Organization of Masters, Mates, and Pilots, West Coast, Local No. 90.

PORTLAND, OREG., February 28, 1955.

HON. EDITH GREEN,
House Office Building,
Washington, D. C.

I today sent the following telegram to Hon. Ezra Benson, Secretary of Agriculture: Regarding March 1 meeting of Commodity Credit Corporation on program for ship storage of surplus wheat.

I have organized committee of interested Columbia River people as listed below. This committee through me emphatically protests any consideration for diversion of vessels from Tongue Point lay-up fleet to Puget Sound for loading and subsequent moorage. Our experience satisfies us comparative costs plus consideration of normal flow of greatest volume of grain via Columbia River will demonstrate that such diversion greatly increases overall cost of the program.

We believe any proposal to tow empty vessels in open sea without crews consists unwarranted risk of public property. We insist no decision be made until all costs are determined and compared and most important made public.

Harry Lundberg Sailors' Union of the Pacific states "His union insists vessels be manned with nine sailors including boat-swain for open-sea towing and that he has so advised Maritime Administration."

Costs in addition to normal factors of towing, dredging, cleaning, and preparation should include special preparation of vessels for open-sea towing, including securing of all tackle and equipment thereof. Volume of annual grain flow via Columbia River is 3 to 1 compared to Puget Sound.

Loading facilities in river are 9 marine terminal elevators compared to 3 in Puget Sound. Therefore greatest demand for relief of storage exists in river area. Labor

representatives on committee emphatically point out river area is in critical zone for unemployment classification.

Committee which concurs in the foregoing consists of: John J. Winn, Jr., Port of Portland; Kit C. Conyers, West Coast Transoceanic Steamship Co.; H. Davies, Albina Engine & Machine Works; Al Bird, Portland Metal Trades; H. H. Harrison, Electrical Workers Local, No. 48; John Gillard, Steamfitters Local, No. 235; A. G. Merriess, Coastwise Line; Norman Hicks, Boilermakers Local, No. 72; Geo. Palmon, Machinist Local, No. 63; Larry Rafferty, Boilermakers; William R. Gray, Laborers, No. 296; William Berry, Sailors' Union of the Pacific; J. Moorhead, colonel, Corps of Engineers, district engineer, Portland District; Matt Meehan, ILWU; J. C. Hayes, Willamette Iron; A. E. Farr, Northwest Marine Iron; F. E. Battaglia, Albina Engine & Machine Works; Capt. A. J. Carlton, M. M. and P. Local, No. 17; Capt. H. T. Shaver, Shaver Transportation Co. and Tidewater Shaver Barge Lines; Thomas P. Guerin, commissioner of public docks; Hudson Lothian Pope & Talbot; L. M. Thompson, Western Transportation Co.; William Garry Bend, Portland Truck Service; William F. Martin, the Quaker Oats Co.; H. E. Sanford, Continental Grain Co.; R. L. Clark, president of Portland Chamber of Commerce.

FRED L. PETERSON,
Mayor of Portland, Oreg.

The Principle at Stake

EXTENSION OF REMARKS OF

HON. EUGENE SILER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. SILER. Mr. Speaker, under leave to extend my remarks, I wish to include and have printed in the RECORD an editorial in the February 1955 edition of the American Issue, a monthly publication devoted to abstinence and civic righteousness, which editorial has some very constructive thoughts pertaining to the necessity of having appropriate restrictions upon the alcoholic persuasions of the whiskey, wine, and beer visitors that may come into the American home through modern advertising media.

One of the world's great writers once referred to "booze" as something that could steal away the human brain and I have seen it happen on many occasions with very tragic results. I have never been able to see any man-of-distinction personality in this robber and arch criminal called "booze." The wisest of books tells us in Proverbs 20-1: "Wine is a mocker, strong drink is raging, and he that is deceived thereby is not wise." So, I hope my colleagues will be very wise and seriously consider this editorial and then help enact pending legislation for banning "booze" advertising from the American home.

The editorial follows:

THE PRINCIPLE AT STAKE

Broadcasting magazine, in an editorial Drink on the House opposes dry efforts to ban beer and wine-casting by claiming that a vital principle is involved. "The principle at stake," says Broadcasting, "is whether Federal censorship will be applied to radio and TV. It is on that principle that broadcasters ought to stand."

"By Constitutional amendment, the Federal Government has left it up to the State to decide whether the sale of alcoholic beverages is legal or illegal. It is not the prerogative of the Federal Government to reserve for itself the power to prohibit advertising of such beverages. Such a prohibition would constitute unadorned censorship of a particularly objectionable kind since it would be directed exclusively against radio and television and would not affect any other advertising medium.

"Let the Government get away with banning beer-wine advertising from the air and there would be no consistent argument against its banning any other kind of advertising.

"Whether the percentage of total broadcast time occupied by beer-wine advertising is zero or 100, it is not a matter for adjustment by the Congress of the United States."

And that's exactly where the temperance forces of America feel this problem of the invasion of the home by beer and wine advertising must be settled—by the Congress of the United States—and there are certainly several principles at stake.

WHY RESTRICTIONS ARE NEEDED

First, there is the alcoholic beverage industry. Because of the harmful character of alcohol, whether in beer, wine, whisky, or vodka, the manufacture and sale of these beverages is a privilege—not a right. In every one of the 48 States there are dry areas where the citizens by local option or regulation have banned the sale of alcoholic beverages. In every one of the 48 States there are hours of the day and week when such beverages may not be sold. In every one of the 48 States there are more laws, regulations, restrictions, and prohibitions dealing with alcoholic beverages than with any other marketable commodity. Why these regulations and restrictions? Because alcoholic beverages are injurious to the health, safety, and moral welfare of the individual and society. Alcoholic beverages are not healthful products like bread and milk and oranges. Alcoholic beverages make pedestrians stagger and drivers dangerous, and homes a hell on earth for the families of millions of alcoholics. This is why the manufacture and sale of alcoholic beverages is so closely guarded and proscribed.

SALES TALK INVADERS HOMES

Second, the advertising of any product is the process of education and persuasion, and the subconscious compulsion to buy and consume that product. And there is no more persuasive or compulsive advertising than the beer and wine advertising on radio and television. Radio is everywhere—home, car, barbershop, filling station, student's room, and children's bedside. Television has moved from the tavern to the living room, but it has brought with it into the home the breath of beer and wine. And into some 35 million American homes today, this marvelous instrument which could so bless our Nation, is using human voice and human personality to consummate skill and limitless wealth, to talk and sing the harmless glories of beer and wine, persuading all listeners, young and old, that no matter what else belongs in the home, beer and wine belong. Never a word of warning. No mention of the presence of dangerous alcohol. In fact, the ABC of Beer Advertising published by the U. S. Brewers' Foundation in 1953 warns brewers never to mention the presence of alcohol in their advertising.

AIR WAVES BELONG TO THE PEOPLE

Third, the air waves and television channels belong to the people of the United States. They are not the property of the stations or of the networks. Through the Federal Communications Commission the People of the Nation grant to radio and TV

stations a franchise for the use of a certain wave length or channel to be used in the public interest. The radio or television franchise is a privilege to operate, not a bill of sale. The radio and television business is a privileged business, like the liquor traffic. And because of its power to influence the thinking, the habits, the desires, the ideals, the lives of people, the radio-TV industry needs to be as carefully and closely guarded as the liquor traffic itself. In fact, the radio-TV industry is a vital part of the liquor traffic when it uses the air waves and TV channels to create the desire and appetite for alcoholic beverages. And as long as it engages in this practice of beer-casting it should come under the same strict regulation as the liquor traffic whose willing servant it is.

FEDERAL CONTROL NEEDED

Fourth, the 21st amendment gives full power to the several States to deal with alcoholic beverages as they may see fit within their respective borders. But it does not give to the States any power to deal with advertising of alcoholic beverages which crosses State lines from without. The licensing of radio and TV stations is not a State matter; it is in the hands of the Federal Communications Commission, because all broadcasting is interstate. It is obvious therefore, that some legislation is essential to correct this division of responsibility. There must be Federal laws giving protection to dry areas against beer- and wine-casting, and to protect homes from invasion by brewers and vintners via the ether waves.

This is not a matter of censorship. It is a matter of keeping out of the home the appeal to buy and drink harmful beverages. Temperance people are as anxious as other citizens that radio and television shall be used as a blessing and not as a curse to America. They are willing and glad when these important media can be used for wholesome and constructive purposes, in the public interest. But selling beverage alcohol in the homes of the Nation is dangerous business. A Federal law banning such advertising should be enacted without delay. Certainly if less than 3 percent of television time and 2 percent of radio time is used for beer and wine, the broadcasting industry will suffer no financial loss while it replaces alcoholic with nonalcoholic programs.

Congress should speedily enact a law to protect the homes of America from the invasion of the liquor traffic over air waves and TV channels which belong to the people themselves.

Resolution Approved by the Egyptian District, Department of Illinois, Disabled American Veterans, at Centralia, Ill., on February 20, 1955

EXTENSION OF REMARKS

OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks, I include the following resolution approved by the Egyptian District, Department of Illinois, Disabled American Veterans, at a regular meeting held at Centralia, Ill., on February 20, 1955:

Whereas the Supply Department of the Veterans' Administration, Washington, D. C., has issued an order that in all general medi-

cal and surgical hospitals of the Veterans' Administration with under 300-bed capacity, the 35-millimeter commercial movie program will be discontinued on April 1, 1955; and

Whereas the 35-millimeter commercial movie program in these hospitals under 300-bed capacity is one of the major sources of entertainment for patients in these smaller hospitals; and

Whereas the geographical location of most of these hospitals is such that entertainment for the patients is hard to obtain, and these movie programs in these smaller hospitals enhance the morale and contentment of patients; the discontinuance of this movie program would not only leave much idle time, which would have a tendency to lead to moroseness of patients with chronic conditions, who are forced to stay in the hospitals over long periods; and

Whereas these movie programs have been in force over a period of years at most of these hospitals, and would be very hard to replace with other forms of entertainment: Be it

Resolved, That we urge our State department and national organization to serve notice on the Veterans' Administration to the effect that our organization cannot see the justification for the discontinuance of the 35-millimeter movie program of the smaller hospitals; and be it further

Resolved, That our State department and national organization take necessary action to inform all subordinate units of our organization on the aforesaid contemplated action, and that the membership at large may act to cause the rescinding of such action.

Dated March 1, 1955.

EGYPTIAN DISTRICT, DEPARTMENT OF ILLINOIS, DISABLED AMERICAN VETERANS,

JOE P. BOYLE, Commander,
FLOYD J. GROOTHINS, Adjutant.

Price Increases in Shotgun Shells

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. REUSS. Mr. Speaker, I represent a district whose inhabitants burn up more powder than those of almost any other district in the Nation. In recent months, I have received many protests from hunters and trap shooters at the sweeping price increases imposed by the manufacturers of shotgun shells in the last 10 years. In the case of 12 gauge trap loads alone, the increase in this period has been 147.6 percent. I am further informed that price changes are generally announced by all manufacturers on the same, or practically the same, date. Typical of the many protests I have received is the following letter of February 25, 1955, from Mr. J. W. Whitehill, president of the Milwaukee Gun Club:

DEAR Mr. REUSS: I am writing to you this morning in the interest of the many shooters from Wisconsin who participate in shooting trap and skeet at the Milwaukee Gun Club, Lake Park, Milwaukee, Wis.

The greatest number of shooters are from the Milwaukee area, however, at times shooters from all over the State shoot on our grounds. A considerable number of teams

from the large industrial plants also shoot with us and we all are very much disturbed over the raising of the price of shotgun shells during the past year.

Earlier in the year of 1954, these prices were raised and at this time both the shooters and the manufacturers felt that by the elimination of some of the variety of shells being loaded we could agree upon simplifying our requirements by adopting a lighter load in a few specific types. It was our feeling that this would in some degree assist the manufacturers in stabilizing the price. Shortly after this, however, the manufacturers again raised the price 6 percent.

These continuing raises in price are most discouraging to the average citizen who derives pleasure and recreation in shooting of shotguns and in a very sincere effort to help ourselves we are experimenting at this time in the reloading of shells already shot and in this way we are reducing the cost to the shooters who are turning to this reloaded shell in desperation. The Milwaukee Journal has already written a story about this situation and we are finding more and more clubs around the country very much interested in doing something to cut down shooting costs, even importing foreign shells which can be delivered here for 10 percent less than the cost of American shells. We believe this is a most unfortunate situation, Mr. Reuss, and something should be done to stop it.

Shortly after these complaints came to my attention, I asked the Legislative Reference Service of the Library of Congress to obtain for me the price history of shotgun shells in the last 10 years. On February 11, 1955, the Legislative Reference Service wrote the Shotgun Shells Manufacturers Trade Association, the Sporting Arms and Ammunition Manufacturers Institute at 250 East 43d Street, New York, requesting a list of price changes in shotgun shells for the postwar period. When no reply was received, the Legislative Reference Service sent a followup telegram on February 25, 1955, saying, "Information urgently needed for Member of Congress."

Finally, a letter dated March 1, 1955, has been received by the Legislative Reference Service from the Sporting Arms and Ammunition Manufacturers Institute:

This will acknowledge receipt of your letter requesting a list or table showing price changes in sporting ammunition.

We regret that we are unable to comply with your request, but the Institute does not collect or publish information of any kind in regard to prices and has no such list or table. It is a definite policy of the Institute not to engage in any activity in respect to prices. Thus, the Institute has nothing whatsoever to do with prices charged by any of its member companies. Each member company determines its own pricing policy on whatever basis it sees fit and does not report its prices to the Institute. Therefore, we do not have and are not able to furnish any information as regards price changes for sporting ammunition over any period.

The activities of the Institute are concentrated in the fields of research, promotion, safety, and conservation. With the thought that they might be of some interest in connection with your survey of the industry, we are enclosing copies of various Institute publications, which will give you an idea of the important types of activity engaged in by the Institute.

RICHARD F. WEBSTER,
Secretary.

I have communicated to an official of one of the sportsmen's clubs in my district the position of the Sporting Arms and Ammunition Institute that "We do not have and are not able to furnish any information as regards price changes over any period," and asked him for his comment. His comment was "apple-sauce."

I have today directed to Mr. Edward F. Howrey, Chairman of the Federal Trade Commission, the following letter:

MARCH 3, 1955.

MR. EDWARD F. HOWREY,
Chairman, Federal Trade Commission,
Washington, D. C.

DEAR MR. CHAIRMAN: I wish to bring to your attention a situation existing in the shotgun shell industry which is working great hardship on the millions of Americans who enjoy the sport of hunting and of trap and skeet shooting.

For some time, I have been receiving complaints from both within and without my district complaining of the steady price increases in shotgun shells and noting that these price increases have quite generally come at precisely the same time and in precisely the same amount. The following appears to be the price history of the larger shotgun shell manufacturers for 12-gauge trap load shotgun shells during the past 10 years:

Year:	Price per thousand shells
1942-46.....	\$32.41
March 1946.....	37.21
July 1946.....	40.00
January 1947.....	48.00
March 1947.....	50.80
July 1947.....	53.45
January 1948.....	53.52
April 1948.....	58.82
July 1948.....	64.50
November 1948.....	67.70
May 1949.....	64.50
January 1950.....	65.10
August 1950.....	71.10
December 1950.....	78.60
January 1953.....	75.60
December 1954.....	80.25

Although trap loads are only some 20 percent of the total shotgun shells sold, the same percentage raises have been made over the years for all varieties of field loads.

You will note that the increase in price is 147.6 percent in under 10 years. I am further informed that these increases by the various manufacturers have been practically simultaneous.

You are, of course, familiar with the numerous cases establishing that horizontal price-fixing practiced in concert by manufacturers is violative of the Federal antitrust laws:

Federal Trade Commission v. Pacific Paper Association ((1927) 273 U. S. 52, 62); *United States v. Socony-Vacuum Oil Company* ((1940) 310 U. S. 150); *American Tobacco Company v. United States* ((1944) 147 F. 2d 93); *United States v. Paramount Pictures* ((1946) 66 F. Supp. 323, 337).

On the question whether concerted action can be inferred from a long-standing uniformity of prices charged for a given product by the various manufacturers, coupled with almost simultaneous announcements periodically of identical price increases, the Federal court in the *United States v. Paramount Pictures* case had the following to say:

"Such uniformity of action spells a deliberately unlawful system, the existence of which is not dispelled by the testimony of interested witnesses that one distributor does not know what another distributor is doing; and there can, in our opinion, be no reasonable inference that the defendants are

not all planning to fix minimum prices" (*United States v. Paramount Pictures*, op. cit., p. 337).

On the facts, it seems to me that a thorough investigation of whether the Sherman and Clayton Acts have been or are being violated is in order. In this connection, the question of mergers in the shotgun-shell industry, and of possible relationships between domestic producers and foreign manufacturers of shotgun shells in restraint of trade should also be investigated.

I shall appreciate being informed of such public action as the Federal Trade Commission undertakes.

Sincerely,

HENRY S. REUSS,
Member of Congress.

Address by Louis S. Rothschild, Chairman
of the Federal Maritime Board

EXTENSION OF REMARKS
OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

MR. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on maritime problems, delivered in Boston, on February 24, by Louis S. Rothschild, Chairman of the Federal Maritime Board.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY LOUIS S. ROTHSCHILD, CHAIRMAN, FEDERAL MARITIME BOARD AND ADMINISTRATOR, MARITIME ADMINISTRATION, UNITED STATES DEPARTMENT OF COMMERCE, BEFORE A LUNCHEON OF THE GREATER BOSTON CHAMBER OF COMMERCE, HOTEL STATLER, BOSTON, MASS., ON FEBRUARY 24, 1955

I am, indeed, honored to have been asked to speak in the Port of Boston. There are a number of reasons why I feel deeply gratified on this occasion. First of all, as a schoolboy at home and later as a student in a nearby New England university, I developed a sort of reverence for the Port of Boston as the birthplace of our seafaring heritage.

Of more recent date and more immediate interest, however, is the fact that my immediate boss, the Honorable Sinclair Weeks, Secretary of Commerce, hails from this historic port. His selection by President Eisenhower for the Cabinet post under which comes the responsibility for maritime affairs is most fitting. The President, keenly aware of the importance of our maritime potential to the strength of the Nation, could not have made a more appropriate choice.

Secretary Weeks has set a wonderful example as an American businessman of the highest caliber serving his country unselfishly and with rare efficiency. Boston, which has given more of its sons to national service than perhaps any American community, may well be proud of his contributions to the present administration. Certainly I count him as a warm and understanding friend and mentor, my superior officer in whom I have the utmost confidence and trust.

So when I was asked to make this talk I thought the least I could do was to look up some statement made by the Secretary that would prove appropriate to the occasion. I found it.

Sinclair Weeks once said: "The sea is the old, tried friend of Boston business. Don't overlook its value."

With true New England brevity and aptness, I think he has given us a valuable message in these few phrases. It has a special meaning to those of us primarily concerned with ocean transportation.

As Chairman of the Federal Maritime Board and Maritime Administrator, our principal interest in the American merchant marine has been the merchant fleet itself, its construction, maintenance, and operation. But we do not forget that there is another equally important factor in our maritime potential—the continued efficient functioning of our port cities.

These communities are more than mere terminals for ships traversing the seas. They must face the sea and inland as well. They must provide for the all-important function of transshipment of cargoes to and from the rails and highways into and out of the holds of oceangoing vessels; their complex organization calls for a standard of efficiency and orderly procedure unappreciated until ill fortune stops it. Almost immediate economic paralysis is the inevitable result, a malady that quickly affects interior communities for hundreds of miles, disturbs deeply the daily livelihood and habits of millions of Americans.

The task of administering the multiplicity of functions of a great port such as Boston is of great importance and requires skill and experience. It is a task that calls for constant improvement, constant attention to the daily details, and a readiness to meet competition of all kinds. It calls for an attitude of responsibility not only to the port itself but to vast productive areas of our Nation—the fields and forests, the factories and workshops, and the market places for goods transported in ships from far-off lands across the seas.

All that I have read and heard about the Port of Boston's progress in recent years points to the fact that it is quite conscious of its vital role as a doorway leading in and out of a vast producing and consuming region of this Nation. Boston has, perhaps, led the East in the provision of new and modern facilities, such as the Mystic, Hoosac, and the East Boston piers. It was a forward-looking spirit that envisaged the need and found the means to accomplish this. As a matter of fact, I think it fair to say that Boston started the postwar cycle of port improvement that will add nearly a quarter of a billion dollars worth of new facilities to the ports of the Nation. Furthermore, one cannot help but be impressed at the high caliber of the individuals in authority and the democratic manner in which they are selected to direct the port activities of the State of Massachusetts.

It is heartening, too, to contemplate the demonstration that takes place day after day, month after month, of the cooperation of management and labor in keeping the goods flowing in and out of Boston in an uninterrupted stream. Such stability begets sound confidence on the part of users of this great national port. This year of unbroken labor peace on the water front is an augury of what can be done throughout all port areas of the Nation.

I believe, in other words, that the Port of Boston well understands that trade goes where it is invited, and stays where it is welcome.

Other ports have heeded this axiom, particularly in the postwar period. For example, Savannah and Wilmington, on the Atlantic coast, have added greatly to their facilities and stepped up their promotion throughout the inland areas they serve. Baltimore is planning additional modernization, and the matter of a new port authority is currently before the State.

On the west coast new and very modern terminal facilities have been put into service in San Francisco, Los Angeles, and Long Beach. New Orleans, the Texas ports, and

Gulfport, Miss., on the gulf coast, have all stepped up their postwar developments, reaching for their business far into the heart of the Nation through the transportation network of the Mississippi Valley.

Development and improvement in this competitive world is all important, not only to the management of a port but to the seagoing phase of our maritime life as well—to the designing, building, and operating of the ships of our merchant fleet.

Today, the policy of the United States is clear. Federal Government aid and encouragement must be available to the extent that our American merchant marine can be relied upon as an instrument of national security. The principal measure of the amount of that aid is the differential in costs that must be borne by our shipping firms in meeting low-cost foreign competition. It is a credit to the present administration that it has reaffirmed that policy, not in any offhand manner, but as a result of a study both deep and wide in its implications and scope.

With true New England conservatism and prudence, the Department of Commerce and the Maritime Administration, under the direction of Mr. Weeks, engaged first in a down-to-earth audit of its maritime responsibilities, and reached its judgment as to further action only when a sufficient amount of data had been accumulated and analyzed.

The value of such a process is obvious. It removes us from an area of doubt and uncertainty in the field of Government-industry relations, into a position of clarity and understanding. It encourages the mutual trust and confidence which must be present in the partnership of industry and Government if we are to meet America's maritime needs. The steps taken in this direction have been among the most valuable achievements of Secretary Weeks' administration of the Commerce Department.

Make no mistake about it—America's maritime needs must be met, for despite the lurid fascination of push-button warfare, of the Buck Rogers type of ultra-technology which blithely conquers the air and stratosphere for trade and defense, ocean transport remains as the solid bulwark of our strength and defensive planning. We must continue to guarantee our ability to use the sea lanes to support our bases overseas in an emergency, and meanwhile to employ them as avenues of peaceful trade with the free nations of the world, over which to export our own goods and products, and to import the long list of cargoes essential to our well-being, to our production schedules and to the stockpiling of strategic materials.

The maintenance of our seagoing fleet at an acceptable competitive level with the merchant ships under other flags, plus meeting our national defense requirements in terms of active ships, in reserve strength and in mobilization readiness—this is one way of describing the major responsibility of the Department of Commerce's Maritime Administration. In addition, the Federal Maritime Board is charged with carrying out the Nation's maritime regulatory laws and the all-important task of determining the extent of the differential subsidy contracts entered into by the Government to aid the maintenance of operation and construction of seagoing ships under the American flag.

Let me sketch out some of the highlights of our present program. In so doing, may I pay tribute to one of your outstanding national leaders—Senator LEVERETT SALTONSTALL, who has continued throughout his years of service to his State and country to understand and work for our maritime welfare. His efforts in the Congress contributed mightily to the achievement of the current shipbuilding and ship repair programs, and he continues to be enthusiastic over the continuing efforts proposed in the President's budget request to Congress for the coming fiscal year.

In 1953, our studies showed clearly the need for maintaining sufficient shipbuilding in this country to continue the employment at all times of a skilled working force in our major shipyards so that they could be a nucleus for expansion to meet mobilization pressures and a high level of shipbuilding if war comes again.

At the start of last year, no orders from the shipping industry had been placed with the shipyards for the construction of new ships. A Government program, commenced at the time of the Korean campaign for the construction of mariner-class freight ships, was coming to a close. And of deeper concern, our projections showed that the eventual replacement of presently active ships in the commercial fleet would not be due, under normal economic processes, until a period of from 8 to 10 years in the future.

We realized, of course, that the prime impulse for the construction and employment of merchant ships must come from private industry, since ships are units in our maritime industrial plant. We were convinced that in the past there had been great wastefulness inherent in the Government's role of principal shipbuilder.

Therefore, our task was to move quickly, for the sake of our shipbuilding and ship repair potential; but at the same time, to use all our efforts to encourage and supplement the investment of private funds in the construction of oceangoing vessels.

Massachusetts can be doubly proud of the part played in bringing this program to reality by those two great congressional leaders, Representatives JOSEPH MARTIN and JOHN MCCORMACK.

I believe that the teamwork exhibited by both the executive and legislative branches of our Government in bringing about our present program was unique and marks the beginning of a new period of coordinated national effort aimed at keeping our maritime progress rolling.

The Congress made possible a shipbuilding and repair program amounting to a \$400 million potential of business for the yards, at an expenditure of less than half that amount in direct Government appropriations. In addition, a wider Federal insurance of privately held mortgages for ship construction was made possible.

Whereas the program could not immediately translate itself into jobs for the shipyards, it has already halted the downward trend, and is beginning the long uphill climb.

Already there are orders for 8 new super-tankers, of which 1 has been placed in the yards at Quincy. There is a potential of 25 more tankers of this new type in the current program.

It should be emphasized that 4 of these 8 ships are being built by private industry. Two are the result of the so-called tanker trade-in-and-build program, and two made possible by our approval of the transfer of older tonnage to foreign registry. Under the present trade-in program authorized by Congress, the Maritime Administration can place as many as 20 serviceable tankers in the National Defense Reserve Fleet.

In addition, the present program calls for the construction of four large new passenger ships. The ability of the New England shipyards to produce ships of this type would lead one to suppose that they will be active bidders on these jobs when invitations to bid are sent out.

Of very great significance has been our ship-repair program, authorized by the last Congress. There are a number of military type ships in our reserve fleet anchorages that need basic repairs before they could be reactivated. Up to now, funds for anything more than preservation of these ships along with the others in the anchorages, have not been available. But our current program has enabled us already to contract

for drydocking and repair of 46 ships, and we expect to complete 70 before the current program is over.

One of the compelling reasons for this program was to provide work for this vital industry along all the coastlines. Bidding was invited on a regional basis, and in this area, Boston yards have worked on four of these vessels, withdrawn and towed here from our Hudson River reserve fleet anchorage.

Already, too, our program has taken us deeply into the field of new ship machinery design and plans for the development of new cargo handling gear, both of which will no doubt greatly influence our merchant fleet in the coming years. Experimental work is going ahead on Liberty ships withdrawn from the ranks of our reserve fleet, where there are 1,400 of these cargo carriers so valuable in the last war, and yet which are completely outmoded today.

While our current ship building and ship repair program continues, it is necessary, of course, to present for budgetary approval scheduled operations for the next fiscal year beginning July 1. Here we have continued along the major lines laid down during this year, but with even more emphasis on the greatest problem overhanging the merchant marine—that of ship replacement to offset the bugaboo of block obsolescence.

In our new program, we hope to encourage the replacement of five older dry cargo ships with new ones in much the same manner as we are now offering tanker operators under the trade-in-and-build program. We look forward to the start of construction of 4 additional new passenger liners, 2 for the round-the-world service, and 2 for service between the west coast and Australia and New Zealand ports. The latter two will be created by extensive conversions of mariner-type ships.

At the same time, we are well aware of the need to maintain our defense posture, a requirement in our maritime planning that has been sharpened with recent developments in Asian waters.

All of the ships I have mentioned so far in our 1956 program are to be constructed under the subsidy laws, with the Government sharing in the costs only to the extent of the difference in the estimated foreign cost of producing such ships and the higher prices necessary from American shipyards. In addition, we hope to continue the tanker trade-in-and-build program, planning for the construction by the tanker industry of 10 new supertankers and the acquisition by the Government of 20 older but usable tank ships for standby service in reserve. Here, too, full materialization of this part of the program will provide some \$194,500,000 worth of work for American shipyards, with the Federal share of the outlay about \$72 million by the taxpayer.

In addition, three ships are contemplated to be built directly by the Government under the 1956 program. These will be prototypes of ships essential to mobilization plans. We must not delay in producing such ships, which can be built in large numbers under emergency conditions, and which would serve in the vital functions of general cargo carriage and as naval auxiliaries.

Two of these new ships are to be freighters, each with the same hull design, but one of higher power and suited for use as a naval auxiliary. The other, with a speed of 18 knots, would be the counterpart of the Liberty ships of World War II. This design has been termed the Freedom ship.

The third prototype contemplated is a 20-knot tanker of the pipeline class, extremely valuable to the Navy as well as to meet the very heavy demand which war would bring for swift, worldwide transport of petroleum products. The jet age has increased this dependence upon the sea transport of fuel, not decreased it.

In the list of new ships to be built as replacement vessels come additional names new to America's maritime terminology. In addition to the freedom replacement for the old Liberty, there are on our drawing boards the following: Clipper, of 18 knots speed, intended for replacement of present C2's, and Seafarer, for the C3's and C4's. These two latter types form the backbone of our merchant freighter fleet today. The new designs are faster, and show the trend toward higher stowage factor. All will embody the very latest in cargo-handling gear.

Three other designs are ready for new construction as shipping companies decide to replace their steadily aging vessels. These are the Island type, a coastal freighter; Bulk, a 16-knot common carrier for all types of dry bulk cargoes such as ores and grains; and perhaps the newest concept of all, the Turnpike class. This is a twin-screw ship of 20 knots speed, essentially a ship to carry trailers and capable of side and end loading. Presumably this type of ship would be used for the most part in intercoastal and coastwise services.

These are preliminary designs produced for the purpose of discussing with the steamship lines the replacement of ships now in operation. We have thus provided a variety of ship designs to help evolve a well-balanced fleet in the next generation of vessel construction. Propulsion machinery and cargo gear no doubt will be greatly influenced by the experimental work we are conducting today. Given the type of cooperation between Government and the industry which I confidently expect, we should be able to look forward to a fully competitive, advanced merchant fleet suitable to meet the needs of our commerce and our defense.

Thus we are working toward the provision of an improved merchant fleet—a fleet of ships faster and better able to handle the transfer of cargo to and from transit by sea to carriage by land vehicles. We must seek the greatest efficiency in this direction, for it is at the terminal where we must work toward achieving the quick turnaround of a ship. It is the ship at sea, not at the pier, that pays for itself.

This means an increasing responsibility on port management. Here, too, the element of direct competition is evident. The opening of new port facilities, such as now looms because of the St. Lawrence seaway program, calls for correspondingly greater endeavor on the part of the older ports. Yet I feel confident that there will be business for all in this expanding economy. Populations are increasing, world-trade volume is steadily climbing, and as we hold off the aggressive threats of communism, the economies of the friendly nations of the world improve by leaps and bounds.

Tomorrow is bringing a tremendous promise to the businessmen of America; and a vital part of that business must flow through the port cities of our coastlines.

Such a realization sharpens the impact of Secretary Weeks' admonition: "The sea is the old, tried friend of Boston business. Don't overlook its value."

The Fourth Object of Rotary

EXTENSION OF REMARKS OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address which I delivered on Tuesday of this

week at the Memphis Rotary Club. As Senators know, I have been concerned by the manner in which our policy has been proceeding in the Far East. I am glad that the President clarified it publicly to some extent this week when, at his press conference, he assured all that this Nation will not help Chiang invade the mainland. I am glad also that the Secretary of State this week did not give Chiang assurances of help in support of the offshore islands. How I feel about this situation is expressed in my address to the Rotary Club.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great honor that you have invited me to participate in your golden anniversary of Rotary. I have been rereading the object of Rotary. I want to talk with you briefly today about the fourth object. As all of you know, it is: "The advancement of international understanding, goodwill, and peace through a world fellowship of business and professional men united in the ideal of service."

There is no greater need in the world today than just such organizations truly dedicated to just such an object. I am told that there are now 8,431 Rotary clubs, composed of 396,000 Rotarians in 89 different countries. Your Rotary foundation is contributing much toward international understanding by sending students all over the world for a year's study.

The activities of such an international group as yours, really working at the job of effectively carrying out the fourth object can contribute magnificently toward international understanding.

I feel that we Americans today face three major problems. Broadly stated they are these:

1. To preserve the peace.
2. To preserve our constitutional liberties and our free way of life, and
3. To preserve our economic health and prosperity.

All three of these blend together and are really aspects of the same problem—the problem of preserving a free society.

It is the first of these—the problems involved in preserving the peace—which I wish to discuss with you today and which fit in so well with your fourth object.

Anyone would be less than frank to say that we are not today in a very delicate situation in our international relations. Our world is balanced precariously between peace and war.

We want peace—but what has caused me so much concern is the fear that we are forever on the verge of stumbling into war, with the very best of intentions to be sure but with disastrous consequences nevertheless.

I think it is time that we raise our sights. We owe it to ourselves and to posterity to do so. We have been losing the forests in the trees. We haven't been able to see India for Matsui—we haven't been able to see Japan for Quemoy.

If a major war is to be avoided we cannot blink at the fact that the position of the United States in Asia generally is deteriorating steadily and that the Communists are gaining strength through improved tactics. If this trend continues the bulk of free Asia may follow China behind the Iron Curtain within the matter of a decade or so. Long before then, moreover, we may have lost whatever ability we now have to influence events.

An Asian policy broad enough, bold enough, and flexible enough to reverse this dangerous drift must have the support not only of a preponderant majority of the people here at home, but also of our free allies in Europe. Like it or not, there is a situation in the world in which the only alternative to co-

existence may be no existence, which could be the result of an atomic or hydrogen war. And coexistence is a two-way street—there has to be give and take on both sides.

I don't think we have been proceeding in a very sophisticated way. For instance, we have just entered into a mutual defense treaty with Chiang Kai-shek. I was one of a minority who voted against it. In this treaty we mutually agree that if anyone attacks Formosa we will help Chiang and if anyone attacks the United States he in turn will help us.

What's mutual about that? I have no objection to defending Formosa. I think that the United States has both a moral and a legal obligation to do so. Formosa and the Pescadores were liberated from Japan largely by our arms during World War II. Pending their final disposition we are in what amounts to a sort of trustee position. Chiang is there by our forbearance.

We are, therefore, under obligations to defend Formosa, but let's not kid the world or ourselves by keeping up the fiction that Chiang is a great, dynamic force in Asia, and that he will be rushing over to defend the United States should anyone attack us in mutual exchange for our defense of Formosa.

I thought my colleague, from Tennessee, ALBERT GORE, put it very well when he said:

Of course, I have no sympathy whatsoever with the Red Chinese claim to Formosa, but I believe that until final disposition of the islands is determined, neither Chiang nor the Reds have sovereign rights to them. In this respect the Formosa treaty falls short of meeting the definition of a treaty, because treaties are agreements between sovereign nations. Chiang's government is not a sovereign nation, but a government in exile.

Furthermore, Formosa, doesn't include Matsu and Quemoy. These offshore islands are within 5 miles of the China coast. To say that their defense is necessary to the defense of Formosa is about like saying that the defense of Staten Island, in front of the harbor of New York, is necessary to the defense of Bermuda. They may be important to the morale of Chiang Kai-shek but one cannot really expect the Chinese Communists to lie down and play dead with his forces that close to their harbors.

I doubt if the administration intends to defend these islands. We are told that they must keep this unclear in order to confuse the Chinese Communists. The trouble is that it confuses us here at home, too, and it certainly confuses our allies. Thus during this past week we have seen Mr. Eden at the SEATO conference trying to clarify the situation as far as these islands are concerned and Mr. Dulles keeping it unclear.

I had hoped that the administration had given up its go-it-alone policy. However, when we had the Formosa resolution before Congress, it was obvious that it took the British, our strongest ally, by surprise. Evidently there had been no consultation.

Unless the administration has a very firm rein on Chiang this is very dangerous business. His goal is to return to the mainland. I would rather see him there than Mao, but to be realistic I must say that he can't get there unless we put him there and that brings into play the Sino-Soviet defense treaty, which really is mutual. And I'm not willing to pay that price, particularly when I believe that if the Chinese people ever successfully throw over the Communist regime they will not be looking to Chiang for leadership, but will be looking to some new force.

One disturbing thing is that immediately after ratification of the Formosa treaty, Chiang announced that this meant the United States would defend Quemoy and Matsu even before Dulles indicated we would. At the very least, I prefer to have our policy

announced by our own State Department, rather than by the Generalissimo.

A Far Eastern policy tied to Chiang is almost certainly doomed to fail, and by the time the failure is recognized it may be too late to disengage ourselves without grave loss of prestige.

The key to the security of Asia lies instead in the development of dynamic centers of indigenous stability and power which will lend their own growing strength to that of their neighbors—with the military and economic power of America and the western alliance discreetly in the background.

The two major potential sources of such stability are Japan and India. The history of our generation in Asia may be written around what happens in these two nations, with one-fifth of the world's population.

If they remain free, there is every reason to believe that the bulk of Asia will remain free. If they go under, the Communists are likely to take over from Tokyo to Cairo. We must continue to defend and support the smaller nations now favorable to us, but we should not assume that they constitute a decisive, effective anti-Communist force.

We must remember also that the real bulwark of our strength in the world is the western alliance. For the past 2 years while the administration has fought the so-called war party within the Republican Party the western alliance has taken a back seat. The doctrine of massive retaliation enunciated for domestic political purposes along with the unleashing of Chiang Kai-shek frightened our allies. They would stand exposed to massive annihilation.

Now the administration is again showing awareness of the Atlantic concept, but here, too, we have got to drop outworn theories and plan big things. My own strong conviction is that NATO must be more than just a military alliance. It must have political and economic ties as well in order to operate effectively. We will be effective neither in Europe nor in Asia as long as the free world itself is divided on its approach, for the Communist world is not.

Problems of American Foreign Policy

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address which I was pleased to deliver on Washington's Birthday at Stephen's College in Columbia, Mo.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PROBLEMS OF AMERICAN FOREIGN POLICY

(Address by Senator ALEXANDER WILEY at Stephen's College, Columbia, Mo., February 22, 1955)

I am grateful to you for asking me to speak on the problems of American foreign policy instead of on the answers. It is a great deal easier to recognize the problems than it is to find the solutions to them, and I will frankly confess at the outset that I do not know the answers to many of the problems I am going to discuss with you.

Still, it is helpful if one knows the problem to which one is looking for an answer. Indeed, a precise definition of the problem may point to an answer. And in this field defining the problem is not so easy an ex-

ercise as some people apparently think. There is a great temptation to oversimplify, and oversimplified problems lead to oversimplified solutions.

Let us begin, however, by attempting to define our objective. What is it that we are really trying to achieve through our foreign policy?

The answer to this question, I think, is fairly simple. We want a world in which the American people can live securely, peacefully, prosperously, and happily. That is what is at the bottom of our foreign policy—so far to the bottom that sometimes we lose sight of it and talk about the means by which we try to achieve it as if they were ends in themselves.

Some of us may have strong cultural and sentimental ties with Western Europe, but the preservation of democracy in Western Europe is properly an objective of American foreign policy, not for these reasons, but because the communization of Western Europe would immeasurably reduce the chances for the American people to live as they want to live.

Some of us may have strong emotional feelings about the righteousness of the cause of Chiang Kai-shek and the iniquity of Chou En-lai, but the defense of Formosa is properly an objective of American foreign policy, not for this reason, but because the occupation of Formosa by an unfriendly power would make the defense of the United States more difficult.

Some of us may feel called upon in a spirit of Christian charity to feed the hungry and clothe the naked of Asia, but the success of the Indian 5-year plan is properly an objective of American foreign policy, not for this reason primarily, however appealing it may be, but because a prosperous India can contribute to the peace and well-being of the American people while an impoverished India represents a positive threat to that peace and well-being.

Keeping our eye on the end and not on the means will help us to limit our activities and commitments somewhat, but even so our objective is a pretty big one and our national resources are limited.

Despite our great wealth and power, we are not strong enough to arrange the world precisely as we would like it. Neither are we strong enough or secure enough to ignore the rest of the world.

This seeming paradox sets the upper and lower limits of our foreign policy. Regardless of our likes or dislikes, there are many things which we cannot do, and at the other end of the scale there are some things which we must do.

Although we still occasionally hear voices urging upon us the doctrine of isolationism, I think the suicidal implications of that doctrine have by this time been pretty well established.

It is rather a curious thing, however, that some of the people who have been emotionally inclined toward isolationism have now swung to the other extreme. Whereas formerly they wanted to have nothing at all to do with the rest of the world, they are now clamoring for all kinds of impossible intercessions. I am sure you are familiar with the type. They have what we might call ultimatum mentality. They demand that we tell the Soviet Union and Communist China to behave themselves or else. What is even worse, they demand that we have the effrontery to tell one of our sovereign allies to do as we say "or else." Apparently they are not at all concerned that the "else" in one case might be hydrogen warfare and in the other case the loss of a valued ally.

One extreme is as bad as the other. The ostrich, which hides its head in the sand, is not particularly more stupid than the rhinoceros, which charges at every noise it hears.

Both of these extremes fail to take adequately into account four major interna-

tional facts of this mid-20th-century world. These facts are:

1. The existence of aggressive communism with sufficient resources and power to constitute serious threat to all free societies.

2. The development of technology at an ever-increasing tempo.

3. The dynamic urge for political independence and economic development which characterizes most of the non-Communist world.

4. A shrunken world due to man's ingenuity.

Any one of these facts, taken alone, would present a challenge to American foreign policy. But they are interrelated, and the problems presented by each become more acute and more difficult because of the existence of the others.

NATURE OF COMMUNIST THREAT

Let us consider some of the implications of these facts, and let us begin with the nature of the threat posed by aggressive communism.

This threat is only in part military. It is also in part economic and political. It has been most immediate, however, in its military aspects, and this is the form in which it is easiest to meet.

Compared to our other problems, it is a relatively simple matter to draw a line around the Western Hemisphere or around Western Europe and to generate, in concert with our allies, enough military strength to create doubts in the minds of the potential aggressor as to his ability successfully to breach that line.

In his first annual message to Congress in 1790, George Washington, whose birthday we celebrate today, said: "To be prepared for war is one of the most effectual means of preserving peace."

Well-meaning people have sometimes criticized our policy as being too heavily militaristic; but when you are confronted with overwhelming military power, you necessarily have to devote first attention to building some sort of a defense structure. While doing this we have by no means neglected the political and economic aspects of the Soviet threat, but I think the time has now come when we must give these aspects even greater attention.

IMPLICATIONS OF HYDROGEN WEAPONS

One reason for this is found in the second major international fact which I mentioned earlier—the ever-increasing tempo of technological development. This is one of the factors which seems to me to make all-out war a remote possibility, if, indeed, it is any longer possible at all. In the cobalt-coated hydrogen bomb technology has given us something which, if it is not the absolute weapon, is at least so close to it as to raise grave questions as to whether its use would be self-defeating. Both the United States and the Soviet Union may very well at this moment have the mutual power of total destruction. This includes, of course, self-destruction.

In dealing with nuclear weapons, you very quickly reach a point beyond which superiority becomes meaningless. If each side has the power to inflict a mortal blow upon the other, then it doesn't matter if one side has twice as much power as the other.

I once heard this point made in terms of less awesome weapons. For example: If I am pointing a .38-caliber pistol at you, and you are pointing a B-D gun at me, I have a very great superiority. But if we each increase our strength, so that I am pointing a .45-caliber pistol at you and you are pointing a .38-caliber pistol at me, then, although I would still have a superiority of sorts, it wouldn't really do me very much good in and of itself.

GROWTH OF TECHNOLOGY

As the military applications of technology make all-out war more nearly impossible, and as the defensive strength of the free world increases in other respects, aggressive communism tends to shift its tactics from overt military action to other means. These other means cannot be met by military measures. They require a good deal of imaginative, constructive thinking on our part.

The United States has risen—one might almost say it has been thrust—to its present extraordinary position of wealth and prestige with only 6 percent of the world's land area and only 7 percent of the world's population. Other countries have more natural resources. Other countries have more people. But none has approached the United States in either total or per capita production.

There is an old saying that "It's what you do with what you have that counts." Americans have done the most with what they had. The atmosphere of political and economic freedom which has always prevailed in the United States has had a great deal to do with it, but there is more to it than that.

One of the great advantages which the United States has in world competition—perhaps at this moment in history the greatest single advantage—is our superior technology. This superiority is so marked that we are apt to take it for granted. But it is not inherent. There is nothing peculiarly American about genius. Indeed, there is evidence to suggest that genius occurs with no more frequency per million Americans than per million non-Americans. The difference lies in the fact that the American system of education and of social organization makes possible a greater development of the talents which are inherent in all people.

Recent studies, however, indicate that the Soviet Union is bending every effort to close the technological gap between itself and the United States. More scientists, engineers, and technicians are being trained in the Soviet Union than in the United States. And the evidence is that they are being well trained. This to me is an alarming fact, and one that we had better do something about.

It seems to me, for example, extremely wasteful of talented manpower to draft bright young scientists into the Armed Forces. These people can make a greater contribution to the security of the United States by working in laboratories than by carrying a gun.

We would also be well-advised to take steps to train more high school and college teachers in mathematics and the physical sciences. Our position in the world dictates such a course, quite apart from considerations of domestic policy and aid to education generally.

I would not want it inferred from this, however, that our schools should emphasize science and technology to the exclusion, or even to the neglect, of the humanities and other fields of learning. As short as we are of technicians, it could still be argued that our technological progress has outstripped our social progress. One need only look at the impressive fact that although scientists have discovered how to blow us up, statesmen haven't discovered how to keep them from it.

It is important, therefore, that we maintain, or if possible widen, the technological and economic gap between ourselves and the Soviet Union. At the same time, it is equally important that we narrow that gap between ourselves and the underdeveloped countries of the free world.

The economic disparity between the United States and these countries is great—and it is growing at an increasing rate. This trend is not in our national interest.

I have frequently said that the world today is one big neighborhood. Now, no matter how well off you may be yourselves, you cannot have a really good neighborhood if most of the families in it are on the verge of starvation. And the United States cannot continue rich and growing richer in this world neighborhood today so long as a majority of the human race, in the words of Fairfield Osborn, is "living in a crisis whose monotone is interrupted only by catastrophe."

People in this condition make poor customers. They also make poor suppliers—and more and more of the materials our industry uses come from abroad.

Thus, it is our national interest to encourage the economic development of underdeveloped countries on economic grounds alone. Given the existence of the Soviet threat, it is also in our national interest on political and military grounds. From the military point of view, highly developed countries are better able to defend themselves, and to join in measures of collective defense against overt aggression. From the political point of view, they are better able to defend themselves against subversion.

The matter takes on particular urgency at this moment in history because of the third of the major international facts which I mentioned at the beginning: the drive for political independence and economic development in these underdeveloped countries. These twin urges pose different problems for American foreign policy.

DRIVE FOR POLITICAL INDEPENDENCE

The United States itself was born in a revolution against colonialism, and it has traditionally been anticolonial. Most Americans can easily understand the desire of other people to govern themselves.

Our history confirms that we sympathize with that desire. We set a target date for the independence of the Philippines and stuck by it. We allowed the people of Puerto Rico to work out their own destiny, and they freely chose to become a self-governing commonwealth in association with the United States. We have turned down many opportunities to acquire overseas colonies and possessions.

We have used our good offices, through the United Nations and in direct contacts, to hasten the withdrawal of colonial powers from other territories, many of which are now sovereign states. At the same time, however, we have found some of our principal allies in the world struggle against aggressive communism among the colonial powers of Europe. Because of our close relations with these powers, we have been tarred throughout much of Africa and Asia with a kind of colonial guilt by association.

For understandable, but also, I fear, ill-founded, reasons, we have too frequently sought to steer a middle course, torn between military logic which dictated that we support our European allies on the one hand, and on the other hand our historic sympathies which dictated that we support the colonial peoples. After much travail of spirit, we have usually aligned ourselves in the end with the colonial peoples.

Speaking now with the benefit of hindsight over the last 10 years, I think we should have been much less equivocal about our position in these matters. I do not say that in any spirit of criticism of those who have been in charge of our policies, because I am not prepared to say that I would have done it differently myself—given the circumstances which existed at the time. I am not one of those who believes in using hindsight to take an unfair advantage of someone in public office. Hindsight is useful only to the extent that it helps us to avoid mistakes in the future. But if we had it to do over,

I would advocate a much stronger policy in favor of freedom and independence for the colonial areas of the world. It is not yet too late to adopt such a policy, and I believe we are moving in that direction. Actually, of course, more people have achieved political independence in the last decade than at any other comparable period of history.

DRIVE FOR ECONOMIC DEVELOPMENT

The record of economic development does not, unfortunately, show as much progress. A start—and on the whole, an encouraging start—has been made, but the difficulties are so complex that we do not as yet thoroughly understand the problem. Here, especially, we must guard against the tendency toward oversimplification against which I warned at the outset. There is a proneness in some quarters, and not least in some of the underdeveloped countries themselves, to think that massive doses of capital investment, administered by the United States, will bring about the desired results. The problem is not that simple, nor is the cure that expensive.

This is another field in which what the United States can do is limited, not only by our own resources but also by the attitudes of the people with whom we are dealing. After all, it is their countries we are talking about, and they can do as they please with them. We should—and we do—stand ready to help insofar as we properly can, but the initiative and most of the effort must come from the people who are being helped.

Economic development is an exceedingly intricate process, consisting of many things, but one of its most important aspects is psychological. Economic development—or economic stagnation to look at the other side of the coin—is in part a state of mind. It is the result of a combination of circumstances which can rarely, if ever, be induced from without. The urge for economic development must be self-generated.

At this point, it is important to distinguish between the urge for economic development and the simple desire for automobiles, air conditioners, and steel plants. Economic development is closely related to cultural attitudes and social organization. Before a country can economically have automobile factories, it must have enough people with enough money to buy the automobiles, and it must have highways for the automobiles to run on. It must have an agricultural production efficient enough to feed the persons who will have to give up farming themselves in order to work in the automobile factories. If it wants greater agricultural production, is it willing to change its system of land tenure which, in at least some underdeveloped countries, breeds inefficiency? If it wants greater industrial production, is it willing to step on the toes of the privileged few who have a vested interest in monopoly and restrictions on output—a privileged few who are usually in positions of great political power? Finally, if it wants eventually to have a complex corporate economy, is it willing to revise its social ideas about the position of women, without whom the American economy could not operate a single day?

These are all questions which can be answered only by the country itself. What its answers are will indicate whether it really has the urge to develop or whether it merely wants the material results of economic development without the social and cultural reorganization which such development implies.

Economic development is only in part the result of capital investment. It is also an aggregate of technical skills—the knowledge and capacity to make efficient use of capital and capital goods. This is the field in which, in my judgment the United States can make the most worthwhile contribution to the economic development of underdeveloped countries.

In this context, then, it seems to me that the proper course for the United States to follow is to adopt, on a long-term basis, a policy of furnishing technical assistance to countries which are genuinely interested in making efficient use of it. You can get more results in work of this kind from a billion dollars spent over 10 years than from a billion dollars spent in 1 year. Indeed, if we tried to spend that much in 1 year in the areas I am talking about, it would be largely wasted. Among other things, it would cause a severe inflation and leave the country which was supposedly being helped worse off than before.

I would not rule out entirely funds for capital investment. But such activities should be limited to specific situations in which a clear and compelling case can be made.

The problem is further complicated by the fact that results are required quickly. Throughout Asia, Communist propaganda is telling people that communism offers a short-cut to economic development. The short-cut, of course, is slave labor but sometimes a people may not realize the implications of this until it is too late.

PEACEFUL USES OF ATOMIC ENERGY

We may now, thanks again to technology, have found a way to speed up the process within the framework of a free society. As atomic energy provided the weapons which may have made war impossible, so atomic energy may also have provided the materials which will make peace durable. Potentially the most hopeful development of the atomic age is the movement through the United Nations to establish an international pool of atomic energy materials for peaceful uses. Growing out of the President's great speech before the U. N. General Assembly in December 1953, this movement has made slow but nonetheless real progress and there are grounds for encouragement that more progress may be made in the next several months.

This promises, indeed, to be one of the great imaginative triumphs of American diplomacy. The Soviet reaction indicates that the Kremlin is fully aware of the danger which is posed to its own schemes. The first reaction of the Soviet delegate to the U. N. was automatic—he criticized the President's speech. Within 48 hours, his bosses in Moscow had taken a new reading on world opinion and instructed him to make noises of cooperation. In the intervening period, the Soviet Union has tried to block the project without giving the appearance of doing so—and without being wholly successful on either count. All in all, the last 14 months must have been a very trying time for the Communists. They have used it, however, to push feverishly ahead on their own research into the peaceful applications of atomic energy.

It is just as important that we stay ahead of the Soviets in regard to the peaceful use of atomic energy as it is that we stay ahead of them in regard to the military applications. It is perhaps not too much to say that the uncommitted world of Asia will go to the side that first develops a feasible means of using atomic energy for peaceful purposes on a large scale. For that reason, we can welcome the recent decision to supply heavy water to India.

It may very well be that the benefits of atomic energy can be made available in underdeveloped countries before they become practicable in countries such as the United States. In a country with a shortage of electric power and with fuel resources which are either insignificant or underdeveloped, for example, it would be economical to generate electricity from atomic energy at higher costs than in a country with abundant and well-developed supplies of other fuels.

We can only guess at what large quantities of atomic-generated electric power

would mean in the underdeveloped countries of the world. Irrigation projects would become feasible to bring vast new areas of land into cultivation with all that that would mean in terms of an increased food supply, a better diet for the people, and improved distribution of land ownership. Multitudinous new light industries could be established.

There are undoubtedly other uses which we cannot now foresee. The potentialities are so vast that any sort of analogy with known experience is dangerous. But one comparison which suggests itself and which may be indicative, if not precise, is that the atomic powerplant may very well do for Asia what the steam engine did for Europe—and that, of course, is to remake totally the economy and society of the area.

We must not allow ourselves to become so preoccupied with day-to-day crises that we lose sight of these underlying, long-range problems that I have been talking about. But at the same time, of course, we have to deal effectively with today—or else tomorrow may never come. So let us now examine briefly 2 or 3 of our more pressing immediate crises. There are, unfortunately, a large number from which we can choose, but let us take two on opposite sides of the world—one in the Far East and one in Europe.

SITUATION IN FAR EAST

Paradoxically, it seems to me that both the chances of war and the chances of peace have increased in the Far East in the last month. This results primarily from the fact that both military and diplomatic activity in the area of Formosa have been stepped up, and the situation, which had been in something of a stalemate, has become more fluid. It is now off dead center, but we do not yet know which way it will move. This is another instance in which the power and influence of the United States are limited, and we must frankly admit that the decision is to a large degree up to the Communists. If they want war, there will be war. If they want to avoid war, they can do so very easily.

So far as the United States is concerned, our basic position is quite simple. Our national interests do not permit us to tolerate the occupation of Formosa by an unfriendly power. The island is an integral part of the chain which runs north and south in the Western Pacific from the Aleutians through Japan, the Ryukyus, Formosa, the Philippines, Australia, and New Zealand. World War II provided a vivid demonstration of what even some of these islands in unfriendly hands can mean to the United States. Formosa provides a potential enemy a means to outflank the Philippines, as well as our bases on Okinawa in the Ryukyus. The Philippines and Ryukyus, in turn, provide stepping stones to other islands and so on, until we reach Hawaii and the west coast.

Since the end of World War II, Formosa has been in friendly hands—namely, the Republic of China headed by Generalissimo Chiang Kai-shek. But its status in international law is not entirely clear. Prior to the 1890's, Formosa was occupied by the Chinese, and it was ceded by China to Japan some 60 years ago. In the Cairo Declaration of World War II, President Roosevelt, Prime Minister Churchill, and Generalissimo Chiang agreed that it should be returned to China. In the Japanese Peace Treaty, Japan renounced all claims to the island, but no affirmative disposition of it was made. It should be noted that the Soviet Union was a party neither to the Cairo Declaration nor to the Japanese Peace Treaty.

Since 1950 there have in effect been two Chinas—one on the mainland, which is Communist, and one on Formosa and a few other islands, which is not Communist. The United States, the United Nations, and most of the nations of the world have recognized the non-Communist regime on Formosa as the legitimate Republic of China.

As long as these two Chinas spar with each other across the Straits of Formosa there exists an area of international tension which is in constant danger of erupting into full-scale war. The situation has become increasingly acute since last September as the Communists have stepped up their attacks on the Nationalist-held islands and as they have filled the air with loud declarations of their firm resolve to capture Formosa.

Two other new elements have also been added. First, the United States has made it as clear as possible—we hope beyond the possibility of misinterpretation even in Peiping—that we will use American Armed Forces to protect Formosa and the Pescadores. We have already used our Armed Forces to protect the withdrawal of Chinese Nationalists from the Tachen Islands in a redeployment which will not only strengthen the overall Nationalist position but will also remove a potential trouble spot.

Second, the United Nations Security Council has taken cognizance of the situation, and efforts are under way to arrive at a cease-fire which will introduce at least some measure of stability into the situation. I do not know what the outcome of those efforts will be. So far as the U. N. itself is concerned, the prospects do not at this moment look particularly favorable. But at least the question has been opened up, and it is a matter of active concern to the world's statesmen, not only in Washington but also in London and New Delhi, and we may hope in Moscow and Peiping.

The United States should support these efforts to achieve a cease-fire, insisting only that our vital interests be protected. We can protect those interests without becoming involved in a war on the mainland of China. The prevention of such a war should be one of the primary objectives of our policy.

SITUATION IN EUROPE

Let us look now at Europe, where the stakes are, in some ways, even higher than they are in the Far East.

Western Europe contains the world's greatest aggregation of industrial capacity and technical skills outside the United States. With Western Europe a part of the free world, our preponderance of economic strength over the Soviet bloc is overwhelming. With Western Europe behind the Iron Curtain, our economic strength and that of the Soviet bloc would more nearly approach parity.

Through the Marshall plan, we strengthened Europe economically so that it could resist subversion and at the same time support a military effort of its own. Through the North Atlantic Treaty Organization, the military defenses of Europe have been further built up.

But one more tremendously important step remains to be taken, and that is to make the skills, the energies, and the resources of the people of Western Germany available for the common defense of Western Europe. We thought a way had been found to do that through the European Defense Community, but national jealousies were still too great, and the memories of three German occupations of France were still too vivid.

Now, through wise statesmanship, an alternative has been worked out to admit the Federal Republic of Germany to NATO, to restore German sovereignty, and to provide for the rearmament of Germany.

The London and Paris agreements which make provision for these steps have been approved by the French National Assembly, but we still wait for action by the French Council. We wait, also, for action by the German Bundestag.

Meanwhile, we see a political deterioration in both France and Germany. In France, one government crisis follows another. In Germany, delay brings with it increasing opposition to the agreements.

Actually, what is involved is more than simply adding German strength to our system of collective security in Western Europe. What is really involved is the integration of Europe—a dream of a thousand years that is now so close and yet apparently still so far from realization.

If we fail this time, we may not again soon have another chance. Yet here we have another instance of a situation beyond the control of the United States. We can only watch and wait and pray—and remind our friends in Europe that this is a time for responsibility, for rising—as Lincoln said—with the occasion, and for putting aside petty jealousies in the interests of the whole community.

UNITED NATIONS

No discussion of the problems of American foreign policy would be complete without considerable emphasis on the United Nations. It is perhaps not a very great exaggeration to say that no organization has ever accomplished so much in the face of so many difficulties. By any standard, the list of what the U. N. has done is impressive. It becomes positively astonishing when one remembers that the U. N. was founded on the principle of Big Five unanimity in the Security Council and that that unanimity hardly survived the San Francisco Conference.

To mention only a few of the U. N.'s accomplishments, it got Russian troops out of Azerbaijan, it ended the Israeli-Arab fighting, it preserved the integrity of South Korea, and through its technical assistance program it has made a modest but hopeful beginning toward improving standards of life in underdeveloped countries.

But it has done more than this. It has provided an international forum where nations can talk out their problems and differences, where the whole world can see the obstructionist tactics of the Soviet Union and the constructive efforts of the free nations. It has provided an excellent means of clarifying the issues in the cold war.

That the United Nations has accomplished as much as it has despite the abuse of the Soviet veto is a clear indication of the powerful, underlying desire of the nations and the people of the earth for an international organization to keep the peace.

The United Nations deserves our full support. I do not have very much patience with people who criticize the U. N. because it falls somewhere short of perfection. No human institution will ever be perfect; nor will one ever be improved by carping complaints.

CONCLUSION

Now, in conclusion, let us try to sum up by formulating some principles which can serve as guideposts for the United States to follow in making and carrying out its foreign policy.

First, we must measure up to the position of leadership which we occupy in the world, but we must at the same time remember our own limitations.

Second, the foremost of these limitations is that we cannot live alone. We must have allies. The only real security lies in collective security.

Third, although the Soviet veto in the U. N. has made it necessary for us to develop a series of regional security alliances, we must remember that the best instrumentality for developing a real system of collective security is the United Nations.

Fourth, although we must not neglect the military aspects of our security, we must pay increasing attention to the political and economic aspects.

Fifth, we must continue technical and other assistance to promote the economic development of underdeveloped countries.

Sixth, we must continue and strengthen our overseas information programs, not

merely to counteract Soviet lies about us, but more importantly to present an affirmative story of freedom.

Seventh, and possibly most important of all, we must keep faith with ourselves and our allies. Let the Communists entangle themselves in devious Machiavellian plots. In foreign relations, as in personal relations, honesty and frankness are the best policies.

With our minds so much on the Far East, I cannot help but recall the teaching of Confucius (and this the Chinese Communists would do well to recall) that there are three essentials to a state—a revenue, an army, and good faith. Of these three, he said, "the greatest is good faith. Without a revenue and without an army, a state may still exist, but it cannot exist without good faith."

Senator George, of Georgia

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a newspaper article entitled "Senator GEORGE Is Most Powerful Single Solon," written by Martin S. Hayden, of the North American Alliance, and published under date of February 27, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SENATOR GEORGE IS MOST POWERFUL SINGLE SOLON

(By Martin S. Hayden)

WASHINGTON, February 27.—The venerable WALTER FRANKLIN GEORGE seems to prove a paradox—that as senatorial togs get older they become more durable.

At 77—and after 33 Senate years—GEORGE, of Georgia, is not just the senior Member of the United States Senate. He is also the most powerful single man in Congress. As the Senate's president pro tempore, he holds titular rank over all his colleagues.

As the Foreign Relations Committee chairman he has three times demonstrated in recent weeks that he is the strongest foreign-affairs voice Capitol Hill has heard since the passing of Michigan's Arthur Vandenberg.

As the senior member and ex-chairman of the Senate Finance Committee, his is the single vote most likely to make or break a tax bill.

And, in almost every other field of legislative business—from reciprocal trade to the slapping down of Joe McCarthy—one question dominates among predebate doers: "Where does WALTER GEORGE stand?"

It wasn't always so with the big, slow-moving, gray-haired man whose ponderous voice echoes a political era when statesmen needed no mechanical microphones to make themselves heard by a crowd.

GEORGE entered the Senate in 1922 as an avowed conservative supported by businessmen, the power interests, and Georgia's dries. As those groups thought, so did WALTER GEORGE vote. It might have been unfair to state (as some did) that GEORGE lacked political courage. But certainly he was troubled by indecision when Georgia, like other Southern States in the 1930's, split between those who went New Deal and those who

stuck with the interests and traditions of the Old Dixie.

During a period of wavering, GEORGE supported the National Reconstruction Act (NRA) and the Agricultural Adjustment Act (AAA) but opposed investigations of private power and the death-sentence act on public utility holding companies. He was for the Tennessee Valley Authority, the Wagner Act, and social security, but against the Guffey coal-control bill, civil-rights legislation, and anything else pictured as an invasion of States rights.

The break with Franklin Roosevelt came on the Supreme Court packing plan. When the President suffered there his first major congressional beating, he put WALTER GEORGE at the top of his list of unreconstructed Democrats who had to be purged in retaliation. The President made his decision known on a Georgia campaign platform. After endorsing GEORGE's opponent, Lawrence S. Camp, he turned to the Senator on the other side of the platform and said with a Roosevelt grin:

"God bless you, WALTER. May we always be friends."

GEORGE rose solemnly, shook the President's hand and boomed out: "I regret that you have taken this occasion to question my democracy and to attack my public record. But I want you to know that I accept the challenge."

In a campaign marked by brass-knuckle tactics and undisguised play by the contenders for racial voting, GEORGE swept the field. Under Georgia's archaic county-unit system he got more than a majority of the whole unit count while Gov. Eugene Talmadge ran second and New Dealer Camp a bad third with less than one-quarter of the popular vote.

From then on no one accused GEORGE of being a Roosevelt man. In 1940 his seniority gave him the Foreign Relations chairmanship and a year later he gave it up to take the Finance Committee chairmanship. If they did not actually suggest the change business interests were pleased by the move that put a man they trusted in the tax-writing post that would have otherwise gone to the less-predictable Tom Connally, of Texas.

When the Democrats took over Congress last month, GEORGE returned to the Foreign Relations chairmanship, leaving another sound tax policy man, Senator HARRY BYRD, Democrat, of Virginia, in charge of finance. In 5 weeks he pushed through lop-sided Senate confirmations of three historic measures sought by the Eisenhower administration: the resolution authorizing the President to fight for Formosa and related regions, passed by an 85-to-3 vote; the southeast Asian (SEATO) defense treaty, approved 82 to 1, and the defense treaty with Nationalist China, which passed 64 to 6.

Urging the controversial authorization for use of American men in the defense of Chiang Kai-shek's Formosa, GEORGE, who lost a son in World War II combat, hit a new high of bipartisanship:

"I believe," he said, "that President Eisenhower is a prudent man. I believe he is dedicated to a peaceful world. I believe what he says and I am willing to act upon it."

By the time GEORGE was finished a retreat had begun by big-name Democratic Senators who, until the old man had his say, were talking of amendments that would have limited the President's freedom of action. GEORGE passed them off as trifling and told his colleagues to stop talking so the world might know of America's bipartisan unity.

When GEORGE's three-rollick job was done, Republican State Department officials hailed it as the hardest blow yet struck at world Communists who would picture America as a divided Nation.

In the Senate today there is speculation about how long GEORGE will be around to run

the show. Some say that, come 1956, he must either retire or be beaten by the established political power of Georgia's ex-governor, Herman Talmadge.

Others take a different view, Talmadge, they agree is the boss of Georgia, but WALTER GEORGE has lived to become a legend and legends are hard to beat in politics.

Nixon Makes a Good Ambassador

EXTENSION OF REMARKS

OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Nixon Makes a Good Ambassador," written by Marquis Childs, and published in the Washington Post and Times Herald of March 4, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NIXON MAKES A GOOD AMBASSADOR

(By Marquis Childs)

While he still stands high on the Democrats' list of ambassadors of ill will, Vice President Nixon is winning friends and influencing people from Central America.

The Vice President stepped into the middle of the bitter feud between President Anastasio Somoza, of Nicaragua, and President Pepe Figueres, of Costa Rica. He undertook not so much the role of a mediator as that of a catalyst seeking to bring a better understanding between two proud Latins.

There are increasing signs of his effectiveness in bringing peace between the two embittered neighbors. President Somoza has opened up the San Juan River to traffic, thereby resolving one of the chief sources of friction.

During his tour Nixon got publicly behind a project that has languished since the withering of the good-neighbor policy. That is completion of the Inter-American Highway, which has strategic as well as goodwill aspects and is dear to the heart of Central America. He also pledged himself publicly to speed up economic aid for Guatemala.

Those who followed the tour he made last year in Asia, and they include critics of the domestic brand of politics he practiced in the election campaign last fall, believe that fully as important as any specific achievement is the psychological effect of the touring NIXONS. Both the Vice President and his wife make every effort to be friendly and cooperative. There is never anything condescending or stuffy in their approach to their hosts.

Several of the countries they visited in Asia are in the neutral or uncommitted category. Nixon was careful to avoid any suggestion that they had better choose sides between East and West in the cold war.

An example was Indonesia where the Vice President made plain in a half-dozen speeches that he understood both the power, real and potential, and the problems of this new nation struggling to achieve statehood and stability. He was cheered by Indonesian audiences again and again in their country of 80 million people, the sixth largest in the world in population and with vast undeveloped natural resources.

On the practical side Nixon familiarized himself with the urgent problem of the Indonesian Government in disposing of its tin and rubber in order to get foreign ex-

change to try to build up industry. On his return to Washington the Vice President provided the extra push necessary to get an agreement signed providing that the United States would buy all Indonesian tin and rubber for at least a year.

All this is particularly important in view of the Asian-African conference to be held late next month in Bandung, Indonesia. The Indonesians are disturbed by statements in the American press to the effect that this is to be a Communist-dominated conference. Yet, as they point out, Pakistan, which is firmly allied with the West, is one of the inviting powers.

Among the 17 powers that have already accepted the invitation is Communist China, but whether the Red Foreign Minister, Chou En-lai will attend is not yet certain. Also among those accepting are the Philippines and Thailand, both members of the Southeast Asia Treaty Organization which recently met in Bangkok. Secretary of State John Foster Dulles is reported to have encouraged both countries to send representatives to help counter the Communist viewpoint put forward by China.

Nixon in his own estimate of the conference puts it down to the desire of newly independent people to show that they can get together to talk about the future just as do the great powers with a long history of diplomatic negotiation.

As Nixon concludes his Central American tour, there is already talk of another such good will expedition, perhaps as early as next fall, to the Middle East. On the assumption that he will be the vice presidential candidate seeking reelection with President Eisenhower, Nixon is planning to do all his traveling in this country in 1956.

Angry Democrats discussed after election in November various ways to punish Nixon for what they charge was a calculated use of the Red smear. One proposal was to force him to listen as a senior and conservative Democrat read the speeches Nixon made in Montana and Oregon. Nothing has come of these proposals. Told of the achievements of Nixon's good will tours, one of these still-embittered Democrats remarked:

"What you say may all be true and, if so, fine. I'm for keeping him out of the country all of the time."

Education: Democracy's Indispensable Weapon

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered before the convention of the American Association of School Administrators, at St. Louis, Mo., on Monday, February 28, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EDUCATION: DEMOCRACY'S INDISPENSABLE WEAPON

(Address of Hon. LISTER HILL, United States Senator from Alabama, before the convention of the American Association of School Administrators, St. Louis, Mo., February 28, 1955)

The public school, conceived in a frontier settlement more than three centuries ago,

is one of the great rocks on which our Nation has been built. In the early days of this Republic, learning, reason, and faith in the people's capacity to govern themselves inspired that adventurous spirit which dared trust the future of an infant nation to the judgment of the many instead of the dictates of the few. The lives and fortunes of individual Americans, the nature of our institutions, the quality of our industry, commerce, and agriculture, the conservation and use of our natural resources, the nature of our law—the destiny of the Nation itself—depend on decisions rendered by all the people. The public school was created to inform the popular wisdom.

The magnitude of the responsibility resting on public education was forcefully described by Jefferson when he declared: "If a nation expects to be ignorant and free in a state of civilization, it expects what never was and never will be."

The frontiers of our forefathers have faded from the American scene. Today we live among busy lanes of commerce, mighty industries, complex networks of communications, productive farms, great hydroelectric plants, and, now, the harnessing of nuclear power.

These are achievements of generations of American men and women educated in our system of free public schools—achievements wrought by a nation grounded in belief in the supreme worth of the individual man, his dignity, his freedom, his capacity to meet the challenge of each new age.

These are the values and traditions that have led people all over the earth to turn longing eyes toward America, to knock on her door for admittance. These are the values and traditions that have made people in the free nations turn to America for leadership in this time of crisis. These are the values and traditions upon which the greatness of America rests. These are the values and traditions that our schools must preserve and perpetuate.

Our schools, as has been so eloquently stated by your splendid president, Mr. Larson, "are the backbone of our national defense, the bulwark of our free enterprise system, and the foundation of a trained and loyal American citizenship."

Yet, anyone who studies our public schools today, as it has been my opportunity and responsibility to do as a citizen and a Member of your Congress, knows that American education is in serious trouble.

The millions of children attending school on a part-time basis, in makeshift quarters, in overcrowded classrooms, evidence the plight of education in America today. Census figures on the increased millions of children already born who will be crowding through our schoolhouse doors in the years immediately ahead pose an even more desperate situation.

Quantitatively and qualitatively we are possessed of an education deficit that threatens the very capacity of the American people—scientifically, politically, and intellectually—to cope with the most complex and most dangerous problems in the history of freemen.

Educationally speaking, we are still breathing the quiet air of the peaceful years before the wars and revolutions of the first half of the 20th century wrought a world filled with malice and fear.

As we analyze what has taken place in the world, we know that the fall of the western democracies from their preeminence was due not as much to the designs of evil men as that those nations lacked the clarity of purpose and resolution of mind and heart to deal successfully with the world disorders which made possible the rise to power of the totalitarian warlords.

The world disorder has forced us to adopt a radically higher and different defense concept, employing the most terrible and costly

weapons that man can devise, yet we have been willing to limp along on an educational system that is wholly inadequate for turning out sufficient numbers of highly trained citizens and for meeting the multiplied demands for moral discipline and wisdom of great affairs.

The hour demands a radically higher and different concept of education.

Our supreme and ultimate aim is to build a world in which all men may live together in peace. But, if we are to build the peace, we must first be able to survive.

We know that our ability to survive in this era of warlords of aggression rests upon our ability to marshal superior brainpower against the brawn of overwhelming numbers. And our edge is slipping away as our educational system fails further and further behind in the quality and quantity of its product while Russia is pushing her educational effort to unprecedented heights.

One field in which this is clearly apparent is that of the training of engineers and scientists.

Our defense authorities tell us that Russian schools this year will graduate some 54,000 engineers, as compared with only 19,000 to be graduated in the entire United States. This is a ratio of 3 to 1. The ratio is as bad or worse with respect to physicists and scientists of every kind. But this is not the worst of the story of how Russia is outstripping us. Russian facilities will turn out approximately a quarter of a million technicians in nonengineering categories this year, while Americans with comparable training will number but 10,000. This is a ratio of 25 to 1.

Dr. M. H. Trytten, of the National Research Council, and Dr. John R. Dunning, atomic expert and dean of Columbia University School of Engineering, have warned that if present trends continue—that is to say, if our education systems fails to effect a sharp increase in the annual output of engineers and other scientific graduates, the Russians will catch up with us in the next 5 years and after that they will pass us in the race.

The same warning has been echoed by Prof. Joel Hildebrand, president of the American Chemical Society. "In producing scientists," Professor Hildebrand declared, "we need to run very much faster if we intend to win the race for survival."

Today we are reaping the harvest of years of neglect of our educational system—of waste of the talent of our youth. Dr. John K. Norton, head of the department of educational administration, Columbia University, told our committee at our hearings on school-construction legislation that "more than half the children who enter at the first grade fail to finish high school." He added that "even more important in terms of its effects upon our preparedness is the fact that only one-half of our top talent, those who get high marks in high school, who pass intelligence tests, who it is generally agreed could do college work and do it well, actually do so." "We are," Dr. Norton declared, "wasting one-half of our top talent in terms of giving them substantial professional, technical, or vocational training."

We must bring to a halt the 50-percent dropout rate in our elementary and secondary schools. We must make certain that more and more of the top talent among our high-school graduates is fully capitalized through college and university training.

We know that if we are to do these things—if we are to build our professional manpower resources—we must begin in our elementary and secondary schools for it is here that our young people must be trained and prepared to pursue college and university training.

Emphasizing the urgent need for training more scientists, the National Science Foundation in its annual report just submitted

to the President and the Congress declared that the fostering of scientific training involves first the matter of incentives.

"The primary and indispensable incentive," the National Science Foundation report declared, "is a deep, personal, and indefatigable interest in scientific discovery. To find ways to promote that interest is," the report concluded, "of first importance and leads directly to the quality of the teaching in the secondary schools."

We must sharply increase our supply of well-trained teachers. To do so, we must lift the level of teachers' salaries from its present rank among the lowest of all employed groups in America to its rightful place.

Indeed, the hour demands a bill of rights for the teacher. A bill of rights guaranteeing a salary which will enable the teacher to enjoy a good standard of living, to permit recreation and travel, continued study and educational growth, and provide security in old age.

The bill of rights must go further. It must recognize the essential worth and dignity of the teacher and assure full opportunity to take part in the life of the community—outside the classroom. The teacher must be free of the petty restraints and interferences with his personal life that are so often imposed in many communities. The teacher must be protected from the unprincipled demagogic attacks that fetter the mind, breed suspicion and fear, and threaten the very destruction of free public education.

Teaching has long been called a profession. We must make it a profession, in fact—appreciated and honored in the community, adequately paid and acclaimed for devoted public service.

The total accumulated needs of our educational system are so great that we cannot, with any reasonable hope of success, attack them all at one and the same time on any major scale.

Today the States and local communities and the across-the-board needs of education are straitjacketed by our \$12 billion classroom deficit and the 6-year certainty of continued recordbreaking school enrollments. Our best hope of relieving the deficit and of enabling the States and local communities to turn more of their efforts and resources to raising teacher salaries and to meeting the other needs of education lies in the Federal Government putting its shoulder to the wheel and providing substantial Federal aid for school construction.

As soon as the returns of the elections last November were known and it became evident that I would be chairman of the Senate Committee on Labor and Public Welfare, I pledged to our parents, teachers, and school officials that the very first bill that I would introduce in the new Congress and the very first bill that I would take up in the committee would be for Federal aid for school construction.

On the very first legislative day of the Senate, I, along with 29 of my Senate colleagues, introduced Senate bill 5, providing a billion dollars in Federal aid for school construction over a 2-year period.

On the same day the President referred to the school crisis in his state of the Union message and announced he would have more to say in a special message on February 15. This was encouraging but the idea of waiting another 5 or 6 weeks to see what the President might say would—it seemed to me—involve a breaking of faith with our parents, teachers, and school officials to whom I had pledged full speed ahead. So we moved forthwith with hearings and consideration of Senate bill 5 and similar bills that were ready for action.

As we know, the President early this month sent to Congress his education message and the administration bill. Our committee moved promptly to hold hearings and consider the bill.

The administration bill provoked a storm of protests from educators and school officials. Spokesmen for leading educational organizations, experts on school financing problems, State school laws, and State constitutional provisions came before our committee at the hearings and literally took the administration bill apart.

One witness called it Federal aid for investment bankers. Others said they are prohibited by their State constitutions and State laws from complying with the loan provisions of the bill. Still others said their school districts could not afford to go further into debt or pay interest or amortize Federal loans or pay rent on school buildings without seriously reducing the already inadequate funds for salaries to teachers.

Stating that the bill provides "much too little aid and much too much control," Dr. William Carr, executive secretary of the National Education Association, declared that the NEA refuses to "embrace untested and hastily formulated proposals which do not conform to the existing pattern of State and local school administration."

Dr. Carr declared further that the bill, while hedged about with unnecessary restrictions and controls, provides only token assistance.

He showed that while Secretary Hobby and Commissioner of Education Brownell have spoken of the administration's bill as a proposal to set in motion a \$7 billion school program, analysis of the bill reveals that actually the only Federal expenditure for construction provided is \$67 million a year for 3 years—less than 1 percent a year of the huge \$7 billion figure Secretary Hobby and Commissioner Brownell have been talking about.

Dr. Edgar Fuller, executive secretary of the Council of Chief State School Officers, told the committee that he had "never seen a bill that had more Federal control. Under the bill," Dr. Fuller declared, "there would be General Accounting Office people, tax attorneys, estimators of building values, and a horde of Federal officials in local school districts. The bill," Dr. Fuller declared, "is written with the tone of a mortgage banker who is lending money to a pauper and is going to tie him down just as solidly as he can to make sure he gets back every cent plus a good rate of interest. As this bill is written," Dr. Fuller declared, "the Federal Government will eventually make a profit at the expense of the school districts of the county most in need. The Chief State School Officers," Dr. Fuller declared, "would not favor the bill because it would set up separate State agencies and because it would be too expensive and because it would be an example of Federal discrimination against schools in contrast with generous Federal grants to highways, hospitals, and other physical facilities in the States. It would," he continued, "make education an orphan, deny it broad sources of income that every other service has and throw the schools back on real estate taxes as a permanent policy."

Our committee heard either in person or by telegrams and other communications from 40 out of the 48 State superintendents of education. Not one favored the bill.

Dr. Carr and other educators cited as the proper kind of approach to school construction legislation the bills developed and sponsored by the late Senators Elbert Thomas, of Utah, and Robert Taft, of Ohio, and myself. The bills embodied these fundamental principles:

1. Direct grants to all the States;
2. Allocation of funds on an objective formula;
3. Administration of the funds by the established State and local agencies.

We have twice passed in the Senate by overwhelming vote, bills containing these principles. These are the principles of Senate bill 5.

Every day of delay deepens the crisis in our schools.

The testimony before our committee made clear that with the passage of Senate bill 5 at least 42 States, under authority of State statutes already on the books, can begin at once to put Federal funds to work along with State and local funds to build schoolhouses for our children.

I am urging that Senate bill 5, strengthened and fortified in every possible way be quickly brought to the Senate floor that we may pass it now. With your splendid help, we shall win the battle.

Please let me take this opportunity of telling you how helpful the support of your association has been in the fight for our Oil for Education amendment, which will dedicate to education the income from the oil wealth of the Outer Continental Shelf. With your help we won adoption of the amendment in the Senate in the last Congress. We have reintroduced the amendment and are carrying on the fight for final victory.

From these oil resources \$150 million has already come into the Treasury and the Department of the Interior has predicted that the revenues will ultimately exceed \$3 billion.

The \$150 million that has already been derived and the revenues that will follow should be put to work to help meet the financial crisis in our schools and colleges.

Here is nontax revenue for relieving the financial straits of our elementary and secondary schools, for providing more and better schools and better trained teachers, and for scholarships, fellowships, and training and research grants. With your continued help, my friends, these revenues will become education's endowment for the future.

As we provide for the education of our children, we nourish the wisdom of America at its roots, we strengthen the well-springs of our democracy, we build the strength and security of our country and build for the peace of the world.

Judge Harlan Before the Senate

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Judge Harlan Before the Senate," published in the Chicago Daily Tribune of February 28, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JUDGE HARLAN BEFORE THE SENATE

Judge John Marshall Harlan has been testifying before the Senate Judiciary Committee which is considering his qualifications for membership in the Supreme Court.

Judge Harlan, in substance, asked the Senate to take him on trust. The nominee did not deny that he had been a member since 1952 of the advisory council of the Atlantic Union Committee. Yet when the objectives of this organization were read to him, he professed astonishment that he had been supporting a movement to drive the United States into a political union with a number of European and other foreign countries, with a common citizenship, common foreign policy and defense establishment, unified currency, economic integration, and unrestricted immigration.

Judge Harlan said if that was a correct statement of the objectives of Atlantic Union, "I disassociate myself." We should say that this awakening comes rather late in the day.

We find it difficult to believe that an experienced lawyer, a sitting judge of the United States Court of Appeals in New York, and a worldly man could be as naive as Judge Harlan seeks to make himself out. He could not have been around for 4 years, with the newspapers available, let alone being a member of Atlantic Union Advisory Council, without knowing at least generally that it is committed to the liquidation of American sovereignty.

A lot of Communists and members of Communist fronts have testified that they were so simple minded that they never knew that they were being used for a revolutionary purpose. It is difficult to credit their testimony as to Communist fronts; it is difficult to credit Judge Harlan's as to one world fronts.

The judge admitted membership in the Citizens' Association for the United Nations, but again said he had no idea of its program or aims and would drop his membership. "I am not," he said despite these connections, "an internationalist, a one worlder, nor a union now."

Again, Judge Harlan said he felt that a Supreme Court judge, when he takes the oath, must resign from all such organizations as those he was questioned about. But the fact is that the candidate already is a judge of a very important Federal court, and not until now has he felt it incumbent on himself to put aside connections with internationalist organizations. If a Supreme Court justice should not be encumbered with such prejudicial baggage, why doesn't the rule hold equally for a judge of the court of appeals?

Judge Harlan was noncommittal when the claims of treaty law as against the supremacy under the Constitution of internal law were brought up in questioning. He would not declare himself, although the seat for which he has been nominated may prove decisive in tilting the Court toward the extinction of American sovereignty and constitutional liberty.

It is no pleasure to take note of these matters. Judge Harlan is a distinguished lawyer and in his brief career on the court of appeals, has shown judicial capacity of a high order. Nevertheless, the testimony before the committee raises the gravest question of his fitness for the Supreme Court. It would be a great mistake to forget that, in the steel seizure case, three Supreme Court judges took the position that obligations assumed under the U. N. treaty authorized the Federal Government to seize property in violation of the Constitution. The margin of safety on the Court is already narrow. Surely among thousands of learned and judicially minded lawyers in this country, at least one can be found who can pass the most rigorous of Senate examinations without raising any doubts of his fitness.

Centenary of St. Mary's College, Near South Bend, Ind.

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement

in commemoration of the centenary observance this year of St. Mary's College, near South Bend, Ind.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

**CENTENARY OBSERVANCE OF ST. MARY'S COLLEGE,
NEAR SOUTH BEND, IND.**

St. Mary's College for women, the first Catholic women's college in the United States empowered to grant degrees and the first to confer bachelors' degrees continuously, celebrates the centenary of its establishment at its present site just north of South Bend, Ind., during 1955.

The college began as an academy for girls in Bertrand, Mich., in 1844 and held its first commencement 4 years later. Four young French Sisters of the Holy Cross, members of the order established 2 years previously, came to the Indiana frontier in 1843 to assist the priests and brothers who had founded the University of Notre Dame only a year before.

The Sisters began their work in America by assuming housekeeping duties for the new mission school of Notre Dame, but soon established their own girls school at Bertrand, 6 miles north of Notre Dame, and the school was chartered by the State of Michigan in 1851.

As the decade of the 1850's opened, the Sisters came to realize that Chicago was fast replacing Bertrand as the area's population and trading center.

Early in 1855, the Sisters of the Holy Cross moved their young school to its present location north of South Bend, Ind., and west of the University of Notre Dame. The State of Indiana promptly granted an academic charter to the school (February 28) "for the education of young ladies in the various branches of arts and sciences . . . and to confer such degrees upon scholars as are usual." In April 1855 the cornerstone was laid for the first building.

The convent and novitiate later (1863) became the motherhouse of the United States Sisters of the Holy Cross.

Under Mother M. Angela, first directress of studies, who guided the school until 1870, St. Mary's developed a curriculum acclaimed by both Catholic and non-Catholic educators.

While emphasizing the study of the liberal arts—still the foundation of a St. Mary's education—the college curriculum continued to add specialized courses.

The most memorable event for the young science department at St. Mary's came in 1899 when the first long distance wireless transmission in the United States was received at the college.

Prof. Jerome Green, of the University of Notre Dame, unaware of Marconi's achievements in Europe a few months before, amazed a group of newsmen by successfully sending a message from the Notre Dame campus to St. Mary's, more than a mile away, on April 19, 1899.

The physical growth of the campus has kept pace with the academic development of St. Mary's. Magnificent LeMans Hall, a tasteful combination of administrative offices, resident rooms, and classrooms, was built in 1926 at a cost of \$1,250,000 and a home economics practice home was erected in 1939.

The college marked the centenary of the founding of the Sisters of the Holy Cross with the building of a 90,000-volume library in 1941. A new 30-room science hall will be dedicated on April 23, 1955, as one of the major events of the year's centenary program and a modern fine arts building and auditorium will be begun on February 26, 1955, as a centenary project.

Sister M. Madeleva, CSC, current president of St. Mary's succeeded to the presidency of the college in 1934. A world-renowned poet

and educator, Sister Madeleva has had a strong influence on the intellectual and physical growth of St. Mary's.

Under her guidance, St. Mary's in 1944 established the Nation's first graduate school of sacred theology for laywomen and sisters. This pioneering graduate school, under papal approbation, offers the master's degree and doctorate in religion and a number of summer schools of theology have been opened throughout the country as a result of Sister Madeleva's inspiration.

St. Mary's College, in its centenary year, now ranks as the largest resident Catholic women's college in America.

St. Mary's offers courses leading to the degree of bachelor of arts, bachelor of music, and bachelor of science.

**The Republican Valley Conservation
Association**

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

Mr. CURTIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me, entitled "The Republican Valley Conservation Association."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

**THE REPUBLICAN VALLEY CONSERVATION
ASSOCIATION**

(Statement by Senator CURTIS)

I should like to take a few minutes today to call the attention of this body to a very important development which is taking place out in Nebraska. I refer to the reorganization of the Republican Valley Conservation Association, which has made great strides during the past 15 years, and has built a reputation for effective promotion of flood control and irrigation in the upper Republican River watershed.

Many Senators will recall the disastrous flood of 1935, when 112 persons were drowned and tens of millions of dollars of property loss sustained in southwestern Nebraska. It is interesting to note that the numerous flood-control conferences which were called through the years, to deal with the perennial flood threat, found Gov. Arthur Weaver, of Nebraska, among the most active advocates of a complete program of flood control from the headwaters down. Congressman PHIL WEAVER, who succeeded me in that great First District of Nebraska, is the son of the illustrious Governor, and has taken up the campaign where his father left off, determined to complete the job that is so nicely underway. The whole decade of the thirties witnessed repeated droughts and floods. Frequently, as in 1935, heavy floods would be suffered in the spring, then the crops would be lost that fall as a result of drought. Clearly, the only possible method of stabilizing agriculture in that area lay in a program involving the storage of floodwaters in the spring, which could subsequently be spread upon the land in the summer months in the form of supplemental irrigation. For instance, during the year just passed (1954), this territory received less than 10 inches of moisture. To meet this challenge, many of the State's outstanding citizens have come forward and put their shoulders to the wheel.

Nebraska has furnished many outstanding workers in the field of reclamation. C. Peterson

Peterson, of Lincoln, is currently serving as president of the National Reclamation Association and one of the greatest authorities nationally on irrigation from ground water sources is Dr. E. C. Condra of the State University, Lincoln. Also, the lower Republican River had had its share of illustrious leaders who have unselfishly devoted their efforts to the furtherance of such a program. Any such list would have to include Oswin Keifer, of Superior, the late Paul Spence, of Red Cloud; Ben Harrington, Leon Sprague, and Halpert Thomas. Also, northwestern Nebraska, and the Platte River territory generally, have brought forward their own group of men who have helped mightily to make our State a better place in which to live.

But no group has ever launched a program of action with as many strikes against them as did the Republican Valley Conservation Association. The organization was formed in McCook in 1940 under the vigorous presidency of Harry D. Strunk, who himself served as director for many years, representing Nebraska on the board of the National Reclamation Association. The Republican Valley group was told by the United States Corps of Engineers that no flood protection was possible in the upper Republican, inasmuch as the valley possessed no satisfactory sites for dams and reservoirs. This would have stopped men of lesser courage. I am rather proud that, responding to a request of that body, I personally urged a review of the reports on the upper Republican by the Engineers Corps. Also, the association sent representatives out into the field, and recorded detailed statements of landowners, setting forth the actual property losses which they had sustained in 1935 and subsequent flood. These sworn statements helped the Engineers Corps reappraise the potential flood damages, and increase its estimate of benefits which could flow from the construction of flood-control reservoirs. And, fortunately, a review of the upper Republican enabled the corps, and the Bureau of Reclamation, to come up with a list of about a dozen reservoir sites. Here, then, was the basis for a sustained drive by which the people of that area could appeal to the Congress to reclaim their lands and usher in an era of irrigation farming.

Many other headaches confronted this little group of citizens. They immediately discovered that, because of State and Federal statutes, it would be necessary to negotiate an interstate compact between Nebraska, Kansas, and Colorado, legally apportioning, for consumptive purposes, the flow of the Republican River and its tributaries. And such a compact had to be ratified by the Congress. With the everlasting help and guidance from the late Senator Hugh Butler, together with all other members of the Nebraska congressional delegation, these initial legislative hurdles were cleared.

Then World War II broke loose. It was apparent that the United States would be fighting for its very life, and all critical materials were to be diverted to defense purposes. So it was that a good many of the members, and some of the officers of the Republican Valley Conservation Association, took the view that it would actually be unpatriotic for the organization to carry on its activities during the war period. It was proposed that they suspend their efforts until the war was over, but level heads prevailed and the group decided to carry on for, after all, a stepup in the production of food supplies comprised one of the methods by which such areas could make their maximum contribution to the Nation's welfare during that emergency period.

It was well that they continued active, because they were able to bring about Federal appropriations sufficient to complete investigations by technical agencies of the

Federal Government. Thus it was that they were ready to have included in the Flood-Control Act of 1944 authorization of 10 or 12 upstream projects. Since Congress passed that measure, Enders, Medicine, Bonny, and Culbertson Dams and Reservoirs have been constructed, one by one, together with several diversion dams. This is a tremendous beginning toward a basinwide program, which will ultimately enrich that area immeasurably. Senator Butler used to say that completing the flood-control and irrigation program in the upper Republican Basin would mean more, economically, than striking oil in southwestern Nebraska.

But as the years went by, some of the original band of loyal sponsors of the program, including Dr. M. Campbell, of McCook, treasurer, and P. N. Foster, director, from Imperial, passed away. The organization encountered considerable difficulty in meeting its moderate financial requirements. Some of the leaders have been obliged to invest substantial amounts of their own money in order to keep a vigorous program running. McCook, the headquarters of the organization, has always contributed a good deal more than its proportionate share among the 32 member towns. But with the firm backing of the McCook Chamber of Commerce, under the presidency of Joe Rothmeier, a special committee has now been named, including Ralph G. Stevens, John Van Auken, Elwood C. Ackerman, and Ben Hornel.

Also, a few of the forward-looking business firms in Lincoln, Omaha, Kansas City, and Denver have made modest contributions through the years. Unquestionably, it is to their enlightened self-interest that they do so. After all, more than \$100 million of Federal funds alone have been expended to date in the upper Republican, and \$50 million to \$75 million remain to be spent before the job is finished. This will treble the farm production in that area. Supplemental irrigation brings in sugar beets, potatoes, increased corn crops, and multiplies materially all phases of livestock production. Growth of these crops also brings, in its wake, the processing plants needed to handle such products. Further, completion of the job will step up the population and the buying power materially, and it will provide permanent protection against recurring floods. All of these things are important within the market area of Omaha, Denver, and Lincoln. By the way, irrigation is universally conceded to be the biggest single factor which has caused population in the 17 States to increase nearly 2½ times as fast as population in the 31 Eastern States during the last 50 years. Without irrigation, western Nebraska would undoubtedly have lost population heavily in the decade of the thirties and subsequently.

One of the principal reasons that I wished to speak today was to urge that the Congress give sympathetic consideration of the proposal for appropriations for investigations by the Engineers Corps and the Bureau of Reclamation, not only in Nebraska but elsewhere in the Nation. It seems to me that we should have a reservoir of projects built up, from those which are found practical and feasible, so that construction can be inaugurated at the earliest possible date. You are all undoubtedly aware of the fact that President Eisenhower himself has said, "I am recommending increased funds for general investigations by the Bureau of Reclamation to insure a proper basis for project authorization." We must have investigational moneys from which detailed investigations can be undertaken on the Red Willow, the Pioneer, either Wray or Parks, and along those three Kansas tributaries, the Beaver, Sappa, and Prairie Dog, which enter the Republican below Oxford. It has already been 11 years since these projects were authorized by the Congress, but no detailed investigations have yet been undertaken.

I want to emphasize today that I am especially ambitious for this program because of the great record which the Republican Valley Conservation Association has made in its efforts to develop southwestern Nebraska, northwestern Kansas, and southeastern Colorado. Not only has Harry Strunk continued to serve as president in the intervening 15 years, giving unselfishly of his time and energies, but he has been surrounded by other good citizens who, likewise, have made a great contribution.

Mr. Strunk has stepped aside now, and become chairman of the board of directors of his organization, welcoming to the presidency H. E. Robinson, who just retired as director of the Kansas River District, Bureau of Reclamation. It was he who built these projects that today stand as a monument to them, and to the farsighted Members of this Congress who have appropriated the necessary funds. And it is Harold Sutton, one of McCook's real leaders, who today serves as treasurer of the organization. And there is another man who has served the group extremely well through the years. He is M. O. Ryan, who served as executive secretary of the organization from 1940 until World War II struck, in 1942. Since 1943, while being otherwise employed in Washington, his extensive knowledge of the entire area and of the complex problems involved has made his judgment invaluable to the Federal agencies and to the Nebraska congressional delegation as they sought to push this program forward.

There are some who maintain that Federal appropriations for development of western areas must be reduced. Let me point out that W. A. Dexheimer, Commissioner, Bureau of Reclamation, states that for the fiscal year of 1954, all appropriations for reclamation construction through the 17 Western States comprised only one-fourth of 1 percent of the national budget. Geographically that is more than one-third of the land area of this country. Of course, President Eisenhower has already asked Congress for a somewhat larger allocation of funds for the fiscal year beginning next July 1. In addition to funds to step up navigation facilities on the Missouri River, which runs through eastern Nebraska, and for the construction of agricultural levees at numerous points, an appropriation is asked for multiple-purpose power project at Gavins Point, Nebr. And then, in the field of reclamation, the President is asking more than \$10 million in appropriations for the Bostwick, the Frenchman-Cambridge, and the Sargent projects in Nebraska.

Appropriations alone do not meet the total needs, however. Refinements in our Federal statutes must be made from time to time. Already, during the 84th Congress, I have joined hands with 11 other Senators from the Great Plains, including my colleague Senator HAYSKA, in introducing S. 787, which paves the way for the negotiation of a compact to achieve maximum conservation and development of water resources throughout the Missouri Basin. Also, I have joined with seven other Republican Senators from west of the 100th meridian, in introducing S. 863, which strengthens the control of the individual Western States over navigable and unnavigable waters within their boundaries. Such a bill appears necessary in order to clarify the nebulous area between State and Federal jurisdiction over reclamation and flood-control activities.

Also, my esteemed colleague, Congressman A. L. MILLER, of Nebraska, who is the ranking Republican member of the House Committee on Interior and Insular Affairs, has reintroduced a bill which he proposed in the last session, which is now numbered H. R. 1824, clarifying national policy in regard to the development of certain water resources. These are among the measures which Congress will need to enact if we are to meet our full responsibility in paving the way for

maximum development of arid lands throughout the West.

A watershed like the Republican is honeycombed with many small creeks and streams. In between the major tributaries, upon which larger projects can be built by the Engineers Corps and the Bureau of Reclamation, lie innumerable smaller streams, each of which provides a flood threat. The Soil Conservation Service, an integral part of the United States Department of Agriculture, is geared to treat these areas with small retardation dams. My mind goes back to 1950, when Senator Kenneth Wherry, an active member of the Senate Appropriations Committee, personally inspired the first appropriation of \$500,000 for the Soil Conservation Service to undertake surveys to ascertain those watersheds where feasible projects existed. Our late Congressman Karl Stefan, who was simultaneously serving on the House Appropriations Committee, put his shoulder to the wheel, and both bodies of Congress approved that appropriation. From the resulting survey, the first of a number of pilot projects are ready for construction in 1955. The McCook Gazette of January 26 gave a map, in complete detail, of Dry Creek watershed project, the first in that area to be constructed under the Hope-Aiken Watershed Protection Act, which was passed by the 83d Congress. These projects do take time, but once constructed, they last a lifetime.

Commissioner Dexheimer offers concrete evidence of the national value which reclamation projects offer to our United States economy. He reports that Federal-tax revenues from reclamation areas, since 1916, have exceeded \$3 billion. This sum alone exceeds by 25 percent the total cost of all Bureau-constructed projects in the past 50 years, or since the Reclamation Bureau was established. Not only do landowners on reclamation projects enjoy enhanced revenues, as a result of irrigation, but the adjoining urban areas share substantially in the increased revenue. As an example, in 1953 reclamation project farmers had an income of \$550 million, whereas the nonfarming urban areas, which had these projects in their immediate vicinity, enjoyed total income of approximately \$786 million.

We have reason to rejoice this year over the fact that hundreds of additional acres of fertile land in the Missouri basin will be brought under supplemental irrigation for the first time. Completion of the last 50 miles of irrigation canals on the Frenchman-Cambridge project, east of Cambridge, and the 13-mile Franklin Canal on the Bostwick project, jointly account for very substantial acreage in southwestern Nebraska which will be irrigated this year for the first time.

To my way of thinking, these groups like the Republican Valley Conservation Association are the only device by which 32 member communities, or whole sections of a State, can pull themselves up by their own bootstraps. I think that the modest support required from chambers of commerce, city councils, and county commissioners, to maintain such organizations, comprise one of the best possible investments in the future welfare of any State.

As I stand here today, I am concerned about the fact that the Department of Agriculture reports more than 26 million acres of farm land in the whole dust bowl area are in condition to blow this spring. In many areas the Great Plains are experiencing the worst drought since the decade of the thirties. Without adequate snow cover, and frequent spring rains, the Dust Bowl could be revived before root fiber from the 1955 crop affords protection against wind erosion. This perennial threat will be with us constantly until we have brought the benefits of supplemental irrigation to the maximum acreage possible, and stepped up the volume of cover crops and legumes which effectively anchor the soil.

Let me confide something to this great body, the United States Senate. The very last day he was alive, our beloved Hugh Butler spent the afternoon in his office conferring with top level officials, seeking ways and means to step up the tempo of this program in the upper Republican watershed in Nebraska. I was there, as were Secretary McKay and other officials of the Department of the Interior. That night he was stricken, and died 24 hours later. To Mr. Strunk and Mr. Robinson, and the directors from the individual cities and towns that comprise the association, I send greetings, confident that they will continue to enjoy the support of all city, county, and State officials. Their efforts will forever remove the threat of repeated floods, and will temper the droughts, and thus stabilize the economy as nothing else in that whole area can do.

I trust that this important program may go forward to completion.

Peace Through Power

EXTENSION OF REMARKS OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech entitled "Peace Through Power," delivered by the Assistant Secretary of Defense, Fred A. Seaton, at Kansas State College at Manhattan on February 9.

On this occasion Secretary Seaton was awarded by Kansas State College at Manhattan the honorary doctor of laws degree.

Manhattan is the home town of the Secretary and he is a graduate of Kansas State College.

Secretary Seaton is a successful businessman and newspaper publisher who has had an outstanding career in public life. At the present time he publishes newspapers in Kansas, Nebraska, Colorado, Wyoming, and South Dakota. Through these mediums he wields great influence for the building of our Nation and the strengthening of our democracy.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PEACE THROUGH POWER

You are all familiar with the general aspects of our present world situation. You know the story of the spread of Communist influence and power from a numerically insignificant Russian political party prior to the October 1917 revolution to its present dominion, over 800 million people arranged over one-fourth the land area of the world.

In response to the common threat to their security, more than 40 of the nations of the world, including our own have allied themselves in several regional defense agreements.

The two blocs—the Communists and the free world alliance—now face each other across a narrowing world, and compete for the support of those nations which have not as yet committed themselves to the struggle.

The seat of military power of the Communist bloc is the Soviet Union. In terms of ground strength, this amounts to a standing army of 175 divisions, to which must be added the 70 divisions of the European satel-

lites. Communist China, furthermore, has more than 2 million men under arms. The amount of manpower the two principals could eventually mobilize is suggested by the fact that during the latter part of World War II, the Soviet Union had on its western front an active strength of over 400 divisions, and, further, on conservative estimates, that the Chinese military manpower pool amounts to over 20 million men. In contrast, at the peak of its military strength in 1945, the United States had 95 divisions (89 Army and 6 Marines) under arms.

On the sea, the Soviet Union commands virtually all the effective strength of the Communist bloc. Its submarine fleet consists of at least 375 vessels, 75 of which are long-range fleet types. It possesses 125 modern destroyers, and 24 cruisers, 15 of which are known to be modern, combat-worthy types. So far as we know, the Russians possess no aircraft carriers but we cannot dismiss the possibility that some may be under construction. Since World War II, the Soviet Union has built more combat ships—destroyers, cruisers, and submarines—than all of the free world put together.

In the matter of air strength, we estimate the Soviet Union to have an inventory of over 1,000 TU-4 bombardment aircraft, which are copies of our own B-29's. If we credit the Soviet air commands with the capability of in-flight refueling, which seems reasonable, it means that a substantial number of our vital cities and installations come within their range. And, of course, on a one-way mission, they could reach almost any target in the United States, if confronted with no opposition. We know also that the Soviet has an undisclosed but growing number of medium and long-range jet bombers, and that they are producing a better fighter than the MIG 15, which was used in Korea. Their total number of aircraft of all kinds exceeds 20,000, most of them tactical types—fighters, interceptors, and light bombers.

As you know, this brief recital of military means at its disposal in no way describes the true dimension and nature of the threat which comes from the Soviet sphere. Policy decisions in the Kremlin have resulted in a world situation which has influenced us to allocate since June 1950, a staggering portion of our national substance and effort valued at \$220 billion to the economically unproductive purposes of defense. Today, 60 percent of your Federal taxes go for the equipping and maintenance of a 3-million-man armed force.

The Communists know as well as we that the physical basis of all our military power is our economy, and that if this economy can be undermined and sabotaged, the effect may well be as disastrous to us as a major military defeat. We must not permit this to occur.

Moreover, we must also contend with the insidious threat of subversion, sabotage, and espionage within our own country and the countries of our allies, which can sap the strength and vigor of the most enlightened democracy. Externally, there is the continuous pressure of political and psychological warfare, of deceit and bluff and blackmail. All these are also part of the total threat, physical and moral, which militant communism poses to freemen.

Obviously this threat, total as it is in scope, cannot be successfully countered by military means alone. But the provision of adequate military strength, particularly for the years immediately ahead, is an indispensable prerequisite to every other action which we must undertake. We must maintain military forces in being sufficient to deter aggression, either limited or unlimited, or in the event we are attacked, to preserve the minimum territorial and military security essential to successful mobilization and subsequent prosecution of the war. Moreover, we must be organized for smooth and

rapid mobilization of our material and human resources.

This military capability to handle ourselves under any and all possible situations is the essential shield upon which we must rely to provide the protective sanction to the political, economic, and psychological pressures we must continue to exert against the Communist regimes.

To this end we have developed over the past 4 years a very potent military force. It is in fact, the most powerful we have ever maintained in time of peace. We have a Navy second to none, with its own steadily growing atomic striking potential. Our large and growing Air Force now consists of 119 wings which will increase steadily toward an ultimate goal of a minimum of 137 wings by 1957. We have a mobile amphibious striking force of 3 Marine divisions and 3 Marine air wings. With the cessation of fighting in Korea, our Army has gradually been reoriented toward a June 1956 strength objective of approximately 1,027,000 men. This represents a decrease of about one-third from the average strength during the Korean operations, but it remains well over 80 percent above the pre-Korean level.

And here I would like to talk briefly about this matter of ground strength, if I may. One of the foundation stones of our military policy is that our strength shall be integrated with that of our allies in such a way that the maximum power potential is made available to the community of allies. Throughout all these alliances there runs the understanding, written or otherwise, that each partner will contribute to the common cause those elements of strength which it is best able to supply, and to the limit that it is able to supply them.

In this great global system of alliances in which we participate, our Nation is peculiarly well suited to supply two vital elements—sea power and the striking capability of long-range land based air power. Our contribution in these particular categories is by all odds the preponderant one. We also have made a substantial contribution in ground strength, but in the very nature of things we cannot hope to supply more than a small part of the total number of troops required. The basic accounting unit of a land army is the man. Which suggests that within the special situation obtaining in each strategic area, the contribution in ground strength must bear a general relationship to the population of each interested nation. So we greatly understate the total ground strength available for our common defense effort if we do not count the very substantial contributions of our allies.

To our own 19 divisions should be added at least a hundred more which the free world could count on in any major war undertaken by the Soviet bloc. NATO presently has available to it an active ground strength equivalent of 48 divisions. The Republic of Korea has approximately 19 battle-tested divisions within a total force of 400,000 men. Japan has initiated the formation of its national security police force, and the Philippines have reestablished internal order and are rapidly building up their strength. The 12 West German divisions are to come. We feel, militarily, well able to take care of ourselves in the event of actual physical attack, provided we conduct our operations along lines which permit us to oppose our own factors of strength against the Soviet factors of weakness.

And this, I think, is the key to the success of our whole defense effort. There are certain areas in which we are greatly superior to the Soviet—our powerful and versatile economy, the depth and breadth of our technology, the enormous fire power and mobility assured by our intensive development of atomic weapons and our control of the seas. Most important of all, there is the universal appeal of the great system of values we have

moved to defend, as contrasted to the total disregard for human life and liberty which necessarily underlies the Communist philosophy.

It is of great significance to me that in 1952 United States produced half again as much coal as the Soviet, $2\frac{1}{2}$ times as much steel, 4 times as much electric power, 7 times as much oil, and 20 times as many automobiles and trucks. While free American agriculture was bringing in record crops, the Soviet staggered lamely along at about its level of 25 years ago. I am sure you would be interested as I was, in knowing that the USSR, still largely an agricultural nation, consumes more grain than it harvests, that its cattle population is 10 million below what it was in 1928, that its pork production has dropped by 5 million tons since 1940; that by its own admission the supply of meat, potatoes, and vegetables is unsatisfactory.

Our allies, on the other hand, have set remarkable records of food production. England now produces a surprising 56 percent of her food needs whereas she formerly imported about 80 percent. France and Turkey are now producing surpluses of wheat. Wherever free enterprise operates free men always win the battle of production.

I derive a keen sense of satisfaction in the marvelous technology which both supports and depends upon our economic system—the same technology which daily enriches our lives in its thousands of peacetime applications, but which when the chips were down could bring forth such vital weapons of war as radar, the VT fuze, and the atomic bomb.

But, most of all, I sense the great latent strength of a society whose goals represent the highest hopes and greatest expectations of men throughout the world—values which men the world over have repeatedly shown themselves ready to lay down their lives to obtain and defend—a sense of dignity for the individual, the right to worship, to speak, and to think as freemen, to have the love of family and friends, to enjoy the love of the land, and of one's ancestral home, the right to participate freely in a government of their own choosing, and to stand as equals before the eyes of the law. These deep and abiding aspirations we hold in common with all people, and in no way can the barren, atheistic philosophy of communism claim them as basic or even a fundamental part of its ideology.

In contrast, the Soviet has nothing to rely upon except force—force of the most brutal and callous sort. Many of you have read of our President's account of his deep shock when, as General Eisenhower, he learned from a high-ranking Soviet officer the Russian Army technique of clearing minefields. "When we come to a minefield," the Soviet officer told him, "our infantry attacks exactly as if it were not there. The losses we get from personnel mines we consider only equal to the losses we would have gotten from machine guns and artillery if the Germans had chosen to defend that particular area with strong bodies of troops instead of with minefields." This may be logical from a coldly analytical military viewpoint, but it is hardly logical in light of the fact that any regime, even a dictatorship, depends for its existence over the long term upon a certain minimum degree of acceptance by the people over which it exercises its authority. To me it shows weakness, not strength.

Nevertheless, there are certain areas in which we must concede the advantage to the Soviet bloc. Their numbers far exceed the combined strength of ourselves and our allies in sheer military manpower. Moreover, a differential population increase is presently weighing the manpower balance further in their favor, so that it may be expected to become more and more unfavorable to us as time goes by, unless we can associate ourselves with additional allies. In World Wars I and II, our side had a very

substantial numerical superiority, and this advantage had its influence in shaping our strategy and tactics in those two great conflicts. But the reverse will be true of any conflict which may be fought out on the present alignment of world power and this tremendously important fact demands our close and continued study.

The only logical remedy for a situation in which we cannot match the enemy man for man lies in the development of capabilities which nullify this enemy advantage. Fortunately, the controlling element in military operations is not mere manpower, but effective firepower, delivered at the time and place of decision. And in the development of such firepower, and the means of its effective delivery, our technology and our massive economy give us a long lead over our nearest competitors. Our arsenal of atomic weapons ranges from giants in the megaton range, which is to say the equivalent of 1 million tons of TNT, down to small tactical weapons which can be fired from guns for relatively limited effect. We have them in increased supply. The Army, Navy, and Air Force all are busily engaged in perfecting the tactics and techniques of employing these tremendous new additions to our military capability.

In the battlefield employment of atomic weapons the effectiveness of our Army has been enormously increased by the 280-millimeter atomic gun, the Honest John rocket, and the Corporal guided missile. All these powerful innovations are now available to our ground forces in Europe, and the recent North Atlantic Council meeting in Paris gave its approval to the proposal that atomic weapons be fully integrated into the basic strategic concept for the defense of Western Europe. It is our deep and earnest belief that the devastating curtain of fire which we shall be able to call down upon the enemy hordes will enable us to keep any would-be invader out of Western Europe and thus deny him his prize.

Measured in our capability to project destruction in the form of rockets, missiles, and bombs, our firepower in the air increases daily. The last B-29 has been retired from active service, and our long-range bombers now are mainly the jet B-47's and the combination jet and propeller-driven B-36's. The B-52's, a superb long-range jet bomber, is being received in increasing numbers and will eventually replace the B-36.

A point frequently overlooked is the fact that the capability of delivering massive firepower is not confined to the Strategic Air Command alone. Our Tactical Air Command also has a tremendous atomic capability. All the fighters and light bombers of the TAC will be able to carry either high explosives or atomic bombs, depending on what the target requires. All of its wings are modern, and all of its fighters are jets, in the high subsonic speed ranges. Our new fighter interceptor aircraft now in production, beginning with the F-100, will have supersonic speeds. Moreover, our great mobile airfields, the Navy aircraft carriers, have comparatively unrestricted access to the seven-tenths of the earth's surface which is covered by water, and can bring their sea-borne atomic striking forces to bear upon targets deep in the interior of the enemy's homeland.

We review this vast power which is ours with mixed feelings.

We can derive great satisfaction and confidence from the enormous increase which it represents over the power which was available to us even a scant 10 years ago. Yet we are sobered by the contemplation of where our weapons technology may lead us in the decade which lies ahead. Moreover, our problem is complicated by the fact that we neither can nor will prepare for initiating war as a conscious act of national policy. Adhering to our moral code, as a nation we

can only prepare for the eventuality that war may be forced upon us under unknown conditions at an uncertain future date. Thus, the element of chance in the preparatory phase of war is inherently larger in the case of democracies than it is with dictatorships, for we cannot with certainty predict when war will occur, if at all. We cannot predict, except within the general limits, the method of attack, or the exact direction from which it may come. Nor can we now foresee very far into the future the political arrangements which may result from the use of military pressures exerted by an aggressor prior to the outbreak of hostilities. These things we cannot know. We can know only that in this lawless world we must be prepared to fight at any time, with weapons that are better than those which will be used against us.

As a result, in the area of weapons procurement, we dare not put all, or even most of our eggs, in one basket. We dare not load our Armed Forces down with weapons which may, at best, have begun to be or become obsolescent even before the last lot has been delivered. The best that we can possibly hope for is to keep our weapons stocks at a level which will enable us to fight effectively with what we have, meanwhile pushing out the older versions with newer, more efficient models as they become available from an economy that has never been known to stand still.

There are those who constantly agitate for more of everything now—more planes, more guns, more of this and more of that. Sincere as they may be, they fail to take into account either the economic or the military problems involved. To over-burden our economy is to risk losing the struggle against communism without firing a shot. To overload the services with obsolete equipment is to risk defeat in battle. True war readiness consists in being able not only to fight today's war with today's weapons, but of being ready to fight tomorrow's war with tomorrow's weapons. This requires a sensible balance in weapons programing. And that, we now believe we have achieved.

This, I think, is the thing which we must keep always in mind in all our defense considerations. For our national security is not tied to a date on a calendar, or to a certain specified number of divisions, ships, planes, or men. It is not to be identified with any one type of weapon or any one strategic approach. Rather, it depends upon our continuing and increasing ability to meet successfully a variety of challenges—military, political, and economic—while maintaining the essential soundness and health of our economy and our political system. And this we must be prepared to do perhaps for 50 years to come.

There is nothing transitory about the threat to our Nation and our way of life, and there is nothing cheap or easy or simple about the things which we must do to protect and preserve them. These difficult and costly measures which we must undertake in our defense will demand the very best that is in us, the people of America. Among these responsibilities will be your own part in the great common effort we all must make to maintain our military readiness, our political solidarity, and our industrial and technological superiority over that of any possible enemy.

If we can do these things, we have an excellent chance for peace, and an accommodation between the free world and the Communist bloc which will effectively serve our interests.

From a plateau of great strength we can negotiate for the easing of tensions and the reduction of trouble areas dangerous to world stability. For many years, it may be a peace, not of good will, but of power, in which our national strength will be the validating factor. But it will be a peace in which free men can live and breathe, and pursue those

ends which tend to lessen the misery and increase the sum of human happiness in the world. It can, at the least, be a peace which will stop the flow of the Red tide which has engulfed so much of the world, and the opening of a more hopeful prospect for democracy than the one it has faced these past 20 years.

This is the peace which we must have, and can have, provided we remain patient, united, and strong.

Defense Argument Not All on One Side in Oil Case

EXTENSION OF REMARKS
OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Defense Argument Not All on One Side in Oil Case," written by John Harriman, and published in the Boston Globe of March 1.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEFENSE ARGUMENT NOT ALL ON ONE SIDE IN OIL CASE

(By John Harriman)

In no area have the voices of protectionism been louder and more insistent than in the matter of oil imports.

Leading the fight have been the domestic producers of oil, the coal industry, and John L. Lewis' United Mine Workers. These groups have consistently sought to have a lid clamped on the 1 million or so barrels of oil which we draw daily from foreign sources, mostly the Near East and Venezuela. And it now looks as if their efforts may meet with success.

Over the past weekend the President's so-called blue ribbon Cabinet Committee recommended just what the doctors of coal and domestic oil have been trying to order—a limit of foreign imports to 14 percent of domestic production, the amount which we took last year.

WHY NOT USE NEAR EAST OIL WHILE WE CAN?

Oil imports come from American companies, of course. These are the big internationals: Gulf, Socony Vacuum, Texaco, and the Standards of California and New Jersey.

This oil is, by and large, cheap oil, due to the high productivity of the fields of Venezuela and the Near East. It could undersell most oil in this country in a free market where costs would dictate selling price. It is for this reason that the coal and domestic-oil industries have sought to have it placed under quota. And they have sought to justify their moves by maintaining that restrictions on imports are necessary to a healthy domestic industry and that a healthy domestic industry is a prime requisite for national defense.

But many, including some of the best students of the industry, place the defense shoe on the other foot and say that our defense need will be best served by increasing imports.

Much of our imports come from the Near East, which is close to the Soviet orbit, and hence only available to us in peacetime. As one statistical service recently put it in a study of the industry, "If war came, it would make sense to have consumed their (Near East) oil during prior years, and to have saved ours for the time of dire need."

IMPORTED OIL IMPORTANT TO NEW ENGLAND

But there is another reason why it would seem the part of wisdom to draw on foreign oil as much as possible for our domestic needs today.

In the Near East, oil is about the only source of wealth, and economic progress in that area, as well as in Venezuela, depends on the royalties that American producing companies pay. If these royalties are reduced, by a cutback of production due to our limiting imports, these countries will suffer. Thus, governments at best none too stable would be still further weakened, and the cause of the Communist propagandists by the same token would be enhanced.

Finally, there is the broad question as to why the American people should be asked to subsidize with import restriction a domestic industry already lavishly favored by the tax break given in the so-called depletion allowance.

This is particularly true of us in New England. Oil is the only fuel that is relatively cheap in this area and that is due to our geographically favored position for imports. Every study of the New England economy has emphasized the importance to us of increasing oil shipments from abroad.

But the Cabinet Committee has recommended the opposite course. As a result, Congressmen from the Gulf States are preparing this week to write into the President's reciprocal-trade bill a provision limiting the import of oil.

Bank Consolidations Viewed as Serious Threat to the Future of Small Business

EXTENSION OF REMARKS
OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a press release dated February 25, 1955, issued by the National Federation of Independent Business.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

George J. Burger, vice president, National Federation of Independent Business, stated today that the recent announcement of the Federal Reserve Board citing 207 bank consolidations nationwide in 1954, contrasted with 116 in 1953, and 100 in 1952, is viewed by small business as a serious threat to their future in getting needed financial assistance through customary banking channels.

Small business notes with further alarm that the justification given for these increasing mergers in the banking field is credited to United States growth and spread of population in leading metropolitan areas—for example, New York, Philadelphia, and California.

Burger states: "The federation and small business generally cannot agree with the statement which appeared in the press that it has become necessary for large banks to open numerous neighborhood banks. The outlying or suburban communities would offer tremendous opportunity to local small banking facilities to be established and serve adequately both the needs of small business and the public." He concluded that the administration and the Congress must act effectively to arrest the trend in the larger segments of our economy, big business, big labor, big farm groups, or by failing to take the necessary action it will result in a serious

economic situation which has spelled ruin for most nations throughout the world. The spiral of gigantic growth in the hands of few segments of our economy opens up the door for socialistic planners.

Agricultural Price Supports

EXTENSION OF REMARKS
OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dated February 25, 1955, which I have received from George Stadstad, of Manvel, N. Dak.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MANVEL, N. DAK., February 25, 1955.

HON. WILLIAM LANGER,

United States Senator,

Washington, D. C.

DEAR SENATOR LANGER: It appears as though a vote will be taken again this year to determine if we have changed our minds from the last few years as to whether or not we want the high or low support for our produce.

Why do we have to vote on this issue every year as long as we have a support program? It seems, as in the past potato-support program, that as soon as the Department of Agriculture succeeds in obtaining enough votes in any one year to drop supports on any one commodity we never have an opportunity to vote on such a program again. The Government must think we change our minds from year to year, or they wouldn't require a vote each year to determine if we still prefer a high support. If we are apt to thus change our minds, then why not ask us to vote on 90-percent support on potatoes? We were asked such a question a few years ago and voted to go along without so-called Government interference. We cut our acreages, and potatoes went up. The Government put a ceiling on them. Why?

By lowering the supports on our crops 15 or 20 percent the Government would succeed in bankrupting agriculture, such as Mr. Benson did with the livestock men. Is this doing anyone any good?

I read from time to time where the Government cannot stand the continued expense of farm supports. That statement is too stupid to even be good politics.

I'm no economist, but I'm sure that very nearly 100 percent of the money put out by the Government for supports is returned to them in the form of income taxes, excise taxes, etc., and at the same time creating a healthier economy.

A very successful businessman friend of mine in California (a Republican) told me this winter that he was very much disgusted with the proposed Benson farm program. I asked him why, and also told him I was under the impression that most businessmen felt that as long as agriculture was supported so should other business. Here is his reply: "Let the Government support agriculture, and agriculture will support the rest of the economy."

I hope you see fit to vote for and work toward 90-percent rigid supports for the farmer, and also to bring potatoes back under price supports. Even with acreage controls. You know as well as I do that the sliding scale can't work for the farmer. If he has a good chop the price drops, and with a poor one it goes up when he has nothing to

sell. Sliding scale and lower price supports cannot work for us; for Mr. Benson and Ike, sure; anything to break agriculture.

Thank you for your support.

Sincerely,

GEORGE STADTAD.

Current Issues in Education

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address entitled "Current Issues in Education," by Dr. William G. Carr, executive secretary, National Education Association. Dr. Carr's address was delivered before the National Association of Secondary-School Principals in Atlantic City, N. J., on February 19, 1955. The address is timely and challenging, and I hope that every Member of the Senate will read the address.

There being no objection, the address was ordered to be printed in the Record, as follows:

CURRENT ISSUES IN EDUCATION

(Address by William G. Carr, executive secretary, National Education Association.)

My topic is Critical Issues in Education. We can forget the plural. The one issue I shall discuss is this: What is the proper role of the Government of the United States in the education of its citizens?

All agree that the welfare of our country demands good schools fully available to all our young citizens. All agree that our schools are not good enough. All agree that a quarter century of inadequate support has now developed into an educational crisis. The question is no longer whether the Federal Government ought to act in this matter. The question is: How should it act, and how quickly can it act?

The policy of the National Education Association is the result of years of study and experience. It calls for substantial Federal grants distributed according to an objective formula through the regular State educational agencies. It calls for clear written guarantees that educational policy remain in the States and communities.

We have been applying these principles to proposed school legislation for many years. We have stood fast by them when it was not popular to do so. Many of you can remember the stand we took on the National Youth Administration. During the depression, educational service to youth was needed on a scale far beyond the ability of the local communities and States to finance. The Federal Government responded not by helping the schools but by establishing the National Youth Administration. This Federal agency without administrative connection with the local high schools, proceeded to use Federal funds to educate selected segments of the population. Of course, the teaching profession opposed this development. Of course, we identified it as a dangerous infringement on local control of education, and eventually the National Youth Administration was discontinued.

Meanwhile, the Chief Executives, beginning with President Hoover and continuing to the present time, have each created commissions or other agencies to study Federal relations to education. Regularly, as these

commissions completed their work, they recommended Federal grants to the States. Regularly, these reports were transmitted to the Congress. Regularly, each session of Congress held hearings during which the same evidence was taken over and over again. Sometimes these bills got out of committee, sometimes they did not. On two occasions they passed the Senate but failed to come before the other House for consideration.

That process is still going on. Meanwhile, another process has been going on. School buildings are getting older; teachers are not getting any younger; and the supply of new teachers continues to dwindle. Increasing numbers of children and youth are receiving instruction from inadequately prepared teachers in overcrowded and unsafe buildings.

Is it not strange that the rich and powerful United States, which can perform miracles of production and construction, which has more wealth per capita than any other nation at any time in history, which can actually spend more for amusements than it spends for food, and which must have good education to survive, has continued to temporize with this situation?

Nevertheless, that is just what has happened. Meanwhile other functions of Government, notably highways, but not exclusively highways, have continued to demand and to receive more and more Federal money. Typically, these Federal funds are on a matching basis. They tempt the States to allot money to these favored purposes because they can get a Federal dollar for every dollar of their own. This Federal policy may cause the States to reduce their ability to provide adequately for their schools.

Our Government has also inaugurated a splendid, far-flung program of aid to education in other countries. We are sending some of our best teachers and educational leaders to distant lands to lay the educational foundations for national freedom and prosperity. But at home education has been largely ignored by our National Government.

We are told that our Government is in debt. So it is; but we do not forget that taxes were reduced last year while Federal grants for highways were nearly doubled.

Now let us see where we are right now in the process of persuading our National Government to accept its responsibility in education. It is not easy to summarize the entire situation. So many different conferences, committees, inquiries, hearings, bills, proposals, and counterproposals have clustered around a relatively simple proposition that we are in danger of overlooking the essentials. Let me try to review the main points in the record of the immediate past.

One of President Eisenhower's first recommendations after he took office in 1953 was the creation of a commission to study relations between the States and the Federal Government. This body, commonly known as the Intergovernmental Commission, has been operating for about 2 years. Originally, Dr. Clarence Mannon, formerly of Notre Dame Law School, was named chairman. Now this Commission is under the direction of Mr. Meyer Kestbaum, of Chicago. It had a subcommittee on education which is said to have drafted a report. Little has been heard from it in Washington for many months.

Also in 1953, the President recommended, and Congress promptly agreed, that a new Department of Health, Education, and Welfare be added to the Cabinet. The National Education Association and other civic and professional groups strongly recommended that in this reorganization the United States Office of Education be given an independent professional status, wherein the Commissioner would be responsible not to a political appointee, but to a national nonpartisan

board of education. This recommendation, however, was not approved. The status of the Office of Education within the Department of Health, Education, and Welfare remains no better than it was in the old Federal Security Administration.

Coming down to 1954, early that year, in his state of the Union message, the President called the attention of Congress to the crisis in our schools. He recommended that there be held in 1954 a series of State conferences on education, culminating in a White House conference.

Legislation to make such conferences possible was not considered immediately. By the time the Congress acted, it was clear that the conferences could not possibly be held in 1954 as the President had suggested. The White House Conference is now scheduled for November 1955. The State conferences should be held before that date. However, there has been no clear request to the States for their opinion on the Federal role in financing education. On the contrary, attention has been directed toward local and State matters. It is not easy to see how the State conferences can culminate in a useful consideration of national policy unless more of the States than is now the case formulate their views on what the national policy should be.

During 1954, committees of the 83d Congress held hearings on bills which would have provided Federal grants for school-building construction.

It is a remarkable fact that such bills received unanimous, bipartisan approval from both Senate and House committees. This approval, however, was directly contrary to the advice of Secretary Hobby and Commissioner Brownell, who said that Congress should await the findings of the White House conference. Largely, for this reason, the bills were never on the floor of either House. The legislation carefully considered by the 83d Congress must in the 84th Congress start all over again on the long road from drafting to enactment.

That was the situation a little over a month ago, when the President rode down Pennsylvania Avenue to deliver his annual message on the state of the Union. In that message, he rejected the policy of waiting for the White House Conference before even emergency action could be taken. He affirmed the deep national interest in education. And he announced that on February 15 he would send to the Congress a separate message on education.

These declarations had an electric effect. Bills were introduced in both Houses. Senator HILL, the new chairman of the Senate committee, gave school legislation an unprecedented top priority. Hearings were quickly completed on legislation closely similar to that approved by the committees of the 83d Congress. Most of the present members of the Senate committee were members of the committee last year when it voted unanimously for the legislation. It seemed difficult, therefore, to see how this committee could fail to recommend passage again. Very strong support also was rapidly building up again in the House of Representatives. The President made his own contribution to the sense of urgency by sending his message on education a full week ahead of time.

Naturally, the contents of the message were properly kept in complete secrecy, although rumors about it found their way into the press. It is not so easy to understand why there was no sustained consultation about the legislation with the professional and civic groups concerned.

Now that this legislation is before us at last I believe that disappointment is the most kindly word that anxious parents and hard-pressed school boards, administrators, and teachers are likely to use to describe their reactions.

Before we analyze this legislation, however, let us return for a few moments to the President's message itself. It is a noteworthy state paper for a number of reasons.

First, the state of the schools was recognized by our Chief Executive as an integral part of the State of the Union. The President eloquently affirmed, at the very outset of his message, "the undeniable importance of free education to a free way of life." Such an expression of Presidential concern in a separate education message to the Congress is unique. It will make February 8, 1955, a memorable date in the history of education in our country.

Second, the message states clearly that emergency action is needed to meet a national crisis. "Millions of children," said the President, "still attend schools which are unsafe or which permit learning only part time or under conditions of serious overcrowding." This is not news, of course. But for the President to say this, with all the close public attention and immense prestige which accompany his office, is a cause for gratitude.

Third, the President did not stop with recognition of the national importance of education and of the school-building crisis. He went further. He declared explicitly that the crisis required the Federal Government to act—as he put it, to "step forward to join with the States and communities." On many previous occasions, President Eisenhower has indicated his concern about the inadequacies of education. Those of us who had the privilege of working with him when he was a member of the NEA Educational Policies Commission for 4 years know how deeply he believes that good education is an essential source of national security, freedom, and prosperity. On one occasion, the President stated that an impairment of our schools could be more dangerous than an armed assault. In several important state papers, before and since he became President, he has stressed the necessity for prompt effective help for the schools. On February 8, President Eisenhower made explicit his belief that the Federal Government must carry part of the financial responsibility for education. And the President, believing as do nearly all Americans in local and State control of education, is sure that this Federal financial responsibility can be met without Federal control.

Fourth, the President concluded his message with a tribute to the teaching profession which this often underpaid and almost invariably overworked group of citizens will profoundly appreciate. In a time when professional alarmists are pointing with trumped-up trepidation to the supposed failures of our teachers, it is heartening to have the President of the United States calmly declare that "Today, the professional quality of American teaching is better than ever."

Now let us consider Senate bill 968, the legislation proposed to give effect to this Presidential leadership. Its major provisions are stated in three titles. With some oversimplification they may be summarized as follows:

Title I authorizes Federal purchase of local school bonds where such bonds cannot otherwise be sold at reasonable rates of interest. State educational agencies must certify that the district could not sell its bonds at a reasonable rate, and that the proposed schools met all State standards. Appropriations are \$750 million for the next 3 years. Interest rates would run about 3½ percent.

Title II authorizes Federal credit assistance to State school building agencies. The United States Commissioner of Education and the State would advance to the State school building agency equal amounts to create a fund which would be security for the bonds the State school building agency issues. The State school building agency

uses the money from the sale of its bonds to construct schools which would be rented by local districts. The rent paid by the school districts, collectively, must be high enough to cover interest on the bonds, to pay one-fourth of 1 percent to the State school building agency, and to pay also the cost of maintenance, repair, replacement, insurance, and other expenses. After about 2 years the State school building agency would begin repayment to the Federal Government. These Federal funds are, therefore, advances; as such they are limited to an amount necessary to set up the reserve to assure payment of one-half the principal on the bonds up to \$6 billion over the next 3 years. Estimates indicate that the Federal advances would require about \$50 million a year. The Federal Government gives no money to State school building agencies; it advances part of the money which is to be repaid with interest at a rate fixed at the discretion of the Secretary of the Treasury.

Title III authorizes \$200 million for the next 3 years to provide grants to enable impoverished school districts to borrow or rent under titles I and II. No district may qualify unless the State educational agency certifies that it is fiscally incompetent and that the schools are needed to relieve "extreme overcrowding, double shifts, or hazardous conditions."

Titles IV and V deal with the cost of administration, research, planning, and legal questions.

The preamble to Senate bill 968 states that free public education is of vital importance; that it is an obligation of the States and communities; that a serious shortage in school buildings exists; that local communities cannot meet the emergency; and that the Federal Government should help them. It is, therefore, proclaimed that the purpose of the act is "to provide assistance of a substantial and effective nature to States and communities which are handicapped by the shortage of public school facilities."

Now let us consider how well the proposed law meets the need for substantial and effective assistance.

First, how substantial is this help? The newspapers, with their imperative demand for simplicity, seized on phrases in Secretary Hobby's release and headlined this bill as "the \$7 billion Federal program." Nothing much has yet been done to correct this monumentally inaccurate impression. Yet it needs to be said that the Federal cash contributions are limited to cases arising under title II and amount at most to about \$70 million a year, or \$210 million in 3 years. All the rest of the widely discussed \$7 billion, or \$6,790,000,000, is provided by States and localities.

The sum of \$70 million would build about 2,400 classrooms. The deficit in classrooms is currently about 300,000, according to the Commissioner of Education. Thus, in each of the next 3 years, the Federal grants would reduce this deficit by eight-tenths of 1 percent.

It is true that title I provides for Federal loans at a rate of about 3½ percent. However, as you know, almost all school districts that can borrow money at all can get it at rates far more favorable than that.

That leaves title II, the backbone of the proposed law. What help can the hard-pressed schools expect from that source? This title requires the establishment of State school-building agencies to construct schools for rental to the local communities. Only two States (Georgia and Pennsylvania) have such agencies in full operation today. Administrators of these agencies have said that title II would be of little help to them. But, it may be said, title II could perhaps help other States after they create school-building agencies of their own. Perhaps; but it will take years to establish such agencies and set them in motion. It will require State

legislation, with all the delays inherent in that process. Even then, if Georgia and Pennsylvania are typical, it will require another 2½ years before the first school is ready to receive children. Even this lethargic timetable assumes that such legislation is constitutional in each of the States, an assumption open to grave doubts which time does not permit us to explore.

With minor exceptions, S. 968 leaves the burden of school construction exactly where it is now, on the back of the local real-estate owner and on such supplementary revenues as can be obtained by the taxing power of the States. Real property, even when fully assessed, lags far behind the rapidly growing wealth and income of the Nation. The schools will be barred from a proper share in national prosperity until they secure grants through use of the Federal tax mechanism. In short, this bill does not provide substantial and effective assistance.

Moreover, this system of loans would be attended by far more Federal controls than are possible under any of the direct grants-in-aid bills which have been recommended by previous committees of the Congress. Thus, in title I, the Commissioner of Education may, at his discretion, include "such other covenants, conditions or provisions as he may deem necessary to assure payment." There are many other examples. In title III, for instance, the Commissioner must tell the States how to determine the eligibility of local school boards. Again, although it is probably an oversight due to hasty drafting, it must be recorded that the bill includes no clause which explicitly restrains the Federal Government from exercising control of the educational process.

But the presence or absence of particular clauses are not the greatest sources of danger with respect to control. By limiting direct aid to those districts that will, in effect, step forward to take a pauper's oath, the bill isolates the weak local school districts from the rest of the Nation and leaves them in a position highly vulnerable to pressure.

Furthermore title II, the backbone of S. 968, requires the States to establish State school building agencies. Whether or not they think this is the best way to meet their school problems, whether or not they can constitutionally assent to it, the States must adopt this particular federally favored procedure or forego even the limited benefits of the bill.

The teaching profession wants no Federal control of education. Our record in resisting it, whenever and by whomsoever it has been threatened, is clear and emphatic.

The National Education Association will, therefore, continue to support bills of the type which were reported favorably and unanimously by committees of both Houses of the 83d Congress. We shall try to get similar unanimous action (and we hope prompt action) by the 84th Congress.

We are not committed to oppose every aspect of the administration bill if it is amended to safeguard more fully local and State control of education, and if the amounts involved are substantially increased. We must oppose the bill if it is intended to prevent or to delay more fundamental, substantial, and better considered legislation. We support legislation of the type that has been championed and developed over years of study by such universally respected lawmakers as Robert A. Taft, of Ohio; John S. Cooper, of Kentucky; Elbert Thomas, of Utah; and Lister Hill, of Alabama. Their programs and policies in this matter call for legislation extending Federal grants to all the States for school purposes. Only in this way can the President's earnest desire to offer our schools prompt, effective help be realized.

Ninety-six years ago next Thursday President Buchanan sternly vetoed the first attempt to provide Federal grants to the State

colleges of agriculture and mechanic arts. He asserted flatly that the proposal was unwise and unconstitutional. He said the bill would surely encourage the States to depend on Uncle Sam instead of expending their own resources for education. He predicted a long series of catastrophes if such a law were to be approved.

Two years later another President, and one much better known to history, approved this same proposal. Many of us remembered this act when the Nation celebrated Abraham Lincoln's birthday last week. During all the intervening years the Federal Government has given a modest measure of assistance to the land-grant colleges. They have repaid the Nation a thousandfold. The States did not relax their efforts. The Federal Government has not controlled instruction in a single classroom. Lincoln was a better prophet than Buchanan. Those who today prophesy the doom of the Republic if the Nation spends some small part of its wealth for better schools may well ask themselves whether history has vindicated Lincoln or Buchanan on this issue.

The Matusow Case

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an analysis by Mr. James Ratliff with respect to the Matusow case.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Cincinnati Enquirer of February 27, 1955]

THE MATUSOW CASE

(By James Ratliff)

One of the most remarkable exhibits of irresponsibility ever seen, even at Washington, D. C., was staged this week by Senator JOHN L. MCCLELLAN, Arkansas Democrat, as chairman of the Senate Investigating Subcommittee.

Nothing ever charged to Senator JOSEPH MCCARTHY, his predecessor, came near the spectacle put on by Mr. MCCLELLAN with Harvey Matusow. Mr. MCCLELLAN took a man who already had publicly confessed that he was a perpetual liar, and gave him a nationwide, congressionally immune Senate forum to promote the book in which he psychopathically describes his own lies. As if this weren't enough, Mr. MCCLELLAN put the mess on television.

Senator MCCLELLAN knew that the publisher of this book could answer under oath whether or not he was a Communist. He knew that Matusow's press conferences were staged by Carl Marzani, notorious jailed Communist, and Nathan Witt, who refused to reply when asked if he was in Alger Hiss' Soviet espionage cell. Yet despite all this, Mr. MCCLELLAN questioned Matusow in front of cameras and newsmen on the ground that he wanted the truth from Matusow "if the truth was in him."

For 1 week Matusow had been babbling, "Read the lies in my book." This was a book by a Communist, openly parroting the Communist lies. But instead of questioning Matusow behind closed doors, Mr. MCCLELLAN chose to give the Communists of America their outstanding propaganda coup of years.

I met Matusow in October 1951. He was brought here by Martha Edmiston, one of the Federal Bureau of Investigation undercover agents who had helped so much 16 months before with the Enquirer's Communist expose before the House Un-American Activities Committee.

Matusow was a swarthy but alert young man in a snappy Air Force sergeant's uniform. He kept twisting pipe cleaners into funny little animals while he talked. Maybe it was a warning. Martha, then a public relations official of Wright-Patterson Air Base, told us: "This is the fellow who drove Wright Field brass into shudders when he listed the Communist Party and 46 Red fronts in his back-ground. But he's a former Commie who wants to talk, Jim."

Matusow could type, so we put him at a typewriter to do his life story. It was an interesting tale of Red intrigue, 37 pages of it. But it still lies unused in Enquirer files, because only a little of it could be verified by us. One verification was a copy of the Daily Worker, the Commie paper, of January 29, 1951. In it Matusow was pictured as expelled from the Communist Party for misrepresentations. (How ironic can you get?)

By coincidence, the Communists were helping to form the National Negro Labor Council, a Red front, over on Central Avenue. Matusow said he could identify some of the Communists so he went over there with reporter Joseph Green, who had the news story.

Matusow recognized some Communists all right. But they recognized him as a traitor to the party and threw him out. The Enquirer reported the incident, without using Matusow's name.

In a few weeks Matusow was bounced out of the Air Force. He went to testify before the Ohio Un-American Activities Commission. I told Sid Isaacs, commission counsel, that he might be able to use Matusow for a while as Commie spotter and research man. This is a calculated risk, but the best way to investigate a secret conspiracy is a man who has been in or can get into it.

Mr. Isaacs told Matusow he would give him about \$300 a month, but Matusow didn't actually last a full month. He started working on January 21, 1952, identifying Red literature, but had to go off for 10 days in February to testify in Washington, Sid told me.

When Matusow got back from Washington he had forgotten the repeated warnings that he was just a Communist trying to undo the harm he had caused. He became a big-time agent. Without a by-your-leave, he went off to Yellow Springs, Ohio, site of Antioch College, and suddenly, to the horror of Isaacs, issued a press statement.

"Antioch has at least 400 potential Communists on its campus," Matusow blurted. Even if true, Matusow didn't know this and he had no authority to open his mouth anyway. Isaacs, who had given him endless warnings, blew up. Matusow was due to testify before the Senate, so Sid paid him off at the end of February.

We never saw Matusow again, but heard of him. He made occasional headlines, romping from one trial and hearing to another as a witness. Many columnists, including ourselves once, mentioned him briefly. But when he began identifying Owen Lattimore and Bishop G. Bromley Oxnam as Reds we became worried. We looked up his forgotten story in the files.

"He didn't tell us he had met Lattimore or Oxnam," I told city editor Jack Cronin. "He may be lying." But we were unable to prove his possible lies any more than his story and we didn't print it.

Now Matusow admits he lied about Lattimore and Oxnam. He says he doesn't know when he ever told any truth. This leads to speculation the Communists may have pub-

lished his expulsion to set a decoy who would discredit all Communist investigations.

Credence to this theory is lent by the fact that Matusow, again a Communist, is linking every Communist exposé he can think of with his lies.

But his tissue of lies is mainly hackneyed Communist Party line stuff. For example, I am supposed to have told him (his book says) "not to overshadow the Ohio Commission, as they need the headlines for votes."

The Communies aren't even clever. This has been the Communist Daily Worker line for years. Imagine me giving a hoot whether the 7 Republicans and 5 Democrats on that commission from all over Ohio got votes for the Ohio Legislature.

Matusow quotes Sid Isaacs as telling him to "break up unions in Dayton, Ohio." The old mouldy Red line. Not only is Sid so liberal that the Republicans wouldn't give him a job in the State Department which asked for him but whenever he goes after Communists like those leading the United Electrical Workers, a decent American union benefits.

I don't think Matusow was planted from the start, however. Too much of his original tale was corroborated by Government committees. The Communies wouldn't dare let him expose so much just for the later harm he could do. They probably black-mailed him back into line when it became obvious to them, too, that he was lying for headlines.

But the harm is done. All over the country people who never say an unkind word about communism are saying it's all a tissue of lies. The fact that endless FBI files send the Communies to jail—not just a Matusow—doesn't bother them. They keep croaking it's all a witch hunt.

As for Senator MCCLELLAN's great book promotion that has aided the Communists? Well, it's your move now, Senator.

The Current Situation in Berlin

EXTENSION OF REMARKS

OF

HON. FREDERICK G. PAYNE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

Mr. PAYNE. Mr. President, most Members of the Senate know personally May Craig, Washington columnist for some of our Maine newspapers. May is currently on a trip to Europe and the Middle East. The dispatches she is sending back are excellent firsthand observations on current happenings of great interest to us all. I ask unanimous consent to have printed in the Appendix of the RECORD a report May Craig has written on the current situation in Berlin together with an editorial on that report from the Portland (Maine) Press Herald of March 1, 1955.

There being no objection, the report and editorial were ordered to be printed in the RECORD, as follows:

MAYOR OF BERLIN WANTS REARMAMENT

(By May Craig)

BERLIN.—In Berlin, "an island in a Red sea," the tall blonde Governing Mayor Otto Suhr told us that Berlin is for the rearmament of Germany. I asked him if he would be for neutrality to get unification of Germany and he said he would not. This is the great bait being dangled before West Germany today the Russians and the Social Democrat Party, to which Dr. Suhr belongs,

and to which half the Berliners belong. Social Democrats are first and foremost for reunification of Germany. Dr. Suhr's party accuses Konrad Adenauer, the Chancellor of West Germany, whose party is the Christian Democrat, of not putting reunification first.

This party claims it has the unions and youth with them against rearmament and the treaties linking West Germany with the West, and Berlin sent Willy Brandt, Social Democrat, to Bonn, while the treaties were being debated in the Bundestag, to oppose ratification. He wanted talks with the Russians before the ratification, saying that ratification would make reunification almost impossible.

Supporters of the treaties argued it would make it easier to talk with the Russians, because West Germany would then be talking from a position of strength. With the small group of editors and publishers I travel with, we went to the city hall and talked with Dr. Suhr and with his deputy, Franz Amrehn. We asked them if they were for rearmament and they said yes. What they said was translated to us, in sentences, after they spoke, and at this point Amrehn interrupted the translator to use the word "defend." Yes, they would defend West Germany. But even as we talked together, busloads of rioters, mostly Communist, were in Bonn, surging around the Bundestag buildings in the falling snow, with placards saying "Mothers' Protect Your Sons," "Free Elections in 1955," etc. We have this picketing in the United States, too; I have seen it at White House and Capitol and elsewhere and it was usually Communist too.

The appeal to the mothers is poignant; rearmament means the draft, and these women have seen their husbands go forth in the world war, and what happened. War-weariness and pacifism is the fruit of dreadful and too-recent experience here, not to lead to reluctance toward a draft.

In a high tower on the city hall is freedom bell, the great bronze bell, gift of the American people to Free Germany, and every day at noon it rings and Berliners stop to listen. At city hall we were asked to pause a moment before 12, so we would be silent and hear the deep bell ring. An official said: "It reminds us of our struggle for freedom."

Berlin is divided into 4 sectors, 1 United States, 1 Russian, 1 French, and 1 British. Russian sector is set apart by the Communists and though people from the West may go into it, the East Germans do not come too much to the West. Berlin does not belong to the Federal Republic, which is West Germany. The Western Allies do not want it to, besides the fact that Berlin is cut off from the rest of Free Germany, and is deep in the Russian Zone. The three Western Allies wish to maintain the contention that Berlin does not belong to the Russian Zone, that it is in fact a quadripartite city, free to all the people of Berlin and to the three Western nations.

The 3 Western nations have practically unified their sectors and zones, the area and population of the 3 sectors about that of the Russians, though the Western zones have many times the population of the Russian, augmented by many refugees from the East. Some go back to the Eastern zones because the West is so crowded they have to live in camps, and they long for the homes they left in East Germany.

Since Berlin is cut off from the West by the 105 miles of air corridor, and other means of transportation is too often blocked by the Russians, industry and business is difficult. Contracts might or might not be fulfilled in Berlin though the Western Allies subsidize it so that the transport back and forth to Berlin to the West does not add to the cost compared to production in the West.

So there is unemployment in Berlin and it is not any longer a white-collar city, the banking and other important business having fled to the Western zones.

Dr. Suhr spoke of the difficulties of administering such a city. To me one of the important things he said is that "the will for freedom is our best treasure." If the Germans deeply believe that, they will stay with us in our struggle against communism.

MAY CRAIG IN GERMANY DURING HISTORIC MOMENTS

Germany has an historic tendency to lead the news. Whether she is making war, disturbing the peace or contributing to the peace she is one of the pivotal nations of the world. Her legislature's decisions have international repercussions.

The past weekend was typical of Germany's prominence and the seriousness with which the rest of the world watches every flutter of a ballot in the Bundestag. It finally came time for West Germany to act on proposals, the West has been working on for years. The Bundestag, had it not followed the stubborn leadership of Chancellor Konrad Adenauer, could have virtually nullified the plans of a free world for effective defenses against communism and effective buffer territory on the outskirts of those defenses.

The Bundestag cooperated with the West. It voted for West German rearmament; it voted for the end of occupation, the restoration of sovereignty, authorization for American, British, and French troops to remain in the Bonn republic; it voted to join NATO; it voted to neutralize partially the Saar valley.

The weekend marked a turning point in world history. Whether the turn will be for better or for worse, no prophet can tell us. The Bundestag voted as the West would have had it voted. To do otherwise would have been an immediate tragedy. But it is possible, for instance, that West Germany's decision to maintain its attachment to the Saar will cause trouble in France. West Germany's attitude could prevent ratification in France and another major chasm in western unity.

Press Herald columnist May Craig observes these events. She is visiting West Germany at a truly historic moment. Her first stop on a tour of Europe was Berlin, whence this morning's column was filed. As she travels to other parts of Germany and to other parts of Europe, Mrs. Craig will see at first hand the repercussions of the West German decisions made over the weekend and attempt to interpret what she sees for Press Herald readers. She couldn't have picked a more strategic time for her globe-trotting.

Back to Inflation

EXTENSION OF REMARKS OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

Mr. GOLDWATER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial entitled "Back to Inflation," published in the Arizona Republic of February 26, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BACK TO INFLATION

When President Eisenhower was campaigning for the Presidency, he delivered a speech in Troy, N. Y., charging that inflation was no accident under the Truman administration.

Now Speaker RAYBURN and his Democratic associates in Congress have proved the truth of Mr. Eisenhower's charges. They have passed a bill which would provide a \$30 across-the-board cut in personal income taxes, thereby adding another \$2.3 billion to the \$2 billion deficit already planned for next year. In Secretary of the Treasury Humphrey's words, the Democratic measure would "just about wipe out" the progress President Eisenhower has made toward balancing the budget. It would also hit every consumer in the Nation right square in the pocketbook, despite the illusion of tax savings.

In January 1953, when President Eisenhower took office, the wholesale price index of the bureau of labor statistics stood at 109.9. In January 1955, it stood at 110.2. Two years ago the consumer price index stood at 113.9. The latest figure is 114.3. In other words, so well has President Eisenhower's administration held inflation in check that wholesale prices have risen only .3 percent, while retail prices have risen only .4 percent. As a result, rising wage scales have given every worker increased purchasing power in stable dollars.

If the Rayburn faction has its way, this trend is now to be reversed and the country is to go back on the inflationary merry-go-round. But there is still a chance that the Democrats will come to their senses, and a coalition of Republicans and Democrats can hold the line against inflation in the Senate.

States Can Do Own School Building

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "States Can Do Own School Building," published in the State, of Columbia, S. C., of February 26, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STATES CAN DO OWN SCHOOL BUILDING

A Washington dispatch carried in our newspaper Friday morning said that a recommendation reportedly approved by the United States Commissioner of Education, and now under study by a Presidential Commission, says flatly that Federal money for school construction is not necessary.

Not only have we here in South Carolina undertaken to modernize our facilities, but we have completely revamped and implemented our transportation system.

No State proportionately will have a greater burden to carry, and few face one that is equal to that undertaken by us.

What the report in question says is what on several occasions we have urged in these columns. We have suggested that our Representatives and Senators in the Congress cite South Carolina as an example in the matter of school construction.

The report which the Presidential Commission is now studying says in part:

"We have been unable to find a State which cannot afford to make more available to its schools or which is economically unable to support an adequate school system."

South Carolina, as readers of this newspaper know, assessed a 3-percent general sales tax to finance the multi-million-dollar school-improvement program undertaken in 1951. Some States already have a sales tax, the revenue from which is being used for

other purposes. But the type of tax is not the point. The general sales tax was not being assessed here, so it was chosen as the levy to back the bonds. A State already in this field would have to find another source to tap.

It is a mistake to think that Federal aid is outside money—something free. In most cases it is simply our money that has traveled to Washington only to be sent back after a handling cost. The sooner we realize this, the better for all concerned. We will never get Federal taxes down if we are continually opening up new avenues of expense.

That a Government Commission should recognize State responsibility, and ability, as evidenced in this case, is indeed refreshing, but if its recommendations are ignored, and Congress goes right ahead with its Federal construction plan, the Commission, like so many in the past, will have wasted its time.

We hope our 2 Senators and 6 Representatives will stand up and be counted on the right side as this issue develops in Congress.

Preservation of the American Outdoors

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

Mr. NEUBERGER. Mr. President, the preservation of the American outdoors has stirred our people for many decades and has brought to the fore such men as John Muir, Gifford Pinchot, and Lyle F. Watts.

I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article written by Ora Niemela about the Three Sisters Wilderness area in the Willamette National Forest of Oregon, which was published in the Oregon State Grange Bulletin of February 25, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THREE SISTERS WILDERNESS REGION BEING THREATENED

(By Ora Niemela)

Farm people have become more and more conservation-minded in the last decade. Flood, silt, and erosion control are an accepted part of our planning. To effect these controls on our farmlands we must be on the alert to first see to it that similar planning and control is done in the watersheds of our streams, the planned runoff of which is vital to every lowland acre.

Thus it is that Oregon farmers are interested, though as yet amazingly uninformed, in the developments in that part of the Three Sisters Wilderness area which embraces the McKenzie River watershed. Farmers should also be interested in the Three Sisters Wilderness area because of its value to the science departments of our Oregon colleges, and its value as a recreation area for the present 1,500,000, and soon-expected 3 million people of Oregon.

The Three Sisters Wilderness area is threatened immediately by dissection.

HISTORY OF THE AREA

In 1929 the Secretary of Agriculture gave the Chief of the United States Forest Service the authority to set aside areas within the national forests to be designated wild areas (between 5,000 and 100,000 acres) and wilderness areas (over 100,000 acres). At present

there are 78 such wild and wilderness areas in 73 national forests scattered through 12 States. Their total acreage comprises 8 percent of the national forest lands. Much of their acreage is in alpine country above timberline. Although many of our wild and wilderness areas have outstanding scenic value, they were not set aside for that purpose, but rather to preserve intact samples of typical primitive areas of the outdoors before we have none left. With the exception of Linville Gorge Wild Area in North Carolina there are no such areas in the East large enough to be so classified because easterners awoke to the possibilities too late. (By Forest Service regulations, to be classified wild or wilderness areas, sections of land under consideration must be free from roads, private property, and commercial activity of all kinds although a few exceptions have been made in the case of already existing mining activities.)

The Three Sisters Wilderness area (246,728 acres) was set aside in 1938 in the Willamette National Forest. It included the North, South, and Middle Sisters, Broken Top, the Husband and the Wife, and many lesser mountains. Near the western border, it includes Horsepasture Mountain and Olallie Mountain, which are joined by a ridge to which we will refer later.

LUMBER RESOURCES QUESTIONED

Now the Forest Service proposes to eliminate 55,620 acres from the wilderness area starting at Horse Creek, which lies in the canyon bottom, and continuing up the steep western slope and over the Horsepasture Mountain-Olallie Mountain ridge with the intent of opening this area to logging. The chief contention of the Forest Service is that small and medium-sized mills in Lane County must have this extra timber to sustain themselves. Lyle Watts, who was Chief of the United States Forest Service from 1943 until he retired in 1952, has exploded this contention by pointing out:

"The need for additional timber to log is not acute in the Willamette National Forest or in Lane County. The west side of the Horse Creek drainage includes some 12,000 acres. This area, based on available estimates, would appear to support between 380 and 525 million board-feet of timber. The increase in the allowable cut under sustained yield for the McKenzie Working Circle would be between 4 and 6 million board-feet per year.

"At present, about 1,250 million board-feet of lumber is cut each year in Lane County. The volume cut on the Willamette National Forest annually is around four hundred and twenty-five million. To be sure, the sustained yield annual cut for Lane County is only about eight hundred and thirty million. Thus the timber in the county is being cut one and a half times as fast as it grows.

"The point is, that by opening to cutting the west side of Horse Creek you would add just about one-half of 1 percent to the allowable cut for the county, and about 1 percent to the allowable cut on the National Forest. Obviously, in a community where the unbelievable volume of 1,250 million board-feet is being cut each year, the additional 5 million is of minute economic consequence. It may well be desirable to place this timber on ice for future need."

Ex-Gov. Charles A. Sprague said in his Oregon Statesman, November 30, 1954:

"The argument for scaling down the size of the area now reserved as wilderness is that the size is excessive and that the timber is needed to help sustain the local economy. However, there are other values than economic, and the wilderness in its primitive condition with access only by trail provides values which cannot be calculated. As the Sierra Club has said: 'It is important to us and to those who follow us that samples of our richest heritage be preserved intact, complete with all the resources that, despite their

possible money value, are even more valuable for their inspirational qualities.'

"The demand of the lovers of the wilderness that the boundary revision stop at the ridge rather than split the basin along the creek seems quite practical and logical. A divided basin, one-half green and the other half logged off, would be neither fish nor fowl. The creek would become a carrier of silt from the eroded hillside, and brush and snags would collect along its course."

COLLEGE SCIENCE DEPARTMENTS OBJECT

The science departments of Oregon State College, University of Oregon, and Willamette University have protested the change for scientific reasons. They point out that the area makes an ideal natural-science laboratory close at home, inasmuch as it contains terrain from low altitude to high altitude—1,900 feet to 5,600 feet on Horsepasture Mountain. Dr. Ruth Hopson, Ph. D., assistant professor of general science, University of Oregon says:

"We are spending vast sums of money in buildings and indoor laboratories for science, but we can never reproduce within a building the things found in this region, nor can we replace them, once they are destroyed. Fieldwork in the out of doors as a method of learning in the natural sciences is gaining in importance both in the public schools and in the colleges. By the time we fully realize these values, will the virgin forest be here to study?"

"Since plans call for the eventual logging of most of the virgin forests and the sustained-yield program does not provide for trees much more than a hundred years old, who can say what the worth may be of such a region left undisturbed, containing as it does the wisdom of the ages by representing the sum total of everything that has happened here in ages past. It is, in fact, a history, a record that may be studied. We cannot afford to lose such a record."

USES OF NATIONAL FOREST

Many of us are unacquainted with the resources of our national forests and make the mistake of assuming that their sole purpose is to produce timber to log. When he was Chief of the United States Forest Service, Lyle Watts said:

"The national forest are forests in the larger sense of the term; that is, they are not exclusively tree-covered areas. A forest in the larger sense is a composite of trees, brush, grass, water, wildlife, scenery. Each one of these elements has its own value. Combined, they give the forest a value much greater than that of a mere producer of wood. For the most part, these various types are so intermingled that no one can be set apart from the others for separate handling.

"It is this composite value which gives the national forest importance to so many different elements in our population."

Now the Forest Service's avowed policy in the supervision of the national forests is to operate them for the greatest good of the most people. Would they be carrying out their promise to us if they turn these acres over to a small group of local logging operators instead of preserving them for the use of millions in the not too distant future? It has been reliably estimated that Oregon's population (now 1,500,000) will reach 3 million in 20 to 25 years and that the Willamette Valley will then house 2 million people. We cannot wait to set aside recreation areas until teeming thousands have arrived to demand them; they must obviously be set aside in advance if we are to have any at all.

RECREATIONAL IMPORTANCE

The CIO Woodworkers Union is one of those organizations opposing the change; A. F. Hartung, CIO-IWA international president, says timber resources of the area don't merit logging. The executive committee of the AFL's Northwest Council of Lumber and Sawmill Workers also oppose the logging of

this area, basing their decision, in part, on the A. F. of L.'s policy of protecting recreation areas. As many laboring people have pointed out, laborers cannot afford to fly their families to plush Miami Beach spots for a vacation; they must have easily accessible, inexpensive places to vacation close at home.

Approximately 21,000 members of 30 outdoor clubs of the Pacific coast, including the Mazamas, Crag Rats, Salem Chemeketans, Astorian Angoras, Eugene Obsidians, and the Salem Chemeketans, banded together in 1931 to form the Federation of Western Outdoor Clubs. The 21,000 members of the federation vociferously oppose the logging of this western portion of the Three Sisters wilderness area. They have reluctantly agreed to sacrifice that portion further west of the Horse Pasture-Ollalie Mountain Ridge. These clubs depend almost exclusively on our national parks and forests for their weekly hikes and climbs and for their annual outings in the summers. For a lover of the wilderness to look down from the Skyline Trail or from the summit of any of the Three Sisters on the nearby scarred, logged-off western slope leading down to Horse Creek would ruin much of the pleasure of this country as a recreation area.

THIS IS JUST THE BEGINNING

An audience of over 300 interested persons listened to a four-man panel discuss this boundary revision question on December 3 in Eugene. They heard Gus Arneson, representative of the lumber companies on the panel, state quite frankly that the logging companies would, of course, quite logically demand the timber on the eastern slope of Horse Creek once they had taken the timber on the west slope. His frankness was admirable; his demand for the timber across the creek would in a few short years be bolstered by the claim that the logging road which they had built up Horse Creek (if they are allowed to build one) must be used if it is to give the most economical returns on the investment.

On that same panel Robert Aufderheide, superintendent of Willamette National Forest, said: "When in doubt we should withhold our decision because true wilderness cannot be restored in less than centuries." If the Forest Service has not had enough doubt cast on their decision by the testimony of ex-Governor Charles A. Sprague; ex-chief of the United States Forest Service, Lyle Watts, the science departments of the three colleges, the protests of 21,000 Federation of Western Outdoor Clubs, all augmented by protests from labor unions, Boy Scouts, and other organizations, it's probably time we farmers added our voices in this matter.

A public hearing on this question will be conducted at the Veterans' Memorial Building, 1626 Willamette Street, Eugene, Oreg., February 16 beginning at 9 a. m. If you are interested in the Three Sisters western boundary you may appear at the hearing and you may voice your protests to J. Herbert Stone, Region Forester, United States Forest Service, post office box 4137, Portland 8, Oreg., with a copy to Richard McArdle, Chief Forester, United States Forest Service, Department of Agriculture, Washington 25, D. C.

The Problems of Civil Defense

EXTENSION OF REMARKS

OF

HON. FREDERICK G. PAYNE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

Mr. PAYNE. Mr. President, the proposal now before the Senate Armed Services Committee to establish a spe-

cial commission to study the increasingly complex nature of civil defense has focused new attention on our preparation for atomic warfare here at home. One matter which merits immediate consideration is the possibility of industrial dispersal. I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Lewiston (Maine) Daily Sun of February 28, 1955, discussing civil defense and industrial dispersal.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INSURANCE AGAINST DISASTER

One of the wisest moves this administration has made, in connection with defense of the United States against overseas air attack, is to propose a special commission to study the increasingly complex nature of civil defense.

Defense Mobilizer Flemming has laid the plan before a Senate Armed Services Subcommittee, suggesting that the commission it sets up be required to report by May 15.

Now, civil defense means protection of humans against bombing raids, for one thing, and that function has thus far occupied most of the attention of the appropriate agencies. But civil defense also means protection of the Nation's war-making potential, and that is an equally difficult problem.

Assuming a set of fortunate circumstances, such as enough warning time and an evacuation plan that works, we may be able to protect most of the civilians now occupying our largest cities. War industries, however, are a different proposition. You cannot pick up a plant employing 10,000 or 20,000 or more persons and lift it out of the way of a hydrogen bomb. You cannot even shield it from gamma-ray activity if a bomb drops 100 miles away.

So it is highly important that Mobilizer Flemming says the commission's primary job is to work out a method of dispersing the country's prime atomic targets. Nearly everyone knows what they are. The atomic facilities themselves at Oak Ridge, Paducah, Hanford, and elsewhere cannot be dispersed, though it will be possible to give better protection to their top personnel. But there are the huge electronic plants, the complex of industries around Detroit, the steel mills in the Chicago-Gary area, the big plane manufacturers and shipyards, and even the highly critical scientific research laboratories concentrated in Boston and Cambridge. It would be a great tragedy to lose the brains assembled there.

When the commission comes to study industry dispersion, it will discover at least one sensible method of saving our vital war-making facilities from complete destruction. The Federal Government will have to rule that no more expansions of existing critical industry, or new industry, shall be made within at least 150 miles of existing major manufacturing centers. And it will have to force or induce the most important plants to detach an integrated or vertical nucleus and establish it in some well-removed small city so that it can serve as a well advanced starting point of reconstruction in the event the parent industry is fully wiped out.

There may be other methods that will occur to the commission. But the above is indispensable to the national security. Surely it would be folly to perfect a plan of saving from death scores of millions of citizens in urban areas, and neglect to draw a plan that will secure the United States against a knockout blow. In fact, if the Communists saw they could not destroy our ability to fight back, they might not attempt it. Industry dispersal regardless of what it costs is good insurance against the kind of assault we must expect if war comes.

Strengthening of the Clayton Antitrust Act

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the RECORD a very timely, able, and thought-provoking statement of the personal views of our former colleague from New York, James M. Mead, who is a member of the Federal Trade Commission. The statement is entitled "Strengthening of the Clayton Antitrust Act."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STRENGTHENING OF THE CLAYTON ANTITRUST ACT

The basic purpose for which Congress established the Federal Trade Commission was to maintain a competitive economy and to prevent the growth of monopoly. The first antitrust statute, the Sherman Act, was passed in 1890. Notwithstanding that very valuable statute, monopolies continued to grow after the turn of the century. In 1911 the Supreme Court in the Standard Oil case limited the effectiveness of the Sherman Act by adopting the so-called rule of reason in interpreting that act.

In 1912 there was a demand by both political parties for Congress to take a New Look at the problem of monopoly and unfair competitive practices and to adopt such legislation as would be necessary in the public interest. Congress in 1914 adopted the Federal Trade Commission Act and the Clayton Act. Notwithstanding the enactment of these two statutes, we still have with us the problem of monopoly and unfair competitive practices.

The great American dream is twofold: (1) Political liberty and (2) economic opportunity. Without economic opportunity there cannot really be effective political liberty. Economic opportunity in its simplest and basic terms means that the ordinary American—John Smith—has the opportunity to go into the legitimate business of his choice, and by hard work and commonsense, grow and prosper and be able to enjoy for himself and his family the necessities and some of the luxuries of life. When that dream dims, the virility of our economy is impaired.

The prevention of monopolistic and other unfair trade practices depends on three factors: (1) Effective legislation; (2) selection of competent administrators of the statutes; and (3) adequate appropriations.

This memorandum is addressed to the factor of effective legislation and more particularly to the Clayton Act. The basic principles of the Clayton Act are as sound today as they were in 1914. There are, however, certain points involving congressional intent and questions of procedure which merit consideration. They are as follows:

1. The good faith or equality of opportunity bill.

2. Prior submittal to the Federal Trade Commission of proposed mergers of larger corporations.

3. The finality of orders to cease and desist issued by the Commission under the Clayton Act.

THE GOOD FAITH OR EQUALITY OF OPPORTUNITY BILL

The Supreme Court in the recent *Standard Oil* case (340 U. S. 231) held in effect that the good faith meeting of a competitive lawful price is an absolute defense to a charge of price discrimination under section 2 (a) of the Clayton Act as amended

by the Robinson-Patman Act although the result of the discrimination may be to substantially lessen competition or tend to create a monopoly. The Robinson-Patman Act is properly regarded by small and independent businessmen as their Magna Carta against the encroachments of monopolies and predatory business practices. In my opinion the discrimination section of the Robinson-Patman Act as interpreted by the Supreme Court in the Standard Oil case is now of limited effectiveness and is not in accord with the purpose for which it was enacted. In my opinion the Robinson-Patman Act should be amended so as to make it crystal clear that good faith is not a complete defense when the discrimination is of such severity and importance that the effect may be substantially to lessen competition or tend to create a monopoly.

In the enforcement of the antitrust laws we must constantly remember that their ultimate objective is to preserve and promote competition. The intent with which business practices are used is certainly a factor to be considered, but the final test of whether or not those practices should be prohibited must be the result of their use and not the intent with which they are used. Our antitrust laws would be futile instruments of national policy indeed if they are to be construed to countenance the destruction of competition solely because such destruction is accomplished by good men acting in good faith.

The right to discriminate in price and meet in good faith a competitive price is a private right subject to regulation by the State. The right to be free from monopolistic and other unfair trade practices is a public right also regulated by the State. When the private right to discriminate in price conflicts with the public right to be free from monopolistic practices, the public right should prevail. That is the basic political and economic justification for enacting the Kefauver-Patman equality of opportunity bill.

PRIOR SUBMITTAL TO THE FEDERAL TRADE COMMISSION OF PROPOSED MERGERS OF LARGER CORPORATIONS

The Federal Trade Commission now has some experience with the amended section 7 of the Clayton Act which prohibits mergers when they have certain adverse competitive effects. In my opinion this record of experience indicates the need of an advance submittal amendment to section 7 of the Clayton Act.

Under the present law the Commission must inform itself as to proposed mergers. This necessitates a staff engaged in inspecting a variety of news and trade publications for information which the principals in these mergers could readily supply to the Commission. A large number of these news items suggest the possibility of illegality of proposed mergers and the Commission then has the burden of collecting certain elementary facts about the companies involved in order to determine whether a full investigation should be made. The necessary information includes, for illustration, the assets of the companies, their principal products, their approximate sales, their competitive relationships, whether there has been a customer-supplier relationship between the merged companies and whether competing companies are likely to be cut off from essential supplies, whether important patents are involved, and other types of information. As a practical matter the Commission must depend upon the companies involved to supply this information. When a great number of companies are merging and in view of the limited staff of the Commission, there must of necessity be numerous delays before the necessary information is obtained. This problem of unnecessary expense and delay would be largely corrected by an advance

submittal requirement since such a requirement would give to firms wishing to merge the incentive of supplying the Commission with the necessary factual information as expeditiously and as completely as possible.

While the Commission has not yet had the occasion under the revised section 7 to order a divestiture of assets of illegally merged corporations, there is a real problem in attempting to "unscramble the eggs" after the assets of two corporations have been merged. Fiscal and other business properties are frequently such that they may be used in any one or several lines of commerce and there will be occasions where the Commission's order for divestiture will not assure that an effective competitor, once destroyed, will be recreated.

I do not believe that it would be either necessary or feasible to require all proposed mergers be cleared in advance with the Federal Trade Commission. It may be that any such advance submittal provision should be limited, for illustration, to situations where the combined assets would exceed \$10 million. I am advised that there are approximately 1,000 corporations in the manufacturing industries which have total assets valued at more than \$10 million.

It is probable that there are no more than 1,000 additional such corporations in other fields which are under the jurisdiction of the Commission, these being largely the distributive and mining fields. Thus by this criterion, about three-tenths of 1 percent of approximately 650,000 corporations in the United States would be subject to the advance approval requirement.

One of two different procedures relative to this advance submittal might be adopted. They are as follows:

1. Require the proposed merging corporations to file with the Commission a notice of their intention of merging and also require the corporations to submit to the Commission any facts, data, etc., which the Commission would require. Within certain time limits the Commission would make a finding whether or not the proposed merger is in the public interest. This procedure might be limited to corporations above a certain size. The difficulty with this procedure is that it might place a very large administrative burden on the Commission and adequate staff would not be available to the Commission for such purpose. The difficulty is that the Commission would be required to give a definite yes or no answer within a limited period of time. If the Commission did not find against the merger, it is not likely that the law would permit the Commission to attack the merger at a later date;

2. Require the proposed merging corporations to submit to the Commission a notice of their intention to merge and also require such corporations to submit the facts and data requested by the Commission. Within a certain time limit the Commission could issue a regular complaint attacking the proposed merger. In the event that the Commission issued such complaint the law would provide that the proposed merger would be suspended pending the final disposition of the complaint. The issuance of the complaint would be in effect a "stop order" which some utility commissions are authorized to issue relative to proposed rate increases. The case could then be tried as a regular case but in the meantime the merger would not be consummated and the Commission would not have the very difficult task of trying to unscramble the eggs. The law could also provide as a safeguard that if the Commission did not issue the complaint within the time specified prior to the proposed merger that the Commission would also have the authority to issue a complaint after the merger as is provided in the present section 7. This procedure would not place on the

staff of the Commission the great burden of deciding definitely (and finally) within a prescribed time limit whether or not the merger is in the public interest. The issuance of the complaint which would hold up the merger would not be a final decision. It would only constitute a "reason to believe" by the Commission.

THE FINALITY OF ORDERS TO CEASE AND DESIST ISSUED BY THE COMMISSION UNDER THE CLAYTON ACT

Orders to cease and desist issued by the Commission under the Federal Trade Commission Act become final and enforceable within 60 days after their issuance unless the respondent appeals to a United States Court of Appeals. After orders issued under the trade act become final the Commission may request the Department of Justice to have the appropriate United States district attorney sue for a violation of the order in a civil penalty proceeding. Violators are liable to a monetary penalty up to \$5,000 for each day of violation. This provision makes trade act orders to cease and desist effective because they are readily enforceable.

It is suggested that section 11 of the Clayton Act be amended so as to provide for cease and desist orders under the Clayton Act to have the same degree of finality and the same penalty provisions as provided for orders issued under the Federal Trade Commission Act. This amendment is needed to insure effective enforcement of the statutory prohibition against monopolistic mergers, competition-stifling exclusive-dealing contracts, unjust discriminations in price, services, or facilities and certain types of interlocking directorates. It is needed to eliminate the laborious, time-consuming, and expensive procedures now required before an order under the Clayton Act is fully effective.

Under the present Clayton Act the orders of the Commission have no force or effect without subsequent court enforcement. In addition the statute limits the right of the Commission to seek enforcement. In order for the Commission to secure enforcement by the court the Commission must prove that the respondent has failed to obey the order to cease and desist.

The long road which the Commission must travel in order to force compliance with Clayton Act orders to cease and desist is as follows:

- (1) The Commission must prove that the respondent has violated the Clayton Act.
- (2) If such proof is made, then the Commission issues its order to cease and desist.
- (3) If the respondent does not appeal to the court from the Commission's order and if the respondent continues to violate the order, the Commission must prove to the satisfaction of the court that the respondent has violated the order of the Commission.
- (4) If such proof is made to the satisfaction of the court, then the court may issue a decree making the order of the Commission the order of the court.
- (5) If thereafter the respondent violates the decree of the court and the Commission is successful in proving such a violation to the court, then the court may punish the respondent for contempt of court.

Under the procedure now provided, the investigations and hearings may drag on for years before effective enforcement with Clayton Act orders to cease and desist is obtained. The resources and energies of the Commission are thus needlessly dissipated and the antimonopoly purpose of the Clayton Act is thwarted.

CONCLUSION

The above constitutes a modest but a very necessary program of proposed legislation designed toward making the Federal Trade Commission a more effective instrument of national antitrust policy.

Postal Pay Raise

EXTENSION OF REMARKS
OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dated February 26, 1955, which I have received from Thomas Nolin, legislative representative of the National Federation of Post Office Clerks, together with an article entitled "Postal Pay Raise," published in the St. Paul (Minn.) Pioneer Press of February 24, 1955.

NATIONAL FEDERATION OF
POST OFFICE CLERKS,
St. Paul, Minn., February 26, 1955.

Senator WILLIAM LANGER,
Washington, D. C.

DEAR SENATOR: The morning after the Senate Committee brought out our bill, I phoned to thank you for your fine support. Unfortunately, you were not available, so please accept my sincere thanks for your successful efforts in our behalf. As always, you are in our corner.

In the House, it seems that we may be in for trouble but we have many friends there too, so, although I am not unduly optimistic, I have hopes that the House Committee will bring out a good bill.

Reports indicate that soon an investigation of the overall operation of the Post Office will get underway. If you will be on this committee, I would like to bring to your attention, the manpower-control system. It was initiated about 6 months ago and seems to be as secret as the atomic research program. We would like to learn what it is supposed to accomplish and how much it is costing the taxpayer.

Meanwhile, I certainly hope that the Department does not have sufficient support in the House to gain many of the things advocated. The Postmaster General is using his high office to disseminate to the public, over radio and television, some rather strange information. He has implied that if any postal-salary bill passed by the Congress does not meet with his approval, he will cause it to be vetoed.

High in the Government he may be but isn't this a great deal of authority for one man to hold?

Thanks again, and best wishes.
Very sincerely yours,

THOMAS NOLIN,
Legislative Representative.

[From the St. Paul (Minn.) Pioneer Press of
February 24, 1955]

POSTAL PAY RAISE
(By Val Bjornson)

A fundamental point in Post Office Department reforms launched 2 years ago remains that of whether stress should continue on making the service fully self-sustaining. The issue arises in connection with pay-raise proposals, vetoed by President Eisenhower in the form given them by Congress in August of last year.

Postal employees said widely at the time that they shouldn't be made to bear the burden of the postal deficit. Administration spokesmen objected, in the main, to another indiscriminate across-the-board pay increase, identical in approach to five such increases made the past 10 years. Maurice Stans, the certified public accountant from Chicago who has headed the task force making fiscal

studies of the Post Office Department, expressed such objections in a speech he delivered in the Twin Cities last December.

Speaking of the vetoed measure, Stans said: "It provided for more of the same old treatment, a 5-percent increase across the board. It provided no new revenue with which to meet the \$100 million cost. It did call for a study of reclassification, but this would probably have merely delayed indefinitely the correction of basic existing inequities in the post office salary structure. The President without hesitancy vetoed it."

Postmark, monthly publication of St. Paul Local 65 of the National Federation of Post Office Clerks, reports the running fire of argument on now about two varying pay raise bills. The publication also reveals the active interest of postal employees in the goal of improved service, emphasized by current reorganization efforts. Union representatives of postal employees favor a flat 10-percent pay raise now, regardless of classifications, and their bill would make the increase retroactive to last August, the time of the President's veto.

The Department's own pay-raise bill continues its major stress on reclassification, with increases varying according to bracket, anywhere from 5 to 40 percent.

The St. Paul publication, Postmark, shows the concern of postal employees here and elsewhere as to improvements in service and operating efficiency. The view often found as to efficiency experts is evident. Comments, whether as to public or private endeavors in the field, frequently raise the point that it may cost more to study and find supposedly inefficient practices than their continuance involves.

Postal employees, maintaining their interest in long delayed modernization techniques, are wondering about the manpower control structure instituted some 6 months ago among departmental reforms. The monthly Postmark made these "clipboard experts" a target recently. The argument was that stress on production records may be outweighing some phases of service to the public. Tallying closely the mail volume handled in 6-minute intervals makes for remarkably complete production records, the union publication admits, but that bit of efficiency expert technique can be carried so far as to delay mail deliveries.

Interest in postal reforms is obviously widespread, and logically so. The service reaches everyone in the country, and it handles 175 million pieces of mail a day.

The Supreme Court of the United States
a Usurper

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1955

Mr. HÉBERT. Mr. Speaker, in the early days of my newspaper employment, I came to know a man whom I now list in my book of fondest memories. He is David Rankin Barbee.

Much water has passed under the bridge since Dave Barbee was one of the brilliant editorial writers and I was the assistant sports editor of the New Orleans States.

Since those days during the late twenties Dave Barbee too has come to Washington and has gone, but in the interim he has left his mark.

Born in Tennessee he has newspapered for some 60 years, 25 of which were spent in Washington.

He has long been interested in the history of the Old South and has written many articles for historical magazines about that section and its people. In the last year of his life, Dave Barbee helped the late Senator Beveridge, of Indiana, on his biography of Lincoln. After the Senator's death, their correspondence was published, with editorial notes, under the title of "An Excursion on Southern History," which was highly commended by leading historians and is now regarded as a classic.

Dave Barbee wrote a popular history of the Nation's Capital, entitled "Washington: City of Mighty Events." This book is much consulted by serious historians and is the most widely read book about Washington in the District of Columbia Public Library.

He has just completed, after 25 years' labor, a definitive study of the assassination of President Lincoln, which scholars call the most original contribution to Lincoln literature in this century.

He wrote several speeches for the late President Roosevelt, notably the Lafayette speech delivered before the Congress, the Gettysburg speech, and the speech before the Gridiron Club on its 50th anniversary.

Mr. Barbee has recently written a scholarly essay on the subject of the United States Supreme Court which is well worth reading and studying. His concern is not individual or personal, but is also the concern of many of us who are strong believers in constitutional government.

Mr. Barbee's article is most timely in view of present conditions and current problems before the Supreme Court which under our Constitution was created to interpret, not write, the laws of the Nation and also to render decisions based on the law of the land and not on sociology books.

Here is Mr. Barbee's treatise:
THE SUPREME COURT OF THE UNITED STATES A
USURPER

(By David Rankin Barbee)

For 170 years the Supreme Court of the United States has assumed and exercised an authority which the Constitutional Convention of 1787 unanimously denied it. This is the power to void an act of the Congress or of any of the States in the Republic. Strange as it may seem, this usurpation of power has gone unchallenged, except in one instance. During the turbulent administration of President Jackson, the Court declared unconstitutional a law in which the President was much interested. Angered by the decision, Old Hickory defied the Court and refused to obey its mandate. "John Marshall has made his law; now let him enforce it," he defiantly exclaimed. And the decision was never put into effect.

Marshall was not a member of the Constitutional Convention, and, therefore, was ignorant of its proceedings. Twelve years before he was appointed the Chief Justice, in the Virginia Ratifying Convention, he announced the doctrine of judicial review of the acts of the Congress, in these words:

"If they (the Congress) were to make a law not warranted by any of the powers enumerated, it would be considered by the National Judges as an infringement of the Constitution which they are to guard. They

would consider such a law void. To what quarter will you look for protection from an infringement of the Constitution, if you will not give the power to the judiciary?"

Seated at his elbow was the man popularly called "the Father of the Constitution," James Madison, whose notes on the daily proceedings of the constitutional convention are almost our sole authority on the debates and the actions of that great legislative assembly. He could have told Marshall that the convention had, after long and serious discussion, participated in by its ablest members, unanimously denied any such grant of power to the Federal judiciary. But he kept silent. He was more interested in defeating Patrick Henry and the cohort of eminent statesmen opposing ratification than he was in the truth. His silence then, and in another conspicuous case, brought everlasting woe on Virginia, on the South, and on the Nation, even to our own time; for, following Marshall's momentous decision of 1815, in the Georgia Indian case, the Court has rewritten the laws of the country and changed the destiny of its historic course.

The Madison papers were locked up in James Madison's possession until 1842, when the Congress, having purchased them from his widow, ordered them published. The Congress, in 1928, ordered a new edition of these papers published. A careful reading of the history of our country, and particularly of the writings of the foremost authorities on the Constitution, from Associate Justice Joseph Story, whose Commentaries on the Constitution was published in 1833, on down to the present, shows that no Member of the Congress, no member of the Federal judiciary, no historian, and no law writer has attentively read those momentous documents which alone reveal the minds of the Founding Fathers. Even so eminent a historian as the late Charles A. Beard, in his *Basic History of the United States*, refers only casually to Madison's notes, and that in his criticism of Calhoun and South Carolina and the Democratic Party in the nullification controversy. He does say that neither did "the public pay much attention to the revelations contained in Madison's papers."

In line with Story and other Federalist interpreters of the Constitution, Dr. Beard says: "The unity of the country was also symbolized by the Constitution in the creation of the Supreme Court. . . . Its Justices might be divided in cases before it, but its decisions made by a majority of them were to be binding at law throughout the land."

It is remarkable, and not at all understandable, that a famous scholar in history, who was venerated by the members of his profession, should have made such a statement, in view of the fact that the Constitution does not make any such grant of power and the Madison papers definitely show that the Founding Fathers shrank with horror from bestowing any such power on the Court. What is still more significant is that the Congress, in the Judiciary Act of 1789, setting up the Supreme Court and the Federal judiciary under the Constitution, carefully refrained from giving the courts the right to void acts of the Congress or of the States.

If Dr. Beard—and he is representative of the profession he adorned—paid little heed to the Madison papers, he fairly worshipped the Federalist, to which he paid this glowing tribute: "From that day (1788) to this the Federalist has been widely regarded as the most profound single treatise on the Constitution ever written and as among the few masterly works on political science produced in all the centuries of history."

After such high-flown praise one naturally would conclude that Dr. Beard had not only read but had studied closely what Alexander Hamilton had written with regard to the

power granted the Supreme Court to void acts of Congress. Hamilton is justly regarded as the ablest member of the Convention of 1787. He had participated in the discussion on the powers to be granted the Federal courts, and had played a principal role in fixing these powers. In the 91st number of the *Federalist*, combatting the widespread notion that the Constitution gave the courts the power of life and death over the acts of the Congress and of the States, he said:

"There is not a syllable in the plan under consideration (the Constitution) which directly empowers the national courts to construe the laws according to the spirit of the Constitution, or which gives them any greater latitude in this respect than may be claimed for the courts of every State." Of course, no State court had the right to void an act of the Congress.

Hamilton did not deceive his readers and the people of New York as to where the Constitutional Convention placed the authority to void an act of the Federal Legislature. He was very definite about that when he says in the same number of the *Federalist*:

"There never can be danger that the Judges (of the Supreme Court), by a series of deliberate usurpations on the authority of the Legislature (the Congress) would hazard the united resentment of the body intrusted with it (the authority to void an act of the Congress), while this body was possessed of the means of punishing their presumption by degrading them from their station."

The Congress has never shown its "united resentment" of any of "the series of deliberate usurpations on its authority." Even now, with a timidity that is amazing, its chief Members shrink from even examining the question.

Turning now to the Madison papers for light, we find that on June 4, 1787, Mr. Gerry, of Massachusetts, raised the question of the right of the Supreme Court to participate in voiding acts of the Congress. "It is quite foreign (said he) from the nature of the office to make them judges of the policy of public measures." He, therefore, moved "that the National Executive shall have the right to negative any legislative act which shall not be afterward passed by (blank) parts of each branch of the National Legislature."

Rufus King, of the same State, seconded the motion, "observing that the Judges ought to be able to expound the law as it should come before them, free from the bias of having participated in its formation."

One of the ablest members of the Convention, James Wilson, of Pennsylvania, opposed the resolution. He said "the Executive ought to have an absolute negative. Without such a self-defense (he went on), the Legislature can at any moment sink it (the Executive) into nonexistence." He proposed giving the Executive and the judiciary jointly an absolute negative.

Joining him in this suggestion, Alexander Hamilton said: "There was no danger . . . of such a power being too much exercised." How little prophetic vision those two great statesmen had.

The Nestor of the Convention, Dr. Benjamin Franklin, sternly differed from Wilson and Hamilton. He was afraid, he said, "that more power would be demanded (by the Executive), till at last enough would be gotten (by him) to influence and bribe the Legislature into a complete subjection to the will of the Executive." The Madison Papers clearly reveal the intent of the Founding Fathers to confer on the policy-making department of the new government, the Congress, the ultimate power in it.

Joining Dr. Franklin, Roger Sherman, of Connecticut, also dissented from the views of Wilson and Hamilton. He was, he said, against "enabling any one man to stop the will of the whole. No one man could be

found so far above all the rest in wisdom. He thought we ought to avail ourselves of his (the Executive's) wisdom in revising the laws, but not permit him to overrule the decided and cool opinions of the Legislature."

"If a proper proportion of each branch (of the Legislature) should be required to overrule the objections of the Executive," James Madison argued, "it would answer the same purpose as an absolute negative. It would rarely if ever happen (said he) that the Executive . . . would have firmness enough to resist the Legislature, unless backed by a certain part of the body itself."

On and on the debate, one of the ablest and most spirited of the Convention, raged, with no determination being reached, but with the chief thought in the minds of the great men participating in it, that the Congress should make the laws and determine their constitutionality.

Action on Mr. Gerry's motion was postponed, and on August 16, 1787, the convention resumed consideration of the question. Mr. Madison reopened the debate by moving "that all acts (of the National Legislature), before they become laws, should be submitted both to the executive and the supreme judiciary departments; that if either of them should object, two-thirds of each House, if both should object, three-fourths of each House (of the Congress) should be necessary to override the objections and give the acts the force of law."

Mr. Wilson seconded this motion.

Mr. Pinkney (sic), of South Carolina (probably Gen. Charles Pinckney), opposed it on the ground that it would lead to "the interference of the judges in the legislative business." If agreed to, it would, said he, "involve them in parties (i. e., politics), and give a previous tincture to their opinions."

From the days of Chief Justice Marshall to the present time, the Supreme Court has been a political and a lawmaking body. Dr. Beard calls attention to this in his *Basic History*, when he says: "A fervent advocate of a strong National Union, Marshall welcomed the opportunity to make his views of the Constitution prevail in law." A leader of the Federalist Party, he gave the laws that came before him the tincture of his political opinions, even during the administrations of Jefferson, Madison, and Monroe. That is one reason why his kinsman, the Sage of Monticello, hated him so. In our own day we saw how an ultraconservative Court took almost fiendish delight in knocking down the liberal legislation of the 1930's.

While endorsing Mr. Madison's motion, John Francis Mercer, of Maryland, one of the ablest lawyers and legislators in the convention, "disapproved the doctrine that the judges, as expositors of the Constitution, should have the authority to declare a law void. He thought laws ought to be well and cautiously made, and then be uncontrollable."

When put to a vote, Mr. Madison's motion was defeated, 9 States to 3, only Delaware, Maryland, and Virginia voting for it.

This left Mr. Gerry's original motion before the convention, and debate on that was at once resumed, with John Dickinson, of Delaware, agreeing with Mr. Mercer "as to the power of the judges to set aside the law. He thought no such power ought to exist."

Gouverneur Morris, of Pennsylvania, described as "one of those geniuses in whom every species of talents combine to render him conspicuous and flourishing in debate"—the man who took the acts of the Convention and whipped them into the shape in which we now have the Constitution—"suggested the idea of requiring three-fourths of each House to repeal laws where the President should not concur. . . . He could not agree (he said) that the Judiciary . . . should be bound to say that a direct violation of the Constitution was law. . . ."

Encroachments on the popular branch of the Government (the Congress) ought to be guarded against."

Roger Sherman, expressing what undoubtedly was the mind of a large majority of the Convention, said that "he disapproved of judges meddling in politics and parties. We have gone far enough in forming the negative as it is," he concluded.

Finally, tiring of the long-running debate, the Convention voted down a motion to postpone further action on Mr. Gerry's motion, and having made up its mind not to give the Supreme Court or any of the national courts the right to void acts of the Congress or of a State, adopted, by a unanimous vote, the motion, giving the Executive the right to veto an act of the Congress and the Congress, by a three-fourths vote of each House, the right to overturn the veto.

There the matter stands in the long silent records of the Constitutional Convention. Who, then, will deny that the Supreme Court has not usurped the power it has exercised for the past 170 years?

The President's School-Construction Program

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

Mr. JACKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by the Honorable Pearl A. Wanamaker, superintendent of public instruction in the State of Washington. In this statement, Mrs. Wanamaker very ably analyzes the ineffectiveness of the administration's school-construction program as applied to the situation in my State.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ON S. 968, SCHOOL CONSTRUCTION ASSISTANCE ACT OF 1955, TO THE COMMITTEE ON EDUCATION AND LABOR, HOUSE OF REPRESENTATIVES, UNITED STATES CONGRESS, BY PEARL A. WANAMAKER, SUPERINTENDENT OF PUBLIC INSTRUCTION, STATE OF WASHINGTON, FEBRUARY 16, 1955

INTRODUCTION

During the past 13 years a cooperatively financed school-building program has been in operation in the State of Washington. While our effort to provide the necessary funds has been considerable, we now find ourselves in a more serious school-housing situation than we were in 1942, the beginning of this school-building program, although since 1951 local, State, and Federal sources have provided some \$214 million for school-building construction.

School districts have received maximum amounts of Federal funds in federally impacted areas. Local school districts have bonded and rebonded themselves to their legal limit as assessed valuation has increased; in addition, they have raised all the money through special levies that their patrons reasonably can be expected to vote—several cases representing more than 200 mills' effort to provide needed school buildings. This has been accomplished as together we have set ourselves to the task of providing adequately for the education of our children.

In this local, State, and Federal endeavor over the past years, we have learned that

there are certain principles which must be observed carefully in a school-building program which has as its objective adequate teaching space to provide a desirable educational program for our children.

These principles are:

1. Responsibility for school building planning must reside with local boards of school directors.
2. The method of distribution of funds must be understood readily and therefore simple in design.
3. State and Federal funds must supplement local school district funds to provide a minimum program permitting the district to go beyond the minimum in the development of its schools to meet individual school and community needs.
4. Interest rates and debt services must be kept to a minimum cost.
5. Assured revenue must be provided at the local level for the retirement of all legal obligations without impairing current operations.
6. The proper framework for an intelligent expenditure of public funds must grow out of comprehensive planning which involves all the forces within a community and State that affect the growth of that community and State, including economic, sociological, and geographic conditions.

ANALYSIS OF S. 968 AS IT WOULD APPLY TO THE STATE OF WASHINGTON

Title I: This section will give no relief to hard-pressed local school districts faced with expanding building needs. Legal bonding capacity of school districts is fixed by constitutional provision at 10 percent of assessed valuation.

School district bonds in the State of Washington command very favorable rates of interest on the open market, ranging from 1.5 to 3 percent with a median of 2.6 percent; lowest rate currently being received on 10- to 15-year bond issues.

Title II: In a growing State, unlimited pyramiding of school district obligations is neither desirable nor supportable. Proposed machinery for administration of this section appears to be excessively complicated and will add to the very substantial bonding debt already carried by needy school districts. This section appears to violate the principle of the prerogative of the local school district to determine the type of educational program necessary to meet the particular needs of its community.

This section does not carry out the principle that all Federal funds for educational purposes shall be channeled through the State educational agency, a basic principle with relation to Federal aid to education.

It appears that the plan proposed in title II would require school districts in the State of Washington to assume a substantial debt with no assured revenue to retire that obligation. In other words, local school districts could be forced to pay debt services out of current maintenance and operation which can be reflected only in lowering teacher salaries.

Title III: This section is not designed to provide relief for needy school districts in our State, inasmuch as it applies only to those districts which cannot qualify under titles I or II. Although school districts in the State of Washington could qualify under title II, they have no assured sources of revenue to repay that obligation. Consequently, it cannot be a solution to our school building program.

Ninety-three school districts, educating 184,460 students, are bonded to capacity and are attempting to vote yearly special levies for operation and maintenance. Seventy-seven of these districts face critical school housing shortages which must be satisfied during 1955-60. In the past, the State has financed up to 75 percent of the cost of building schools in these districts. If districts are to provide needed school housing,

funds from other sources as well must be provided to take care of construction costs, architects' fees, and sales tax. The careful study of this section indicates that Federal funds cannot be made available to the needy districts of our State.

Title IV: Provisions of title IV can be useful for carrying on long-range planning looking toward modifying school-district organization and modification of unduly restrictive tax or debt limits. This section would help to assure the retention of basic responsibility for school planning in the local board of school directors and assure proper framework for intelligent expenditure of public funds.

SUMMARY

Title I will provide no aid to school districts in the State of Washington. Guaranteed debt services apparently would be higher than current rates in this State.

Title II cannot function in Washington because of its failure to protect the prerogative of the local school districts to determine their educational programs. It appears to set up an excessively complicated framework of administration and tends to restrict the right of local boards of directors in planning to meet the educational needs of their respective communities. This section fails to carry out the principle of channeling through the State educational agencies. This section does not provide assured revenue for the retirement of school districts' capital outlay obligation.

Title III could assist needy school districts except for the provision of nonqualification under title I or title II which eliminates title III as a source of help for school districts in the State of Washington.

Title IV can be of assistance to the State of Washington in the further study and analysis of proper school-district reorganization patterns and methods of revising unduly restrictive tax or debt limits currently in effect in this State.

Views of CAB Members Lee and Adams in Respect to Transocean Air Lines, of Oakland, Calif.

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. MILLER of California. Mr. Speaker, on February 8 of this year, I addressed the House with respect to the reported failure of the Civil Aeronautics Board to recommend to the President the adoption of the recommendation of the Board's Assistant Chief Examiner that Transocean Air Lines, of Oakland, Calif., be awarded a limited certificate for a period of 7 years to conduct irregular nonscheduled nonsubsidized air-transport operations between Oakland and various points throughout the critical transpacific area. I was bitterly disappointed in the Board's failure to concur in the findings of one of its ablest and most experienced examiners. His recommendation was based upon a record of extensive and comprehensive public hearings.

On February 16, the Board's opinions and the President's actions in the transpacific case were made public; and I was most interested to read that two mem-

bers of the Board, former Senator Josh Lee and Col. Joseph P. Adams, urged that the examiner's recommendation that Transocean be certified should be approved forthwith. It is difficult to believe that the President was made aware of the views of Members Lee and Adams; because I believe that if the President had read their forceful and cogent dissenting opinion he would have adopted it and thus affirmed the recommendation of the examiner that Transocean be granted a limited temporary certificate.

Because I believe that the Members of the House will be very much interested in the views of CAB members Lee and Adams with respect to Transocean, I am making their views a part of my remarks today:

We must also dissent from the majority's refusal to give Transocean a certificate to engage in air transportation on an irregular basis between California, Hawaii, and points in the Orient as recommended by the examiner. The majority's action in deferring decision on the examiner's recommendation for further consideration with the large irregular carrier investigation, docket No. 5132, ignores the evidence of record in this case which shows that Transocean has performed a needed public service in the transpacific area, transporting more than 26,000 passengers between January 1951 and March 1953. The majority's decision also ignores the fact that the intolerable hardships on Transocean of further delay may force it to disband its efficient organization and deactivate the facilities it now operates in the transpacific area.

We are fearful that the majority's action with respect to Transocean will lend support to the charge that the Board is following a policy of death by delay against the irregular carriers. It was only little more than a year ago, in March 1953, that a former board chairman appeared before the Senate Select Committee on Small Business and assured the committee that the board is not conducting a war of attrition against the irregular carriers but, on the contrary, has a policy of encouraging these carriers to prosecute their applications in proceedings such as this before the Board. The chairman stated:

"The large irregular carrier investigation is not the only avenue, of course, by which the irregular air carriers and others may seek permanent authority from the Board for operations exceeding those which may be conducted on an irregular and infrequent basis under part 291 of the Board's regulations. The Board has always urged that applications for permanent authority for regular operation should be filed and processed by irregular carriers in preference to expansion of operation in violation of the limited operating privileges granted them by the blanket exemption regulation."

Transocean has followed that course here only to be told that this is not the time or place for a decision on its proposal, even though the evidence demonstrates the need for continuance of its service. Instead of having a decision on a clean-cut record as established in this case, Transocean is told that it must wait for a decision in another case—a decision which appears to be at least 2 years in the future.

But now Bureau counsel on brief to the examiner in the large irregular carrier investigation takes the position that the record in that case "will not support any economic finding as to the quantity and class of route-type service required for particular segments or areas." He therefore recommends that the need for such service as proposed by Transocean "should be determined in a regular area certificate proceed-

ing, where requirements for specific route segments are ascertained after a thorough analysis of all related factors." We submit that there must be an end to these procedural maneuvers which are continually pushing the irregular carriers from pillar to post. First, they are told to participate in the large irregular carrier investigation. Then they are encouraged to try their applications in individual-area proceedings. Having done this they are again referred back to the large irregular carrier case (as the majority has done in the instant proceeding). And now Bureau counsel, who is the agent for the Bureau of Air Operations (that arm of the Board responsible for policymaking), takes the position that the record in the large irregular carrier investigation will not permit the granting of the applications of the irregular carriers and suggests that they again seek relief in the individual-area cases.

This is not the first time the majority has placed the irregular carriers in a difficult procedural position. Nearly a year ago on January 20, 1954 (Order Serial No. E-8052), we dissented from the majority's decision in the large irregular carrier investigation to separate the general public interest question from the issues regarding qualification and selection of carriers. In that dissent we pointed out that such action by the majority will delay the final decision in the large irregular carrier case and only if the majority finds that the public interest does not require the services of the irregular carriers could the procedure adopted by the majority result in expediting the proceeding, a finding we were not prepared to make then and are not prepared to make now.

JOSH LEE.

JOSEPH P. ADAMS.

Dispersal of Industry

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith Senate Resolution 19 of the 69th Illinois General Assembly submitted to me by Secretary of State Charles F. Carpenter. The resolution, adopted by the Illinois State Senate on March 1, 1955, urges the encouragement of industry to take steps to effectuate the dispersal of its facilities in the State of Illinois.

STATE OF ILLINOIS,
OFFICE OF THE SECRETARY OF STATE,
Springfield, March 2, 1955.

HON. MELVIN PRICE,
Representative in Congress,
Washington, D. C.

DEAR CONGRESSMAN: I have the honor to attach herewith, as directed, copy of Senate Resolution 19 of the 69th general assembly.

Sincerely yours,
CHARLES F. CARPENTIER,
Secretary of State.

Senate Resolution 19

Whereas the development of thermonuclear weapons has made all former concepts of warfare obsolete and has made modern war so extremely destructive that the largest cities may be effectively and permanently destroyed by one explosion; and

Whereas the industrial areas now existing in Illinois are so concentrated that virtually

every principal industry in this State could well be destroyed or seriously crippled by bombs dropped by a comparatively few enemy aircraft on the first day of a war; and

Whereas little or no effective action has been taken by industry to disperse the industrial facilities in Illinois so as to preserve an undamaged and repairable industrial capacity in the State in the event of an atomic attack; and

Whereas the degree of dispersal required by the threat of eventual hydrogen bomb attack makes any halfhearted attempt at dispersal futile; and

Whereas the lives of millions of our people may be saved by a suitable plan of dispersal of industry which would minimize the destructive results of any attack by nuclear or radiological weapons: Now, therefore, be it

Resolved by the Senate of the 69th General Assembly of the State of Illinois, That industry be encouraged to take immediate steps to effectuate the dispersal of its facilities in this State; and be it further

Resolved, That the Governor of the State of Illinois be respectfully urged to call a conference of industrial leaders, city planners, officials of the Federal Civil Defense Administration and other interested State officials and citizens to make plans for dispersal of industry and to discover how the State of Illinois can help, financially or otherwise, in such dispersal efforts; and be it further

Resolved, That copies of this preamble and resolution be forwarded by the secretary of state to the United States Senators and Congressmen from the State of Illinois to inform them of our deep concern with respect to such matters and to urge them respectfully to initiate similar steps at the national level.

Adopted by the Senate, March 1, 1955.

JOHN WM. CHAPMAN,
President of the Senate.
EDWARD H. ALEXANDER,
Secretary of the Senate.

Smog Can Kill, Claim Experts After Survey and Study

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. McDONOUGH. Mr. Speaker, the Congress may soon have to give serious consideration to legislation concerning the responsibility of the Federal Government to help eliminate smog in highly industrialized and thickly populated areas throughout the Nation.

Smog and all forms of air pollution which are dangerous to the health and welfare of our people have been increasing steadily in the United States during the past decade, and I am sure that this is a matter in which all Members of Congress are concerned.

The Atomic Energy Commission informed the Nation recently of the horrifying effects and possible death and certainly the detriment to the health of millions of people within the area of an atomic bomb fallout which would contaminate and pollute the atmosphere within a 7,000-square-mile area, if the zero point was located in New York City.

This clearly indicates the urgent need of an immediate study of the effects of

the fallout from atomic bombs tested in Nevada over the past several years.

Even if we knew nothing of the atomic bomb and did not have to consider the effects of the atomic fallout on millions of people, we would still have the serious problem of exhaust fumes from millions of motor vehicles which are increasing daily as they are not equipped with efficient carburetors to consume all of the gas delivered to the engine nor are they equipped with filters on the exhaust to neutralize or reduce the unburned gasoline vapors or the noxious products of combustion which is thrown into the atmosphere of thickly populated and highly industrialized areas in various parts of the Nation every day and thus contaminating the atmosphere with poisonous and irritating pollutants.

It is only fair to say at this point that the automobile manufacturers of the Nation are at present studying and experimenting with more efficient carburetors for motor vehicles which will reduce the poisonous gas now released from these machines. However, it is estimated that it will be a considerable time in the future before such a carburetor can be manufactured and applied to the millions of motor vehicles in operation in the United States.

Since motor vehicles are freely permitted in interstate commerce is further evidence that the problem of the elimination of smog and other air pollutants is one which the Federal Government should assume some responsibility for its solution.

Some preliminary studies have been made of the problem of smog and other atmospheric contaminants including a report by the Stanford Research Institute on the nature and causes of smog. This report, published in 1954, considered the growing smog problem of Los Angeles County since 1947, and pointed out that it is a serious problem which cannot be oversimplified. It is a problem which must be thoroughly understood, all contributing causes classified and identified, before effective control can be achieved.

I have introduced H. R. 3680 which would authorize the Secretary of Health, Education, and Welfare to conduct intensified research into the causes, hazards, and effects on human health of smog and all forms of air pollution, and to investigate the most effective means of eliminating smog.

Many parts of the Nation have been severely affected by the deadly and irritating menace of air pollution, and Los Angeles County and other areas in southern California have had this problem for some time.

As further evidence of the dangerous effect of smog, a survey and study by medical experts was conducted recently which I submit herewith together with a letter to me from Francis M. Pottenger, Jr., M. D., chairman of the smog committee of the Los Angeles County Medical Association:

MONROVIA, CALIF., February 9, 1955.

Hon. GORDON L. McDONOUGH,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE McDONOUGH: I am sending a copy of the Los Angeles Times of

January 21, 1955, which contains the full report of our committee which was passed by the council of the Los Angeles County Medical Association. In reply to your letter, my remarks are in clarification of these resolutions.

First, we feel that air pollution can cause death. It has done so elsewhere, including within the confines of the United States.

Air pollution is a continuing problem. It changes from day to day and locality to locality, depending upon meteorology as well as technological problems that apply in a given area at that particular time. For this reason, in the past, the committee has felt that the study of smog must be to a large degree be based on the study of local factors. It is for that reason that we have felt that the acceptance of standards of toxicity that might be developed in Buffalo, N. Y., although they might deal fundamentally with the same toxicological studies, that the standard permissible in New York City would not necessarily apply to Los Angeles because there may be other pollutants in the Los Angeles atmosphere that might not be present in Buffalo, and the effect of the Los Angeles pollutants might be additive, so that a far lesser concentration of a given component might be lethal or a serious health hazard, while in Buffalo it could be breathed with more or less impunity.

Likewise, we have realized that the pollutants are continually changing. They are changing as technical advances change, both as elimination is carried on and also as new techniques develop. On the other hand, we are convinced that it is essential that the relative toxicity of each major contaminant in the atmosphere be determined at once. That problem would be the same in any city of the United States, and, therefore, could be a problem of Federal Government.

Definite establishment of toxicological standards would provide the enforcement officer with two primary tools of great leverage. First, it would provide him with a knowledge of what material must first be eliminated from the atmosphere, and, secondly, it would provide him with information that would enable him to act in a legal manner should the accumulation of toxic elements reach a level that could be assumed to be approaching a critical health hazard. It is also essential from our point of view that some biological means of determining the general critical level of toxicity of air pollution must be discovered to supplement purely chemical determinations. A homely example of this was the early observation that the poisonous fumes in mines would cause the canary bird to be overcome long before the effect on man was noted. This warned the miners that they must take measures to protect themselves.

As to the effect of your bill on the smog problem, it appears to me that any legislation that will encourage industry to install devices for the elimination of atmospheric pollution, such as a means for tax relief should be encouraged. Likewise, although not included in your bill for the potential sources of atmospheric pollution, especially those that are associated with the wider use of atomic energy, should make it mandatory that industry determine the public health aspects of its pollutants that are new to the arts.

I certainly wish to thank you for your interest in this problem, and the committee will be very happy to receive further information. I will see that your bill is brought to the attention of our committee at its next meeting.

Sincerely,
FRANCIS M. POTTENGER, JR., M. D.,
Chairman, Smog Committee, Los
Angeles County Medical Association.

[From the Los Angeles Times of January 21, 1955]

AIR POLLUTION CAN KILL, MEDIC GROUP CLAIMS

"Air pollution can cause death."

This was the first of a group of 9 motions submitted to the council of the Los Angeles County Medical Association by its smog committee and approved by the council, according to the association bulletin.

The smog committee, headed by Dr. Francis M. Pottenger, Jr., of Monrovia, also noted:

2. That air pollution is a continuing dynamic problem in the Los Angeles area.

SAFETY OF HUMANS

3. That the smog committee proposes that biological as well as chemical indices must be determined for the safety of human beings.

4. That the smog committee approves in principle the establishment of chemical standards of air pollution as proposed and begun by the County Board of Supervisors.

5. That the smog committee feels that present chemical standards do not alone safeguard the health of the public.

6. That the tolerance levels of toxicity for human beings of each important contaminant in the atmosphere must be determined both for acute and chronic exposure, both singly and in combination.

REPORT WANTED

7. That the deans of the three medical schools in the area and the California Institute of Technology be requested to prepare a report to the Los Angeles County Medical Association indicating what program each school would propose to determine standards of toxicity of air pollutants, both acute and chronic, and to prepare an estimate of the cost of such a program.

8. That the council of the Los Angeles County Medical Association request each section of the association to send its chairman or representative to meet with the smog committee to make plans for a survey of the membership of the section as to the effect of air pollution on human beings.

9. That the council of the Los Angeles County Medical Association request the county board of supervisors to obtain the cooperation of private, city, State and Federal agencies in financing the necessary facilities and salaries for biological research to determine critical standards of air pollution toxicity, utilizing the facilities of all local institutions capable of carrying on such research.

Federal School-Construction Aid

EXTENSION OF REMARKS OF

HON. ANDREW F. SCHOEPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, March 4, 1955

Mr. SCHOEPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial entitled "Federal School-Construction Aid," published in the Lewiston (Maine) Daily Sun of February 23, 1955.

The editorial refers to one of our distinguished colleagues, the junior Senator from Maine (Mr. PAYNE), who was formerly Governor of that State.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FEDERAL SCHOOL CONSTRUCTION AID

The Senate Labor and Public Welfare Committee has opened hearings at Washington

on the administration's Federal school-construction aid bill, and the measure has quickly run into a storm of criticism.

In one way, this is a good thing. It proves what we have long suspected—that most of the proponents of Federal aid to education want an indiscriminate giveaway program of huge size, taking little or no account of the ability-to-pay principle.

There is no question but that the bill now before the committee can be improved. Its sponsors never anticipated it would pass unchallenged. But the principle is sound, it is flexible in its application, it contains no unjustified rewards for rich States perfectly capable of building their needed schools from current revenue or bonds, and it places the initiative for new school construction in the hands of local and State authorities where it belongs.

All these points were made by Senator **FREDERICK G. PAYNE**, of Maine, when he appeared before the committee late last week and courageously supported the White House bill. This fact in itself is significant. The Senator represents one of the poorer States, and he might have been expected to be among those attacking the bill. But Senator **PAYNE** was Governor when the Maine School Building Authority was established, and he knows something about schools. He could point with pride to the fact that Maine was an early pioneer in setting up a school-construction authority, by which municipalities unable to afford schools through lump-sum purchase or bonding may contract with the authority to build a school, lease it over a long-term period, and then acquire ownership.

Now, the authority idea is basic in the President's plan, and although it has worked well in Maine the educationalists and the New Deal Democrats violently oppose it. They ignore the weakest point in a generous giveaway plan of grants—that on a matching basis the poorer States will find themselves unable to benefit. They say nothing about one of the best features of school-building authorities—as it has worked in Maine, at least—that the careful series of steps undertaken cuts out frills and luxuries and keeps costs at a minimum in terms of functional needs.

We do think the loan section of the White House program can be improved by directing the Federal Government to subscribe to school bonds at much lower rates than prescribed in the bill, and this newspaper would not object to a larger fund for direct grants, which the States would have to allocate among those communities unable even to afford the services of the school-building authority.

But we repeat, the bill is sound, and it rests on the admirably firm foundation of the school authority idea. If Maine can make it work, so can others—unfortunately too many educators, too many Members of Congress, and too many States are simply looking for handouts. It is ridiculous to see big cities like New York and Chicago opposing the bill on the ground that since they build schools from current yearly revenues, they won't be eligible. If they are that well off, they don't deserve it.

Extinction of the United States a Matter of Time Says Red China

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. McDONOUGH. Mr. Speaker, if you have any doubt that Red China does

not mean business, read the following statement from the official Chinese Communist Handbook published for Communist study groups.

After reading it I am confident that all good loyal Americans will agree that we should not appease, compromise, or yield 1 inch to Red China, that we should not be duped into the fallacy and deception of coexistence, and that we should use all of our influence as a great world power to keep Red China out of the United Nations, or withdraw from the United Nations if Red China is admitted over our veto.

EXTINCTION OF UNITED STATES "A MATTER OF TIME"

Official Chinese Communist handbook titled "Fundamental Knowledge on Internationalism," published for Communist study groups:

"Among the nations today obviously exist two antagonistic camps: one is the anti-imperialist camp, that is, the camp of democracy and socialism, with Soviet Russia as its leader; the other is the imperialist camp, that is, the camp of war, anti-democracy and capitalism, with the United States as the leader.

"The reactionary camp led by the United States is day by day showing its inferior position of passivity and isolation. Its extinction—which means the extinction of the entire world capitalism—is only a matter of time. All mankind is on the eve of the total extinction of world capitalism and the total victory of socialism. The animosity and struggle between these two camps are so acute that all races, all nations, and classes cannot avoid being swept into the struggle.

"If people do not stand on this side, then they stand on the other; if they do not join the anti-imperialist camp and help in the struggle for liberation of all the enslaved people and laboring masses in the world or struggle for their own liberation, then they join the imperialist camp and help American imperialism and its running dogs to enslave the peoples of their world or their own people. There is no third path. If somebody thinks a nation can achieve revolutionary victory alone without unity and assistance from the forces of world revolution, [or] after its victorious revolution stay aloof from the animosity between world revolution and counterrevolutionaries, then he is against proletarian internationalism and has fallen into the mire of nationalism."

Watchdog on a Leash

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an article from *Ammunition*, official magazine for the United Auto Workers, CIO:

WATCHDOG ON A LEASH

Last November the conservative Los Angeles Daily News published a shocking series of articles revealing the widespread contamination of grain and grain products—bread, soda crackers, rice, flour, cornmeal, cereals, and other common household commodities.

This is what the newspaper said:

"There is no guaranty that the bread on your table isn't made from contaminated flour. There may be weevils, rat droppings, or other infestations in it—and maybe you can't see them."

Despite these disclosures, made in a detailed series, conditions have not been improved.

The paper stamped the blame for these shocking facts on Mrs. Oveta Culp Hobby, Secretary of Health, Education, and Welfare; on Secretary of Agriculture Ezra Taft Benson; on Kansas City and Omaha grain dealers, and on "economy-minded" Republican Congressmen who at the last session voted to slash the Food and Drug Administration's budget by \$648,000. That action forced a 25-percent cut in the FDA inspection staff.

It showed up in invisible dirt in your food.

One of the most important and least-known agencies of the Federal Government, the Food and Drug Administration's main job is to enforce the Federal Pure Food, Drug, and Cosmetic Act.

It has the responsibility to protect the consuming public by making certain that foods, drugs, therapeutic devices and cosmetics are pure and wholesome, safe to be used, manufactured under sanitary conditions, and honestly labeled.

The story of the fight to secure enactment of the original Pure Food and Drug Act of 1906 marks a significant victory for consumers over the powerful drug and food manufacturers' lobbies which fought pure food and drug legislation for years with the now familiar slogans of socialism, regimentation, and dangerous regulation of private enterprise.

Despite these widely advertised well-financed attacks, the law was passed. Through the years, it was enforced vigorously. Even in the wildly political administration of Warren G. Harding, the Pure Food and Drug Law was given needed support to make sure its objectives were carried out.

For while the efforts to weaken the law went on, the measure generally was considered as apart from politics. And the attacks were turned aside.

But that apparently no longer is true.

By 1900, food processing was moving away from the family kitchen and into large factories. There, the housewife no longer could control the sanitary conditions under which food was processed and canned.

Shocking exposures of filth, contamination and vermin-infested food were common. Adulteration of food products by dangerous chemical preservatives, use of poisonous dyes, the wholesale production of "cure-all" patent medicines created a public demand for congressional action to protect the health and safety of American consumers.

The 1906 law was revised and modernized in 1938. Since then, it has been strengthened even more through amendments and court decisions. In 1940, administration of the law was transferred from the Agricultural Department to the Federal Security Agency which in 1953 became the Department of Health, Welfare, and Education.

An important 1953 amendment to the law gave FDA inspectors authority to inspect factories and warehouses without first getting permission from the owners. Passage had followed a sideswiping court decision which invited Congress to strengthen this section of the act.

It did. But later, it did an about-face and slashed the FDA budget so heavily that enforcing the section was weakened drastically.

Despite such administrative and legislative ups and downs, the fight against the unscrupulous, the fraudulent and the greedy food processors and manufacturers who exploit and endanger public health is a never-ending struggle.

Occasional newspaper stories—and regular FDA bulletins—report frequent cases in-

involving food found containing rodent droppings, rat hairs, worms, weevils, pieces of bugs, maggots, and other adulterations. Other cases are based on decomposed food, fraudulent mislabeling, and other danger signs for families.

Most of these never are reported in the press. Often they are considered too small or routine for news. More often, however, the threat by processors or manufacturers to keep their advertising out of a newspaper has been reported completely effective in killing such items.

Some authorities recently observed that American consumers are fighting a losing battle against those who endanger our health for the sake of bigger profits. Charles W. Crawford, former FDA Commissioner, for example, estimated the agency would need \$15 million a year to protect the public adequately.

The new Eisenhower budget calls for only \$5,484,000 to finance FDA's vast watchdog program.

FDA's inspection job is vast. This "consumers' FBI" directs the inspection of domestic plants and examinations of interstate shipments of foods and drugs which involve about 96,000 separate manufacturers, shippers, and warehouses. These handle food, drug, and cosmetic products having a retail sale value of about \$60 billion a year.

In 1953's fiscal year, more than 15,400,000 pounds of unfit or contaminated foods were removed from the market. That was more than 148 tons a week.

In one recent month, the agency brought about seizure of 1,422,833 pounds of unfit food in 81 Federal court actions. FDA court actions average about 2,000 a year. Most of these involve seizure to take filthy, spoiled, or harmful products out of the market before they can be consumed in quantity. Less than 2 percent of the cases brought by FDA actually are contested in court.

Weakening this work by slashing FDA's budget, therefore, can only mean filthy foods and adulterated drugs will be bought unknowingly by families in startling quantities.

The apparent increase in contaminated foods in the past year, for example, can be more readily understood by examination of the FDA budget, the size of its inspection staff, and the behind-the-scenes work of the grain lobby during the past 2 years.

The number of FDA field inspectors has dropped, since the Republicans took over, by more than 20 percent—from 249 to a low of 195.

The FDA budget has been chopped down 10 percent during the same period. Result has been in the last year less than 10 percent of the 96,000 establishments actually were inspected.

That means it would take more than 10 years for FDA inspectors to average just one visit to each plant or warehouse.

Cost of the FDA's watchdog enforcement of the Pure Food, Drug, and Cosmetic Act averages only 3½ cents a year for each person in the United States. That compares unfavorably with the 7-to-8 cents per person appropriated in Canada for similar inspection work.

Each year 12 times as much of the taxpayers' money is spent by the Department of Agriculture just for the inspection of meat and meat products.

The grain lobby's role in weakening the law has been completely obvious. In May 1953, for instance, FDA and the Agriculture Department jointly agreed to set aside temporarily certain enforcement aspects of the inspection of grain shipped by freight.

That prevented inspection of grain shipments for rodent infestation, a program which had been put into effect just a few months before.

Next, an insect infestation inspection program, scheduled to go into effect in July 1953, also, was blocked. Pressure by the Senate Agriculture Committee and the De-

partment of Agriculture was compounded by protests by grain interests against the new inspection program. The protests did not draw any resistance from Secretary Hobby, whose Department, which includes FDA, had just been raised to Cabinet status, the month before.

Reporting all this, the Wall Street Journal said the action shunting aside the inspection program was apparently taken on the demands of the grain industry.

In an obviously political move aimed at placating those angered by their action, Secretaries Hobby and Benson then appointed a special committee to study the grain inspection-enforcement program. Their report, completed early this year, failed to recommend that the inspection program be brought back.

Thus, for more than a year and a half now, the people have been denied the protection (to which they are entitled under the law) against filthy, rodent-infested, contaminated grain going into the food products they eat every day.

Despite the committee's weak report, FDA has acted to resume the random sampling of carloads of grain. But there again is fresh evidence that the grain lobby is hard at work in Washington once more to cripple strict enforcement of the law.

Senator MILTON YOUNG, Republican, North Dakota, has introduced a bill which would strip FDA of its grain inspection authority and transfer it to the Agriculture Department.

The alarming increase in contamination recently prompted the Eisenhower administration to request an additional \$284,000 for strengthening the field inspection program. But that—which only partly remedies the original crippling slash—is just a small fraction of the amount actually needed.

And instead of requesting sufficient funds, based on obvious needs, Secretary Hobby has appointed another study group to look into the adequacy of enforcement of the Federal pure food and drug law. Should this study take as long as others made by administration agencies, its report will not be made until after the next election.

Consumers, therefore, must look to Congress for their only possible protection. Yet chances for action to improve and strengthen FDA in this session are uncertain.

Legislation tightening up FDA's enforcement power in such areas as chemical additives in food and cosmetics, mislabeling and misbranding of food products, adulteration, and the dangers from residues of pesticide chemicals no doubt will be reintroduced this year.

But unless the Senate and House appropriations committees act favorably to increase the FDA budget well beyond the inadequate Eisenhower recommendations of \$5,484,000, the watchdog enforcement program of the pure food and drug laws will be on a dangerously short leash.

And that would endanger everyone's health and safety.

Special Postage Stamp in Honor of the Late Charles Russell

EXTENSION OF REMARKS OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 4, 1955

Mr. METCALF. Mr. Speaker, the late Charles Marion Russell, of Montana, was one of America's outstanding artists.

In recognition of this distinguished Montanan, our legislative assembly asks in the following joint memorial that a postage stamp be issued in his honor:

Joint memorial of the Senate and House of Representatives of the State of Montana to the Congress of the United States; to the Honorable James E. Murray and the Honorable Mike Mansfield, Senators from the State of Montana; to the Honorable Orvin Fjare and the Honorable Lee Metcalf, Representatives from the State of Montana, and to the Honorable Postmaster General; relating to issuance of a stamp commemorating Charles M. Russell

To the Senate and House of Representatives of the United States in Congress assembled:

Whereas the western frontier has developed a large portion of the American heritage, a heritage that will live ever in the spirit of our National and State endeavor; and

Whereas the rugged conditions of the West produced a scene in the passage of history that will never be duplicated; and

Whereas Charles M. Russell has preserved for posterity in works of art unsurpassed in character and insight and has, as the passage of time will more fully indicate, designed a monumental guide to which the American people may always refer, to ever keep the thoughts drawn upon the ideals our frontiersmen and cowboys sought to carve out of a wilderness; and

Whereas these principles are now more than ever needed before the public eye, and it is the desire of the people of Montana and those that appreciate his significance, that a stamp dedicated to Charles M. Russell be issued by the Postmaster General of the United States: Now, therefore, be it

Resolved by the House of Representatives of the 34th Legislative Assembly of the State of Montana (the Senate concurring), That we respectfully urge that the Senators and Representatives from Montana to the Congress of the United States, and the Honorable Postmaster General take appropriate action to issue a stamp commemorating the genius Charles M. Russell; be it further

Resolved, That copies of this memorial be forwarded by the chief clerk of the House of Representatives of the State of Montana to the Honorable James E. Murray and the Honorable Mike Mansfield, Senators from the State of Montana; to the Honorable Orvin Fjare and the Honorable Lee Metcalf, Representatives from the State of Montana, and to the Honorable Postmaster General of the United States.

LEO C. GRAYBILL,
Speaker of the House,
GEO. M. GROSMAN,
President of the Senate.

Prior to receipt of the above memorial, the senior Senator from Montana—Senator MURRAY—the junior Senator from Montana—Senator MANSFIELD—and I had introduced companion bills (S. 862 and H. R. 4373) to provide for the issuance of a special postage stamp in honor of the late Charles Russell.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Transfer of Soil Conservation Technical Assistance From the Federal Government to the States

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. METCALF. Mr. Speaker, in its issue of November 14, 1954, the Washington Post carried a story in which Mr. Aubrey Graves reported that a committee of the President's Commission on Intergovernmental Relations had recommended the transfer of the function of soil conservation technical assistance from the Federal Government to the various States.

Mr. Graves' story follows:

SOIL PROGRAM SHIFT TO STATES IS PROPOSED—
STUDY COMMITTEE URGES ABOLISHING FEDERAL CONTROL

(By Aubrey Graves)

The transfer of the function of soil conservation technical assistance from the Federal Government to the various States has been recommended by the Committee on Federal Aid to Agriculture.

The recommendations, concurred in by 9 of the 10 committeemen, are contained in a report filed with Meyer Kestnbaum, chairman of the President's Commission on Intergovernmental Relations, last September 30.

The latter group, which will report eventually to President Eisenhower, has not yet accepted or rejected the committee's proposals.

The committee was established to examine the interrelationships among different levels of Government in the conduct of governmentally aided, sponsored or directed programs in the field of agriculture.

It was directed to formulate recommended legislation "to bring about a proper allocation of functions as between the Federal Government on the one hand and the States and their political subdivisions on the other."

The Committee has also recommended that the agricultural-conservation program service, which gives financial help to farmers cooperating in soil-conservation practices, be likewise shifted to State administration and control.

The recommended transfers of authority away from the Federal Government are certain to ring vigorous protests from conservation leaders who futilely fought Agriculture Secretary Benson's reorganization of the Federal Soil Conservation Service.

In that shakeup the seven Federal regional offices were abolished and their duties and most of their personnel transferred to State offices.

Hugh H. Bennett, founder and former chief of the Soil Conservation Service, declared at that time that the shift "cuts the heart out of soil conservation . . . It means watering down a carefully built organization of skilled technical men and dispersing them to . . . State offices or the winds."

Benson replied that in the State offices most of the highly trained scientists and technicians would continue to do exactly what they did before, and that the move would serve farmers better and more economically.

The moves now recommended by the committee would be vastly more far reaching and will be even more bitterly fought.

If they are carried out, soil conservation will be retained at the national level only to furnish national leadership, to coordinate grants-in-aid programs, to carry out the responsibilities of the Department of Agriculture with respect to a few authorized watershed projects, and to work with other Federal agencies on river-basin development and flood-prevention activities.

The individual farmer who wants help in building a farm pond or a field terrace would deal with his local government.

Soil conservation is currently federally operated, federally manned and practically 100 percent federally financed. In fiscal 1954 the Federal appropriation for assistance to conservation districts totals \$56,600,000, most of which is being used to pay Federal technicians.

STATE APPROPRIATIONS SMALL

As of October 1953 State appropriations specifically available for soil-conservation programs during 1 year were about \$2,100,000.

This means the Federal Government is now putting up about \$14 for every State dollar spent in conserving the soil. This compares to 5 State dollars currently being put up for every Federal dollar contributed to agricultural research activities.

Approximately 12,000 permanent Federal employees are now carrying out soil-and-water conservation work: 385 in the national office; 500 in State offices; 700 in area offices; and more than 10,000 in 3,000 local work unit offices located for the most part in county seats. Employees at the local work unit level are the ones who render on-site assistance to individual farm or ranch operators.

The committee, in making its report, conceded that strong Federal action was needed at first (beginning in 1937) to focus national attention upon the necessity of arresting further depletion of an all-important natural resource—the soil.

"Quite likely this could not have been done without national direction, a well-planned national campaign and highly skilled technicians," it says. "However, these arguments are no longer valid, primarily because the importance of soil conservation is now recognized everywhere."

OPPOSITION ANTICIPATED

The committee report anticipates that opponents of its plan will argue that if Federal funds now being used for soil conservation are parceled out to the States, the result will be 48 different programs, some good, some bad, and the majority probably indifferent.

It expects objectors to point out that the States turned in a very poor showing on soil conservation efforts prior to the entry of the Federal Government in this field, and that State administration of the program might become susceptible to undesirable State political influences.

It also anticipates the argument that many Federal civil servants whom the Federal Government has trained at a cost of

millions of dollars may be unwilling to work for State governments, both because of the lower prestige attached to such employment and the lower salaries that might result.

There will be fear expressed, the committee concedes, that the corps of technicians built up over the years will be dispersed.

In answer to these arguments, the committee "emphasizes the blunt fact that the Federal Government is presently engaged in a direct educational program in soil conservation and there is no basis for viewing the function of agricultural extension and that of agricultural research as primarily State functions and, on the other hand, treating soil conservation technical assistance as a wholly national function."

The committee recommended spreading the transition of the technicians to State control over a 5-year period. During the first year it proposes that States receive 100 percent Federal grants.

In the second year, it suggests "an adjusted matching arrangement" between Federal Government and the States, and during the third and fourth years a shift over to an equalizing grant basis. Federal funds would be allocated on a formula giving weight to such factors as area and type of farmland farm population and per capita income.

The States during this period might put up from one-third to two-thirds of the cost, "depending upon States' fiscal capacity as measured by State per capita income."

COMMITTEE MEMBERS

Members of the Committee are: R. I. Nowell, of New York, chairman, vice president in charge of farm mortgage department, Equitable Life Associations Society; Edward J. Condon, vice president, Sears, Roebuck & Co., Chicago; Dr. Frederick Lawson Hovde, Lafayette, Ind., president of Purdue University and president of the Association of Land Grant Colleges; Phillip F. Aylesworth, United States Department of Agriculture; Judge Fred B. Glass, president, National Association of County Officials; W. C. Jacobsen, Director of Agriculture, State of California; John A. Logan, Washington, D. C., president, National Association of Food Chains; Herschel D. Newsom, master of the National Grange; Robert A. Rowan, chairman, R. A. Rowan & Co., Los Angeles, and Senator Andrew F. Schoeppel, Republican of Kansas, a member of the President's Committee on Intergovernmental Relations.

Newsom is the member who dissented from the committee's recommendations concerning the Soil Conservation Service.

The Wildlife Management Institute took note of this recommendation. The following appeared in the November 26, 1954, issue of the institute's biweekly Outdoor News Bulletin:

SOIL CONSERVATION PROGRAM TOO SUCCESSFUL
FOR ITS OWN GOOD

Despite the denials of agricultural leaders, evidence keeps mounting that vigorous efforts are being made to scuttle the highly successful soil conservation program of the United States Soil Conservation Service, according to the Wildlife Management Institute. James G. Patton, national president of the Farmers' Union, was quoted recently in the New York Times as saying that "the Eisenhower administration was preparing to dismantle the Federal soil conservation pro-

gram and shift responsibility for soil conservation to State governments."

Mr. Patton was referring to a report of the committee on Federal aid to agriculture to its parent Commission on Intergovernmental Relations. This report, which is awaiting action by the Commission, proposes that with the exception of a small administrative staff, the SCS be dismantled and its soil scientists and technicians be assigned to State land-grant colleges.

"If this reorganization is permitted to go into effect," Patton said, "it will set our soil conservation work back by 20 years." The Commission is scheduled to make its full report to the President by March 1, 1955.

According to Wayne Darrow's Washington Farm Letter of October 30, 1954, the shift would be done over a 5-year period, with SCS personnel transferred at once and 100-percent Federal grants-in-aid available the first year. It is planned that the States ultimately would share some of the expenses, but even after the Federal program is discontinued, the United States participation still would be anywhere up to two-thirds of the cost of the programs.

The committee that made these recommendations consists of R. I. Nowell, Equitable Life of New York, chairman; E. J. Condon, Sears, Roebuck Co.; President F. L. Hovde, Purdue University; Phil Aylesworth, United States Department of Agriculture; Fred Glass, National Association of County Officials; John Logan, National Association of Food Chains; Herschel Newsom, the National Grange; Robert A. Rowan, Los Angeles; and Senator Andrew Schoeppel, of Kansas. Mr. Newsom is reported to have dissented to the plan for shifting the soil conservation work to the land-grant colleges.

At its annual business meeting in Butte on November 30 and December 1, 1954, the Montana Association of Soil Conservation Districts adopted the following resolution:

Whereas the soil conservation research program being conducted cooperatively by the Agricultural Research Service and the land-grant colleges is of vital importance in developing best possible soil conservation measures and sound land-use practices; and

Whereas funds are inadequate to carry out the research program urgently needed to answer current soil and water conservation problems; and

Whereas new investigations are needed to study means of increasing the efficiency of moisture use and reducing erosion in dry land and range farming areas and to solve drainage, irrigation, and soil-management problems in river-valley areas so as to maintain agricultural production and preserve our soil resources: Now, therefore, be it

Resolved, That the Montana Association of Soil Conservation Districts assembled in Butte this first day of December 1954, go on record as supporting research on problems pertaining to soil and water conservation. These problems are being worked on cooperatively by the Agricultural Research Service of the United States Department of Agriculture and the Montana Agricultural Experiment Station at Bozeman, Havre, Huntley, Moccasin, and Sidney. To meet the need, Montana could use effectively \$80,000 more annually; be it further

Resolved, That copies of this resolution be sent to each member of our Montana delegation in Congress, the Secretary of Agriculture, the President of the National Association of Soil Conservation Districts, the Administrator of the Agricultural Research Service, United States Department of Agriculture, Washington 25, D. C., and the Chief of the Soil and Water Conservation Research Branch, Agricultural Research Service, United States Department of Agriculture, Beltsville, Md., the Director of the Montana Agricul-

tural Experiment Station, Bozeman, Mont., and appropriate committees in the State legislative bodies.

On January 24, our colleague from Texas, the Honorable JIM WRIGHT, called our attention to the proposal in these words:

One of the finest activities of our entire Government, Mr. Speaker, and one which I am convinced is absolutely essential to our ultimate survival as a nation, is in jeopardy of being destroyed.

A subcommittee of the President's Commission on Intergovernmental Relations has officially recommended that the field activities of our Federal soil-conservation program be discontinued.

The panel proposes that the responsibility for sending these trained field technicians out to the grassroots, at the forks of the creek, where they can actually help the American farmer save our soil, be simply turned over to the various States to accept or ignore as they may individually see fit. I find it difficult to conceive of a more costly or a more disastrous move.

Montana's House of Representatives also urged that Congress "reject the proposal of the subcommittee of the President's Commission on Intergovernmental Relations to dismantle the Soil Conservation Service and turn its functions over to the States." Here is House Memorial No. 2:

Memorial of the House of Representatives of the State of Montana to the Congress of the United States, to the Honorable JAMES E. MURRAY and MIKE MANSFIELD, Senators from the State of Montana, and to the Honorable LEE METCALF and ORVIN FJARE, Representatives in Congress from the State of Montana, urging that the Congress reject the proposal of the subcommittee of the President's Commission on Intergovernmental Relations to dismantle the Soil Conservation Service and turn its functions over to the States

Whereas the Federal Soil Conservation Service, working with soil-conservation districts, has been outstandingly successful in serving the soil-conservation districts of America; and

Whereas the subcommittee of the President's Commission on Intergovernmental Relations has recommended that this program be relegated to the various States with a progressively decreasing grant-in-aid status; and

Whereas the present corps of SCS technicians would be gradually shifted to the status of State employees; and

Whereas the idea is financially impracticable because a number of the States, including Montana, have, in the past, been unable to make sufficient appropriations to meet their obligations on other similar grant-in-aid programs such as Federal highways and other worthwhile projects; and

Whereas a good program must be based and dependent on well-trained and educated personnel who can be assured of the security and permanence that only the civil-service status could provide; and

Whereas a high standard of achievement is unlikely of achievement in all 48 States under separate programs; and

Whereas under the provisions of the Reorganization Act, this undesirable shift in soil conservation service responsibility will automatically go into effect after its approval by the Federal Commission unless rejected by the Congress within 60 days; and

Whereas the benefits of a nationally administered program of soil conservation accrue to all the people: Now, therefore, be it

Resolved, That the House of Representatives of the State of Montana, now in session, hereby most urgently request the Congress of the United States to reject the aforesaid reorganization plan, and retain the soil conservation as a Federal service in substantially its present form, with responsibility for carrying forward the programs developed by the locally administered soil conservation districts; and, be it further

Resolved, That the secretary of state of the State of Montana be hereby directed to transmit a certified copy of this memorial to the Congress of the United States, to the Honorable JAMES E. MURRAY and MIKE MANSFIELD, Senators from the State of Montana, and to the Honorable LEE METCALF and ORVIN FJARE, Representatives in Congress from the State of Montana.

LEO C. GRAYBILL,
Speaker of the House.

With this file before me, I called the office of the Commission, seeking information. I was told that while there was a leak by a member, the Commission has issued no report, has not made a recommendation to the President, and is not expected to do so until May at the earliest.

I understand that the Commission is meeting this weekend on the recommendation. Knowing the personnel of the committee, I venture the prediction that when the report is published it will show the fears expressed above to be well grounded. We might as well get ready to fight this out on the floor of the House.

The Need for the Bricker Amendment

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, that great patriotic organization, the American Legion Auxiliary, has been alerted to the dangerous loophole that exists in the Constitution relating to treaties and executive agreements.

In a forceful article appearing in the American Legion Auxiliary National News, Mrs. Luther D. Johnson, of Valley, Nebr., chairman of the national legislative committee, points out that treaty law can override the Constitution. Her authority is no less a distinguished person than the present Secretary of State, John Foster Dulles.

Mr. Speaker, under leave to extend my remarks I am inserting Mrs. Johnson's article:

THE NEED FOR THE BRICKER AMENDMENT (By Lucile Johnson)

Our Constitution has a dangerous loophole. The loophole has been described as follows:

"The treaty-making power is an extraordinary power, liable to abuse. Treaties . . . are, indeed, more supreme than ordinary laws, for congressional laws are invalid if they do not conform to the Constitution, whereas treaty law can override the Constitution. Treaties, for example, . . . can cut across the rights given the people by their constitutional Bill of Rights." (Address by

Hon. John Foster Dulles before a regional meeting of the American Bar Association, Louisville, Ky., April 11, 1952.)

The framers of the Constitution intended to close every avenue to tyranny. They never dreamed that constitutional rights could be undermined by treaties and executive agreements. Thomas Jefferson pointed out that if the treaty power is unlimited, "then we have no Constitution."

Beginning in 1920, however, a line of Supreme Court decisions removed treaties and executive agreements from effective constitutional control. The loophole opened up by these decisions has assumed alarming proportions.

Scores of United Nations treaties in various stages of preparation would, if ratified by the United States, permit freedom of speech, press, religion, and other fundamental rights to be denied by executive decree. One treaty proposed by the U. N. would permit Americans to be tried abroad by an international court without a jury and perhaps in secret. Already, under the terms of the NATO Status of Forces Agreement, American servicemen are being tried by foreign courts under alien law. They are denied the constitutional protections which govern trials in our own military service courts.

Many advocates of world government and Atlantic Union would use the treaty power to achieve those ends.

The American Legion, along with the American Bar Association and many other national organizations, favors a constitutional amendment to protect personal rights and national sovereignty against abuse of the treaty power. The Bricker amendment, re-introduced in the 84th Congress as Senate Joint Resolution 1, would prevent such abuse. It would:

1. Prevent any treaty or executive agreement in conflict with the Constitution from having any force or effect; and
2. Prevent any treaty or executive agreement from becoming domestic law except through valid legislation.

All members of the American Legion Auxiliary should study the vital issues raised by the Bricker amendment. You should then express your views to your Senators and Congressmen.

For additional information on the Bricker amendment, write to Mr. Beurt SerVaas, director of national foreign relations commission, the American Legion, 700 North Pennsylvania Street, Indianapolis, Ind.

Industrial Advantages of South Carolina

EXTENSION OF REMARKS

OF

HON. JOHN J. RILEY

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. RILEY. Mr. Speaker, under leave, I insert in the RECORD an address delivered by Hon. George Bell Timmerman, Jr., Governor of South Carolina, before a group of business and industrial leaders in New York City. The address follows:

In South Carolina there is an atmosphere filled with optimism for the future. In the belief and with the sincere hope that many of you will share in that future, I want to emphasize some of the advantages of South Carolina.

PEOPLE

Our people are our greatest asset. Ninety-nine and six-tenths percent of them are native-born Americans. That is a higher per-

centage than in any other State. They think alike and act alike. They are predictable.

South Carolinians are fundamentally conservative—in their family life, their religion, and their government.

They are staunch individuals. Their concept of freedom is basic. It rejects controlled-group ideologies. It abhors outside intermeddlers. It questions the sincerity of those who come professing to see meats in the eyes of others, while evidencing ignorance of the beam so apparent in their own.

To fully appreciate the competence of the South Carolina industrial worker of today, one needs to understand his background.

(a) Attitude

Prior to 1860, South Carolina was the third richest State in the Nation. At the end of the war of that time it was the poorest. The only material values that remained were its natural resources, a favorable climate, and the unconquerable courage of its people. They were determined to hold on to their State and to rebuild it in the face of almost insurmountable difficulties. This required a spirit that can sustain a man in toil from sunup to sundown without regard for time. Hard work engaged all of our people.

Our farmers often had to improvise. When needed equipment was not available, they made their own tools. When modern machinery was available, they learned to operate that machinery and learned to repair it.

Rebuilding required planning and material development without the aid of a Marshall plan. It required the stamina and ingenuity of men and women who could take the ashes of destruction and rebuild their State with their own hands and their own resources. They accomplished this while laboring under the yoke of punitive regulations imposed upon them by unrepresentative government.

Their efforts have made South Carolina today a land of rich opportunity. Its present foretells even greater development for the future. That achievement, no amount of misreport can destroy.

This experience, passing as it did from a ravished economy to the present day of unfolding opportunity, has enriched the character of our people. It has developed, as no other experience could, their basic respect for property and for the rights of others. That respect is engrained in them. They know the value of production. They had to produce in order to rebuild. The variety of their heritage provides a tolerance that lends itself to harmony and unity. They know the value of the rights of others.

It was this same spirit that enabled their forebears to fashion a wilderness into the third richest State in the Nation. It was this same spirit that enabled you and others like you to assume the heavy responsibilities of conduction successfully your large enterprises.

(b) Quantity

In many respects our modern South Carolina farmer is an industrialist. Basically, his problems are like your own. He must plan for the operation of his farm as you must plan for the operation of your industry. He must determine what crops to plant and when and where to plant them, as you must determine your products and when and where to produce them. He must make plans to market what he produces as you must market what you produce. He has problems of financing as you have problems of financing. The successful management of his farm involves the doing of all those things that make for the operation of any successful business. The stability of government is essential to his intelligent planning as it is essential to enable you to plan intelligently.

I am not trying to tell you that the farmer of South Carolina is capable of operating your industrial plant. I do tell you that, with his knowledge and experience, and with his basic characteristics, you need him because he can do a better job for you than many that you may find in other localities.

Industrialists who have come to South Carolina will tell you that our people quickly learn industrial occupations and that their productivity is 20 to 50 percent above that of workers doing similar jobs in other sections of the Nation.

In South Carolina there is no shortage of those with this background and this competence. For every 100 farmers who die or retire in South Carolina there are 214 young men to take their places. This increase is among the highest in the Nation.

Moreover, thousands of skilled employees with the same basic characteristics are being made available for industrial employment in our State through modernization of existing plants.

It was the productive capacity and attitude of the South Carolina worker that played a large part, I am sure, in enabling many of you here tonight to build a profitable textile empire in our State, free of the interruptions and upheavals which have beset your counterparts in other sections.

(c) Dependability

The dependability of South Carolina employees is shown by our low unemployment compensation rates. The experience rates range from twenty-five one hundredths of a percent to 2.35 percent with the largest portion of taxable payrolls in a recent year having an average of less than 1 percent. The unemployment compensation fund has been so administered that there is now on deposit with the Federal Government enough funds to pay the majority of our covered employees maximum benefits for the maximum length of time eligible.

GOVERNMENT

Basic South Carolina conservatism finds its best expression in sound, efficient government, which has been firmly established for many years.

(a) Constitution and taxes

Our constitution prohibits me as Governor from signing a budget bill that is out of balance.

We have a sound tax structure, founded on a broad base, well distributed among various sources of revenue. Corporate taxes account for approximately 10 percent of the total. Our fiscal affairs have been so managed that some taxes have been eliminated. We have no tax on intangibles. We have no State tax on real property. We have reduced the franchise tax from 3 mills to 1 mill, and have equalized this tax with respect to foreign corporations doing business in South Carolina. Our sales tax exempts purchases of raw materials, machinery, machine repair parts and any item used to make or produce a finished product. Our tax system is universally acceptable.

Assessments on industrial plants are made by our State Tax Commission. This insures uniform assessment regardless of plant location.

Plant assessments do not exceed 16.8 percent of the actual cost of the plant. The value of grading, landscaping, air conditioning, or other expenditures which add to the comfort of employees are not assessed.

(b) Appropriations

In our 1953-54 budget, highways and schools account for more than 60 percent of expenditures, all paid for by consumer taxes.

Construction and maintenance of our highway system, one of the Nation's best, is paid for by our gasoline tax, which can be used for no other purpose. Our school-

building program is paid for by our retail sales tax, which can be used for no other purpose.

Other sources of revenue contribute to our general fund and are allocated to specific needs.

(c) Turnover

Turnover in all departments of our Government is small. When I became Governor, there was scarcely a ripple among departments whose officers and personnel continued to function as before.

The only new appointments made to the Tax Commission within the past 40 years have been to fill vacancies caused by death or resignation.

(d) Cooperation

All of our agencies are available to industry upon call. This spirit of cooperation exists in every department. It exists also in the general assembly. Its leaders are in the forefront in our effort to develop the State industrially.

(e) Development board

To assist industry, South Carolina has a development board with a technically trained staff ready to work in confidence. Factual information acceptable by leading engineering firms throughout the country has been assembled and is available on request.

(f) Survey

Our State employment service has made surveys of labor available in any section. This service is also prepared to give dexterity tests and test batteries in order that plants may obtain the best available labor for their respective operations.

(g) Schools

The courage and realism of South Carolinians in public affairs is revealed in the manner in which we are meeting our school problems. For years every State has known that it must modernize its public schools. Four years ago we determined that we could afford such a program. We are building a school system equal to any in the Nation.

Our schools for Negroes are superior to any in the Nation.

Our school planning is projected into the future. As we modernize, we build for future needs.

By sound planning and sound financing South Carolina has already accomplished an educational revolution, while other States continue to face a crisis. The critical school situation in other States has been recognized by the President of the United States. He has advocated a \$7 billion program in an effort to correct the lack of school facilities. We are 4 years ahead of that program despite the fact our State ranks only 45th in the Nation in per capita income. Our financial condition is so sound that we could not qualify for Federal aid under the school program proposed by the President. This educational accomplishment was attained without levying a single corporate tax and without endangering our State's double-A credit rating.

Expansion of facilities in higher education is proceeding in a comparable way, especially in technical fields. South Carolina has the highest percentage of white college graduates of any State in the Nation. This means a continuing supply of educated personnel for management. Our States supported colleges have graduated more than 3,600 engineering students. Our engineering courses are attracting more students each year. We now have more than 750 students enrolled in electrical engineering and more than 500 in mechanical engineering.

Sixteen colleges in South Carolina are undertaking long-range intercampus programs designed to improve their curricula to fit our young people for responsible jobs in industry.

Some 5,000 of our Negro youth are currently enrolled in institutions of higher education in South Carolina, and this number is increasing each year.

NATURAL RESOURCES

(a) Water

South Carolina has an abundance of water for industrial purposes. There are four large drainage basins embracing our State, a 3d of North Carolina, and a 10th of Georgia. The Pee Dee River drainage area is the second largest on the Atlantic coast. The Santee River drainage basin is the third largest. The Savannah and Edisto Basins have high rankings. Together these rivers drain an area of more than 45,000 square miles. The result is adequate water for industry in South Carolina.

(b) Bushy Park

Near Charleston there is a development known as Bushy Park. This development alone will provide a minimum of 1½ billion gallons of fresh water each day for industrial purposes, with a potential of 10 billion gallons every 24 hours. By comparison, your great city of New York consumes only a billion gallons a day.

In addition to its water supply, Bushy Park has 4,400 acres available as industrial sites, served by highways, railroads, and ocean-going ships. When that is utilized, there is a 10-square mile area which can be made available immediately for industry.

(c) Ground water

In ground water South Carolina is fortunate in amounts and in purity. In many areas the ground water is of such excellent quality that no treatment is required for industrial purposes.

Through a scientifically managed water pollution program, industry can be assured that its plans may be confidently laid without fear that future regulations may upset them.

Continuing studies assure a source of data readily available on any water site in the State.

(d) Electric power

Three major electric power companies and two major public power projects serve South Carolina. Their generating facilities provide adequate service and guarantee ample capacity for future growth. These facilities have a history of expansion. All have been geared to our industrial future.

Commercial and industrial power rates in our State are considerably below the national average. The actual figures are 1.795 cents a kilowatt hour for the United States and only 1.280 cents for South Carolina.

(e) Fuel

Our fuel situation is excellent. Coal is readily available from the bituminous fields of District 8. Fuel oil is brought in through pipeline outlets and by tanker at the Port of Charleston. The Transcontinental Natural Gas pipeline crosses the State and the Southern Natural Gas Co. lines also supply us.

(f) Communications

Our telephone and communications systems have matched the pace of industry since World War II so adequately that we have led the Nation's telephone rate of growth by a substantial margin.

(g) Forests and transportation

Our forests—covering 62 percent of the land area—offer numerous opportunities to industry.

Our paved highways reach every hamlet with roads second to none in the Nation.

Charleston, the fastest growing port in the Southeast, offers favorable rates to industrial centers and the great markets of the world. Ports at Georgetown and Beaufort have excellent harbors available for tremendous development.

More than 400 truck lines serve South Carolina.

Sixteen railroad companies serve to give the State one of the highest rail densities

in the South. There are airports near at hand, all served by major airlines.

(h) Markets

South Carolina is centrally located with respect to the world's fastest growing markets. Our State is nearer to 87 percent of the Nation than is the city of New York. Many of our new plants have been built to take advantage of these markets. Many others will come.

In less than a year an acquaintance of mine has purchased 18 bottles to feed one baby. These bottles cost him 40 cents apiece.

Last year about 210,000 babies were born in South Carolina. Some of those babies will not get 18 bottles apiece. But each year, as per capita income rises, more families will buy more milk bottles for more babies. If each baby averages only 6 bottles, that would amount to 1,260,000 milk bottles. At 40 cents each, it would mean gross retail sales in excess of a half million dollars. From South Carolina, in the heart of the Southeast, markets several times as large could be served easily by any manufacturer.

The bottles my friend purchased were manufactured more than 700 miles from South Carolina.

One day, someone will take advantage of this growing opportunity where he can anticipate a multimillion dollar market.

Our markets are not limited to milk bottles for babies. They exist for practically all consumer goods.

INDUSTRY IN SOUTH CAROLINA

The record shows what is happening to industry that comes to South Carolina.

A manufacturer of world-famous women's hosiery established a plant in South Carolina. Within 3 years he had 5 plants in the State—one quarter of his total world-wide investment. Today he is further expanding in South Carolina.

A cement plant was designed for an 800,000 barrel capacity. Within a few years it was increased to 2 million barrels.

A giant fiberglass plant went into production only 8 months after ground was broken. Extensions are now being added.

A tufted-carpeting manufacturer is planning to double and possibly triple his operations. The first carpet came off the line only 6 months ago.

A famous maker of women's clothing established his first South Carolina plant in 1944. He now has a chain of six.

The great Deering-Milliken and J. P. Stevens Cos. each have more than 20 plants in the State. The vast majority of their postwar expansions have been in South Carolina.

We are also proud that our own Springs Mills, Greenwood, McKissick, Abney, Textron, Woodside and many other great names in industry have done all of their expansion in our State.

WHAT SOUTH CAROLINA WANTS

South Carolina needs and wants new industry. We believe that the surest way to expand our ability to finance the things that are beneficial is to provide new revenue without additional taxation by raising the income of our people.

We believe that new industry and new payrolls are the best means of increasing our per capita income. Each new payroll not only provides more revenue for services rendered by the State, but enables our people to raise their standard of living. It raises the standard of the necessities—housing, food, clothing, and medical care. It enables our people to purchase more items which add to the pleasure and comfort of living in this modern age.

Our people and our Government reject the philosophy of tax and tax, spend and spend. We want a sound prosperity. We want to increase that prosperity on a broad base.

I have told you of our people and our Government. In the final analysis it is the character of a people which makes their Government and its leaders what they are. It is this character which makes us reject the static thinking of the right and the erratic thinking of the left. It is this character that guides us as we study and plan for the future.

South Carolina has no interest in unsound industry. We do not want industry which seeks to exploit our labor or our natural resources.

South Carolina wants industry that will join us in planning for the future—industry that is sound in its thinking as our people are sound in their thinking. South Carolina wants industry which will grow and develop with us.

Our people and our government are pledged to fair treatment and sound planning. From our future industrial citizens we ask as much.

Review of Civil Air Policy

EXTENSION OF REMARKS OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. PRIEST. Mr. Speaker, I have just introduced a bill containing a number of amendments to the Civil Aeronautics Act of 1938. In its examination of this bill, along with other amendments of the act which may be proposed by others, the Interstate and Foreign Commerce Committee will conduct a review of the civil air policy of the United States.

Through the years this committee has been responsible for developing and presenting in legislative form the present civil air policy, both as it relates to purely domestic operations and as it affects the operations of our aircraft abroad and foreign aircraft to this country. This committee wrote and recommended to the House the legislation which became the Civil Aeronautics Act of 1938, the basic statute under which civil aviation operates today. The committee is proud of that statute. Under it, civil aviation has made the magnificent progress with which all of us are familiar—progress which permits us to say that we maintain, under the American flag, the finest air transport system in the world, both at home and abroad.

During the years since 1938 there have been few changes in the Civil Aeronautics Act. The problems of civil aviation have been adequately dealt with, notwithstanding the vast changes which have come about in those 17 years. However, the time has come when it is necessary to review that statute to determine whether some changes need to be made in order to make it a more effective instrument for the continued development and regulation of this great industry.

The bill which I have just introduced will serve as the basis on which this inquiry will be made. In it I have sought to present the major legislative issues which are under discussion at this time.

However, if there are other issues which the Members of this body feel should be reviewed as they affect civil aviation, I hope they will be promptly presented to the Interstate and Foreign Commerce Committee in order that they may be resolved.

My bill provides for the regulation of contract carriers by air. At the present time these carriers are not subject to economic regulation under the Civil Aeronautics Act. The bill would impose limited economic regulation upon them along the lines presently prescribed for contract motor carriers and contract water carriers. Since contract carriers compete with both scheduled and non-scheduled carriers by air for the best traffic available, the regulation of contract carriers is designed, among other things, to prevent discrimination in regulation. Your committee will expect to call upon its knowledge of civil aviation, as well as its experience in regulating other forms of transportation, in determining whether contract carrier regulation is necessary, and if so, the manner in which this regulation should be carried out.

My bill also includes provisions which more clearly define the relationship between the State and Federal Governments in the regulation of civil aviation, both safety and economic. Unfortunately, in the past few years there has been quite a bit of litigation in which it has been sought to draw the line under the existing law between the jurisdiction of State and Federal Governments in aviation regulation. Here again the committee will call upon its experience in dealing with other forms of transportation, as well as on its knowledge of the special characteristics of aviation, in working out this particular problem.

My bill also deals with the problem of the proper regulation of nonscheduled air carriers. Some years ago the Civil Aeronautics Board issued certain exemptions from regulation for the benefit of carriers conducting nonscheduled or, as we call them in the motor-carrier field, irregular route operations. Ever since that time the Board has expended great efforts in seeking to enforce its regulation which restricts these carriers to nonscheduled operations. While most of the carriers who are beneficiaries of the Board's exemption successfully conduct operations within the regulation, a few have sought to conduct elaborate scheduled operations between major cities in the country. The Board's efforts to enforce its regulation have resulted in violent controversy, some indications of it having appeared in statements on the floor of the House. Members have been concerned by reason of the charges made by some of the nonscheduled lines that a monopoly exists in air transportation, to the detriment of the sound development of air transportation. Similarly, members have been concerned by reason of the countercharges that the Civil Aeronautics Act is being subjected to wholesale violations. These fears, of which Members of this body have spoken, must be inquired into by the Interstate and Foreign Commerce Committee of the House. The facts must be ascer-

tained, and if legislative remedies are necessary, they must be recommended to the House by your committee. This will be done.

My bill provides for the extension to international operations of the Board's present powers to regulate cargo and passenger rates. At the present time the Board's powers to regulate international rates are very limited. A number of times the Board has recommended that its ratemaking powers be extended in the way provided for in my bill. This is a controversial subject. Your committee studied this same question very carefully prior to recommending legislation which became the Civil Aeronautics Act of 1938. At that time the committee rejected the proposal for complete rate regulation in the international field, because it was fearful that this would cause retaliation and place the carriers in such an inflexible position that they would not be able to compete effectively with their foreign competitors. Times have changed greatly since that decision was made. The committee should explore the controversy and settle this question as to the scope of the Board's rate regulation.

In reviewing this proposed legislation I have touched upon only the major issues with which the bill deals. Many significant, though less important, changes appear in the bill and will be subjected to review. My reason for making this lengthy statement upon the introduction of this bill is to inform the Members of the House that this review of civil aviation policy is to be conducted by the Interstate and Foreign Commerce Committee. Thus the members will be afforded an opportunity to inform the committee of any problems affecting civil aviation which are giving them concern. Based upon its knowledge not only of civil aviation, but related fields of transportation, the committee will then consider these problems and make a report to the House, accompanied by such legislation as seems required to meet the problems presented.

Brotherhood Week

EXTENSION OF REMARKS OF

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. FRIEDEL. Mr. Speaker, under leave to extend my remarks, I include the address of the Honorable Theodore R. McKeldin, Governor of the State of Maryland, to the congregation of Temple Oheb Shalom, Baltimore, Md., during the annual observance of Brotherhood Week.

The address follows:

ADDRESS OF GOV. THEODORE R. MCKELDIN, TEMPLE OHEB SHALOM BROTHERHOOD MEETING, FRIDAY, FEBRUARY 25, 1955

Brotherhood is a theme on which men can write and have written variations in endless numbers, ranging from the highest realms of thought to the lowest levels of expediency.

Consider them in descending order: brotherhood is part of the law of God; brotherhood is the highest of human ideals; brotherhood is the mortar with which we build civilization; brotherhood is the best security of man in a hostile world—brotherhood is a paying proposition.

I propose today to offer you still another variation, without saying whether it is high in the scale of values, or the lowest of all. That depends upon the point of view. But, high or low, it is as profoundly true as any; and I put it in a phrase borrowed from a former President of the United States. It is this: brotherhood is a condition and not a theory.

To illustrate my point I do not need to quote the Bible, nor any other ancient book that men have regarded as Holy Writ. I call your attention instead to the newspapers of this very month in which we are living, the month of February 1955.

You have all read in your newspapers the accounts of what follows the detonation of such a hydrogen bomb as we set off on a remote Pacific island. It was, the scientists tell us, by no means the most powerful bomb that can be made; we know the formulas for the construction of others much more destructive than this one, and there is no apparent reason why we cannot produce them whenever we choose to do so.

Yet after this bomb of relatively moderate size exploded, for 10 miles up the wind and for 190 miles down the wind, that is, for a total distance of 200 miles, invisible death rained from the skies for the next 2 days. It was a visitation more merciless than the fire and brimstone that the Lord rained upon Sodom and Gomorrah, for that at least was swift; the cities of the plain were wiped out almost instantaneously. But this man-created horror does not strike like a thunderbolt; it sets up within the victim's body an invisible and unquenchable fire that consumes him by slow degrees through weeks and months of increasing agony.

Under that soft and gentle sifting down of pain and death, do you think it matters in the least what is the color of a man's skin, or how blue is his blood, or which of our countless creeds he holds to be true religion? Whether they cry to Jehovah, or to Allah, or to Christ the King, it is all one. Whatever they may have been before, they are brothers in their agony, brothers when merciful death has brought their only possible release.

This, I repeat for emphasis, is a condition and not a theory. We cannot alter it in any way. We can deny it, but our denial will be "a tale told by an idiot, full of sound and fury, signifying nothing." We all stand in the same peril, all under the same condemnation, and the way of escape is escape for all or for none. War is the last, most insolent denial of human brotherhood, and continued war plainly threatens the existence of the race.

If, then, we are brothers in the last extremity, who will have the hardihood to assert that the relation begins only in the shadow of death? And if the relation exists from the beginning, how can we escape the conclusion that the organized slaughter of human beings, whatever name we give it, is in the final analysis fratricide?

It is our custom to brush this somber fact aside with the argument that war has existed since before the dawn of history, that war is a condition of human life in this world, and that it is a distortion of logic to equate it with the individual crime of murder.

It is true that war has always existed, has always been a condition of human life. But war guilt is entirely different. Even the stumbling approach to perfect justice that is man-made law recognizes that the degree of guilt increases with the mental and moral responsibility of the guilty. An imbecile is not held legally responsible for any of his acts, and even the crime of murder cannot

send a man to the gallows unless the jury is convinced that he knew the difference between right and wrong.

Only in the higher civilizations have the masses of men begun to suspect the essential criminality of war, and only in the highest have they realized that aggressive war is not distinguishable from mass murder. We have yet to develop a civilization high enough for men to realize that truth, emotionally as well as intellectually, which is to say that we have not yet developed any civilization high enough to abolish war. Not until we feel, as well as think, that war is a crime will we be capable of getting rid of it.

Development of that kind of civilization is the world's one hope, and the chief responsibility for it rests upon the nations that are the leaders of our present civilization. Americans cannot evade that responsibility unless we are willing to concede that ours is a backward nation morally, however far in advance it may be in technology. It is a concession that I, for one, am unwilling to make; I prefer to accept the heavy responsibility for leading the world in the ways of peace.

But in accepting the responsibility we must face the fact that the hour is late, I fear much later than we think. It is an ironical fact that the time left us has been shortened by our own act. Like the fisherman in the Arabian tale who removed the seal of Solomon from the bottle and let the evil geni escape, we have employed our energy, our wealth, and our scientific genius to remove the seal of ignorance that barred release of the infernal powers that now loom over us as the monster towered over the fisherman.

We excuse ourselves by saying that if our hand had not done it, another would within a short time. It may be true; but that does not alter the fact that we did it, and by doing it incurred chief responsibility for seeing to it that the unleashed evil does not overwhelm our brother men.

How may we hope to discharge that responsibility? Only by facing the facts, all the facts. One that must be faced is the somber fact that the nations are not yet morally developed to the point at which they will all voluntarily renounce war as an instrument of national policy. Some must be restrained by knowledge that aggression cannot bring profit but only ruin to the aggressor; and it is our business so to organize the world that the knowledge will be too plain for any man to escape it; this involves labor, expense and eternal vigilance. We must be strong ourselves and we must be surrounded by strong friends, a condition that will last probably for many years.

But we must face all the facts, and there is another that is equally grim, equally distressing. It is the fact that our own moral level is far too low to justify us in assuming a holler-than-thou attitude toward any other country. The fact of human brotherhood is frantically denied every day and every hour in the streets of our own city and in every other city across the continent. It is not done in words as often as in deeds more eloquent than words. If we are honest with ourselves we will admit that it is denied in our own heart. "Am I my brother's keeper?" snarled Cain, and the mark of the murderer was laid upon him; but where is the man who can stand before the bar of judgment and swear that never has that scream of the beast been echoed, even in his inmost thought?

None of us is guiltless, none of us has never yielded to the impulse to reject the condition of brotherhood; and it is that guilt that blinds our eyes so effectively that we cannot see our way through the labyrinth of the modern world. I believe that the growth of a realization of our brotherhood, not with Chinese and Hindus, but with the man next door and the man down the street, with the

man who worships with a rite different from our own, the man whose skin is of a color different from our own, there will come a sharpening of the vision of statesmanship, a lifting of the mists that obscure our way. With the growth of brotherhood here at home, problems abroad that now seem beyond solution will become increasingly simple and plain.

Cynics sneer at this as impractical idealism, but it is the cynics themselves who are superstitious fools, still believing in witchcraft, still proposing to cast out devils in the name of Beelzebub, Prince of Devils. The realist knows that human brotherhood is not a pious aspiration, but a biological fact, and that fratricidal strife among brothers is a defiance of the laws of nature as disastrous as swallowing poison or deliberately walking off the edge of a precipice.

I think it is realism, too, to acknowledge the fact that all existing programs for the abolition of war are probably inadequate. Pacifism will not do it, although loyalty to the ideal of peace is certainly an essential. I am skeptical of world government as a solution because it seems to me that world government should follow as a result rather than come first as the cause of the abolition of war. Most emphatically reliance on military power can produce nothing but the opposite result, as all history proves.

The fact is that the blind alley in which the modern world finds itself has no way out through any sort of formulas and systems. Formulas and systems may have their uses after the way out has been discovered, but the first necessity is a change in the human heart.

If you feel inclined to throw up your hands at that and cry that human nature never changes, my answer is to ask you, in that case what has civilization accomplished? Is the human nature of an American of the twentieth century exactly the same as the human nature of a caveman of prehistoric times? Basically it may be unchanged, but you know very well that it manifests itself in ways so different that the two creatures seem hardly to belong to the same species. Of course human nature changes; if it were not so, education would be a waste of time and religion nothing more than an empty dream.

The attainment of a sense of human brotherhood is not an impossible ideal, but I sometimes think that we may have laid too much stress on it as an ethical duty. It is a duty, certainly, but it is also a rational process, very much like attaining a realization that the world is round. For many ages that idea, too, was rejected by the mass of mankind as a denial of common sense. Any man, merely by looking around him, could see that the world is flat.

For an even longer time men have been taught by that same common sense that they are not brothers, but mortal enemies. Any man can see it, merely by looking around him. Nevertheless, as evidence kept piling up that the world is round until the fact had to be accepted, so the evidence that men are and must remain brothers keeps piling up. The evidence of the hydrogen bomb is merely the latest item. The lives of countless millions of human beings are in our hands, and our lives are in their hands. We are our brothers' keepers and we can no more alter the fact than we can alter the course of the planet around the sun.

Our choice is limited to accepting or rejecting the duty that the fact implies. It is within our power to be murderous brothers of the breed of Cain, but brothers we shall remain, and if the voice of blood cries out from the ground, it will be our brothers' blood.

Which is my reason for saying that brotherhood is a condition and not a theory and

its acceptance is only secondarily a moral triumph. It is first of all a triumph of reason over ignorance and superstition; and as every triumph of reason results in intellectual enlightenment, so I have faith to believe that the progressive acceptance of the fact of human brotherhood will be a lamp unto our feet and a light unto our path that will guide us through the darkness that threatens to overwhelm us and lead us into the perfect day.

Address by Seaborn P. Collins, National Commander of the American Legion

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. BERRY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address of Seaborn P. Collins, national commander of the American Legion, before the 32d annual national rehabilitation conference of the American Legion in the Statler Hotel in Washington, D. C., on Thursday, March 3, 1955:

Chairman McCurdy, distinguished guests, and my fellow Legionnaires, I am very happy and proud to be with you tonight.

It's always a privilege for me to recognize publicly Legionnaires who have worked tirelessly to put across the programs of our organization, programs which contribute so much to the welfare of the Nation. Tonight I especially welcome the opportunity to pay tribute to you post, department, and national rehabilitation officers of the American Legion. No group within the Legion has contributed more to the welfare of veterans and all citizens than you have. No group is more deserving of the gratitude of every member of our organization.

However, you did not come here to be praised. The way you have worked these past few days proves that you came to this 32d annual national rehabilitation conference of the American Legion for one purpose only—to seek, through discussion and the exchange of ideas and experiences, means of serving our Nation's veterans more effectively.

I have seen the various panels and committees in action, so I don't hesitate to predict that you will leave here with new solutions and new approaches to the many difficult problems which you face. You will leave here with new determination to carry out the burdensome tasks assigned you.

It is essential that you do so, because the burden of preserving existing benefits for America's veterans, their dependents, and their survivors is daily becoming heavier and more difficult to carry.

Tonight those benefits and services which we believe in so dearly are in serious jeopardy.

Before considering the nature and extent of the threats to the entire structure of veteran benefits, let's determine the source of these threats.

The increasingly bold challenge to the very concept of veteran benefits stems primarily from the recommendations of the Hoover Commission on Government Organization. Of course, the threat comes from other quarters as well—from responsible citizens—yes; even from high officials of our Government.

For my part, I want to make one thing very clear:

The American Legion will fight with every resource at its command to preserve and

protect essential veteran benefits. Our defense of these benefits will be based on principles, not on personalities; on facts, not on the opinion of hurried investigations.

We would prefer to devote our efforts to the things that unify rather than those which divide Americans; to the task of strengthening the military security of our Nation; to the job of destroying the insidious disease of communism that has found openings in the bloodstream of America; to the problem of improving the health and welfare of our children; to the countless other tasks that challenge the wealth and will of our Nation.

If our efforts in these directions must be relaxed so that we might throw our forces into the battle for the preservation of veteran benefits, it will not be because we wished it so.

Let me assure any who might doubt our purpose, however, that the American Legion will not hesitate to commit whatever strength is required to win this fight.

The American Legion seeks no cause to prove that it has the physical courage to stand up against powerful opponents. At the same time we will never fail to meet any challenge demanding the moral courage—the guts, if you want to call it that—to stand up and fight for what is right.

Veterans have earned the help and care to which a grateful Nation—through the Congress—has provided. We believe that the principle of adequate medical care for disabled and sick and indigent veterans, compensation for service-connected disabilities, job opportunities, and modest pensions to enable aged and totally disabled veterans to live out their lives as dignified, decent human beings, is right and just and necessary.

This principle is as sound as the sense of justice and morality which gave it birth. It is above compromise.

The American Legion has always been willing to sit down and discuss every practical, honorable means of discharging the Nation's obligations to its veterans within the limits of sound economy. But such discussions cannot be based on the assumption that the Nation has no obligation to veterans simply because there are a large number of veterans involved.

We are not willing to sit down and bargain with those budget-conscious, nearsighted individuals who can see only one place to trim Federal expenditures—the appropriation for veteran benefits.

By the same token, we respect the other fellow's right to disagree. We welcome every opportunity to discuss the critical question of veteran benefits with men of good will and good faith, with men seeking the truth about veteran benefits, and with men seeking earnestly to reevaluate these benefits in terms of future needs and the means to meet them.

The American Legion, however, will never be party to appeasement. We will never sell down the river the interest of the disabled veteran.

Now that we have made clear how and why the Legion must act to protect veteran benefits, let's see where we must act to preserve these benefits.

The first and most serious challenge confronting us is to combat the unrealistic assumptions, unwarranted conclusions, and unjust recommendations of the Hoover Commission with respect to veteran hospital and medical benefits, disability compensation, and veteran preference in Federal employment.

Known officially as the Commission on Organization of the Executive Branch of the Government, the Hoover Commission has submitted only 3 out of 20 reports to be made to the Congress. Two out of the three reports submitted to date deal primarily with veteran benefits.

The action taken today by the national rehabilitation commission in adopting a resolution expressing very clearly and in the strongest possible words the American Legion's vigorous opposition to the Hoover Commission's recommendations affecting veterans demonstrates your recognition of the fact that these reports are slightly less than objective and accurate.

I don't know how much consideration and study went into the Hoover Commission's reports. Some of the Commission members perhaps had little time to personally analyze them; otherwise I would find it hard to understand how objective, fairminded men could lend their names to findings which are so misleading, inaccurate, and incomplete.

Let's forget for a moment, however, that these reports may have been the product of a creed—a philosophy, if you will—which substitutes dollars and cents for justice and gratitude. Let's consider these reports in the cold light of facts.

The Hoover Commission, having stubbed its toe in previous attempts to discredit a whole system of benefits through citation of a few sore thumb cases, now comes up with a sore toe case.

The American Legion agrees that the Commission's sore toe doesn't rate disability compensation, but we deny emphatically the Commission's allegation that service-incurred disabilities rated 30 percent or less "are not being realistically related to loss of earning power."

The American Legion is shocked at the Hoover Commission's heartless denial of the historical principle that veterans who have suffered service-connected, disabling injuries are entitled to compensation from their Government. We find it difficult to believe that worship of the dollar has so corrupted the conscience of any American that he would seriously suggest substitution of greed for creed. Surely the Commission does not expect that this Nation will abandon principle for the sake of a few dollars and accept its recommendation that ability to earn be made the single criterion for determining a veteran's entitlement to disability compensation.

No less heartless is the Hoover Commission's recommendation that 20 Veterans' Administration hospitals be closed, despite the fact that the existing number of VA hospital beds is short of the total needed, and short of the total authorized by Congress.

As far as I'm concerned, this recommendation is so short-sighted and unrealistic that it doesn't even merit consideration. It reflects only one of two things: either a complete lack of understanding of the medical needs of veterans, their entitlement to medical care, and their use of this entitlement, or a deep-seated, bitter hostility toward veterans.

The Commission's charges of excessive hospitalization and medical care for veterans with non-service-connected illnesses and disabilities are completely inaccurate. They are completely, if not deliberately, misleading. You know this from your own experience. You have never hesitated to do everything within your power to obtain needed hospitalization for veterans who were entitled to it. At the same time, you have never tried to obtain VA hospitalization for veterans who could afford private care for non-service-connected illnesses and disabilities. I urge you, in all sincerity, never deviate from this policy; never forget this dual responsibility.

You know, it's easy to prove, by juggling figures, that 60 percent or more of VA patients discharged from VA hospitals are non-service-connected.

For example, in a 100-bed hospital, 90 beds are occupied by the service-connected, and the tuberculous, the neuropsychiatric, chronic neurologic and chronic cases. Only 10 beds are occupied by non-service-connected general medical and surgical cases. This is

an accurate percentage of patients in VA hospitals.

During the year, there are 75 discharges from the 10 G. M. and S. beds, 10 from the long-term category of non-service-connected cases, and 15 from service-connected cases. Propaganda artists add the 75 and 10 and broadcast as a fact that 85 percent—not just 60 percent, mind you, but 85 percent—of the discharges were nonservice connected. Even as they make this charge, they know full well that every day of the year 90 out of the 100 beds were occupied by patients in classes which the Hoover Commission itself recognizes should be given VA hospital and medical care in accordance with the sentiment of the American people.

It's also easy to prove that veterans, with incomes of \$50,000 a year, receive VA hospital care for non-service-connected disabilities. It's easy to prove, that is, if you search long enough and hard enough, and finally come up with the case where an individual, earning \$50,000 a year, collapsed on the street from a heart attack. He was moved to the nearest hospital, a VA hospital, and kept there for 3 or 4 days until he was well enough and strong enough to be transferred to another hospital.

Time doesn't permit the full-dress discussion which this particular report of the Hoover Commission warrants. I've covered enough of it, however, to demonstrate how little credence the American people should place in the Commission's findings concerning veterans.

There are other Hoover Commission recommendations which we should keep in mind. These would emasculate, if not destroy, veteran preference in Federal Government.

The first report issued by the Commission dealt with personnel and civil service. The Commission's recommendations are just as hostile and just as destructive in this report as are its recommendations on medical care and compensation.

Among other things, veterans would lose employment preference and job retention rights which they now enjoy under the Veterans' Preference Act of 1944. And they would be denied the right of appeal to the Civil Service Commission 5 years after they entered Federal employment, if the Commission's recommendations are adopted.

There are many other signs which indicate clearly that veteran benefits are under the gun. It's impossible to examine them all tonight. But before closing I would like to call to your attention two other developments which bear watching.

By Executive order last January 14, President Eisenhower established a commission to make a comprehensive survey and appraisal of the structure, scope, and administration of laws providing pension, compensation, and related nonmedical benefits to veterans and their dependents. Taken by itself, this action might not be considered detrimental to the existing program of veteran benefits. But when it is related, as it must be, to the President's statement of last fall that steps would be taken "to examine the entire structure, scope, and philosophy of our veterans benefit laws in relation to each other and to other Government programs," this action must be recognized as a very serious and very real, potential threat to veteran benefits.

The House of Representatives has appointed a select committee to conduct a full and complete investigation and study of benefits provided to survivors of deceased members and former members of the Armed Forces. Again, viewed independently, this action doesn't seem to warrant special concern on our part. Yet, it must be remembered that this special House committee is a successor to the so-called Bates committee. You're familiar with the report of that committee so you can appreciate that the

new select committee might very well consider a major alteration of survivor benefits.

You can be certain that your national rehabilitation commission and staff will keep you immediately and completely informed of important developments in these areas. My only purpose in mentioning these studies tonight is to alert you to the fact that they may develop into critical areas of activity for you in the next few months.

One of the most effective ways I know to destroy whatever good might result from the strong stand which the American Legion has taken during this conference for the protection and preservation of veteran benefits is to begin to qualify that stand. I have no intention of doing so.

In closing, however, I do want to make these points clear.

The American Legion recognizes that existing benefits for veterans who have earned them through wartime service can be jeopardized by their continuation for all future veterans without regard to the length or circumstances of their service. Therefore, we offer our 36 years' experience in rehabilitation and service matters to the President, the Congress, and other concerned agencies or groups appointed to study this critical question.

The American Legion will not hesitate to confer with any individual or organization seeking sincerely to learn the facts about veteran benefits. We will not hesitate to inform and counsel any individual or group uninformed or misinformed about veteran benefits.

In doing so, however, we will never compromise with the principle that the essential veteran benefits which veterans have earned, and for which we fight are just, and right, and necessary.

We cannot compromise this principle if we hope to convince all of our citizens that this principle is right. And we must convince our fellow Americans, if veteran benefits are to be preserved.

Length of Congressional Terms

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Greenfield (Ind.) Daily Reporter of March 3, 1955:

LENGTH OF CONGRESSIONAL TERMS

A chance and probably extemporaneous remark by President Eisenhower at his Wednesday press conference, brings up an interesting concept of the workings of our Government.

Mr. Eisenhower was talking about the pay raise from \$15,000 to \$22,500 which Members of Congress have just voted themselves. He intimated that he favored and would sign the measure.

Then he remarked that he thought Members of the House of Representatives should be elected for 4-year terms instead of the present 2-year terms.

The length of congressional terms is set by the Constitution. Therefore, it would take a Constitutional amendment to change them. Members of the Senate generally serve for 6 years; Members of the House for only 2 years, with the possibility of a complete changeover every 2 years. One-third of the Senators stand for election each 2

years, so, barring death or other emergency, two-thirds of that body carry over.

One of the objections to serving in the House of Representatives has always been that the aspirants or incumbents are in an almost perpetual state of campaigning, with the straining labors and the expense involved. The possibility of a complete changeover in the House is actually not very great because of the general practice of multiple terms, long tenures, and the fact that an incumbent, if he be doing a relatively popular job, has a distinct advantage in both nomination and election over a new-coming aspirant.

But the remark of the President raises the question as to what was the purpose and intent of the Founding Fathers in establishing the two legislative bodies and in the variance in the length of terms.

It is another example of the old idea of checks and balances. The House is supposed to be quickly and highly responsive to the will of the electorate. The Senate is supposed to be more stable and deliberative and to be removed a few degrees from the flash and flare of political pressures. One body offsets the other in a measure. That is the primary reason for the difference in the length of the terms. It should be remembered that for many years Members of the Senate were not selected in direct elections but were chosen by the State legislatures, presumably from a selected list of wise and seasoned men. Still continuing this idea in part is the practice, as in Indiana, of selecting the party's senatorial candidates in convention rather than by direct primary, while the Representative candidates are picked in primaries.

Therefore, no matter how much more convenient it would be to have longer terms for Members of the House, such a change could not be made except to the detriment of the possibility of quick response to the will of the people.

That is important. And in a time when big government is more and more inclined to ignore the public will; in a time when an increasing preponderance of appointive rather than elective public servants are deciding and executing matters vital to the public welfare; it is no time to loosen the public halter, or control, any more than it has been eased.

The Flemming Report

EXTENSION OF REMARKS

OF

HON. FRANK IKARD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. IKARD. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Wichita Daily Times of Tuesday, March 1, 1955, entitled "The Flemming Report":

THE FLEMMING REPORT

Congressman FRANK IKARD's bill to divorce the Federal Government from control of natural gas at the wellhead received unqualified support in the Flemming report that was made public in Washington Saturday.

"In the production of natural gas it is important that sound conservation practices be continued," the report recommended. "This area of conservation management is under the jurisdiction of State conservation commissions. In the interest of a sound fuels policy and the protection of the na-

tional defense and consumer interest by assuring such continued exploration for and development of adequate reserves as to provide an adequate supply of natural gas, we believe the Federal Government should not control the production, gathering, processing, or sale of natural gas prior to its entry into an interstate transmission line."

The Director of the Office of Defense Mobilization, and the seven Cabinet members heading the Departments of State, Treasury, Defense, Justice, Interior, Commerce, and Labor had been directed by the White House last July to evaluate factors pertaining to the continued development of energy supplies and resources fuels.

That the study group should come up with findings to the exact point of the bill introduced by Representative IKARD, and of other measures on the same subject, is gratifying and offering hope that Congress will now act favorably on legislation to contravene the ruling of the United States Supreme Court in the celebrated Phillips case.

The Flemming report clearly outlined the scope of Government control of natural gas production, transmission, and utilization. It recommended that production and conservation of natural gas be regulated by State conservation commissions; that interstate transmission be regulated by the Federal Power Commission; and that distribution be regulated by the local public utility commissions.

Texas ought to be thoroughly familiar with this separation of authority. It is the theory under which the natural gas industry has operated all along until the Phillips case interfered last year.

Thomas Masaryk: The First Czechoslovak President

EXTENSION OF REMARKS OF

HON. RICHARD W. HOFFMAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. HOFFMAN of Illinois. Mr. Speaker, today is the 105th anniversary of the birth of Thomas G. Masaryk, and under leave to extend my remarks, I wish to pay tribute to an outstanding leader of our time.

Great nations have produced great men who have shaped the destiny of their peoples. America has men like Washington and Lincoln; Czechoslovakia has Thomas G. Masaryk. He was born on March 7, 1850, in Moravia, under humble conditions, and died as the first president of the Czechoslovak Republic.

Throughout his life Masaryk was a seeker and protector of the truth. He abhorred violence and terror in social life and politics. His intense feeling for democracy is evident from his statement: "The ideal of democracy is so high, so valuable, so dignified, that it is worth believing in, living for, fighting for." A champion of the oppressed, he constantly fought for the rights of minority groups.

Believing the Hapsburg monarchy to be incompatible with democratic self-government he worked for a free and independent Czechoslovakia. He continued the struggle after the outbreak

of World War I, by travelling abroad to gain support for the Czechoslovak cause and with the aid of Edward Benes formed the Czechoslovak National Council, which was recognized, during the war, as the de facto government of Czechoslovakia. On November 14, 1918, when the Austro-Hungarian monarchy collapsed, he was elected president of the newly formed Czechoslovak Republic, and being on American soil at that time he visited President Wilson to express his gratitude for America's aid in the creation of the infant nation.

The Czechoslovak state which he founded was based on democratic freedom and recognized the rights and duties of the individual. Under Masaryk's firm leadership Czechoslovakia became one of the foremost democracies in Europe. He was reelected to the presidency in 1920, 1927 and 1934 and resigned, due to ill health, in 1935.

His spirit lives on in Czechoslovakia, despite the tragic experiences of the Czechoslovak people under the present Communist regime. This was appropriately expressed by President Benes at Masaryk's funeral in 1937 when he said:

Though he passes on Masaryk is still with us. . . . President-Liberator, we will remain faithful to the heritage which you have laid in our hands.

Although this heritage has, at least for the present, been betrayed by the Communists, we know that the Czechoslovak people remain faithful to it in their hearts.

Thomas G. Masaryk: The Spirit of Democracy

EXTENSION OF REMARKS

OF

HON. WALTER ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. ROGERS of Texas. Mr. Speaker, this 105th anniversary of the birth of Thomas G. Masaryk, founder and first President of the Czechoslovak Republic, ought to remind us all of the great American heritage of democracy.

Thomas Masaryk was the embodiment of those same concepts that have made our Nation a great Nation. And it is not without significance that it was in America that Thomas Masaryk found much of the spiritual inspiration for creating the Czechoslovak Republic in 1918. Thus, Thomas Masaryk represents a link between America and his own native Czechoslovakia.

On this anniversary of the great Czech statesman let us, therefore rededicate ourselves to those higher ideals of democracy which are exemplified so well by the spirit of Thomas Masaryk. We are living in an epoch of trial; and the firmness of our convictions, the steadfastness in the righteousness of our cause, and the determination to preserve Western democracy—all are the elements which will insure ultimate victory.

A Target Area's Request for a Chance To Survive

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a splendid statement sent to me by Evelyn Smart, of Roxbury, Mass., entitled "A Target Area's Request for a Chance To Survive."

It is inspirational to know that there are persons like this lady, who are so deeply interested in such an important matter, which should be of the utmost concern to each and every one of us. The thoughts and views of Mrs. Smart are worthy of deep consideration.

The statement follows:

A TARGET AREA'S REQUEST FOR CHANCE TO SURVIVE

Since the detonation of the first hydrogen device in 1954 I have been compiling information from official sources as to the merits of a personal defense kit for the public in target areas, in the event of enemy attack by nuclear or bacteriological warfare.

My first letter, in the spring of 1954, was to President Eisenhower, asking if a program for protective devices was considered. This letter was forwarded finally to the Atomic Energy Commission. The reply was that "the protection of the public against the effects of nuclear detonation was clearly the concern of the Federal Civil Defense Administration."

My first questions were asked at a time when any layman could estimate that a hydrogen blast would generate a dangerously increased fallout of radioactive particles from which the population would need protection by filtered respirators and special clothing.

I have since found information which proves a kit should be prepared with Government specifications, which could be sold at cost, manufactured under Government subsidies.

Statements from the Atomic Bomb Casualty Commission Director in San Francisco, the Institute of Pathology in Washington, D. C., Brigadier General Calloway of the Army Quartermaster Research Center in Natick, Mass., all prove that garments can be made to protect evacuating people from blast, flash burns, glass penetration, inhalation of radioactive dusts, and bacteriological warfare.

The present certainty of delayed rescue calls for each person to carry his own first-aid supplies and emergency rations.

Various booklets prepared by the Atomic Energy Commission inform us that workers in atomic-energy installations wear plastic suits against the dangers of internal radiation, so, our garments' outer surface should be of plastic; for the lining, I have learned that 3 or 4 layers of wad cotton insulate well against thermal radiation and would not be bulky enough to impede freedom of movement. The garment should be either a hooded cape or hooded coverall for quickly putting on.

The vital areas of head, neck, and lungs should have the protection of the nylon material already used in the Armed Forces as body armor, to guard against glass penetration and falling sharp or heavy debris.

Outer pockets should carry plastic overshoes and gloves or mitts, as well as goggles. Inner pockets should contain first-aid sup-

piles and emergency Army-type rations. An ultra filter type respirator should be worn about the neck, ready, at a cost of \$4.50.

If civil defense were to issue a design for patterns, many women could make for their families the capes or coveralls. The garments could be made in high schools, settlement houses, prisons, by Red Cross groups, Girl Scouts, and civil-defense groups.

Then for Congress to enact legislation to provide a Government-subsidized manufactured garment, they could still sell at cost. The cost probably would not exceed \$12 or \$15. Not too far out of reach for the general public. Radio, TV, and newspapers could educate the public as to their use and protective qualities.

Boston parents, last year, signed permission for school authorities to evacuate school children. Can the picture of thousands of bareheaded, bare-armed, first graders setting off on the fearful gamble of evacuation to face the most awful perils man has known be the verdict of Congress?

Just as life preservers are stored in ships these kits should occupy one wall in every schoolroom in every school, hospital, office, mill, factory, etc.

The blind and lame and aged will have to be led to shelters; a hooded cape would allow crippled people to use their crutches and increase their chances of survival.

A mother carrying an infant in her arms might have to flee a burning or collapsing shelter. She would be spared a great deal of fallout radioactive particles if a plastic garment covered her and her baby.

We won't all get rides to safe areas. We won't all survive, but it should become the aim of this Congress that no expense be spared to give greater chances of survival to the public.

The life which is spared might be your own.

Thomas Garrigue Masaryk: Scholar and Educator

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. ZABLOCKI. Mr. Speaker, on this 105th anniversary of the birth of Thomas G. Masaryk it is fitting that we pay tribute to the man, to his life, and to his work.

At this critical juncture of civilization, the name of Thomas Masaryk has a special meaning; for next to Woodrow Wilson, perhaps no statesman of World War I had a greater appreciation of the importance of knowledge and education in relations to a democracy and to the continued growth of Western culture than Thomas Masaryk. Like Wilson, Masaryk was a scholar, statesman, and philosopher well grounded in the ideals of our Christian civilization. Christian democracy was to Thomas Masaryk the highest ideal to be achieved in the building of a state: A state inspired by, and based upon, the ideals of both Christianity and democracy.

A statesman convinced of the necessity for a sound educational system in a democracy, Thomas Masaryk infused into the newly constructed Czechoslovak Republic his own spirit of democracy

and humanism. As a cure for political evils, Masaryk wrote:

Democracy demands the political education of citizens and electors.

Education, he pointed out, was not to be solely erudition or one-sided and exclusive school education because they alone cannot bestow understanding, talent, or political sense. A nation needs a "strong and healthy brain," he said, and thus the objective of education in a democracy is "to teach the young to think."

Education did flourish in the Czechoslovakia of Thomas G. Masaryk, and it aided in molding the new Republic in the spirit of true democracy and humanism.

Since the Communist seizure of Czechoslovakia in February 1948, the Communists have made a concerted effort to destroy the structure of the educational system of once free and independent Czechoslovakia. They have endeavored to build a structure based entirely upon the philosophy of communism. Knowing that education can mold the generations to come, the Communists have tried to mold the entire Czechoslovak system in the image of Marx, Engels, Lenin, and Stalin, and to produce a new type of man, the so-called Soviet man.

This communistic system of education, presently operating behind the Iron Curtain, is atheistic; it is materialistic; it is antidemocratic and anti-humanistic.

Fundamentally, the Communist educational system is the very antithesis of everything Thomas Masaryk stood for.

Today Czechoslovakia is a participant in the universal struggle against totalitarian, atheistic communism. Unfortunately, Czechoslovakia is now within the Soviet orbit of power, and thus it is a nation in slavery.

On this 105th anniversary of the birth of Thomas Masaryk, let us, therefore, call the attention of all the world to the dedication and to the principles of this great statesman. Let us also reassert and reemphasize our Christian and democratic principles, for it is in the strength and the vitality of these principles that the salvation of mankind may well rest in this global struggle with materialistic and totalitarian communism.

Peanut Industry Nets Millions

EXTENSION OF REMARKS

OF

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article by Violet Faulkner:

PEANUT INDUSTRY NETS MILLIONS

(By Violet Faulkner)

Did you know that American farmers reap \$175 million from their peanut crop each year? That's \$25 million more than is spent

on the diamonds imported into the United States in a comparable length of time.

The National Peanut Council states that although America produces only about 10 percent of the world's peanuts, we have more uses for them than any country on earth. We eat quantities of them as is; hundreds of pounds go into candy and peanut butter. We use them in sauces and soups (Hotel Roanoke is famous for peanut soup); in desserts and fancy toppings for cakes and ice cream.

Peanuts rate well in thiamin and niacin and contain large amounts of riboflavin. The fat content is high, almost 50 percent, but there are those who contend their energy value offsets their calories. For the record, the energy value of 1 pound of peanuts is equal to 4 pounds of beefsteak, 21 pounds of cheese or 33 eggs.

Kids, peanuts and carousels seem to go together. So, why not pay tribute to the popular goober and have a party for the pigtail set during National Peanut Week, March 6-12.

CAROUSEL CAKE

It's a tossup who'll have the most fun *** mom, while she's dreaming up variations on this carousel cake *** or the squealing pigtail gang when they see old goober goober doing a wing-ding on the merry-go-round roof.

Let's start: The roof of the carousel is a party hat, minus its elastic. Posts for the prancing animal crackers are jumbo-size soda sippers pushed snugly through holes in the roof. Dots of household cement secure the cookie steeds. The goober goober is held together by bits of pipe cleaner inserted for joints. A big darning needle is just right for punching holes in the shells.

Set your carousel aside while you bake a big 9-inch, 4-layer cake. Two packages of cake mix will save you time. Spread each cooled layer with chocolate frosting. Sprinkle with chopped peanut confection *** candy bars or peanut brittle. Stack. Ice sides with white, top with chocolate. While icings are fresh, press on animal crackers, wagon wheels cut from a one-fourth pound peanut candy bar, and redskin peanuts to hitch the procession together. Use a pastry tube for the chocolate frosting cages. Now a circus ring of salted peanut halves around the edge, those merry-go-round posts erected firmly *** and the show is on the road.

PEANUT CONE SUNDAES

If you've a teener on the premises, expect a platter party any day. Chances are there'll be jitter-bugging in the rumpus room, mamboing in the living room, and hot jazz emanating from the attic.

And where there are teen-agers, there'd better be plenty of food. For a real cool idea that will start the blue jeans crowd stomping. We recommend make 'em yourself cone sundaes for that next disk-spinning party. Stock up on supplies and let the youngsters take over. Have these on hand:

Peanut-chocolate candy bars—figure one nickel-size bar for each cone to be topped. Melt bars over boiling water; soften with a few drops of water.

Whipping cream—half a pint will top up to a dozen cones. Whip and sweeten.

Maraschino cherries—those with stems handle best.

Salted peanuts—have plenty; chopped for topping, whole for munching.

Ice cream—two cones apiece won't be any too many. Neatest to serve are the 2-inch ice-cream cubes, in a choice of flavors. Keep in freezer until needed. Or buy ice cream by the gallon and scoop with the biggest dipper you can find.

Cones—buy 'em by the box.

Peanut cookies—buy or use the new prepared peanut-cookie mix.

H. R. 1, the Trade Agreements Extension Act of 1955

EXTENSION OF REMARKS OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Malden (Mass.) Evening News of February 28, 1955:

IT COULD HIT HOME HARD

If some superhuman power were suddenly to transfer Malden industry thousands of miles away, the effect on the community would be catastrophic.

Jobs would be lost, millions of dollars in payroll would be gone, the money to buy food and goods and to pay for household appliances would disappear, and the eddies of disaster would move in concentric rings throughout the community affecting the pace of its life in a hundred different unhappy ways. Once recovered from the shock of such an outlandish development every voice in the community would rise in anger and protest.

Such an event, on such a scale, in such a manner, is not likely to happen. But in a less conspicuous way, but very real way, employment of more than a thousand people in Malden and a payroll of more than \$3 million a year (which has a very real effect on the community), and the survival of very substantial local industry, may well be in jeopardy as a result of certain things presently going on down in Washington.

These things include a bill, H. R. 1, which is designed to extend the President's power for 3 more years so that he may adjust the tariff structure of the United States to encourage the development of industry in seemingly less fortunate parts of the world.

Generally speaking, the American people are an enlightened people and they very genuinely subscribe in principle to the theory behind this bill. Why not, they ask themselves, develop trade instead of spending endless sums on aid? Why not, they ask again, help raise the standards of living of people in foreign countries by offering them opportunities to sell goods in our own markets?

Because: Granted that American industry, at least for the present, has a know-how unequalled anywhere else in the world; and further granted that the American workman, for the present, has the skills to out-produce his counterpart anywhere else in the world, nevertheless, the authority inherent in the extension of the reciprocal trade act would make it possible for the President to wipe out differentials existing in tariffs so that the influx of foreign goods could seriously injure those firms in America which produce the same product.

The rubber footwear industry is a case in point and the Converse Rubber Co. in Malden and its employees, which make up our largest industry, face a real threat as contained in the language of the reciprocal trade act.

Let it be understood, incidentally, that nowhere in this act which has already gone through the House in Congress and awaits action in the United States Senate, is the rubber footwear industry specifically threatened with a tariff situation which can put them out of business. But the power and the authority is there given to the President at his own discretion to use.

Not too long ago the threat to use that power to reduce the tariff on importing

rubber footwear was quite real. Except for the tremendous efforts of the workers in that industry and the sympathetic hearing they received in Congress and at the White House, the tariff cuts would have gone into effect and the position of the rubber footwear industry put, in the minds of most observers, in serious jeopardy.

What makes the rubber footwear industry especially sensitive to tariff fluctuation is the fact that labor represents a high percentage of the production costs in its operations. Thus, the American rubber footwear industry finds itself in a particularly vulnerable position as long as it has no guaranties in the face of foreign, cheap labor competition. For example, in Hongkong where 65 percent of the canvass footwear imported into Canada last year was made, the average hourly wage being paid to males in their rubber footwear factories was 14 cents an hour. Workers there have a 9-hour day, every day of the week, including Sundays and holidays except for certain Chinese festivals. The Chinese workman does not enjoy the long list of fringe benefits paid for in American factories. On this score alone it is perfectly obvious that the application of the authority of reduced tariffs to encourage the importation of foreign-made rubber footwear could be nothing short of disastrous for the American workman in this field.

This becomes all the more apparent when it is realized that there is available to the foreign producer of rubber footwear the very same machinery that is used by the American manufacturer. In many cases the American Government is sponsoring tours of factories in the United States so that foreign producers may observe and study American working methods to take back home—but not the wage scales. All these elements contribute to the stark realization that, in truth, there are no special advantages enjoyed by the American producer of rubber footwear which would permit him to overcome the existing wide wage differential.

Passage by Congress of the Reciprocal Trade Act is expected to be followed by consideration of three other bills, all of substantially the same nature and which aim at providing relief for Americans dislocated by any tariff policy that the President may desire to pursue. In recognition of the danger of dislocation to American industry and workers by the Reciprocal Trade Act, these bills intend to provide special unemployment compensation and accelerated retirement policies for displaced employees, some assistance in helping people pick up and leave their localities to get new jobs elsewhere, and a measure of assistance to industries which find adjustments necessary.

As far as the rubber footwear industry is concerned, all these cushions add up to nothing more than a rather dreary alternative to be paid by an industry which has enough problems even now competing with foreign production without the disadvantage of further tariff cuts.

The interesting part of this whole tariff picture and this proposed extension of authority for the President is that even the most zealous supporters of the principle of lowered tariff barriers to encourage so-called economic rebirth abroad, hedge in their convictions with an exception in behalf of special cases, such as our rubber footwear industry. And yet it seems they have set in motion on a broad basis forces to create authority to do certain things which overlook this elemental respect and understanding of a specific problem.

Thus, on a realistic basis no one can ask a complete reversal of national policy to the end that the Reciprocal Trade Act not be extended. The large picture should not be lost sight of, and we do not oppose the principle of assisting our free world allies to build their economies. Nevertheless, the

people of Malden know very well that it does not make sense to try to achieve that goal at the expense of our local prosperity and our local economy. Nor is there any justice in requiring that the major burden of such a national policy be borne by those workers who happen to find themselves employed in industries where wages and salaries form a significant percentage of the cost of production.

Efforts by our Massachusetts Congressmen to halt the speedy passage of H. R. 1 several days ago, because they realized these facts, were not successful. But the matter is now before the United States Senate, which can do something, we think, about amendments to protect such an industry as the rubber footwear industry, which is currently entitled to that protection. The people of this community who are concerned with what can happen to one of our principal industries should make their feelings known in this regard by writing to either Senator KENNEDY or Senator SALTONSTALL. For whether a citizen of Malden feels one way or the other about the Reciprocal Trade Act, he is in no way compromising his principles by asking for a provision to protect an important nationwide industry with an important impact on our own immediate area.

Message of Faith

EXTENSION OF REMARKS OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include an article which appeared in the Washington Sunday Star newspaper of March 6, 1955. It is a speech delivered by the venerable world diplomat and fearless leader of our Korean allies, President Syngman Rhee.

In preface to his excellent message of encouragement to our great people, I should like to reiterate his timely warning in defining our true enemy—for it speaks in the reminiscent voice of a passed great American leader, Franklin Delano Roosevelt.

Mr. Rhee identifies the enemy as fear and self-doubt born of insufficient faith in our own institutions. The greatest antidote for combating this lack of self-assurance is significantly contained in the word "faith." Faith in turn is directly dependent upon our relationship to God, who is the final depository of man's dependent and transient destiny. Therefore let us, as the final hope of all the world's free peoples, be ever mindful of this dependence through the exercise of a greater faith in ourselves and, ultimately, God.

Mr. Rhee's message follows:

RHEE TO AMERICA: HAVE FAITH IN YOURSELF

Last Tuesday President Syngman Rhee spoke in Seoul on the occasion of the 36th anniversary of Korea's Mansel independence day. It commemorates the occasion in 1919 when Korean patriots dared to speak out for liberty and justice against their Japanese oppressors. Much of what President Rhee had to say should be of interest to Americans. Here are excerpts from his address:

"There is no more ridiculous charge ever made than the repeated propaganda of the Communists that the United States is building up military bases in Asia for purposes of colonialism and imperialism. Exactly the opposite is the case, as has repeatedly been proved; but they recite their lie in order to deceive the uneducated masses of peoples and line them up against America.

"The United States entered South Korea with its armies when we had no government and no military strength of our own. It helped us to conduct elections, and build our own democracy; and it has armed and trained for us an army for our own self-defense. Similarly, the United States has intervened in Chinese affairs solely to help defend the last outpost of Chinese independence, for the everlasting benefit of both the entire free world and the great masses of the Chinese people themselves. One of the greatest proofs of American generosity is the great helping hand it has extended to its defeated enemy, Japan.

"I wish the people and the Government of the United States were not so quick to criticize and doubt themselves. When they hear the Communist propaganda charging that the people of Asia do not like their interference, they are fearful that there might be some truth in such charges, and they have a tendency to withdraw.

"If I could deliver just one single message to the heart of all America, it would be this: Trust yourselves a little more. Have faith in your own ideals. For truly the American principles and the American ideal are the last great hope of the world.

"The people of Asia know America, perhaps better in some ways than the Americans know themselves. It is too bad that American newspapers have so much to say about the supposed dislike and distrust of the peoples of Asia toward the United States. It is too bad there is so much discussion in America of the fact the only atomic bombs ever used in warfare were those dropped by American aviators upon an Asian people.

"This kind of self-castigation has partially at least closed the eyes of the American people to the tremendous position of strength they hold in our hearts. Stories such as these are created by the Reds to win over the voting population of every land as part of their Communist revolution campaign. In this way the Soviets have succeeded in making many nations their satellites. All intelligent Americans should realize this and make it known to their fellow citizens.

"No Asian will ever forget that at the time of the Boxer Rebellion the United States used its indemnity from China to educate Chinese students. No Asian will or can forget that the entry of the United States into the Philippines was for the purpose of educating and assisting the Philippine people to attain their independence. No Asian can overlook what the United States is doing for Korea and China.

"The truth is that the United States is a giant only partly aware of its own strength. When that giant is awakened by some awful catastrophe, as it was at Pearl Harbor, its strength is shown to all the world—as is its generosity and forbearance after the fighting is ended.

"Perhaps it is inherent in any democracy that its real power is concealed except in emergencies. In this period of half-war, half-peace—when every responsible statesman is doing his best to prevent a world disaster—the democracies reveal to everyone their own self-criticisms and their own tendencies to retreat as far as possible rather than to fight.

"Under such circumstances, it is the totalitarian dictatorships that look powerful. . . . But while the dictatorships look, talk, and act fierce, the facts show that they are nothing but paper dragons. Red China has

a large army, but the masses of Chinese hate their masters; and there is nowhere on the continent of China any industrial power to support a major war. Russia conducts a tremendous game of global bluff, but is weak in oil, coal, and steel—and has behind its Iron Curtain an uneasy collection of captive peoples who long for the opportunity to reassert their historical independence. . . .

"What I do deeply believe is that our greatest enemy is not the armed masses of Communist soldiers who confront us with one gun held at their own backs. The greatest enemy of the free world is its own fearfulness and self-doubt. If this can be overcome in time, the Communist dictatorships can be stopped and the rot that lies behind the Iron Curtain can be exploited to cause its own collapse."

Upper Colorado River Project

EXTENSION OF REMARKS OF

HON. JOHN F. BALDWIN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1955

Mr. BALDWIN. Mr. Speaker, Dinosaur National Monument is an important part of our national-park system. It straddles the Utah-Colorado border up near Wyoming, and contains in it some of the most livable and beautiful river scenery in the entire Colorado system.

Right now, Dinosaur is under a serious threat. There is a multi-billion-dollar reclamation project before Congress to build a series of huge dams in the upper Colorado River system, so that Utah, Colorado, Wyoming, and New Mexico can make use of their half of the Colorado River's water. Conservationists would like to see a good Colorado River development plan. But they do not want to destroy our enviable, priceless reserves of parks and scenic wilderness unless there should be a compelling national need for such destruction. There is not.
